

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

SATURDAY, JULY 1, 1882.

No. 530, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Reminiscences, chiefly of Oriel College and the Oxford Movement. By the Rev. T. Mozley. In 2 vols. (Longmans.)

THE interest of reminiscences never can equal that of a daily journal in which the fresh impressions of the moment are recorded. As Mr. Mozley says of Newman's *Apologia*, "it is possible that a new search into first memories, under a strong suggestion, may vary their order and prominence." The recollection of age is capricious; and it is not the things we should most care to recollect which stick by us longest, or which occur to us most readily. Anyone who happens to take up Horace Walpole's *Reminiscences*, written in old age, after his *Letters*, will feel the difference at once. But when we cannot have a diary, we are thankful for recollections.

Many before now—Oakley, Froude, Kennard, not to mention Newman himself—have contributed to the story of the Tractarian movement. None of these, not even the famous *Apologia*, will compare with the two volumes now before us in respect of minute fullness, close personal observation, and characteristic touches. At an age when most men have ceased to think of writing, Mr. Mozley has produced what he calls, with a touch of irony, his "first work." We all know that, if what he has written in the shape of article were collected and printed, it would rival in bulk, perhaps in other qualities also, Carlyle's thirty volumes. Even to the general reader, who knows nothing and cares nothing for the merits of the Oxford movement, these *Reminiscences*, in their vivid power and eminent candour, must possess a great charm. To the few survivors of the tragic *mêlée* who knew the actors, or had a personal stake in the issues, they are fascinating. Unlike Rousseau's *Confessions*, they are not personal or egotistical, but objective. That is, in their greater part. In a very few places the writer reveals with simplicity and truthfulness his own experience of mental struggle; but this is a quite subordinate element of what he has to tell. It was said of Lord Clarendon that he could recollect more minds than other people could faces. Mr. Mozley can recall minds and characters by the score of acquaintances long passed from the scene, and present them with a life and reality which is a sufficient guarantee of faithfulness.

Where the matter is so abundant and all of it good, a reviewer is baffled in making a selection. And the difficulty is made greater by the absence of order and method. It was

probably essential to the success of the effort to recollect, that that which offered itself to the memory should be written down as it came up. If the *Reminiscences* had been redacted and arranged they would have lost more in spirit and freshness than they would have gained in symmetry. A kind of chronological succession is attempted—i.e., we begin at the writer's boyhood and youth—but even this is laxly adhered to, and we find ourselves in the same page touching at widely remote epochs. The centre figure, if there be a centre, is of course John Henry Newman. Some things are told of the now Cardinal which, after all that has been written about him, will be new to all but his intimate friends. The writer's near connexion has not interfered with the free and genial flow of his reminiscences. He tells us that the *Apologia* has not done justice to Newman's early sallies into the domains of thought, fancy, and taste. He very early mastered music as a science, and attained such proficiency on the violin that if he had not become a doctor of the Church he would have been a Paganini. At the age of twelve he composed an opera. He had no suspicion that theology would become his absorbing interest. His parents intended him for the law, and he kept some terms at Lincoln's Inn. He always said he had lost by not being a public-school man, though the private school to which he was sent—Dr. Nicholas's at Ealing—was considered one of the best in the country. He regarded with admiration and generous envy the facile and elegant construing which a boy of very ordinary talents would then—it is now a lost art—bring with him from the sixth form of any public school.

In 1817, in spite of his want of a public-school training, Newman obtained a scholarship at Trinity, Oxford, which was then to schools and school-boys what a Balliol scholarship is now. In 1821 he published two cantos of a poem, "St. Bartholomew's Eve," a copy of which would now be a prize for any collector. Notwithstanding a disastrous breakdown in the examination schools, he carried off an Oriel fellowship, then regarded as the highest prize the university had to offer. He went into Oriel common-room "a shy man, with heart and mind in a continual ferment of emotion and speculation, yearning for sympathy and truth."

Of the two influences which, put together, moulded J. H. Newman, he encountered one for the first time at Oriel in 1823. One he brought with him from home, implanted by the not harsh Calvinism of his mother, a Foudrinier, of a French Huguenot family. The later influence, barely indicated by Mr. Mozley, was that of the "old Oriel school"—Copleston (persistently misspelt Coplestone), Whately, Blanco White, Hampden, Arnold. Not that Newman was acted on by any one of these men individually, but by the atmosphere in which they lived, and which they had created. Newman "would have been ready to love and admire Whately but for the inexorable condition of friendship imposed by Whately—absolute agreement in thought, word, and deed." It is hardly possible that Whately's clear and logical, but superficial, way of looking at things could have ever taken a grasp upon Newman's

mind. Mr. Mozley does not, I think, do justice to this very remarkable school. The old Oriel school—the Noetics—had no dogmas, and left no books; neither *Davidson on Prophecy* nor Whately's numerous publications could be said to represent it. The greatest outcome of the school was the Tractarian movement, of which the historian of the future will write that Newman, Keble, Pusey, &c., were the instruments, but that the prime movers—they who implanted the germ—were the Noetic school of the generation before, men of no learning, men who did not read, but who sat in their easy-chair and "thought." But the "old Oriel school" produced the Tractarian movement, not, as Mr. Mozley says, in the way of reaction, but directly, through the determination to sound your intellectual position on which it insisted. He sees this too, for in another place Mr. Mozley says that Arnold's explosiveness was reproduced in the movement. Cant words are often unfair, but in the analysis of the High Church movement there are two such words which do much to explain it; these are "earnestness" and "realise." Newman's mother put into her children's hands Watts, Baxter, Romaine, Newton—any writer who seemed to believe and feel what he wrote about. The word "realise" is of perpetual occurrence in the *Parochial Sermons*; it is nothing more than a shorthand expression of the process of the old Oriel school when applied to the objects of religious thought. This was the secret also of Newman's influence over others. His personality was not imposing; he disappointed those who saw him for the first time. They found him more like a Wesleyan preacher than a pillar of the Church. Robust and ruddy sons of the Church looked on him with condescending pity as a poor fellow whose excessive sympathy, restless energy, and general unfitness for this practical world would soon wreck him. Thin, pale, and with large lustrous eyes ever piercing through this veil of men and things, he hardly seemed made for this world. But his influence had in it something of magic. It never was possible to be a quarter-of-an-hour in his company without a man feeling himself invited to take an onward step; and Newman was sure to find out in time whether that onward step had been taken. One of his principles was that every man was good for something, but you must find out what it was, and set him to work accordingly. He kept a careful account of his pupils, always having his eye on the metal rather than on the dross. Wiseacres often commented on his misplaced labour, when tutor of his college, upon the most barren material. He would invite to his rooms for private talk and instruction men who went away and called it a bore. Newman always tried to reach the heart and understanding of those with whom he had to do. One remarkable instance was the case of Sidney Herbert, who was a gentleman commoner of Oriel. Sidney Herbert, while at college, repelled every advance or attempt of Newman. He studiously adopted the tone and the conduct which he knew would be most distasteful to Newman. But the redeeming features of Sidney Herbert's later career—too brief—betray the influence of

Newman penetrating him, and asserting possession of him, in spite of a stubborn and wilful resistance. When Newman gave up the tuition, his pupils subscribed to purchase a set of the *Fathers* as a testimonial; and the committee would gladly have done without Sidney Herbert's money, yet did not like to return the £10 10s. which he sent. But the subscribers knew that Newman would refuse the testimonial if he found that Sidney Herbert was one of them, and had, in consequence, to keep the names from him.

This is a very small sample of what Mr. Mozley has to tell about Newman. About Keble much less is told because there was less to tell; yet Mr. Mozley's half-dozen pages devoted to the author of "*The Christian Year*" give more that is characteristic than Coleridge's two volumes of *Memoir*—one of the flattest biographies ever written. It is well known that when the Provostship of Oriel became vacant at Copleston's promotion in 1827, Newman gave his vote and influence against Keble, and in favour of Hawkins, the man with whom he lived eventually most in collision. Pusey put in print the statement that Newman had lived to regret the part he had taken on this occasion. Mr. Mozley denies the truth of this; Newman's most intimate friends cannot remember a single word tending in this direction. He does not, however, throw any light on Newman's reasons. It may be presumed that he judged the shy and unready poet not practical enough for the post. Everybody who visited Oriel enquired after Keble. He was present in everybody's thoughts as a glory to the college, a comfort and a stay; the slightest word he dropped was remembered, because there was so little of it, and because it seemed to come from a different and holier sphere. His manner of talking favoured this; there was not much continuity in it, only every word was a pearl. Such a man was little likely to be elected to a post for which habits of business were required. Mr. Mozley adds, too, that Keble soon lost his temper in discussion, and that there was no getting on with him without entire agreement—i.e., submission. As far as happiness is concerned, Keble's after-lot fell to him more fortunate than if he had been successful against Hawkins. Away from the garish metropolis, proud cathedrals, and the restless university, Keble pursued quietly that sublime life of pastoral duty which is so little esteemed in these days. He ceased to be a public man; and those who choose to read his later letters as printed in Coleridge's second volume will feel that his views were narrow and his sympathies contracted, and that he had no intelligent grasp of the course of things in the Church or the world.

"People felt that Keble was a little smothered in the embrace of a not very large-minded or open-minded section of the aristocracy. Land-owners cannot help being sensitive on points that affect their very existence. I remember one of Keble's curates, a strong, healthy man, bursting into tears as he related that Sir William Heathcote would probably have to put down one of his equipages on the repeal of the Corn Laws."

Keble's jocular proposal during the vacancy of the Provostship, that the prize should be

divided, is told by Mr. Mozley as having been "to give Tyler the red gown, Hawkins the work, and himself the money;" but in Coleridge's *Memoir* the words are "and himself the play." It would be interesting to know whether *pay* or *play* is here the true reading.

Of Pusey, who for a time gave a name to the movement, nothing is told. He is only mentioned as the preacher of an alarmist sermon on "Sin after Baptism," of which the key-note was the word "irreparable" pronounced every now and then with the force of a judgment. It was the effusion of a fiery zealot who had lost his balance, and falls under a dictum which Mr. Mozley has dropt in another part of his volumes, that the leaders of a movement are almost always pursued by a spirit of exaggeration which reacts upon themselves.

Had Richard Hurrell Froude not been out of early, he, and not Newman, might have taken the direction of the party. He was one "of whom it is impossible for those who have known him to speak without exceeding the bounds of common admiration." "Tall, erect, unnaturally thin, investigating and explaining with unwearied energy, incisive in his language, with a fiery force of look and tone, he seemed a sort of angelic presence to weaker natures." Ascetic in his habits, he despised comfort. Merciless to shams and evasions, he was inspired by that transcendental idea of the gentleman which has almost disappeared from middle-class society in England.

"When Mr. Bulteel, a fellow of Exeter College, mounted the pulpit of St. Mary's, denounced the university and the Church of England, took his name off the books, married the sister of a pastry-cook in High Street, and set up a meeting-house behind Pembroke College, Froude went about for days with a rueful countenance, and could only say, 'Poor Bulteel!' He had married a housekeeper, Froude thoroughly believed, to chasten his earthly affections, and show what a minister ought to be. Nor was Froude's faith in his fellow-countryman shaken when it turned out that the pastry-cook's sister was young, accomplished, good-looking, not at all dowdy, and that she had a good fortune of her own" (i. 228).

Froude could believe in self-renunciation in every form, most of all in a gentleman, particularly one of a good Devonshire family. It was in perfect good faith that he exclaimed, on hearing the description of a member of the reformed Parliament, "Fancy a gentleman not knowing Greek!" He was a High Churchman of the ultra-intense school, taking part with Thomas a Becket, who was a gentleman. He used to talk of those who preached the prayers, as if edification was their object, and not that for which we ask. As a protest against this system, he fell himself into a monotonous, unmeaning style of reading the church service.

It is courageous in Mr. Mozley that he does not shrink from photographing Richard H. Froude's younger and more celebrated brother, though he is still living; and it is creditable to his judgment and feeling that he says nothing unkind of him, though Froude early left the Tractarian ranks. Perhaps it is more true to say that Antony Froude was never enlisted, though he undertook one of the "Lives" in Newman's series of the English saints, and that, too, one which made

the heaviest demands upon credulity. The result is well known; the slight bond of connexion was broken. Froude himself has told the story more fully than it is told here by Mr. Mozley.

Other Oriel names are commemorated in these pages, men of note in their generation, but not known beyond the limits of the university—Hawkins, Tyler, Dornford. The last-named, a Peninsular hero, son of Simeon's tea-maker, had been at the same private tutor's as Macaulay, "a shy, awkward, pale-faced boy," he said, with whom he never could get on. After his Peninsular campaign Dornford entered at Wadham, carried off the highest honours, and became fellow and tutor of Oriel. The undergraduate account of his return from Spain was that, being told off for a forlorn hope, he found himself so ill that he had to apply for sick leave. Henry Wilberforce used to say on this, "I am sure that, if I knew I was to be in a forlorn hope to-morrow, I should be very ill indeed." There was a college feud between Dornford and the Wilberforces, provoked by Dornford having in a high-handed manner appropriated a study which had formed part of H. Wilberforce's rooms in Oriel. The encroachment improved Dornford's set of chambers, and he defended his action on the ground that "no undergraduate wanted more than a sitting-room and bed-room." For two years it was impossible for either Dornford or R. Wilberforce to open his mouth in the common-room without receiving a contradiction or a sarcasm from the other. The Peninsular hero ripened ultimately into a sort of Tractarian; and, going off into a country parish, lived in hot water with his parishioners. The provocation alleged was, of course, ecclesiastical innovation; but the real cause was the veteran's success in ingratiating himself with the female part of the parish. It is difficult to be loved too much by one sex and enough by the other. An avenue of seventeen cypresses in his garden at Plymtree had been the monuments of as many unsuccessful courtships. A man who was popular with the sex had met with seventeen refusals. His mode of address was too gallant; there was too much strutting and crowing in it.

Beyond the limits of Oriel College, Mr. Mozley's gallery contains portraits of many a university notable of that generation—nearly all passed away now. Foremost among them is Manuel Johnson, who, at the age of thirty-five, and after some length of military service in various parts of the world, put himself to school to learn Latin and Greek, became Radcliffe Observer, and a Gaius mine host to the younger Tractarians who gathered round his table on Sundays. Enthusiastic in his love for his science, he had a fine knowledge of engraving, and knew all the states of a Marc Antonio. None who have seen it can forget the beaming countenance, the laughing eye, and the genial presence which thawed the sternest; but only the few who were admitted to closer intimacy could know that this popular manner covered one of the most staunch and loyal hearts that ever existed.

Of Sir George Bowyer, the refounder of the Order of St. John of Jerusalem; of William Sewell, who ruined himself and others in found-

ing Radley; of Thomas Stevens, who fared the same at Bradfield; of Golightly, unchanged among the changing; of Charles Neate, Edward Blencowe, Sir Gilbert Scott, and a score beside, Mr. Mozley remembers something always worth telling, not as good stories, but as characterisation. Good stories, such as a diner-out likes to produce, Mr. Mozley has not run after. The one or two which he has thought worth preserving have not novelty to recommend them. The tale (ii. 77) about the white trousers and the black necktie used in my day to be told of S. Wilberforce and Burgess of St. John's; Mr. Mozley tells it of Dornford and H. Philpotts. Probably it is older than either. When G. A. Denison applied to Drury to allow him to cut turf on Shotover, Drury refused, and Denison immediately sent a cart and horses, and drew as much as he wanted, "calculating that, after so curt a refusal, the owner would think his turf safe." As the story was told to me at the time, there was a PS. to the note taking back the refusal contained in the body of it.

MARK PATTISON.

Animi Figura. By John Addington Symonds. (Smith, Elder & Co.)

THIS interesting volume is made up of a series of sonnet-sequences, each sequence being the soul's dialogue with itself concerning some problem or mystery of life, or some special experience of the lover of beauty who is at the same time a lover of truth. Taken all together, the poems, it is said, delineate the mind of one who possesses the artistic temperament, with more, however, of speculative than creative faculty, and who is placed amid the trials, difficulties, and dangers of this our modern world. Such debates as these many of us have held each with his inward self in solitude. With what result we can hardly tell. Sometimes the thoughts that emerged dropped back into our moral being a little quickened by their play upon one another; sometimes they tangled and fretted into a bewildering skein, and then we sought relief in action, or pleasure, or sleep; now and again some beautiful form seemed to rise unlooked-for from the trouble of the brain, but whether a dream or a reality we dared not say; now and again we seemed to touch some clew which must bring us out into a wealthy place, but did we ever follow the clew far enough? In general, we doubted whether it would make for happiness or for truth to put on record these dialogues of the soul with itself. They appeared to be means—painful means—to an end beyond themselves. If a resolution of the discord came, song might follow; but why vex men's ears with the discord itself? One Hamlet, one Faust, we said, is profoundly interesting; but the world does not need numerous hop-o'-my-thumb Hamlets nor a new variety of the Faust-homunculus.

Yet even the "Confessions of a Third-rate Mind" would be of extraordinary value and interest, if only they were sufficiently truthful. Unfortunately, the third-rate mind cannot be truthful; it is inaccurate; it cannot draw a firm, precise line; it blurs and splashes with pseudo-philosophy, sentiment, rhetoric—

anything to hide the faulty drawing. In a master's hand even the peasant mind, with its few and heavy movements, becomes an object of profound interest; out of some such moral protoplasm as this have been evolved all fine sensibilities, all complexities of feeling, all graceful agilities of intellect. To know the mind of a cultivated modern man is of proportionately greater interest; to know its edges of slippery doubt, its black chasms, its oracular mists, its shining heights. With such a modern mind Mr. Symonds would make us acquainted by means of a selection from those inward debates which we all carry on—a selection including only those of vivid interest, those in which the theme is high and the dialogue of the soul with itself is keen and passionate. In large measure he succeeds; he is truthful; he lifts real experience into an ideal region; he is sufficiently definite; he is not often rhetorical; he rouses us to think and feel; he does not stun the mind into vacuity by a turmoil of poetic sound and spray.

What is the general outcome of these debates? Let us try to gather into a few lines of prosaic statement the drift of what we may call Mr. Symonds's teaching, and then show by a few examples how the dull precipitate of prose differs from the same truth or surmise as taken up by its solvent of beauty.

Vital truth, Mr. Symonds tells us, is not to be had from creeds and dogmas. Tradition expresses what was needful to the life of past ages, and so is not worthless; but in our best self and in the ideals which beacon us forward we shall find the living sources of truth for to-day and to-morrow. Let us therefore dare to venture into untried ways of thought and feeling. This courage of the brain and heart is checked from growing irreverent by mysteries which environ us and lie within us—even by the mystery of our own personality. Escaping from the isolation of self, we find union with others through love which must be constant to one, and through comradeship which may be sought with many in a spirit of gay adventure. We sin; but may not even sin sting us out of a sleep of death, and be a means of awakening the dormant energy of the soul? At least, let not sin kill the soul's courage; nor is it well to eat out our heart with brooding self-enquiry. Rather act and love; "now abideth faith, hope, and charity, but the greatest of these is charity." A remarkable group of poems follows which delineates the special trial of the artistic temperament—the anguish and exhaustion which come in the pursuit of unattainable beauty, "l'Amour de l'Impossible." From this anguish relief is found in the cooling influences of Nature, and in our wiser will which sets a limit to desire; above all, in humble service to our fellow-men. Humble we needs must be, and at one with our fellows, for the sin of proud isolation has brought dread punishment and ruin in its train. Yet good has somehow been wrought out of ill; we have learnt to master self, and to feel our need of God. To God let us press forward; he, too, advances to meet us—far off his coming shines. We find God even now in our best thoughts, desires, and volitions, and yet we know not what God is; the name

awaits a new interpretation. As to a future life for each soul of us, it is hard to believe, yet almost harder to disbelieve; may we not dare to hope? And while humanity endures its passion in this world, may we not trust that, for past, present, and future, Evil is not Lord of all?

Such in brief abstract is the intellectual warp of Mr. Symonds's *Animi Figura*, which in his verse is shot across with the iridescent woof of imagination. In some respects the volume reminds one of M. Sully Prudhomme's *La Justice*. M. Prudhomme urges his intellectual contention against the aspirations of the heart more keenly than does Mr. Symonds, and urges it more from the side of science. Determined to argue out the case thoroughly, he is prepared to sacrifice much of the charm of poetry; nor does he rest satisfied until he has reached a supposed scientific basis of belief—a supposed ethics of science, dominated by the idea of evolution. Mr. Symonds deals rather with those aspects of truth which disclose themselves to a thinker whose temperament is that of the artist; yet perhaps hardly that of the highest artist, or only of a peculiar class; for the persecution of unattainable beauty, of which we hear much in modern verse, though it was known to Michelangelo and conquered by him, as his sonnets testify—though it was known to Marlowe, as some wonderful lines in "Tamburlaine" prove—and though it pursued the painter of Mona Lisa for a lifetime—did not greatly affect Shakspeare, we may believe, nor Homer, nor Raphael, nor Mozart. Beauty may strengthen and rejoice instead of slay.

And now the reviewer's pleasantest duty remains. Here are the fifth and twelfth sonnets of the group entitled "L'Amour de l'Impossible":

"THE VANISHING POINT.

"There are who, when the bat on wing transverse
Skims the swart surface of some neighbouring
mere,
Catch that thin cry too fine for common ear:
Thus the last joy-note of the universe
Is borne to those few listeners who immerse
Their intellectual hearing in no clear
Paeon, but pierce it with the thin-edged spear
Of utmost beauty which contains a curse.
Dead on their sense fall marches hymeneal
Triumphal odes, hymns, symphonies sonorous;
They crave one shrill vibration, tense, ideal,
Transcending and surpassing the world's chorus;
Keen, fine, ethereal, exquisitely real,
Intangible as star's light quivering o'er us."

"DOVE SONO I BEI MOMENTI?

"Morning of life! O ne'er recaptured hour,
Which some have dulled with fumes of meat
and wine;
And some have starved upon the bitter brine
Of lean ambition grasping place and power;
And some have drowned in Danaë's vulgar shower
Caught by keen harlot souls whose ingots shine;
And some have drownd with ivy wreaths that
twine
Around Parnassus and the Muses' bower;
And some exchanged for learning, pelf of thought;
And some consumed in kilns of passion hot
With lime and fire to sear the sentient life;
And some have bartered for high-blooded strife
Of battle; where art thou? These all have
bought
With thee their heart's wish. Youth! I sold
thee not."

Mr. Symonds supposes that he has innovated in treating the sonnet so that the meaning obviously runs from one sonnet to another,

neither being complete in itself. The claim to be an innovator must be peremptorily disallowed; but it is not prudent to advance any rival claim, lest too many disputants should appear.

EDWARD DOWDEN.

A Short History of the Kingdom of Ireland.
By Charles George Walpole. (Kegan Paul, Trench & Co.)

THIS book is a bold attempt to sketch the leading features in the history of Ireland from the earliest times down to the union with Great Britain, and would appear to be meant as a text-book for those now engaged in the vexed question of Irish politics. The author does not pretend to any original research; his work is a compilation, and a compilation from Histories, written in many instances with a strong religious or political bias, as well as from published State papers, correspondence of eminent statesmen, and the statutes of the realm. To these is appended a full chronological table of the leading events in Irish history from the arrival of St. Patrick in 432 to the Act of Union in 1800. In the Appendices we find a list of the Governors of Ireland from the reign of Henry the Second to that of George the Third. Five maps are included in the work, showing the distribution of the clans and Danish settlements throughout Ireland before the Anglo-Norman invasion; the distribution or localities of the Anglo-Norman settlement in the thirteenth century; the divisions of the country among the English of the Pale, the English who had united themselves with the native tribes, and the independent native Irish. Map iv. shows the plantations of Mary, Elizabeth, James the First, and so on. A list of authorities quoted is given at the opening of the work, but no signs for reference appear to direct the reader to or from the text derived from such sources.

Critical accuracy is not always the primary object of writers on Irish history, and a deficiency in this respect is apparent even in the title and headings of the leading portions of this work. Ireland never was a kingdom and never was conquered, and yet the work is divided into five books describing the five "conquests" of this "kingdom" of Ireland. Again, when, in the chapter on the condition of the early Irish, reference is made to the houses of the chieftains, the writer seems to imply that such structures were contemporary with the great sepulchral chambers of New Grange and Dowth; yet these, with the dolmens so common in Ireland, are held to be monuments of a pre-Celtic race of whom we know absolutely nothing. Passing over the sketch given of the introduction of Christianity into Ireland, we come to the subject of the missionary work of the Irish Church:

"Though the spread of Christianity in the sister isle amongst the pagan Scandinavian settlers was largely due to the efforts of Columbanus and Columba and others, the Irish missionaries on the Continent in the seventh century, and later, caused considerable scandal and indignation by reason of the roving commission under which they intruded into the dioceses of other bishops."

The "sister isle" here we presume means Great Britain, and the mission of Columba in A.D. 563 was to the Picts, although the influence of his school at Iona spread for

three centuries later through the North of England. But the mission of Columbanus in A.D. 589 was to France, Switzerland, and Italy, and cannot in any sense be connected with the spread of Christianity in Great Britain.

This whole sentence is rather a summary way of dismissing one of the most remarkable features in the history of Ireland; and the true significance of a movement which endured for seven centuries, as indicative of a noble vitality in the old country, is lost sight of. The missionary work commenced early in the sixth century, and its field extended from Iceland and the Farö Islands to Italy and Carinthia. So late as 1082 we find Tighernach at work on his great chronicle of the world in Mentz, having come there from the Irish monastery at Cologne in 1056; and in 1148 the Irish monastery of Ratisbon was still enriched by donations from Ireland. In fact, the most prosperous time of many of these Irish missions was the middle of the twelfth century; and then it was but natural that the degeneracy to which nearly all monastic institutions fell a prey should affect the Irish monks no less than others. They did but yield with their fellows to that mournful law of declension and decay that seems to rule all human effort; their cause became degraded, and the first pure impulse that fired their undertaking in its youth sank into corruption at its close.

So, also, in the treatment of the struggle between the Irish and the Northmen, the fact is ignored that this strife, which lasted upwards of 200 years, and ended in the final defeat of these invaders in 1014, does not seem to have materially paralysed the energies of the Irish nation as regards their native arts. A people must be possessed of some moral stamina who, in the midst of such harrowing distractions, continue to send forth teachers in science and arts, ecclesiastics upholding Greek learning and philosophic speculation, asserting the freedom of the will even at this date while still clinging fast to their faith, and who have left monuments behind in architecture, sculpture, and other arts which show that, spite of all hindrance, they kept pace with the civilisation of the rest of Western Europe. The fact is that a gradual and sure development was taking place in Ireland down to the middle of the twelfth century which tended towards a central monarchy and a less local church system. In the reign of Henry the First friendly relations existed between England and Ireland, as we are told by William of Malmesbury:—"Our Henry had such devoted followers in Murchardu, King of the Irish, and in his successors, whose names report has not handed down, that they wrote nothing except what flattered him, and they governed in no respect except as he commanded."

If historians continue to ignore these evidences of mind and education in the inhabitants of Ireland, they will miss the one point which might tend to give dignity to their work. Their subject is a tragic one, but the interest of tragedy consists in the revelation it affords of the moral worth of those concerned in it. Unless this is drawn forth so as to awaken sympathy, not pity or anger, the history of the six centuries of ever-recur-

ring, not to say continuous, strife in Ireland will affect the mind like a study of morbid anatomy, and remain a useless repetition of past wrongs and a raking up of memories that should long ago have been laid to sleep.

At the conclusion of his account of the Act of Union, the author observes that the most remarkable thing about the whole transaction was "that so many as one hundred members of the Lower House were found whose integrity the Government were unable to corrupt, and whose honour it was powerless to purchase." When will the fact be perceived that the true Ireland is never revealed in the political arena but by such a minority, and yet that the class represented by it is a living reality, and has been doing honest work from the beginning? Like leaven, its influence makes itself felt through all hindrance, and to it England owes many a genius she is proud to call her own. This half-stifled but never dying virtue that underlies the troubled stream is ignored; the scum upon the surface only is regarded; but if ever there is to be a true history of, or a wise policy for, Ireland it must be based upon appreciation of the moral worth to be found in the country, even though the class that exhibits it be in the minority.

MARGARET STOKES.

VACCARONE'S TUNNEL OF MONTE VISO.

Le Pertuis du Viso. Etude historique d'après des Documents inédits du XV^e Siècle conservés aux Archives nationales de Turin. Par Louis Vaccarone. (Turin: Casanova.)

THE steep and shattered crest which divides France and Italy—the head-waters of the Po and the Guil—is pierced a few miles north of Monte Viso, at an elevation above the sea of 9,470 feet, by a tunnel about 250 feet in length, 8 in breadth, and 6½ in height. This work has been referred, as might be expected, by local tradition to very various authors. Hannibal, according to Dante, crossed the Alps near the sources of the Po. Here clearly was the result of his vinegar! Or, if not Hannibal's work, it might be ascribed to Pompeius Magnus, the Saracens, Francis I., or even that greatest of all Alpine engineers, Il Diavolo. Even serious writers, such as Ladoucette, who had some knowledge of the contents of the documents which made manifest its origin, have been ill content to allow, where it was due, the credit of this the first, and for so many centuries the only, Alpine tunnel.

The author of the tract before us, Sig. Vaccarone, is on the staff of the Royal Library at Turin, and is already favourably known by the papers on the ancient passes of the Western Alps, which he has published in recent numbers (41 and 47) of the *Bollettino* of the Italian Alpine Club. In the course of his duties he came one day on a bundle of MSS. labelled "Super Negocio Apertura Collis Montis Visolj." It proved to be a collection of the documents relating to the conception and execution of the tunnel of the Col de la Traversette. These Sig. Vaccarone has carefully transcribed and edited, with a commentary tracing the history of the pass down to the present day.

Louis II. Marquis of Saluzzo was the author of this, for its epoch, singularly bold undertaking. He was anxious to provide his subjects with a road which would enable them to carry on their trade with Dauphiné and to import the salt of Provence without passing through the frontiers of any other State. Having first assured himself by competent advisers that the scheme of a tunnel was practicable, he in June 1475 applied to the Parliament of Grenoble to co-operate in carrying it into effect. That body was not disposed to accept the project hastily. Before applying to the King or giving any answer to the Marquis, they appointed a commission to take evidence as to the probable advantages of the proposed work—its effect on the royal revenue and the prosperity of the province. The depositions of the witnesses are printed by Sig. Vaccarone.

The business did not come before Louis XI. until December 1477. He saw at once the advantages of the scheme, and took it up warmly. The Governor of Dauphiné replies in the King's name: "Il m'a chargé expressément que le chose fust entreprise et parachavée, et pour ce vous pry que y besougner car ce sera ung grant bien pour le pays et grant honneur a tous vous que de votre temps ung si grant bien se face." The King was in earnest, and, when at the beginning of 1480 some question between the Parliament and the Marquis threatened to put a stop to the work, he replied promptly to the Marquis's appeal by an order for its immediate completion.

A few weeks later, the Roman Emperor, Frederick III., having heard of what was being done, and anxious, perhaps, to assert his interest in the Debateable Land of the Marquisate, addressed Louis II. in a very characteristic epistle, in which the King of France is completely ignored. Being always looking out from his Caesarean loftiness over the universe to see when any boon is conferred on humanity and to reward the benefactor, he has noticed the admirable and altogether novel enterprise undertaken by Louis of Saluzzo, and, as a mark of his august approval, authorises the Marquis and his successors to levy certain tolls on all merchandise passing by the new road, subject, however, to the obligation to build and maintain a chapel displaying the imperial arms at the mouth of the tunnel, where masses might be said for the souls of "living and dead Roman Emperors." The tolls were probably taken; the chapel was never built.

By the end of 1480 the excavations were finished and the approaches completed on both sides. Commerce at once took advantage of the new route, as is shown by letters patent granted by Charles VIII. to the Marquis in 1483. For the subsequent history of the tunnel we must refer readers to Sig. Vaccarone's narrative. We trust his book may lead to further researches and the discovery of documents throwing fresh light on the ancient condition and history of the Alpine region. For one other such discovery, that of an account of the condition of the glacier passes leading out of Val d'Aosta in the seventeenth century, we are already indebted to Sig. Vaccarone.

DOUGLAS W. FRESHFIELD.

NEW NOVELS.

Democracy: an American Novel. (Macmillan.)

Redeemed. By Shirley Smith. In 3 vols. (Hurst & Blackett.)

One of "Us." By Edmund Randolph, jun. In 3 vols. (Sampson Low.)

Sweetheart and Wife. By Lady Constance Howard. In 3 vols. (F. V. White.)

The Shackles of an Old Love. By Märä. (W. H. Allen.)

The Stolen White Elephant, &c. By Mark Twain. (Chatto & Windus.)

THIS English edition of *Democracy* will be welcomed by many readers whose curiosity has been excited by such reports of it as have come across the Atlantic. The book is so clever, and so rich in a peculiar kind of interest which makes a special appeal to cultivated persons, that it is hardly likely to disappoint anyone who is competent to appreciate the qualities which give it a charm; though, as it is not only a novel, but a satire, it must needs be most thoroughly appreciated by those countrymen and countrywomen of its author who can feel the force of every allusion, and are in a position to amuse themselves by guessing at the identity of the characters. That *Democracy* comes from the pen of an American is, of course, a mere assumption, for the secret of authorship has been well kept, even the question of the sex of the writer being one upon which parties are still divided; but the assumption is a fairly safe one, for, though not absolutely impossible, it is in the highest degree improbable, that anyone not native and to the manner born should have acquired the intimate knowledge of the byways of political life in Washington to which every page of the book bears witness. *Democracy* is the record of an important chapter in the life of a Mrs. Lightfoot Lee, a young widow who, though healthy, wealthy, and wise with the kind of wisdom which can be gained from New York society and "philosophy in the original German," becomes possessed by the demon of *ennui* and consumed by a desire to "get at the heart of the great mystery of American democracy and government." To satisfy this desire Mrs. Lee migrates to the capital, and pursues her enquiries to a point at which she is quite content to enquire no longer. The great mystery, the heart of which is the goal of Mrs. Lee's quest, seems for her to incarnate itself in the person of Senator Silas P. Ratcliffe, described by the newspapers as "the Peonia giant, the favourite son of Illinois," and regarded by both friends and foes as a man with a career before him. For the story of how Mrs. Lee fared with the mystery and with Mr. Ratcliffe the reader must be referred to the book itself, for the record is not one to be briefly summarised. The portrait of the ambitious senator is a powerful and curiously interesting study; and some of the subsidiary sketches (notably those of old Baron Jacobi, the Bulgarian Minister, and Mr. Gore, the historian), though necessarily slighter, are equally telling. The literary workmanship as a whole reminds us of Mr. Henry James; but the new writer's method is more direct and less tantalisingly elaborate than that of the author of *Washington Square*, suggest-

ing occasionally the homelier, because less aggressively analytic, manner of Mr. Anthony Trollope. Cleverness is not the most valuable quality in art, but it is always interesting; and *Democracy* is certainly the cleverest novel which has appeared for some time.

"Shirley Smith," the name which appears on the title-page of *Redeemed*, is probably a *nom de guerre*. "Shirley" has an epicene quality, for, though it sounds decidedly masculine, Charlotte Brontë has made it feminine; and there seems little doubt that this well-told and pleasant story is written by a woman. With the author's previous works I am not acquainted, but it is evident that she has left behind her the mere 'prentice stage of literary development; and the hypothesis just hazarded is based upon the fact that, though all the personages in *Redeemed* are firmly and consistently drawn, the female characters have much more of realisable individuality than their male companions. The most life-like of the men is the wicked Sir Hercules Leigh, but even he is sketched from the outside; while Lucille Howard, Mrs. Romney, and, best of all, Lady Sarah Haldane are clearly studied from within, and are accordingly much more interesting and satisfying. There are single scenes, too, such as that in which Lady Cheston makes love vicariously to Mr. Seatoun, and single passages, such as that describing the effect produced on Mrs. Romney by her knowledge of Arthur Mowbray's profligacy, which could only be written by a clever and refined woman. The story is both interesting and healthy; and in the way of adverse criticism there is hardly anything to be said save that the first two or three pages are an artistic blunder, and that the author's notions concerning the comparative social standing of a surgeon and a "doctor" seem somewhat hazy.

Mr. Edmund Randolph has produced a very amusing book which will be equally popular in the drawing-room and the smoking-room; but *One of "Us"* is less a novel than a series of bright social sketches strung together on a thin thread of connecting narrative. Mr. Randolph has both humour and wit; and, though the farcical element in his book may seem to some sober readers a little too predominant in a work which is not, like Mr. Burnand's *Happy Thoughts*, avowedly comic, there are no violations of good taste. And nowadays, when so much of our fiction is sicklied o'er with the pale cast of thought, one can sincerely welcome a book of which—if the parody can be pardoned—it may be declared, "thought is not, in amusement it expires." As *One of "Us"* can be put down and taken up at any time "without solution of continuity," it is an invaluable companion for the odd ten minutes.

It is to be hoped that Lady Constance Howard will live to regret the publication of *Sweetheart and Wife*. Everybody knows that a book which is the very reverse of edifying may have artistic qualities which in some sort vindicate its right to exist; but the critic must be indeed complaisant who can find either art or edification in Lady Constance Howard's story of an illicit love, the main incidents in which are a series of rapturous embraces described with an elaboration which

is nothing less than sickening. During the first stage of the passion for each other of Erroll de Grey and Lady Magdalen Hillsborough he is married and she is single; during the second stage he is a widower and she a married woman; and it is difficult to say which portion of the story is the more unpleasant. Miss Rhoda Broughton has provided her readers with some full-flavoured situations; but even Miss Broughton is left far behind by the chapter in which Magdalen after her marriage is held to her lover's breast "in an embrace so eager, so tender, so longing, that the very life seemed to ebb from her in delicious ecstasy, while kisses the most passionate, the most self-sacrificing [what can be the meaning of a self-sacrificing kiss?], the most forcible and reckless, were rained by Erroll's impassioned lips upon her eyes, her hair, her willing, hungry lips that had fasted so long in silent, hopeless misery for the touch of his lips upon hers."

In spite of this sad stuff, of which there is a great deal too much, it must in fairness be said that Lady Constance Howard has the gift of constructing and telling a coherent story, and there seems to be no reason why she should not some day produce a book as readable as *Sweetheart and Wife*, and considerably less unpleasant.

All that can honestly be said in favour of *The Shackles of an Old Love* is that there is only one volume of it, but, as this one volume contains 377 closely printed pages, even this solitary merit is subject to large deductions. Had "Mārā" devoted the amount of time spent in collecting words and phrases from half-a-dozen living and dead languages to the acquisition of such acquaintance with English as is possessed by the ordinary school-girl, her book would have been considerably better than it is at present; but even then it would have been deplorably bad. The feat of producing a novel which is thoroughly absurd, and yet not in the least amusing, is somewhat difficult; but it has been performed, apparently without effort, by the author of *The Shackles of an Old Love*. As the story is quite unreadable, enough—perhaps more than enough—has been said of it.

Mark Twain's new book bears, as might be expected, a very close resemblance to its numerous predecessors; and, as those who enjoy his peculiar kind of humour do not seem soon to tire of it, there is little doubt that they will give *The Stolen White Elephant* a cordial reception. Some of the papers will not be new even to readers on this side of the Atlantic, for they have appeared in American periodicals which circulate here, and have, moreover, in one or two instances been reproduced in English newspapers; but this fact will not seriously interfere with the popularity of the volume. The story about the white elephant is by no means the best in the book, for the burlesque of detective procedure in the United States is too extravagant to be really funny; but several of the sketches are decidedly amusing; and, though there is nothing here so good as the account of Buck Fanshawe's funeral in *The Innocents at Home*, the volume as a whole is quite up to its author's average.

JAMES ASHCROFT NOBLE.

CURRENT LITERATURE.

THE best that can be said of Mr. Adolphus Ward's little volume on Dickens, in the "English Men of Letters" series (Macmillan), is that it betrays the endeavour to appreciate the master; and the worst that can be said of it is that the writer remains, nevertheless, without a full appreciation of Dickens's humour, though with much acknowledgment of his pathos. Mr. Ward is a careful student, and has read and thought. He does not fall into the error of intelligent young men from Oxford, with whom it is rather the fashion nowadays to consider Dickens as wholly for the vulgar and Thackeray as something greater than a genius—a gentlemanly person. Mr. Ward knows better than to judge two great artists by this latest standard of the drawing-room, about the last that anyone fit to be a critic—that anyone detached enough from the class-prejudices of a moment—would apply to a creator of fiction. Mr. Ward's standpoint is not that of a corner in which the negative virtues of faultlessness and politeness count for all. He is sufficiently out in the open to be aware of the place that Dickens has filled in the national life, and to give him the credit that he cared for the most—that of a genius thoroughly in sympathy with the most humane movements of his time, and one able to add appreciably to the better feelings of the race. Mr. Ward understands that the impression made by Charles Dickens upon nearly two generations of readers and writers is indelible; but, when he comes to details, his criticism is apt to have the somewhat tame defect of obviousness. He does not tell us much that is new. Not to tell us anything at all that is new is yet, it may be, sufficiently to fulfil the function of an intelligent young writer asked to discourse to a popular audience about some minor classic; but with Dickens how different is the case! Dickens is known to everybody. Excellent criticisms upon Dickens—Mr. John Forster's in the familiar *Life*, and a score of others—are known to everybody. So Mr. Ward's task was difficult. A little workmanlike and industrious boiling down of other folks' materials could here be of no avail. The materials were in everybody's possession. That was Mr. Ward's misfortune. He has, we feel sure, done his utmost to overcome it. But his efforts have not been entirely successful. He has possessed information and industry and sound sense. He has wanted originality in a matter as to which it would in any case have been hard to be original.

MR. AUSTIN DOBSON's selection of *Eighteenth-Century Essays*—the penultimate volume of the "Parchment Library" (Kegan Paul, Trench and Co.)—is an extremely happy one. It shows not only much *à propos* reading of eighteenth-century history and social history, but likewise a nice discrimination as to the examples of the eighteenth-century essay which it was fitting to include. No better choice could have been made, we venture to think, as a whole, than that which Mr. Dobson has made, just as it is certain that no better choice of an editor could have been made than that which fell upon Mr. Dobson. Few contemporary writers are so completely in possession as Mr. Dobson of that "slower pen"—and that carefully sharpened one—which belonged to the eighteenth-century men of letters. As to the editor's selection, it includes thirty-four papers, ranging from the work of Steele to that of the Scotchman Mackenzie. In Mackenzie's time the "slower pen" was fairly on the way to become hastened and spoilt. The best essayists—nearly all the essayists—represented in this volume produced things which must be better liked at a fourth reading than at a first. Their occasional writings had the finish or the force of literature. Few men nowadays have time

to possess these, or to read them in bulk, and so the "Parchment" volume is on all accounts welcome. We have tried our eyes very painfully over the exquisite but diminutive print.

The Speeches and Table-talk of the Prophet Mohammad. Chosen and Translated, with Introduction and Notes, by Stanley Lane-Poole. (Macmillan.) When we have once got over our surprise at finding Selections from the Kuran following upon Selections from Wordsworth and Byron, and when we have also reconciled ourselves to the somewhat misleading title, we have nothing but praise to give to this little book. It represents that result of historical criticism (which it is too much the fashion to ignore) by which the past and its literature are made to live for us in a way that was unattempted till the present generation. Criticism is not all destructive. Indeed, it would be more true to say that its real work is but now opening before us. Here, for example, we have not only translations from the Arabic turned out with scholarly precision and arranged with a view to their historical order, but also a sketch of the life of Mohammad and of his surroundings which does not overwhelm the reader with strange facts, but presents a faithful and simple picture to his mind. It is hardly too much to say that the ordinary English public have never before had the opportunity of learning what manner of man Mohammad was, and what the religious and ethical teaching of the Kuran is. What Dr. Rhys Davids has done for Gautama the Buddha and his creed, Mr. Lane-Poole has here done for the founder of Islam. And if Buddhism seems more closely akin to certain philosophical ideas of the time and to the modern temperament, the importance of Mohammadanism (if Mr. Lane-Poole will let us use the word) is far greater from the historical and political standpoint. In the view of passing events, it cannot be too often and too loudly repeated that Mohammad was neither impostor nor lunatic. What he was, can now be read by anyone in this last addition to the "Golden Treasury Series."

Five Minutes: Daily Readings of Poetry. Selected by H. L. Sidney Lear. (Rivington.) This little book falls somewhere between the old-fashioned anthologies and the modern "birthday books." It consists of a selection of poems, some short, some longer, arranged for every day of the year. And as the Preface is dated "The Close, Salisbury, Whitsuntide," we may add that the year is the year of the Church rather than of Nature. The title is intended to convey a suggestion that a few minutes every morning may profitably be given to committing a few verses to memory. The selection itself is in many respects notable. It omits much—very much—with which all are familiar. Unless we are mistaken, Campbell and Mrs. Hemans (to mention no other names) are entirely absent. The Church poets—a long series, from Herbert and Quarles to Neale and Newman—are numerously represented, though there is but very little from Keble. There is much from Crabbe, and we are thankful for it all. And living authors have been very generous to the compiler, who has not, for his part, corrected the press so carefully as he should have done. On p. 76 we have "Browning, Art Vogler;" and on p. 93, "George Eliot, The Legend of Tubal." We cannot, either, reconcile ourselves to the spelling *Eschylus*.

WE are much behindhand in noticing the successive issues of Mr. W. J. Rolfe's pretty editions of Shakspeare's plays in separate volumes. The last we have received is "Timon of Athens," June 8; and before that came the "Two Gentlemen of Verona" (May), "Love's Labour's Lost" (April), "Merry Wives" and "Measure for Measure" (March). At the

pace at which these editions are turned out, their excellence is astonishing. In only one point have we found the latest information missed, and that was in the non-notice of Mr. Sidney L. Lee's interesting paper on the historicalness of the leading personages and some of the incidents in "Love's Labour's Lost." On the other hand, Mr. Rolfe has included in his latest critical notices, among those by Verplanck, Coleridge, Hazlitt, Knight, Dowden, Furnivall, &c., several hitherto unprinted and very interesting extracts from the papers of the late Charles Cowden Clarke, which Mrs. Cowden Clarke has placed at his disposal. This is a distinct gain. In "Timon of Athens" Mr. Rolfe has carried out Mr. Furnivall's suggestion that the spurious part of the play should be printed in smaller type, and thus every reader can at once judge for himself whether the lines between genuine and non-genuine work are rightly drawn. To all the plays are appended Mr. P. A. Daniel's valuable Time Analyses of them as dramatic performances. In the treatment of his text Mr. Rolfe is not quite so conservative as the new school of English editors, but he is immeasurably superior to Hudson, whose wanton changes of Shakspeare's words are simply lamentable.

NOTES AND NEWS.

WE regret to hear that the state of health of the historian Mr. John Richard Green is causing anxiety to his friends.

THERE is a treat in store for the Bewick-worshippers. Thomas Bewick's daughter still survives, at the age of ninety-two; and, by her desire, a "Memorial Edition" of her father's works is to be produced in a limited edition, with impressions from the original wood-blocks. It is to be a local work in every sense, as the press-work is to be done at Newcastle in the great engraver's house, and even the paper is the product of a Northern mill. The printer, whose competence and practical skill are undoubted, is confident that, by the use of improved methods now in vogue, he can, without tampering with the wood-blocks, produce impressions equal to the best of the old ones, and give the world a book that shall be worthy of the occasion and do credit to everyone concerned in the undertaking. It is to be in five octavo volumes—Birds (2), Quadrupeds (1), Aesop's Fables (1), Memoir of Bewick (1)—and only 650 copies will be printed. We have little doubt of the success of the "Memorial Edition," which will probably in a few years' time command in the market a price higher than that of subscription. Mr. Quaritch, who is to publish the book, will give all the necessary information to intending subscribers.

THAT indefatigable worker, Mr. B. N. Cust, is engaged upon a book treating of the modern languages of Africa, somewhat similar to his useful *Modern Languages of the East Indies*. It will classify, condense, and arrange the scattered knowledge on the subject, following the most esteemed authorities. A linguistic and ethnical map has been specially prepared by Mr. Ravenstein to illustrate the volume; and in the Appendix will be a bibliography exhibiting all the grammars, dictionaries, translations of the Bible, &c. The work will be published by Messrs. Trübner and Co.

AN influential deputation, including the Greek Archbishop, the Cadi, and Mufti, waited upon the Governor of Cyprus on Thursday, June 15, to present a petition for the formation of a museum in the island. The Governor approved of the scheme; a council was forthwith appointed, and held its first sitting, at Government House, the same day. Mr. H. H. Kitchener, R.E., was appointed curator

of the museum and hon. secretary. Subscriptions to the amount of £110 were announced. Subscriptions are urgently needed, and will be acknowledged by the hon. secretary, Nicosia, Cyprus.

PROF. PEABODY, of Harvard, is ending his year's holiday in England and Scotland, and will return to the United States early in September. Prof. Corson, of Cornell, will spend his vacation in the Channel Islands.

MR. FURNIVALL is just putting together for the New Shakspeare Society his collection, from friend and foe, of fresh allusions to Shakspeare, 1592-1692, beyond the 358 that were in the second edition of Dr. Ingley's *Centurie of Phrases* issued by the society. He has above 300 of these fresh allusions, and will feel obliged by the contribution of any more that Shakspeare students may have lying by them.

SIR ROBERT TORRENS has written an essay on *The Transfer of Land by Registration under the Duplicate Method operative in British Colonies*, which Messrs. Cassell, Petter, Galpin and Co. are about to publish for the Cobden Club.

Dante Gabriel Rossetti: his Work and Influence, is the title of an essay by Mr. William Tirebuck which will be issued very shortly by Mr. Elliot Stock.

MR. ALEXANDER GARDNER has in the press a volume of *Selections from Wordsworth*, edited by Mr. J. S. Fletcher, who has also written an Introductory Memoir.

MR. T. FISHER UNWIN will shortly publish a work treating of surnames connected with Lincolnshire, and particularly with Grantham. It will be entitled *Our Noble Selves*.

The publishing partnership of W. and A. K. Johnston has been dissolved by consent, and for the future the business will be carried on at 6 Paternoster Buildings by Mr. A. Johnston.

SIR JOHN MACLEAN is preparing for publication (by subscription) *The Annals of Chepstow Castle*, left in MS. by the late John F. Marsh. The work, which was the result of much research, will give a complete history of the castle and of its custodians from its first erection down to the present time.

MR. A. M. E. SCARTH will shortly publish by subscription (with Mr. Peach, of Bath) a short history of the Old Catholic movement, with references to earlier kindred movements, and as leading up to a confederation of independent national churches. Three chapters will be devoted to the Church of Utrecht, from which the Old Catholic body received their orders.

THE City financial journal, *Money*, has despatched Mr. Charles Marvin to Russia upon a special mission of enquiry into the actual condition of Russian finance, particularly with regard to the rumoured issue of a new foreign loan and the state of the railways. After completing his investigations at St. Petersburg, Mr. Marvin will proceed into the interior and report upon the National Exhibition now being held at Moscow.

MR. ROBERT HOLT, bookseller, of Shudehill, has presented to the Manchester Free Library the copy of Oaxton's *Chronicles of England* (Wynkyn de Worde, 1497) the discovery of which in March of this year caused so much stir among bibliophiles.

A GREAT assistance has been rendered to scholars by the printed Index of the early wills in the archiepiscopal registers at Lambeth, issued with the recent numbers of the *Genealogist* edited by Dr. Marshall. It should be remembered that the Palace Library is open to the public almost daily, and that modern books are lent out to the clergy and the laity in the

parishes of Lambeth, Southwark, and districts of Westminster.

WE have more than once noticed the system of publishing novels as *feuilletons* in a number of local newspapers which Messrs. Tillotson and Son, of Bolton, have so largely developed. They now announce no less than seven new works to be issued in this way. Among the writers are Mrs. Oliphant, Miss Braddon, Miss Helen B. Mathers, Mr. Clarke Russell, and Mr. B. L. Farjeon.

MESSRS. J. NISBET AND Co. will henceforth publish the *Homiletic Magazine*, edited by the Rev. F. Hastings.

FOR the Browning Society's evening of music and recitations on Friday, June 30, Mr. J. Greenhill composed a setting to Mr. Browning's "Lovers' Quarrel" for his pupil, Miss M. Adderley; and Miss Carmichael's MS. setting of "A Woman's Last Word" was also to be sung, with Virginia Gabriel's "At the Window" from "James Lee's Wife," Mrs. Reinagle's "In a Year," &c.

PROF. INGRAM, the librarian of Trinity College, Dublin, has issued some separate copies of his very interesting paper on "Two Collections of Mediaeval Moralised Tales" belonging to the diocesan library at Derry. The first is of the fourteenth century; the second is an inferior duplicate of a MS. of the fifteenth century, in the library of Trinity, Dublin, and contains the *Speculum Laicorum*, &c. The first volume is "called in the Catalogue Harrison's Manuscript," and belonged unquestionably to the William Harrison, Rector of Radwinter and Canon of Windsor, who wrote the "Description of Britain" in Holinshed's *Chronicle*. It was in and from this Derry library that Mr. Furnivall was lucky enough to find and get Harrison's MS. *Chronologie* that was supposed lost (see his Forewords to Harrison, part i., New Shakspeare Society, p. v. note). In the second part of the first Derry MS. is a French verse:

"quod Anglice dicitur

Whan þe nyhyng [miser] is ded, and lyþ by þ' wowe [wall]

Comeþ a prout 3ong man and wo3eþ [wooth] his love

Drynkeþ of his broun ale and et of his lhoue [eats off his loaf]

And singeþ for his saule gyvelgove."

As the last word may be new even to the Philological Society's Dictionary, we have reprinted the verse, and now add the French, to throw such light as it can on "gyvelgove":

"Quant ly avery et mort et gyt south la bere
Vient un iofene bacheler, e dannye sa bele
Boit de souyn vne e mount sa sele
Et chaunt pur saime va la ly durele."

Prof. Ingram prints nine of the curious tales in the *Speculum*, and several extracts from the other volume, including passages of Scripture, "on account of the frequent and sometimes curious variations which occur in them from the received text of the Vulgate."

MESSRS. ROBERTS, of Boston, U.S., announce a reprint of the *Dial*, the organ of New England transcendentalism, which only lived for four years (1840 to 1844), but during part of the time Emerson was editor. The regular contributors also included Margaret Fuller, Theodore Parker, George Ripley, Henry Thoreau, and William Channing. The reprint will make four volumes; and an additional volume will contain an Index, and *ana* about the contributors by the Rev. G. W. Cooke.

THE following announcement is quoted from the *New York Publishers' Weekly*:—"Richard Henry Stoddard is preparing a series of English and American poets—American for the English market, and English for the American market."

MESSRS. LITTLE, BROWN AND Co., of Boston, U.S., announce a work by Mr. George E. Ellis entitled *The Red Man and the White Man in North America, from its Discovery to the Present Time*. Special attention has been given to the Indian system of land tenure, to missionary efforts among the Indians, and to a comparison of their treatment by the Spanish, French, and English, and by the United States Government.

THIS day was to be published at Paris a book that has aroused no little interest. It is from the pen of Mme. Adam (Juliette Lamber), and is entitled *La Chanson des nouveaux Epoux*. The frontispiece is a portrait of the writer; and there are besides ten drawings by Doré, Detaille, Lefebvre, Munkácsy, and other well-known artists. Only 400 copies are to be struck off; the price is 200 frs. per copy.

THE Boston *Literary World* for June 3 gives a bibliography of Victor Hugo, including sixteen of his unpublished works. To some extent this list is confirmed by M. Jules Claretie in the *Temps*, who writes that Victor Hugo has in his portfolio a drama of modern life, entitled "La Faim," a third series of "La Légende des Siècles," a volume of political satires, and an epic called "La Fin de Satan." Victor Hugo is said to have declared that he should leave ready for the press almost as many volumes as he had published.

THE second and third numbers of *El Folk-lore Andalus* contain two very useful articles by Señor García Blanco, "Filología Vulgar," on the Andalusia dialect, with especial reference to Latin and Hebrew sounds. "El Folk-lore del Perro," by Don Antonio Machado y Nuñez, and the "Supersticiones populares Andaluzas" show how well this new society is working. Similar folk-lore societies are being formed in Catalonia, Estremadura, the Basque Provinces, the Asturias, and even in Cuba and in the Canaries.

AN important collection of *Cantos Populares Españoles*, with music to many of them, selected by Señor F. Rodríguez Marín, is announced for publication by Francisco Alvarez and Co., of Seville, in three volumes of 500 pages each. The subscription for the whole, paid in advance at Seville, is 22 frs. 50 c.

PADRE F. FITA has nearly terminated his work on "Six Inedited Spanish Councils." These Councils contain matter of great interest concerning the acquittal of the Templars in Spain, and on the treatment of the Jews in the first half of the fourteenth century.

M. HERZEN has issued (Lausanne: Benda) a reprint of the little work which his father, Alexander Herzen, the well-known Russian refugee, wrote in 1864 upon Garibaldi's triumphal reception in London in that year and his speedy departure from this country. It is entitled *Camicia rossa*.

PROF. TRAUTMANN has just issued his bibliographical part of *Anglia* (vol. v., part 2), in which the following works are noticed:—A. Brandl's edition of *Thomas of Erceildoune* and G. Lüdtke's *Erl of Tolous and the Emperes of Almayn*, both in Weidmann's series of critical English editions; the *Catholicon Anglicum*, edited by S. J. Hertrage. R. H. Hutton's *Sir Walter Scott* ("English Men of Letters" series) is appropriately noticed by Dr. A. Brandl; B. Eizenkel treats of O. Zielke's edition of the Middle Age fairy tale, *Sir Orfeo*, and discusses at some length the valuable work by Prof. Schipper on *Englische Metrik* (part i.); Prof. Trautmann points out, with a well-deserved word of praise, the contents of Dr. Horstmann's new series of "Old English Legends," a large volume with a considerable introduction—taking occasion to debate the authorship of the legend of St. Erkenwald. Dr. Tanger has an explanation as to his paper on "Hamlet" of

Quarto 1, Quarto 2, and the First Folio: their Relations to Each Other" (Shakspeare is responsible for two battles of the wits recorded in this number). The editor, in dealing with two pamphlets by D. Asher and G. Körting, makes some remarks on a subject which he has much at heart—the instruction in Modern French and English given in German public schools.

UNDER the title of *Combat du cap Ortégal* (Paris: Chair), M. Gemähling has published an interesting historical document, being a description of the naval engagement which followed one month after Trafalgar. It was written at the time by M. Gemähling's father, who then commanded a French ship, and was captured after an honourable resistance. The English were commanded by Sir John Strachan.

M. ANDRÉ LEBON has published (Paris: Plon) a volume entitled *L'Angleterre et l'Émigration française de 1794 à 1801*, which throws much new light upon the relations between the British Government and the banished courtiers of Louis XVIII. The author has made use of unpublished documents in our Record Office. A Preface to the work is contributed by the historian, M. Albert Sorel.

WITH reference to a notice of Mr. J. H. Ingram's *Claimants to Royalty* in the ACADEMY of last week, a correspondent writes that the last Count of Albany died about one month ago, not eighteen months. It was his father who died in 1880.

IN the letter on Walton's *Compleat Angler* which appeared in our last week's number, Mr. Holford's name was inadvertently spelt Halford twice. The copy of Walton referred to belongs to Mr. Holford, of Park Lane.

ACKNOWLEDGMENTS.

WE have on our table the following pamphlets, &c.:—*The Revisers and the Greek Text of the New Testament*, by Two Members of the New Testament Company (Macmillan); *The Recovery of St. Thomas: a Sermon* preached in St. Paul's Cathedral on April 23, 1882, with a Prefatory Note on the late Mr. Darwin, by Canon Liddon (Rivingtons); *Deliver us from Evil: a Second Letter to the Bishop of London in answer to Three Letters of the Bishop of Durham*, by Canon Cook (John Murray); *The Church and the Ministry: a Review of the Rev. E. Hatch's Bampton Lectures*, by the Rev. Charles Gore (Rivington); *Great Britain and Rome: or, Ought the Queen of England to hold Diplomatic Relations with the Sovereign Pontiff?* by Mgr. Capel (Longmans); *An Exposition of Isaiah lli. 13, 14, 15, and liii.*, delivered before the Council of the Senate on April 28, 1882, by S. M. Schiller-Szinessy (Cambridge: Deighton, Bell and Co.); *A Reply to Dr. Farrar's Answer to Sir Edmund Beckett's "Should the Revised New Testament be Authorised?"* (John Murray); *The Collects rendered into Plain, Easy Verse*, for School and Family Use, by the Rev. E. W. L. Davies (Bagster); *Prayers for Every Hour*, by Day and by Night, Second Edition (Parker); *A Census of Religions: Three Essays*, by the Right Hon. J. G. Hubbard (Longmans); *Mr. Tennyson's "Despair": a Lecture on its Moral Significance*, by Thomas Walker (Elliot Stock); *Modern Dissent: What is It?—a Retrospect and a Prophecy*, by Walter Carey (Simpkin, Marshall and Co.); *Thoughts on the Evolution Theory of Creation*, by the Rev. John Andrew (Marcus Ward); *Fragments from the Early History of the Christian Church*, Parts I. and II. (James Nisbet); *Present Day Tracts*, Nos. I. to V. (Religious Tract Society); *The Faiths of the World*, Lectures V. and VI. (Blackwood); *Faith or Unfaith? a Modern Phase of the Question*

discussed in Two Letters to a Guardian, by An Earnest Layman (Provost); *A Critical Examination of Bishop Lightfoot's Defence of the Last Petition of the Lord's Prayer*, by the Rev. T. H. L. Leary ("Christian Opinion and Revisionist" Office); *Bible Words and Phrases*, explained and illustrated, by Charles Michie (Edinburgh: Macniven and Wallace); *The Olergy: or, Truth and Unity*, by W. H. Trenwith (New York: J. W. Pratt); *De la Sépulture de Jésus-Christ*, par A. Jameson (Paris: Leroux); &c., &c.

ORIGINAL VERSE.

IN THE HEART OF THE FENS.

GREEN breadths, red oxen, fade to far gray skies—
Skies black where gathering rain-burnts may be seen,—

With many a plashy waste and isle between;
Slow the gaunt poplars wave, the peewit cries;
Smit with rough blasts each whitened osier sighs,
And crosses flame amid the dreary scene,
Where the tall iris flaunts, a water queen;
O'er leagues of sedge their pale, wan radiance flies,
Long aeons here unchanged did nature reign,
Till faith breathed into her a soul divine
And scattered darkness. In the grassy main
Far-gleaming note that peak,—that tower shine;
There, ringed by poplars, holy Guthlac's face
O'er reedy meres greets Pega's sister shrine.*

M. G. WATKINS.

* Crowland Abbey and Peakirk.

MAGAZINES AND REVIEWS.

THE third number of *La Revue de Droit international* for the present year commences with an interesting paper on "The Vestiges of an International Law in China," by Dr. W. A. P. Martin, President of Tungwen College at Peking. The paper is, in fact, a French version of a memoir read by the author at the Congress of Orientalists held at Berlin in September 1881. Dr. Martin has been the Director, since 1868, of a college established by the Chinese Government at Peking for the education of the sons of mandarins who contemplate an administrative and diplomatic career, where they may study the languages and sciences of Europe in Chinese translations of the best European works. The modern empire of China, which may be said to date from the third century before the Christian era, was established upon the ruins of a more ancient system, under which the Chinese territory was distributed among a group of ten principal States, connected together by a certain feudal dependence on a common Sovereign, to whom they rendered homage under the title of Tien-Tzeu, or Son of Heaven. This feudal organisation was gradually replaced by a confederation of independent principalities recognising a nominal suzerain; and such an order of things, which lasted down to the third century before the Christian era, gave rise to relations of war, as well as of peace, between the various members of the confederation, whose intercourse came gradually to be regulated by a system of rules analogous to an international code. The great "holocaust of books" which the conqueror Chi-Hoangti, "the first of autocratic Sovereigns," effected in the middle of the third century before Christ has destroyed all official records of these rules; but traces of them are to be found in the writings of Confucius and of Mencius, and in philosophic works of the fifth century before Christ, as well as in the "Tcheo-li," or book of rites of the dynasty of Tcheo. This latter work, which dates from the eleventh century before Christ, and was compiled under imperial authority, throws considerable light on the darkness which would otherwise envelop the feudal period. The present Chinese empire was the creation of

"Chi-Hoangti," already mentioned, who, in the year 246 before Christ, established his supremacy over the other princes of the confederation. He built the Great Wall of China, and has handed down to his successors, who still bear the title of "Hoangti," a centralised system of government, built up on the ruins of the ancient feudal constitution, which is, apparently, as indestructible as his Great Wall. Prof. M. F. de Martens, of St. Petersburg, follows with a short article on "The Foundation of International Law," which is intended to form part of a treatise on International Law shortly to be published. Dr. Molengraaff, of Amsterdam, continues his article on "The Contract of Affreightment," which will be the subject of discussion at the approaching Conference of the Association for the Reform and Codification of the Law of Nations to be held at Liverpool on August 8 next. His views differ somewhat from those propounded by Mr. Richard Lowndes, of Liverpool, at the Cologne Conference of last year, as well as from the scheme drawn up at Sheffield in 1865 under the presidency of Sir Robert Phillimore, and known as "the Sheffield Rules." Mr. John Westlake, Q.C., continues his article on "La Doctrine anglaise" in matters of private international law. Prof. Louis Renault, of Paris, contributes a second article on "La Jurisprudence française" in matters of private international law. A notice follows of the proceedings of a Commission of the Institute of International Law, which met at Wiesbaden in September 1881 to consider, among other subjects, the application of the European Law of Nations to Oriental States, when Prof. M. F. de Martens, of St. Petersburg, presented a report. An important consultation of the members of the same Commission is also published on the subject of the principles of prize law laid down in a judgment delivered by the Supreme Court of the United States in 1863 in the case of the neutral barque *Springbok*. This consultation is signed by Profs. Arntz, of Brussels; Asser, of Amsterdam; Bulmerincq, of Heidelberg; Gessner, of Berlin; Hall, of Oxford; de Martens, of St. Petersburg; Pier-Antoni, of Naples; Renault, of Paris; Alberic Rolin, of Gand; and Sir Travers Twiss, Q.C., of Oxford. Prof. Saripolos, of Athens, has furnished a brief reply to Mr. F. S. Reilly's paper on the recent English legislation for the Island of Cyprus. Prof. Saripolos is a native of Cyprus, and he wishes to see the legislation of the kingdom of Greece introduced into his native island. A very interesting bibliography concludes the number, which notices more especially the *Rechts-Lexicon* of Prof. von Holtzendorf; the "Right of War and the Precursors of Grotius," by Dr. Ernest Nys, of Brussels; "International Maritime Law," by M. Perels, Counsel to the German Admiralty at Berlin; "Enemy's Property under a Neutral Flag," by Dr. de Boeck, of Paris; "The Extradition of Delinquents and the Right of Asylum," by Dr. von Holtzendorf; "Is it desirable that there should be an Identity of Criminal Law among the European States?" by Dr. Franz von Liszt; and "Austria-Hungary and Roumania on the Question of the Danube," by Prof. Ursiano Valérian, of Jassy. Other interesting recent publications by Italian and Swiss jurists complete the list.

In the *Revista Contemporanea* of June 15, Señor Jordana y Morera gives some bibliographical notes on the botany of Tetuan and its neighbourhood, extracting largely from Hooker and Maw, but stating that much still remains to be explored. A lyrical poem, by Campoamor, on the "Utility of Flowers," treats of them as the playthings of childhood, the souvenirs of love, and consolations in death. In his notes on the MSS. of the

"Archivo histórico nacional," Ubique has some remarks on the development of the Spanish language. In a document of A.D. 927 he finds some words still in use, a great advance in 1017, and the idiom almost fully formed in 1234. "The Last Sigh," by V. Tinajero, is a highly aesthetic, but not very intelligible, description of a painting of the Crucifixion by J. A. Casares. The "Juventud Dorada" of A. de Montaberry deals with the reigns of Charles VII. of France and Henry IV. of Spain. "The Expedition to Italy in 1849," by Gen. de Cordova, is drawing to its close with the flight of Garibaldi.

THE two first quarterly numbers of the *Revue de Linguistique* for the current year contain some interesting articles. Padre F. Fita begins the publication of lib. iv. of the *Codex Calixtinus* of Compostella. A valuable study of the Gascon dialect of Bayonne from the archives of the town is by M. E. Ducérs. M. V. Henry concludes his Afghan studies. Prof. J. Vinson contributes a lecture on the French East Indies and on Indian studies in 1880-81, in addition to papers on agglutination and on the American languages; while L. Adam, in a paper on "La Linguistique et la Doctrine de l'Evolution," asserts that the development of language forms no exception to the theory.

THE present number of the *American Antiquarian and Oriental Journal* has an article by A. W. Williamson on the "Dakota Languages and their Relations to Other Languages," in which he points out that, both physically and in language, the Dakotas approach much more nearly the Indo-European type than do the other Indians, from whom in the structure of their language they are widely separated. Mr. John Campbell compares, with illustrations, the lately discovered Hittite characters with those used by the Davenport mound builders. Another usefully illustrated article is that on a "Find of Ceremonial Axes in a Florida Mound," by A. E. Douglas. The editor has an essay on "Ancient Temple Architecture," also illustrated.

THE THIRD PART OF THE SUNDERLAND SALE.

THERE is no lover of books whose mind must not fill with wonder at the sustained splendour of the riches displayed by this Catalogue; it must also fill with dismay at the scattering to the four winds of a collection whose chief value consists in the completeness of its stores on special authors, or special epochs of bibliography. Of the great classical authors not only is each *ed. princeps* to be found, but every other early or curious or beautiful edition. Thus, there are more than forty *Martials*, all dating before 1700, and six of them before 1480. There are fifty-five *Juvenals* (most of them with *Persius*), nine of them before 1480, and many curious and beautiful, either for binding, or for material (a Lyons counterfeit on vellum). There are first editions of some thirty classics, many of them of extreme beauty and rarity; there are ten splendid books printed on vellum; and, in addition to these curiosities, there are large and curious materials, not only for French history, as the compiler observes, but for Italian (chiefly between Nos. 5532 and 5587), Turkish, Spanish (6202-23), and American history. Many forgotten histories, travels, and reflections will meet the eye of the specialist on these subjects all through the Catalogue. The editions of Horace (6352-533) are a library in themselves, and contain all sorts of curiosities; nowhere could the bibliophile better compare the varieties of type in the splendid old Italian presses of the fifteenth century. But there are also Spanish and French editions, such as the vellum

copy from Osen, and the best old English, such as those of Pine and Foulis.

Any attempt at enumerating the treasures is so idle that one turns from the task with a feeling of curiosity as to where money can be found to give fair prices for such a collection. I will add a few words on the most interesting Greek types indicated in the part before us. First in interest is, doubtless, the great Florentine Homer of 1488, a book in itself beautiful, and printed in the most charming of Greek types, containing, moreover, all the extant poems ascribed to Homer. However valuable, it can hardly be described as *very rare*, for Brunet says forty copies (!) were known in England and elsewhere. One hears of three in the Eton Library, Lord Spencer has one, Lord Cowper has one, and there was one (a poor copy) lately at Mr. Quaritch's, for which £100 was asked. But this book, together with the very rare *Batrachomyomachia* in red and black printing, the Milan *Isocrates* of 1493, and the Florentine Lucian of 1496, affords specimens of what Greek printing was before it was ruined by Aldus. Of these books the Lucian is one of the most splendid copies of any classic I ever saw, but the type approaches the Aldine type, and is quite inferior to the *Isocrates*. The *Batrachomyomachia* (1486) is by far the rarest, with a beautiful type, but very rude printing. This is the first Greek classic ever printed; the first Greek book is also in the list, Lascaris' Grammar of 1476. The type of this book is very like that of the Florentine Homer. Even more interesting in the history of Greek printing are the editions of Lactantius and Macrobius in the present volume. The Lactantius of Subiaco in 1465 is the first book honestly using Greek types, the rude attempts in Fust and Schoeffer's *Cicero de Officiis* being unworthy of notice. The printers Sweynheym and Pannartz seem not to have had the types ready till the first ten leaves were printed, as is pointed out for the first time by Mr. Lawler here. They shortly after quarrelled with the monks, and removed to Rome, where they brought out new editions of Lactantius in 1468 and 1470. The latter (like the Aulus Gellius of 1469) shows Greek type in the quotations; but the Lactantius of 1468 ought to prove whether the printers did, or did not, carry their type of 1465 with them. The next earliest use of Greek type is the Venetian Lactantius of Adam in 1471, and then the Macrobius (1472) of Nic. Jenson. All these books are in the Catalogue, so that the *whole history of the incunabula of Greek printing is contained in the books of this section of the Sunderland Library*. To have these documents together is of inestimable value; it is earnestly to be hoped that some rich collector will endeavour to acquire them all.

The small number of titles under the heading Marlborough suggests that the books of interest concerning the great Duke have been very properly retained in Blenheim Palace.

J. P. MAHAFFY.

THE ASHBURNHAM MS. OF THE YORK MYSTERY PLAYS.

WE are glad to hear that Lord Ashburnham has at length consented to the publication of his unique fifteenth-century MS. of the York Mysteries, which has never been printed, though its existence has long been known. With much liberality, he has placed it in the hands of Miss Toulmin Smith, who is preparing to edit the whole, with notes and a short introduction, the Delegates of the Clarendon Press having agreed to publish the volume.

The collection is an important addition to our early drama; it contains forty-eight plays—more than are found in any of the other three great collections, which have, Coventry

Plays forty-three, Towneley Mysteries thirty-two, and Chester Mysteries twenty-four plays. The subjects of the first eleven York pieces are taken from the Old Testament, as far as the flight of the Israelites and the drowning of Pharaoh in the Red Sea; the remainder are taken from the New Testament, the Gospel of Nicodemus, and some of the Marian legends. The Biblical narrative is closely followed in many parts. The handwriting is that of about 1450, but the composition and other facts point to an earlier date for the plays. They comprise several interesting varieties of metre—among the rest, some fine alliterative rhyming verse. The volume was, in all likelihood, the official "register" of the plays belonging to the Corporation of York, whose duty it was to assign the performance of the plays to the different crafts. We know from Drake, and from the evidence of the volume itself, which must have been in active use after 1553, that alterations were sometimes made by the performers, as well as revision of the text to suit later taste. Some interesting points arise as to the authorship of the plays. On comparison with the Towneley Mysteries, also a Yorkshire collection, and written in the same Northern dialect, four or five of the plays are found to be not only parallel in subject, but to be identical in long passages and scenes; in fact, they are the same plays with additions or omissions. The York collection being perfect, it may be expected that it will serve to correct the Towneley set—many of the plays in which are imperfect, and one, at least, of which seems to be displaced in order—as well as to supply useful variations in readings for the parallel plays. Not the least interesting feature of the MS. is that it supplies the score for the music sung by the angels, recurring in the play on the vision of our Lady to St. Thomas, probably one of the earliest specimens of the use of music in the English drama.

The MS. single play of this collection (the Scriveners', on the incredulity of St. Thomas) which has been printed, first by Croft in 1797, and reprinted by the Camden Society in 1858, appears to have been an actors' copy. It is a separate MS., lately belonging to Dr. Sykes, of Doncaster. The text agrees with that of the York play.

CORRESPONDENCE.

WAS ROGER OF MONTGOMERY AT SENLAC?

Somerleaze, Wells: June 21, 1882.

The letter of Mr. Howorth, whom it was not hard to spy out under the signature "H.," is so specially courteous and kind to myself personally that I cannot help taking up my pen again, if only to thank him. And, having taken it up, I may as well make one or two more remarks on the subject of controversy. That subject is indeed one about which one might dispute for ever, as neither side brings forward any evidence unknown to the other. The whole matter turns on the degree of trust to be put in this or that witness. But there are one or two points on which I venture to think that Mr. Howorth would look at things differently, if he had lived as long and as familiarly with the witnesses as I have.

I must decline Mr. Howorth's appeal to Sir Thomas Hardy. No one did better service to the study of English history than Sir Thomas Hardy did in his own line. But his line was the history of the books themselves, not the appraising of the matter which they contained. His estimates of the different authors in his Catalogue have always seemed to me singularly weak. Put a book into the hands, I will not say of Dr. Stubbs, who stands by himself, but of Dr. Luard or the late Mr. Dimock, and you get a different result. They understood their authors. Sir Thomas Hardy did not.

Invention is the last thing with which to charge Master Wace—least of all in his narrative of the battle. It is the central piece of his work, to which everything else is subordinate. It is done with the utmost care; while he gave far less heed to some of the later parts of his story. His account of the war between William and Rufus and Helias is full of error. It came too near to the time of his own birth for him to know or care much about it. But his story of the battle will stand testing. Above all, contrary to what Mr. Howorth suggests, it will stand testing in the most purely English matters. I will mention only three examples out of many. I pointed out long ago (*Norman Conquest*, vol. iii. p. 425) that Wace's list of shires from which men came to Senlac

(12848 Pluquet), which at first sight reads like names set down at random, proves to be drawn up with the minutest geographical and political accuracy. Again (12970), Wace makes Harold ride round his men to marshal them, and then get down from his horse for the actual fighting. That is to say, Wace describes an English army and its commander as acting according to the English tactics of that day. This is in marked contrast to Snorro, who describes the English army at Stamfordbridge after the pattern of an English army of his own day. Again it is from Wace (13119, 13194) that we learn the English war-cries—"Holy Cross," "God Almighty," "Out, out!" The first of the three has the force of an undesigned coincidence. Why should the English cry "Holy Cross"? In honour, no doubt, as I pointed out long ago, of their King's church of the Holy Cross at Waltham, and of the relic which was the special object of his reverence. When a man has given, as I have done, a large part of his life to a subject and its authorities, all these little points have a force and a meaning for him, which they perhaps may not have for those who casually drop in upon them, like Sir Thomas Hardy and Mr. Howorth. Instead of giving in to Mr. Howorth as to the amount of trust to be placed in Wace, I am more inclined, now that I have turned again to these instances of minute accuracy, to withdraw a censure of my own. I am now half tempted to believe that William Fitz-Osbern's horse was, for some cause or other, "all covered with iron," though so to cover horses was certainly not the usual fashion of his time.

Mr. Howorth says that he does not know how I "arrived at the conclusion" that Roger of Montgomery's sons had not reached manhood in 1066. I told him my chief bit of evidence before. Orderic (532 D) records that Robert of Bellême was knighted in 1073 on William's march to Le Mans. How old was he? Henry the First was dubbed to rider (Chron. Patrib. 1086) at the age of eighteen. Fifteen years after Robert's dubbing, he still figures (Chron. Patrib. 1088) among "cnihtas," and William of Malmesbury (v. 306), clearly with the Chronicle before him, applies the word "juventus" to him and his comrades. Now both the English and the Latin words are laxly used, and I would not build too much upon them. Still, when a man is knighted in 1073, when he is still classed among the "juventus," even in the very widest sense, in 1088, I cannot believe that his younger brother was old enough for a high command in 1066. Mr. Howorth remarks, with great truth, that Roger of Poitou was a married man before 1085. I cannot think that this proves that he had reached the age of generalship or even of soldiery nineteen years earlier. I can believe that the United States army contains many officers who are now married men, but who would not have been thought old enough for great commands in the days of Grant and Lee.

Mr. Howorth points out, what is certainly remarkable, and what must have struck most students of Domesday, that Roger of Poitou appears as holding, or rather as having held, a vast estate, while his brothers hold little or nothing. Mr. Howorth infers, very justly, that this must have been the reward of some special service or merit. But he further infers that this service must have been rendered in the warfare of 1066-70. He infers this because no special service of Roger's is recorded at any time. I cannot follow this argument. It seems to run thus:—"Roger must have done some special service; but we have no record what the service was; therefore it must have been done on Senlac or at York." It seems to me that I should have just as much right to argue that the unrecorded service must have

been done at Gerbevin or Ste. Susanne. Domesday does now and then give the reason for a particular grant; but this is not the usual practice of the great record. I wish it had been.

Mr. Howorth still has not got his head quite clear of the nightmare of Battle Abbey Rolls. He must learn to take in that Battle Abbey Rolls are of exactly the same value as the story of Jack the Giant-killer or the tales in Sir Bernard Burke's Peerage. They are not merely "most corrupt and most sophisticated;" they are sheer inventions. They are not even "subordinate evidence of tradition and general reputation." They were devised simply to gratify family vanity and nothing else. In the Battle roll printed in Duchesne, Roger of Montgomery is left out; but so are a good many other of the chief men whom we know to have been there. In a mere list of surnames—a fashion very unlike the eleventh century—it is, as I said before, not easy to see whether the real men are there or not. But if it is hard to find Roger of Montgomery, it is also hard to find Ralph of Wader, William Fitz-Osbern, William Malet, Ralph of Tocsny; it is hard to find Taillefer himself, who would certainly find a place in any list drawn up in Virginia. It may be that Walter Giffard lurks under "Lonquale," and Robert Count of Mortain under "Mortmaine." They are not there in any more intelligible shape. The reason is plain. The families of the great men of the Conquest were mostly extinct or had vanished from England long before the time of the forgery. They had no one to plead for them. But Boteler, Fitz-browne, and Taverner wished to be put in, and they doubtless found arguments which were very convincing to those who had to put them in or not.

It is just the same with Benoît of Ste. More. Mr. Howorth talks of his "graphic details" of the battle. But his account is very short, and greatly lacking in detail, when compared with that of Wace. Naturally enough; it was not his period, and it was Wace's. In his account I do not see Roger of Montgomery. But then, to mention two names only out of many, I do not see Robert Count of Mortain or Odo Bishop of Bayeux.

The matter really stands where it did. Is the narrative of Wace, detailed and probable in itself, set aside by the absence of Roger's name from the list given by William of Poitiers? I have nothing further to say on this head, nothing further to say about the place in Orderic, where I still believe that one Roger has got in instead of another. But I must again thank Mr. Howorth for his remarkable courtesy and fairness, as also for the suggestion at the end of his letter which is at least kindly meant.

EDWARD A. FREEMAN.

THE ONLY ENGLISH PROCLAMATION OF HENRY III., OCTOBER 18, 1258.

London: June 21, 1882.

In Prof. Skeat's second paper upon the discovery of the Oxfordshire copy of this proclamation (ACADEMY, May 13, p. 339) he says:—"The chief gain is the correction of *inoge* for *moge* as printed by Mr. Ellis . . . probably this fine line may be detected in H. [the Huntingdonshire copy preserved at the Record Office, patent rolls 43 Henry III.], now that we know we are to look for it."

This refers to the last word of the proclamation, which I, in common with all other copyists, had read "*moge*" (Italic *g* representing the Saxon letter for which "*g*" is misprinted in Prof. Skeat's article). This word had occasioned me much difficulty, and I was very glad to find that the Oxfordshire copy read "*inoge*." Acting, then, on Prof. Skeat's suggestion, I went to the Record Office on June 19, and inspected

the original. On a first glance I could see no sign of the fine stroke distinguishing "*in*" from "*m*;" but on more attentive examination I saw a kind of worn groove in the parchment, and, on applying a magnifying glass, I saw that scattered through this groove were a series of dots, very small, and at sensible distances apart, evidently the remnants of the fine stroke. On comparing it with other instances of "*i*" throughout the proclamation, I found the stroke of precisely the same shape and thickness, and the colour of the ink also the same—that is, apparently of a redder brown than the rest of the proclamation, as if all these fine strokes had been added afterwards. But this may be due only to the extreme thinness of these strokes. The reading "*inoge*" may therefore be considered established. ALEXANDER J. ELLIS.

THE SUMERIAN AND ACCADIAN DIALECTS.

London: June 24, 1882.

As I was one of the first to whom Mr. Theo. G. Pinches, of the British Museum, communicated his discovery of important tablets showing the co-existence of the Sumerian and Accadian dialects in the pre-Semitic cuneiform texts, will you allow me to state here that as early as May 1880 Mr. Pinches, with the object of helping me in my comparative studies of the early writing of China and the pre-cuneiform characters of Babylonia, gave me, as proof of his discovery, two large pages, which I still have, containing the decipherment of the fragments K. 4319, K. 4604, afterwards (November 3, 1880) published in the *Nachrichten* of Göttingen by Dr. Paul Haupt?

Some scholars have been led to doubt the genuineness of these languages by reason of the play on polyphons and ideograms in which the Assyrian scribes indulged in their transcriptions of old texts in order to give satisfaction to their proud Semitic nationality and augment the mysterious importance and sacredness of these early texts.

These doubts, which have been useful in the progress of decipherment, were possible several years ago—in face of the too hasty conclusions drawn by some students of Accadian; but they cannot be maintained at the present day. The real existence of the two leading non-Semitic dialects of Babylonia, as well as the existence of several other local dialects, is now no longer a matter of hypothesis, but a real certainty.

Numerous grammatical tablets giving in Assyrian the analysis and explanation of every element of the Accadian text; trilingual tablets in three columns containing the equivalent words in Sumerian, Accadian, and Assyrian; tablets exhibiting the phonetic and regular differences of pronunciation between the Sumerian and Accadian words; lists of names of deities in the several dialects, each called by his proper name; besides the many proofs of various kinds given by the specialists since the beginning of these studies—all form a strong array of convincing testimony which cannot be misunderstood.

To those who maintain their doubts, and refuse to yield to such clear evidence, may be applied the words, *Oculos habent et non vident*.

TERRIEN DE LA COUPERIE.

A GARIBALDI IN THE EIGHTH CENTURY.

Glasgow: June 23, 1882.

A very early occurrence of the name Garibaldi is in a document printed by Bluhme and Carl Meyer in their *Sprache und Sprachdenkmäler der Langobarden*, p. 206. This document is dated 757, and a Garipald is witness. Paul Warnefrid (Paulus Diaconus) also mentions a *Garipaldum Taurinatum ducem*, iv. 52. In

v. 33 there is another Garibaldi. The Teutonic etymon of the name is obvious.

JAMES MORISON.

GABRIEL PEIGNOT'S WORKS.

Birmingham: June 24, 1882.

Mr. Krebs will be glad to learn that another large collection of the works of this famous French bibliographer exists. I have collected fifty-three separate works—nearly all the separate issues; I believe that several of the others (to make up the ninety-six) are articles contributed to periodicals which cannot be procured now. It may further interest Mr. Krebs to know that I have 100 autograph letters of Peignot which have been published; and sixty-three which have not been published, and which were addressed to "M. Baulmont, Contrôleur des Postes à Vesoul" during the years 1816–12.

SAM. TIMMINS.

"THE MARTYRDOM OF MADELINE."

London: June 20, 1882.

A man who is Quixotic enough to attack windmills must expect summary and clumsy treatment. My windmills are, as everybody knows, the English journals of society and criticism—in the present instance, I regret to say, the ACADEMY. One of your miller's-men, whose name is unfamiliar to me, has loosed the big wheel to unsettle me—a *propos* of *The Martyrdom of Madeline*; but I hope that the miller-in-chief, who has always seemed to be good-natured enough, will allow me a few words of protestation.

Now, I am not going to defend my novel as a work of art against any mere miller's man that ever, in coat or cassock, cast dust into the people's eyes. The public will read my work and form its own opinion—the generous perceiving, perhaps, how difficult was the adequate illustration of my theme in a story meant for popular circulation in England. But your reviewer, because he dislikes my big-eyed heroine, and sympathises with certain of my foes, roundly accuses me of Charlatanism, applying that loose word, if I understand him rightly, not merely to my last work, but to my writings in general. Such a charge, indeed, concerns rather the secret motives of a man than his special inspiration; and, much as your reviewer may distrust my motives, he should at least be accurate in his descriptions of my performances. He accuses me, in the first place, of attacking my "old friends the fleshly poets." Who are the fleshly poets, so-called? If your reviewer refers to Mr. Swinburne, to Mr. Morris, to Mr. Rossetti, and to those whom I once classed as their disciples, I beg leave to re-assert (in addition to the disclaimer in my Preface) that my satire concerns not *them*, though it may, I suppose, have a certain retrospective application to writings which were merely a phase of their genius. Mr. Swinburne has long left the pastoral region shepherded by the impeccable Gautier; he has risen to heights of clear and beautiful purpose, where I gladly do homage to him. Mr. Morris may be passed by without a word; he needs no apology of mine. Mr. Rossetti, I freely admit now, never was a fleshly poet at all; never, at any rate, fed upon the poisonous honey of French art. Who, then, remains to complain of misinterpretation? If your reviewer had said that I satirised Gautier and his school of pseudo-aesthetics, and their possible pupils in this country, he would have been within his right. Then, again, your reviewer complains of the severity of my attack on society journalists. He thinks it "Pharisaic." Surely only the most reckless of miller's men would treat Pharisaism and Charlatanism as interchangeable terms? My attack was either Pharisaic and mistaken, or Charlatanish and in-

sincere—either designation might have suited your reviewer; but, in true windmill-compelling fashion, he must clutch at both.

In reference to the charge of personality, I should like to tell you a little parable. Once upon a time, there came to a wild village "out west" a quiet individual of studious tastes. His unsocial ways annoyed the original denizens of the place. Their annoyance presently took the shape of strong language, then of stones and other dangerous missiles. They disturbed the recluse's rest with hideous howling, they battered down his door, they broke his windows, they popped at his house with their revolvers. One day he lost his temper, and fired a shot out of his window in return. That afternoon there was a meeting at the local "bar," when one of the ringleaders, virtuously indignant, exclaimed, "What's to be done neow, with that dern'd stranger? He never understood sarcasm, and neow he's clean outside civilisation—he's nick'd Long Jim in the heel!"

The parable would be even more appropriate if the stranger, instead of firing a shot, had simply published an exact description of the amenities practised in the village, accompanying it, perhaps, with a pen-and-ink sketch of his chief assailants. This, at any rate, is just what I have done. After suffering a long literary persecution, after being treated to all the amenities of civilised criticism, I have simply put on permanent record the precise condition of matters journalistic. And so I don't understand sarcasm, and am outside the pale of your reviewer's civilisation.

Perhaps, if I were a Charlatan indeed, I should have let the windmills alone; for no honest man was ever truly victorious over any one of them. But, though rudely assaulted, and even unseated, I shall at least have published a description of these monsters of mechanism, which grind no corn and make hideous the fair landscape of literature. I am not their only victim. I am not the only man of letters who, smarting under injustice and indignant at wrongdoing, has been called a Charlatan and a Pharisee. But the truth is great and will prevail, though Don Quixote tumbles in the mud.

One word more. Your reviewer insinuates (there is no mistaking his innuendo) that a certain character in my story is a shadow-picture of the late Mr. Dante Rossetti. To show the injustice of this supposition, I will simply ask your readers to compare the lineaments of my Blanco Serena, a society-hunting, worldly minded, insincere, but good-humoured, fashionable painter, with the literary image of Mr. Rossetti a solitude-loving, unworldly, thoroughly sincere and earnest, if sometimes saturnine, man of genius, in revolt against society. The blundering of windmill-criticism could surely go no further. I wish to have no mistake on this, to me, very solemn matter. What I wrote of Mr. Rossetti, ten years ago, stands. What I wrote of Mr. Rossetti in the inscription of *God and the Man* also stands. Time brings about its revenges. Can the least acute observer of literature have failed to notice that the so-called fleshly school, in proportion as it has grown saner, purer, and more truly impassioned in the cause of humanity, has lost its hold upon the so-called fleshly public—even on the dapper master-millers and miller's men of the journals of nepotism and malignity? Certain of our critics said to certain of our poets—"Go that way; there lies the short cut to immortality!" But the poets, after going a few paces, paused, recognising, as only true poets can recognise, the easy descent to Acheron. How strange it would be, after all, if we, the so-called Pharisees of ten years ago, should find ourselves called upon, in the end, to defend these very poets against their own critics, against society, against the world!

Stranger things have happened. Ishmael, after all, is close akin to Esau; and I can say for my own part that not even the dread of the brutal, blundering windmills would prevent me from championing Esau, if ever I should find the smooth hands of Jacob raised to destroy him.

ROBERT BUCHANAN.

Oxford: June 28, 1882.

Mr. Blanco Serena, while parodying the opinions of one artist, painted the *Nocturnes* of another. I, therefore, carefully qualified my identification by the words "if we mistake not." I am now happy to hear that I was mistaken, and accept with deference the author's disclaimer. My other remarks I did not qualify, nor can I do so now—unless it be my infelicitous allusion to the Higher Charlatanism.

THE REVIEWER.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, July 3, 4 p.m. Asiatic: "The Buddhist Caves of Afghanistan," and "The Identification of a Sculptured Top with Sanchi," by Mr. W. Simpson; "Some Observations on Chinese Written Law," by Mr. Christopher Gardner.

2 p.m. Royal Institution: General Monthly Meeting. 7.30 p.m. Aristotelian: Election of Officers; Discussion: "Subject and Object."

WEDNESDAY, July 5, 7 p.m. Entomological. 8 p.m. National Indian Association: "High Education in India," by Mr. Roper Lethbridge.

FRIDAY, July 7, 8 p.m. Browning: Special Meeting; Election of Officers.

SCIENCE.

SOME DICTIONARIES AND GRAMMARS.

Simplified Grammar of Hindustani, Persian, and Arabic. By E. H. Palmer. (Trübner.) Messrs. Trübner's idea of a collection of short Grammars which shall set forth in the simplest and clearest manner the construction of the principal languages of the world will probably result in a very useful grammatical cyclopaedia. To those who wish to gain a rapid insight into the principal characteristics of inflection and syntax in a good many languages, without intending to study further, these short Grammars will be invaluable. They are treated in the true principle of merely explaining the actual inflections, &c., without attempting to make them conform to any supposed universal grammar, or to assimilate them to the stereotyped arrangement of Greek or Latin grammars. They require, however, a certain linguistic faculty to appreciate them, and we are inclined to think they are too short for a beginner to find his way by them. A Grammar, to our thinking, needs many qualities before conciseness, and you may use as many words as you like provided you make the learner really understand the principles you are setting forth. The beginner might, perhaps, get on fairly with the Arabic grammar in the present volume, in which, by-the-by, the treatment of the root-words (pp. 59 ff.) is admirable, but we doubt whether he would make much of the Persian or, still more, the Hindustani verb. Twenty pages is too little for Hindustani, we think, simple as it is. Experience, however, alone will test this; and meanwhile we can cordially recommend Mr. Palmer's little volume to those who want a good outline of the grammatical structure of three leading Eastern tongues. Their union in one volume is, we conclude, due to Indian Civil Service arrangements.

An English-Persian Dictionary. Compiled from original sources by Arthur N. Wollaston. (Allen.) Mr. Wollaston takes the reader of his Preface entirely into his confidence, and gives him quite a pedigree of the dictionary, which passed through a good many phases before it came to the present state, and now appears to consist of a vocabulary written by Mr. Munro

Binning enlarged and improved by Mr. Wollaston, with the assistance of Col. Ross and Mirza Bakir. It does not, however, matter much by what process the dictionary arrived at its present form. A good English-Persian dictionary was certainly needed, and the only question is whether Mr. Wollaston's is good. We believe it will be found extremely serviceable. It contains a very large number of words, including modern scientific terms, names of diseases, implements, &c., and a vocabulary of proper names. It is not an elaborately exact dictionary like that which Dr. Badger has so successfully compiled for Arabic. Several Persian equivalents are commonly given for one English word, without any indication as to which is preferably to be used. These equivalents, however, are not always synonymous, and have shades of meaning which ought to be distinguished. We must also regret that no distinguishing mark has been added to show which are Persian and which Arabic words. An initial letter or asterisk prefixed to all Arabic words would not have added seriously to the bulk of the work, and would unquestionably have increased its value. Nevertheless, it will prove very useful; and we may hope that eventually Mr. Wollaston may be able himself to add to and improve it to the high standard he originally set for himself, and which pressure of other work alone has temporarily postponed.

A Manual of the Malay Language. By M. E. Maxwell. (Trübner.) This is an elementary work with copious exercises on the Ollendorffian system, and is likely to prove a useful introduction to the Malay of the Straits. It is a pity, however, that some specimens of Malay written in the Arabic-Persian alphabet as adopted by the Malays have not been given, as there is no likelihood that such bitter Muhammadans will soon adopt the Roman character used in this book, though it is largely in use in Java. This is not a scientific work, and the author is very emphatic on the uselessness of such Grammars as Marsden's and Crawford's for beginners; but, considering the object he had in view, it is a pity that he should have filled some forty pages with "An Introductory Sketch of the Sanskrit Element in Malay," as is ostentatiously announced on the title-page. It would, for practical purposes, be quite enough to point out that the earliest Malay civilisation is clearly Hindu, and that this has been followed and partly set aside by Muhammadan influences. But the Hindu influences that effected the earliest Malay civilisation were not purely Sanskrit, but clearly came from Southern India, as the use of the name *Kling* by the Malays proves, as well as the existence of a number of Dravidian words in Malay, &c. Some labour spent on W. von Humboldt's great work on the Kawi language, and on Prof. Kern's recent most valuable works on the same, would be far more useful than the collections of words such as are given here, often with spurious and fictitious equivalents in Sanskrit. Such imaginary words as *mas* (as = gold, p. 15), and *cinna* (as = tin, p. 15), and *sodaryo*, show clearly that the author has hastily used one of those pitfalls for the unwary—a romanised Sanskrit vocabulary. He quotes also Hindustani; but how little that he gives can be trusted, is shown by his giving (p. 25) an American word "ananas," comparatively recently introduced into India, as Hindustani! The pineapple was introduced into India in the sixteenth century by the Portuguese. A really accurate list of the foreign elements in Malay would be of much value; but hastily compiled lists in which imagination has a large part can only mislead. It is due, however, to the author to say that much of this questionable matter has been taken by him from others, such as the Abbé Fayre.

A Lascari Dictionary. (W. H. Allen.) This is the fifth edition of a curious collection of nautical terms which are (or, rather, were) used by the "Lascars," or sailors of different Oriental races to be seen on India ships. It was originally compiled (in 1810) by a Capt. Roebuck, and is now reprinted by an ex-missionary who has had much to do with Lascars. These terms are of some interest as a specimen of one of the numerous Hindustani *lingua franca*s of Indians as opposed to the literary dialect. Another similar variety is the very mongrel Dakhni, or native soldiers' language, which has become necessary in South India and other parts owing to the variety of races to be found in Indian regiments. The Lascars are Indians, Africans, Arabs, Burmese, and even Malays, with a Chinaman here and there. This being the case, it would be well to give etymologies, which are wanting here. From a practical point of view, this vocabulary does not promise much. During the last few years, sailing ships have been almost entirely superseded by the Canal steamers well known to Anglo-Indians as "ditchers." The different English lines employ a large number of Indian Lascars, but the French and Dutch lines do not allow their splendid vessels to be defiled in this way. But this dictionary is for the sailors of sailing ships; and the terms used on board steamers are not to be found in it. Any officer of the Peninsular and Oriental Line could easily supply this want, which would bring the book down to modern times. As it is, it is full of old words which hardly any but the readers of nautical novels of a time long since past will ever meet with. The terms relating to the machinery of steamships should also be added; also the terms used by the Indian servants on board passenger ships. The Lascars form a useful, if filthy and repulsive, class of men, and a practical dictionary of their *lingua franca* would be of use to many.

MAJOR WALTER GOWAN has published (Kegan Paul, Trench and Co.) an English version of Ivánoff's *Russian Grammar*. It is stated by the translator in the Preface that, having resolved to supply English students with a thoroughly practical Grammar of the Russian language, it struck him that to adapt a work by some recognised Russian grammarian—it may here be mentioned that Ivánoff's book has gone through sixteen editions—to the special needs of English students would be a task at once easier of fulfilment and more likely to prove of service than the compilation of a technically original Grammar from the existing Russian and English sources that are available. We think he was quite right. Although Ivánoff writes as a Russian for Russians, his handling of the special difficulties of the syntax and grammar is as careful and delicate as if he were instructing foreigners. Take, for example, the treatment of mood aspects. Where the Russian grammarian does fail to supply some requirements of foreign students, such as the value of the letters and the peculiarities of the pronunciation, his translator fairly meets each deficiency. We are glad to see that Major Gowan has been at pains to mark by typographical devices the root as far as possible in each word, compound or simple.

A Dictionary of the Suahili Language. By Dr. Krapf. (Trübner.) A melancholy interest attaches to this valuable and long-expected work. In the words of Mr. Oust, who writes a short Introduction to it, "while a few sheets remained in the press, the venerable compiler fell on his last sleep." But the work of a lifetime was substantially completed, and a full and accurate dictionary of one of the most important of the Bantu languages of Southern Africa consequently now lies before the public. In compiling it Dr. Krapf made use of

materials furnished by his friend Dr. Rebmann; and this is in great measure the cause of the varying orthography which we find in it, and which, from a scientific point of view, cannot be otherwise than regrettable. For the Bantu scholar the purity of the Ki-suahili dialects spoken at Mombas and the neighbouring localities makes them superior to the dialect of Zanzibar, which has borrowed a large number of Arabic and other foreign words; though, for practical purposes, this foreign infusion is an advantage, as a translator, to use Dr. Krapf's own statement, has "the resource of being able to adopt at will an Arabic word when in difficulty for a proper expression in Ki suahili." The fullness of explanation every word in the dictionary has received throws a good deal of light on the manners, customs, beliefs, and superstitions of the natives. Thus, under *pinqa* a description is given of the ceremonies used by the *mganga*, or doctor, when trying to cure a patient; and under *mgalla* reference is made to the Galla legend that when God created man he called out first the Abba Lonni—i.e., the possessors of cows, or Gallas; then the Abba Shuffa—i.e., the possessors of clothes, or Suahili; and at last the Abba Zema—i.e., the possessors of hoes, or agricultural tribes. So, too, we learn, under *jami*, that to tread upon a mat is a sign of mourning; and under *chua* that "the Suahili believe that the sun sinks into a pool of frogs, others that he is drawn down by people in the Western Hemisphere; first boys pull, then old men, and last of all, the strong youths; the splash and rush of the water is prevented by the multitude of people drawing water to wash before prayers." In fact, the dictionary is more than a mere dictionary of words; it contains facts of the highest interest for the student of social life and savage mythology. When we remember that the Suahili belong to the same race as the Zulus it will be seen that a knowledge of their language and beliefs should have a special attraction for Englishmen. We must not omit to add that a brief sketch of Suahili grammar is prefixed to the dictionary.

MR. HALSLEY'S *Etymology of Latin and Greek* (Boston, U.S.: Ginn and Heath) is composed of two very discordant elements. After a short Introduction, in which we are duly told that the original vowels were *a, i, u*, and that original *k* becomes *p*, we have a *résumé* of the views of "the new school," which overthrow both positions. Then we get 140 pages devoted to an abstract of the word-groups in Ourlus' *Grundzüge*, and, among other things, learn that "some" connect *porto* with *fero*. After this the new school again asserts itself, at least as far as the vowels are concerned, and in the remaining twenty pages Ourlus' roots are partially restated on Brugman's principles. The two chapters giving the modern views, the author tells us in his Preface, are condensed from two articles by Prof. Maurice Bloomfield in the *American Journal of Philology*. The body of the work was probably written before the appearance of these articles.

Chambers's Etymological Dictionary of the English Language. Edited by Andrew Findlater. (W. and R. Chambers.) This is an entirely new edition of a justly popular book. The careful revision to which it has been subjected has greatly increased its usefulness. The vocabulary is extensive, the pronunciation carefully marked, and the etymological portions fairly abreast with the latest developments of philological research.

Die Bilin-Sprache in Nordost-Afrika. By Leo Reinisch. (Vienna.) This is a work of considerable value, both for the Semitic scholar and the comparative philologist. It embodies the discovery of a new Semitic language. The Bilin of Bogos speak a dialect, which, like the

neighbouring Tigre, is clearly of Ethiopic or Gheez origin. At the same time it has peculiarities which make it particularly worthy of philological study. Thus, while the grammar is throughout Semitic, the grammatical forms for the most part being those of Gheez, the position of the genitive, which precedes its noun, as in Indo-European, stands in marked contrast to general Semitic usage. Dr. Reinisch's present work, he tells us, is only preliminary to a longer Grammar, accompanied with texts and dictionary, which is already in the press. He is also preparing for publication a translation into Bilin of the Gospel of St. Mark.

Gutiska. II.—De adjective in het Gotisch en hunne suffixen. Door Dr. J. H. Gallée. (Utrecht: O. H. E. Breijer.) Dr. Gallée has done good service to the English student by his interesting article on the Dutch language under the heading "Holland" in the *Encyclopaedia Britannica*; and we are glad to call attention to another of those scholarly contributions to a verification of what we really know of Gothic which he began in 1881. In the first number (noticed in the ACADEMY of March 12, 1881, p. 193) he treated of words whose gender or declension cannot be determined from the Gothic texts themselves; in the present number he deals with the adjectives and their suffixes, classifying the adjectives according to the suffixes, and tracing the suffixes as they appear in Sanskrit, Greek, Latin, &c. Many of the etymological observations which incidentally occur in the course of the investigation are striking and suggestive, and deserve the attention of students who may not be directly interested in the treatment of the main subject.

Trübner's Catalogue of Dictionaries and Grammars of the Principal Languages and Dialects of the World. Second Edition. (Trübner.) Mr. Trübner's long and well-known connexion with linguistic subjects has placed him in an exceptionally good position for compiling a Catalogue such as that before us. Mr. Trübner does not profess that the Catalogue is absolutely complete, but he is able to say with perfect justice that it provides students and booksellers with a book of ready reference to the titles of all those approved Grammars and Dictionaries that can be obtained without difficulty. All students are familiar with the vexation and loss of time that too often accompany the beginning of the study of any out-of-the-way tongue from the difficulty of discovering the best Grammars and Dictionaries relating to it. In the presence of Mr. Trübner's Catalogue this difficulty should disappear, and the student must be ambitious of travelling very far a-field indeed if he cannot find the objects of his search among the works on the upwards of five hundred languages and dialects described in its pages. The arrangement of the materials is good, the type is excellent, and the volume is of a handy size.

NOTES OF TRAVEL.

THE Chevalier Ernst von Hesse-Wartegg, whose book on Tunisia was reviewed in the ACADEMY of February 18, has just returned from a scientific journey through Mexico, New Mexico, and Arizona. He has brought back with him several hundred photographs on a large scale, and an interesting collection of arms, pottery, and stone implements, which are now on view in the map room of the Royal Geographical Society. We hope that his researches will throw light upon the origin and history of the so-called Pueblo Indians—a subject which is now being much discussed in America.

THE March part of the *Proceedings* of the Asiatic Society of Bengal (received by the last mail) has a valuable paper, together with a map, on "The Singpho-Kampti Country, or Neutral Ground

between India and China," by Mr. Charles H. Lepper. This gentleman has interested himself, during a long residence on the extreme frontier of Assam, in collecting information about the debateable ground between Assam and China, and about the tribes that inhabit it. During the past winter he made an excursion across the frontier, in company with a gentleman who possessed all the information available from the Chinese side, but whose name is withheld for political reasons. The geographical interest of this unknown country arises from the fact that it must contain the source of the Irrawaddy, for the hypothesis that would connect the Irrawaddy with the Sanpu, or Great River of Tibet, is absurd. The source of the Irrawaddy is reasonably inferred to lie in about the twenty-eighth degree of north latitude; whereas it has been ascertained that the Salwin, the sister river of Burmah, rises probably four degrees farther north, in the heart of the great plateau of Eastern Tibet. The political interest of this region is yet greater. Hence have come the tribes that overrun Assam in comparatively recent times, and by this way there has always lain a trade route between India and China. At the present time a gap of only eighty miles separates British from Chinese territory. This gap is chiefly occupied by two tribes—the Kamptis in the north, and the Singphos in the south. The latter speak a language akin to the Siamese, and pay tribute to nobody; the former recognise Burmese authority, though (curiously enough) their tribute to Mandalay has to pass across British territory. Both tribes belong to what may be called the Tibeto-Burmese family, which is non-Aryan; and both are described as unwarlike. For various reasons, Mr. Lepper is of opinion that the trade route of the future between India and China should pass southwards, through the country of the Singphos.

M. MIKLUKHO-MAKLAY is on his way home from Australia, and is expected to arrive in Russia about the beginning of August. After a stay of two months at home on private business, he intends returning to his station on the Island of Pelu, north-east of New Guinea, where he enjoys every facility for the prosecution of his scientific researches. These have reference to the anthropology and ethnology of the islands of the Pacific, especially New Guinea, as well as to the comparative anatomy of the animals indigenous to these regions. The records of his investigations are scattered over a number of MSS. and diaries, and he expects that at least two years will be required to arrange and digest them. He has projected an association, the object of which is to unite into one society all who take an interest in the progress of biological science in Australia. M. Miklukho-Maklay brings a part of his collection with him for presentation to the Russian Geographical Society.

SCIENCE NOTES.

Newly Discovered Remains of the Moa.—Some remains of the gigantic birds of New Zealand, remarkable for their perfect state of preservation, have been lately sent over to this country. They were obtained from a fissure-cavern which was exposed by a landslip near Lake Wakatipu, in Otago. Not only are the claws and the beak in excellent condition, but the skin is still adherent to some of the bones, and even the feathers are well preserved. Evidence derived from the moa-ovens and from Maori traditions tends to show that the great wingless birds were living in New Zealand during the human period; and such specimens as those lately discovered seem to prove that the extinction must be of very recent date. Prof. Owen has referred these remains to a new species

under the name of *Dinornis didulus*. Some specimens lately acquired by the British Museum were exhibited by Dr. H. Woodward at the last meeting of the Geological Society.

THE committee formed for the purpose of establishing a Darwin Memorial has now issued a public appeal for subscriptions. The chairman of the general committee is Mr. W. Spottiswoode; the treasurer is Mr. J. Evans; and the hon. secretaries are the Rev. T. G. Bonney and Mr. P. Edward Dove. It may be worth noticing that the following names are also to be found on the committee:—The Archbishops of Canterbury and York, the Bishop of Exeter, the Vice-Chancellor of Cambridge, the Principal of St. Andrew's, the Provost of Trinity, Dublin, the Master of Balliol, the Deans of Westminster, St. Paul's, and Christ Church, and Canons Farrar and Tristram.

THE Parkes Museum, first established at University College, London, in 1876, has now been incorporated under licence of the Board of Trade. It is stated to be probable that a new building may shortly be found for the museum in a more central position.

THE Belgian Government has obtained from the Chamber a credit of 96,000 frs. (£3,840) to found an astronomical observatory in connexion with the University of Liège. In contrast with the existing observatory at Brussels, whose chief work is research, this new one will be specially organised for the instruction of students in geodesy and geographical surveying.

The Botanical Atlas. By D. M'Alpine. Part I. (W. and A. K. Johnston.) The plan of this atlas is, by giving representatives of the leading forms of plant-life, to furnish a guide to the practical study of plants. Part I. contains plates of phanerogams, with full explanatory descriptions. As is usual in illustrated works on botany, the colouring seems a little overdone, but the drawing is probably accurate, and the analysis complete. Separate pictures or diagrams are given of the leaves, the inflorescence, the blossom as a whole, the blossom in section, the bracts, the sepals, the stamens, the pistil, and the fruit; also magnified sections of the seed, and plans of the blossom. Care is taken to indicate the arrangements of the plant for self- or cross-fertilisation, and for the diffusion of its seed, as first popularly described in this country by Sir John Lubbock. For instance, the two states of *Dianthus deltoides* (which is proterandrous) are shown. We have carefully tested the drawings and letterpress by specimens and by comparison of authorities, and believe them to be very correct; thus, the capsules of *Stellaria media* are drawn characteristically reflexed. But the glandular nature of the sepals in that plant is not indicated; and the plate in which it occurs is, perhaps, a little confused by the introduction of a nameless *Cerastium* as fig. 2. We should have liked a picture of the carpel of *Geranium robertianum*, as well as of the seed; the one is wrinkled, the other smooth. But we have found no other flaws, and shall watch the progress of Mr. M'Alpine's plan with great interest.

PHILOLOGY NOTES.

WE are able to give some more details about the proposal of the Society for the Promotion of Hellenic Studies to obtain a facsimile reproduction by photography of the Laurentian codex of Sophocles. Not only is this codex the best authority, on the whole, for the text, but the margin contains scholia of considerable value. From the palaeographic point of view, it is also interesting, as several different hands,

from the eleventh to the sixteenth or seventeenth century, were engaged upon it. Prof. Jebb, of Glasgow, has consented to write an Introduction on the critical value of the MS.; and Mr. E. Maunde Thompson, of the British Museum, will describe the details of its palaeography. Subscriptions (£6 each) will be received by Mr. G. A. Macmillan, 29 Bedford Street, Covent Garden.

THE twelfth volume of the *Archaeological Survey of India*, which has recently been issued, contains Mr. A. C. L. Carlisle's reports on his tours in the Central Doab and Gorakhpur in the years 1874-75 and 1875-76. It was then that he identified the site of Kapilavastu, the birthplace of Gautama Buddha.

THE announcements of Herr Teubner, of Leipzig, include a treatise on the structure of the Pindaric strophe, by Moritz Schmidt; *Alazon*, a contribution towards the study of ancient comedy, by Otto Biebeck, with a German translation of the "Miles Gloriosus," originally published in 1881; and the correspondence between August Boeckh and Carl Otfried Müller from 1818 to 1839.

THE American Bureau of Ethnology will shortly publish an Indian Vocabulary, compiled at the end of last century by Capt. William Preston.

THE Académie des Inscriptions has awarded the second prix Gobert to M. Godefroy for his Dictionary of Old French, now in course of publication.

M. MARTIN SCHWEISTAL has printed (Paris: Leroux) an essay upon the phonetic value of the Latin Alphabet, principally based upon the grammarians of the Imperial epoch.

AT a recent meeting of the Société nationale des Antiquaires de France, M. d'Arbois de Jubainville suggested an etymology of the word Galatians (*Γαλατῆς*), used by the Greeks for the Gauls after the invasion of 279 B.C. It is a transliteration of the Celtic adjective *galatios*, formed from the substantive *gala*, "courage"—in Old Irish, *galde* and *gal*. For the termination he compared *γαλατῆς*, meaning a Gaulish soldier, which comes from the Celtic adjective *galatios* (Old Irish *gaide*), itself formed from the name of a sort of javelin—the *gaisum* of Latin authors. At the same meeting M. Sacaze communicated several Latin inscriptions from the Pyrenees, containing dedications to Mithra, Abellion, and Baigorius or Baigorixus. The latter name he compared with the modern Bigorre, and found in it a Basque root meaning "red."

IN the new number of the *Journal of Philology* Dr. W. H. Thompson contributes some introductory remarks on the *Philebus*; Mr. E. Ellis, some emendations of the Greek anthology and the difficult fragment of Hermetianax given by Athenaeus; Mr. J. Masson, a criticism, at once appreciative and severe, of M. Guyau's *La Morale d'Epicure*; Mr. D. B. Monro, some further notes on Homeric subjects, and a short, but admirable and convincing, paper on some passages of the second book of the "Iliad;" Mr. Herbert Richards, a theory as to the original meaning of the words "tetralogy" and "trilogy;" Mr. J. H. Onions, some notes on Placidus and Nonius; Prof. Nettleship, some lexicographical and glossarial notes and conjectures; Mr. J. Oook Wilson, conjectures on the text of Aristotle and Theophrastus; Mr. H. A. J. Munro, some emendations of the *Agamemnon* and of Catullus; and Mr. W. H. Ramsay, some new, but not very interesting, inscriptions from Cilicia, Cappadocia, and Pontus. The whole number contains only 160 pages, and must be considered disappointingly short if compared with the extent of the journals on the same subject in Germany.

MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, May 25.)

THE REV. H. A. J. MUNRO, President, in the Chair.
—Dr. Kennedy read a paper upon Thucydides ii. 42, with special reference to the concluding words of the chapter. He specially insisted that *ἀξιῆς* must be rendered by some purely subjective word, such as "determination" or "expectation," and not by "glory." Of the entire chapter he gave the following free translation:—"I have dwelt at length on the character of our city for these reasons:—I wished not only to prove that people without any of the advantages resembling ours have not an equal stake with us in the present contest, but also to justify clearly by striking facts my eulogy of the men over whom I am now speaking. Its chief grounds are contained in what has been said already: the glories of our city which I extolled were conferred on her by the virtues of these men and of others like them: and there are few Greeks in whose praises word and deed would be shown so evenly balanced as in this case. In my opinion, the death of each now lying before us amply proves the worth of a man, whether it be the first indication or the final confirmation. For in favour of those whose conduct in other respects was less creditable, it is but just to put forward their bravery in war for their country's cause: they have cancelled evil by good, and the benefit of their public services has been greater than the harm of their private acts. No rich man among them became a coward from over-esteeming the prolonged enjoyment of his wealth: no poor man put off the hour of peril in the natural hope that even yet he might escape poverty and be rich. Such aims they embraced with less longing than the chastisement of their enemies; and, as they deemed this, moreover, the noblest of dangers, they frankly welcomed it, resolving, while they punished the foe, to let their aims stand over; trusting to hope for success in a future which they could not see, but for a work in a present which they did see minded to rely upon themselves. In that work they thought more of resistance even to the death than of safety by retreat: the word of shame they fled from, the brunt of action they personally bore, and in fortune's briefest crisis, full of high-wrought determination, free from dread, they passed away."
—Mr. Roby read a paper on points arising out of the *Gromaticæ Veteres*, of which the following is a summary: *Arcifinius*. The derivations which have been given of this word from *arcere fines* or *arcere vicinos* are all impossible. *Arcifinius ager* is land with wavy natural boundaries. So Balbus describes it (p. 98), *extremis generis sunt duo unum quod per rigorem observatur, alterum quod per flexus: rigor est quicquid inter duo signa veluti in modum lineæ perspicitur, per flexus quicquid secundum locorum naturam curvatur ut in agris arcifiniis solet*. Hence it is derived from *arcus* and *finis*. *Decumanus* is the name of a balk between centuries, normally running east and west. It has been the subject of wild speculations. But it must be derived from *decuma*, and must mean "of the tenth." The *centuria* was a square plot of land divided into *sugera*, two *ingera* forming an *heredium* or original allotment, and there being a hundred *heredia* in the century, which were not separated by balks, but only by marks erected by the proprietors. Measuring along a side after the tenth *heredium* comes a balk, *times*, which might have been called *lines decumanus* and then simply *decumanus*. Mr. Roby then controverted Mommsen's view of the difference between *ager uiridianus* and *ager colonianus* (*Corp. Inscr.* i. pp. 58, 59)—viz., that colonial land was divided into centuries by balks and given by lot and only to a relatively small number of persons, which was fixed by a law authorising the distribution: whereas *ager uiridianus* was divided into *saltus*, it was not given by lot and to all Roman citizens subject only to their willingness to receive it and the amount of distributable territory. Mommsen's seven instances of *uiritum diuinus ager* prove nothing, as he does not assert that *uiritum* cannot be applied to a colony, and in two of them, according to Livy (iv. 47, 48, v. 24), the distribution was colonial, which shows that Livy did not recognise the distinction. In *Pestus 1st aul. Epit. L. 373*, *uiritanus ager dicitur qui uirito populo distribuitur* (the only place where *uiritanus* is found) *populo* proves nothing. Nor does

Varro *R. R.* i. 10, *quattuor centuriæ coniunctæ appellatur in agris diuinis uirito publicæ saltus comparatur with territoria in saltibus assignata in the so-called libri coloniarum* (p. 211). The third place from *Siculus Flaccus*—*Diuisi et assignati agri non unius sunt condicionis; nam et diuiduntur sine assignatione et redduntur sine diuisione*. *diuiduntur ergo agri limitibus institutis per centurias*. *assignantur uirito nomenclibus*—may be translated freely "Divided and assigned lands are not all held on the same tenure. You may have a division of lands without their being assigned, and you may have a restoration of lands without their being divided (*cf. Grom. p. 162*). Division is the separation of land into centuries by regular balks, assignment is the appropriation of the land to individuals by name." Assignment and division are thus different things, and are not always found together. Assignment may be made without division (*Frontinus Grom.*, p. 4, *Siculus Flaccus*, p. 160, a passage which seems to have escaped Mommsen) and division without assignment (*cf. p. 163*). It may be added that *nominibus assignare*, to register the land in the proprietors' names, is opposed to *per centurias diuidere* as a different part of the same process. *uiritum diuidere* is not necessarily division to all the people, but merely to individuals of the body or number specified. Mr. Roby next criticised Mommsen's rendering of *Cic. Brut.* 86, 136 (*Corp. Inscr.* i. 77), *Sp. Thorius . . . qui agrum publicum uitiosa et inutili lege neotigali leuauit*, and his refusal to refer it to the *lex agraria* of which fragments in bronze are preserved at Naples and Vienna. *Applan B. C.* i. 27 gives the history of the public land after C. Gracchus. The Gracchi had prohibited the sale of the allotments and imposed a tax on the holders. Three laws followed. The first removed the prohibition of sale; the second put an end to any further allotments and allowed the holders of lands yet undistributed to retain them by paying a tax or rent, the revenues thence accruing to be distributed to the people in lieu of the lands. The third law removed the rent. *Applan* attributes the second law to *Ἀρόπριος Βόπριος*, probably a misreading of *Ἰόπριος*. The discrepancy which thus arises between *Oleoro* and *Applan* Mommsen would remove by translating the *Cicero* "*Sp. Thorius . . . who, by imposing a rent on the public land, relieved it from the faulty and impolitic law of the Gracchi*:" an impossible translation not justified by *Cic. Lael.* 20, § 72, where no ambiguity could arise. Mr. Roby finally criticised some remarks of Niebuhr's in his *Roman History*, ii. 140, on the tenure of public lands.—Mr. Jackson read a paper on Aristotle, *Politics*, i. 6. 1255 a 7 sqq.

BROWNING SOCIETY.—(Friday, June 23.)

F. J. FURNIVALL, Esq., in the Chair.—Prof. Hiram Corson read a paper on "Personality and Art as its Intermediate Agent." He began by touching on the importance of Browning's poetry, as embodying the deepest thought, the subtlest and most complex sentiment, and, above all, the most quickening spirituality of the age. Browning, though endowed with a powerful, subtle, and restless intellect, has made the strongest protest that has been made in these days against mere intellect. It is the human heart, that is, the intuitive side of man, with its hopes and its prophetic aspirations, as opposed to the analytic understanding, which is to him a subject of the deepest interest. He knows it is in the depths of the human heart that life's greatest secrets must be sought. Mrs. Browning, in the fifth book of "Aurora Leigh," says:—

"The growing drama . . .
May . . . take for a worthier stage the soul
itself,
Its shifting fancies and celestial lights,
With all its grand orchestral silences
To keep the pauses of the rhythmic sounds."

Browning's poetry is the fullest realisation of what is here expressed; he has taken for a stage the soul itself, and he has worked with a thought-and-passion capital greater than the combined one of the richest of his poetical contemporaries. And he has "thought nobly of the soul," and has treated it as, in its essence, above the fixed and law-bound system of things which we call Nature. "Mind is not matter, nor from matter, but above," he makes the Pope say, and the recognition and

acceptance of this must be the starting-point for every student of Browning. Paracelsus says:—"Truth is within ourselves, it takes no rise from outward things, whatever ye may believe . . . to know rather consists in opening out a way whence the imprisoned splendour may escape, than in effecting entry for a light supposed to be without." "The fair, fine trace of what was written once," it was the mission of Christ, it is the mission of all great personalities, to bring out into distinctness and vital glow. It is brought out by the attracting power of magnetic personalities. Perhaps the most comprehensive passage in Browning's poetry, expressive of his ideal of a complete man under the conditions of earth-life, is found in "Colombe's Birthday," act iv., where Valence says, "He gathers earth's whole good into his arms, standing, as man now, stately, strong, and wise, . . . and lead him at his grandest to the grave." Though, with Browning, the spiritual bearing of things is the all-in-all, the robustness of his nature, the fullness and splendid equilibrium of his life, protect him against an inarticulate mysticism. A cardinal idea in Browning's poetry is the regeneration of men through a personality who brings fresh stuff for them to mould, interpret, and prove right; whose life teaches them what life should be, what faith is, and loyalty, and simplicity. The intellect plays a secondary part. The quickening, regenerating power of personality is everywhere exhibited in Browning's poetry. It is emphasised in "Luria," and in the monologues of the Canon Caspascchi and Pompilia in "The Ring and the Book"; it shines out in "Colombe's Birthday," in "Saul," in "Sordello," and in all the love-poems. In "Balaustron" it may be said to be the leavening idea which the poet has introduced into the Greek play. An exalted magnetic personality is the chorus of Divinity, which, in the great drama of Humanity, guides and interprets the feelings and sympathies of other souls, and thus adjusts their attitudes towards the Divine. The stronger personality leads the weaker on by paths which the weaker knows not. Humility, in the Christian sense, means this fealty to the higher. Pride, in the Christian sense, is the closing of the doors of the soul to a great magnetic guest. If Browning's idea of the quickening, the rectification, of personality through a higher personality be fully comprehended, his idea of the great function of Art as an intermediate agency of personality will become plain. To emphasise this latter idea may be said to be the ultimate purpose of his masterpiece, "The Ring and the Book." "It is the glory and good of Art," says Browning at the close of this poem, "that Art remains the one way possible of speaking truth, to mouths like mine at least. . . . Art may tell a truth obliquely, do the thing shall breed the thought"—in other words, prepare the way for the perception of the truth—"nor wrong the thought, missing the mediate word." Meaning that Art, so to speak, is the word made flesh, is the truth. "So may you paint your picture, twice show truth, beyond mere imagery on the wall, . . . So write a book shall mean beyond the facts, suffice the eye, and save the soul beside." The inference from this is that the life and efficacy of Art depends on the personality of the artist, which "has informed, transpired, thrived, and so thrown fast the facts else free, as right through ring and ring runs the djerred and binds the loose, one bar without a break." And it is this fusion of the artist's soul which kindles, quickens, informs those who contemplate, respond to, reproduce sympathetically within themselves the greater spirit which attracts and absorbs their own.

THE PHYSICAL SOCIETY.—(Saturday, June 24.)

PROF. CLIFTON in the Chair.—New members: Prof. Bartholemew Price, Principal Viridam Jones.—A vote of thanks to Prof. Clifton, president of the society, for the kind manner in which the society was received by him at Oxford on June 17, was proposed by Prof. G. C. Foster and seconded by Prof. W. G. Adams.—Prof. Clifton replied, and, in the course of his remarks, said that the University of Oxford has liberally supported him in his endeavours to advance the study of physics there.—Prof. Bjerkness, of Christiania, then delivered a lecture on the hydrodynamic analogies to the phenomena of electricity and magnetism which he

has established, and illustrated it by a number of beautiful experiments showing the attraction and repulsion between small bodies vibrating in water.—The society will meet again in November.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 112, Strand, near Waterloo-bridge.

THE ART JOURNAL for JULY, 2s. 6d.—PLATES: "A MIDDLESEX LANE," drawn and Etched by Fred. Slocombe. "THE LANDING STAGE, LIVERPOOL," facsimile of a drawing by W. L. Wyllie. "BOHEMIAN GIRLS," engraved from a picture by J. F. Porteau.

The Life and Works of Jacob Thompson. By Llewellyn Jewitt. (Virtue.)

THIS large and most sumptuously got-up volume is a marvel of typographical art, but the engraver's contribution is not always on a level with that of the printer. Jacob Thompson was a native of Penrith, Cumberland, came of a Quaker family long resident there, was apprenticed to a house- and sign-painter, worked his way into pictorial art, acquired a considerable reputation as a landscape artist who made frequent use of the figure also, was patronised by the Lowther family, became intimately associated with certain art movements that found their rallying point at Liverpool, and died in 1879 at seventy-three years of age. That Thompson at any period of his career attained to national distinction it would certainly be much to aver, notwithstanding the evidences of pretty general appreciation which a long subscription list to the present volume affords. His position in Cumberland was similar to that occupied by William Daniels in Liverpool—so far, at least, as professional reputation is concerned, for in personal character and repute these men had little in common. Daniels was indisputably a man of genius, with a strong vein of poetic aspiration, with the dramatic temperament, and with a great knowledge of human nature. But, besides his lack of a sense of colour and his apparent incapability of realising beauty, there was a streak of vulgarity, not to say brutality, in his nature; and this often came uppermost, to the injury of work which in other respects was true and vigorous. Due partly to this defect, and partly, no doubt, to an undisguised intemperance in every habit of life, Daniels was scarcely known outside his native town; and his obscurity is now so complete and final that, notwithstanding the efforts of a biographer, his townsman, a recent number of the *Magazine of Art* in a pleasant paper tells the story of his life as "the story of a failure." Thompson cannot be numbered among the failures in art, unless, indeed, the expectations of the artist and his friends have been set too high; but his final place is very likely to be on a level with that of the wayward painter we have referred to. Despite the eulogy of injudicious admirers and poetic panegyrists, or the more temperate laudatory criticism of Mr. Jewitt in this handsome volume, it goes without saying that Thompson, whatever his aspirations, was a long remove from being a Turner. His range was limited, although it would appear that he regarded it as otherwise. It was restricted, in fact, to certain of the more prosaic aspects of mountain scenery.

Where the artist attempted to compass classical subjects he failed only too conspicuously—as, for example, in his ungainly "Acis and Galatea," or, even more painfully, in his "Proserpine," which seems to represent an unlovely woman writhing beneath an unlovely tree. Indeed, the absence of literary interest and of that fertility of invention which education is supposed to chasten, if not to generate, is very marked in Thompson's work. The portrait of Southey, as engraved in this volume, has something of the superficial sentimentality of expression which we have somehow got to associate with the face of Tom Moore; while that of Wordsworth is merely the portrait of an amiable Westmoreland "statesman," being wanting altogether in introspective expression, deficient in the strength proper to the lower features, and in width and mass across what is called the region of ideality. And these are defects of presentment which, as we say, come of Thompson's defective literary culture; and are such as Daniels would have avoided, not so much by superior education as by keener intellectual insight. Thompson's figures are often curiously cumbrous, and often amusingly spic-and-span in their apparent observance of social decorum. His children are much too well-bred in his "Height of Ambition" to sport about the dales with reckless juvenility; and his ladies and gentlemen "Drawing the Net at Haweswater" have the appearance of having combed their several heads of hair with courtly scrupulosity after having put on their respective new suits of clothes and costumes. But these are, for the most part, the artistic faults of the period of Thompson's youth, and must not undividedly be charged upon him. More serious are radical defects of composition, as in the "Highland Ferry Boat," where the straight line of the boat passes three-quarters across the picture. Perhaps Thompson's best contribution is rather topographical than purely artistic—his view from Rydal Mount being an admirable and most faithful picture, and his view of the poet's house being valuable as a record of what once was, and is not now. Why, however, do we always get the front view with the steps? One would think the side-view from the Mount would be more picturesque both in itself and for its background looking towards Grasmere. The picture representing the "Rush Bearing" is also interesting to those who treasure the record of customs falling into disuse. The one claim Thompson has as an artist is familiarity with the beautiful lake country in which he made his home. He paints the hills and dales of his native county as one who knew well their minutest changes of configuration. But he lacks poetic sympathy. A love of Nature he undoubtedly possessed, but he has never a momentary visitation, perhaps, of that natural rapture which transforms mere portraiture into transfigured realisation. His picture entitled "Solitude" is proof of what we say. It is difficult to understand how the piece of flat country, slightly wooded and with its streak of lake, could serve as an embodiment of natural solitude to one who must have known West Water and its Scares, Thirlmere and its Raven Crag, the Vale of St. John, the Vale

of Newlands, Ulleswater, and Ennerdale. But Thompson knew these solitudes without feeling them. Certain of the engravings in this volume—as, for example, "The Signal" and "Haweswater"—are admirably executed; the half-page illustrations are not always so satisfactory. Mr. Jewitt's part of the work is well done, being characterised by moderation and judgment. One good result will be pretty certain to ensue upon the publication of this book, and that will be to direct the attention of landscape artists afresh to the matchless lake country as a scene for study. Bettws y Coed has long enjoyed a monopoly of interest, and the charm of its deep tints entitles it to lasting admiration; but the wonderful colour and alternately narrow nooks and broad stretches of scene in Cumberland and Westmoreland (though once overrun by artists) have never been explored by any considerable section of the younger school of English water-colour painters.

T. HALL CAINE.

THE HAMILTON SALE.

II.

THE second portion of the Hamilton sale has taken place since our last issue; and, though some very remarkable furniture—the best being of the Louis Quatorze period—was included among the objects dispersed, it is likely that the greatest interest attaches to certain purchases of pictures for the National Gallery. Mr. Burton was the buyer, on behalf of the nation, of an extremely characteristic example of the later art of Mantegna, "a pair of upright panels, painted with figures of vestals on agate ground." This he acquired at the price of 1,700 guineas. The National Gallery will also be the resting-place of the noble late Venetian picture ascribed to Giorgione, "The Story of Myrrha." This was acquired for 1,350 guineas. Two reputed Botticelli's have likewise become public property. The minor example alone is to be doubted—that is, "The Adoration of the Magi," from the Beckford Collection. In the distant landscape are seen the procession of the kings and some pilgrims. Something in the work is suggestive of Filippino Lippi; yet it may well be Botticelli's own. The sum of 1,550 guineas was paid for this picture. The remaining National Gallery purchase of great importance was that of the historic Botticelli, "The Coronation of the Virgin," which Vasari writes about. It was painted for a Florentine church, and was the gift of Matteo Palmieri, "an able and learned man," Vasari writes, and one who in some sort ordered the design. The further story of the offence given by the picture and of its consequent privacy during many years is sufficiently known. This famous Botticelli is a great acquisition. Though it is likely that certain of the heads have been repainted or retouched, the work, as a whole, is intact, and it is fully representative of what is at least a very important side of Botticelli's art. After some comparatively insignificant biddings, the representative of the Louvre alone remained to compete for it with the representative of the National Gallery. The work fell to Mr. Burton's bid of 4,550 guineas.

The National Gallery of Ireland acquired for the modest sum of 250 guineas an exquisite and characteristic picture attributed to Francia, but which was accepted as in all likelihood a Perugino. Indeed, to Francia it bore no resemblance, while it bore amply sufficient evidence of Perugino's hand. Its condition was most excellent. A delightful Cima da Coneg-

liano, a Virgin and Child—the Virgin of the broad-faced, petty-mouthed, and, be it said with all respect, somewhat stupid type not unfrequently associated with the master—was among the most widely admired pictures of the sale. The charm of the design, and the greater part of its charm of execution, lay in the fine and dainty background. This, in addition to its own beauty, had the merit of faultless condition. It represented the winding of a stream through flatish and well-watered meadows, whereon sheep grazed and a shepherd pondered. Behind the extent of quiet field land there rose a sudden hill. A city was set on it; its fortifications surrounding and crowning the height. This desirable picture had been, in the year 1770, in the collection of the Nuncio di Verona at Venice—that city itself the natural resting-place of pictures by Cima; it had been subsequently at Fonthill, and it now passed into the hands of Mr. Agnew for 620 guineas. Two beautiful pictures, attributed, perhaps rightly, to Fra Angelico, though painted on a scale somewhat unusual for him, were sold for 1,250 guineas (Winckworth). The one of them represented the Virgin Mary, and the other, and more attractive, the Angel of the Annunciation. A fine and notable drawing by Sansovino was sold to Mr. Thibaudeau for 300 guineas.

In the remaining portions of the sale there will occur some works attributed to Velasquez, of which report speaks highly, and a Luca Signorelli, as to which accounts differ. Further important Dutch pictures may likewise be awaited; but, whatever these may prove, it is not premature to say that in one respect this greatly vaunted auction has proved disappointing—if it has allowed occasion for the purchase of a few masterpieces, it has already flooded rich men's houses with pictures of uncertain character, profiting only by the fact that it is in a palace that their fine names have been bestowed upon them. The existence of a wiser public—that is, a public more sensitive to things of beauty—would have made it impossible to part with much of the Hamilton collection at the prices that, as matters stand, have been realised. But the major portion of the gazers at Christie's, and some of the purchasers besides, have shown themselves as deficient in that learning which it is possible to acquire as in that gift of taste which learning does not bestow.

M. NAVILLE'S VISIT TO THE RUINS OF TANIS (ZOAN).

THE *Journal de Genève* for June 22 contains a long and interesting account of the present condition of the ruins of Tanis, communicated by M. Edouard Naville, who has lately returned from a short tour of exploration in the Eastern Delta. The following, translated and abridged, is taken from the latter part of his narrative:—

The ruins lie high above the marshy plain, upon a kind of plateau surrounded by an amphitheatre of low hills. These hills are the rubbish-mounds of the old crude-brick city, surrounding the great wall within which lay the temples and palaces of Tanis. The scene of desolation which this wall encloses is described by M. Naville as quite overwhelming. He found himself standing in the midst of a vast waste strewn and piled with columns, architraves, obelisks, statues, and enormous blocks of hewn stone, all shattered, overturned, and showing marks of wilful destruction. Traces of the tools with which the ruin was done are visible on almost every stone. In one superb colossus, which has happily resisted the hand of the destroyer,

M. Naville found wedge holes into which wood blocks had been inserted for the purpose of splitting the granite. He inclines to think that this was the result of war, and not of iconoclasm. The temple was probably occupied as a fortress in Roman times or during the Middle Ages, and both besieged and besiegers may have used its materials for offensive and defensive purposes. The destruction is too complete, and would have cost too much time and trouble, to be the work of either plunderers or fanatics. The principal temple was built entirely of red granite brought from the quarries of Assouan, on the Nubian frontier. The labour and difficulty of transporting these enormous blocks is quite incalculable. Fourteen obelisks, described by M. Naville as the largest in Egypt, strew the mounds with their gigantic fragments. All these, and nearly all the statues and sphinxes, which appear to have lined the avenues to the principal temple, were erected by Rameses II. Not only do their inscriptions celebrate the glory of this great Pharaoh, but even the bases of these overturned monuments, which rested on the ground, and were intended never to be seen by human eyes, are engraved with his well-known cartouches. Many of the colossi still retain traces of colour. Those which represent Rameses II. seem to have been purposely more mutilated than the rest, some being "almost pulverised." Many of the wives and daughters of Rameses are represented on a small scale beside the knees of the Pharaoh. Among these, M. Naville found the daughter of the King of the Kheta, whom Rameses married when the famous international treaty of Karnak was concluded. A bust of the mother of Rameses II., greatly mutilated; two statues of Menephtah, the supposed Pharaoh of the Exodus; and a vast number of fragments of statues of more ancient kings, whose cartouches have been surcharged by those of later Pharaohs, are lying in and about the great pile of red granite which marks the site of the principal temple. Some of these are Hyksos kings; some bear the cartouche of Apepi, who is believed to be the Pharaoh of Joseph; and many of the sphinxes are charged and surcharged with the heraldic insignia of usurper after usurper. M. Naville found no Ptolemaic remains; but they are known to exist somewhere under the soil. It was here that Lepsius found the famous trilingual Stone of Canopus. The statues seem all to have been executed in red granite, gray granite, green breccia, and other equally hard materials. Some are of great size. M. Naville specifies one tolerably preserved head, the eyes of which, from corner to corner, measured 20 centimetres. The leg of another measured 2 metres and 10 centimetres from the knee to the sole of the foot. M. Naville is of opinion that there is a great work to be done at Tanis in the way of excavation. The little, comparatively speaking, which has yet been accomplished there was by Mariette-Pasha; but his discoveries were limited by want of time, health, and funds; and much that he uncovered is again buried. "In severe grandeur and solemnity, these ruins," says M. Naville,

"surpass even those of Karnak. Herodotus, who had never seen Tanis, expatiated at much length on the beauty of Bubastis. To judge by what is left of the one and of the other, Tanis must have greatly surpassed its rival. Supposing that some part, at least, was left standing—that all was not, as it now is, overthrown and shattered—I have no hesitation in saying that Tanis would have been the most beautiful ruin in Egypt."

Though exempt, by reason of its inaccessibility, from the depredations of tourists, Tanis is suffering from the fatal effects of an atmosphere laden with saline exhalations. M. Naville reports that the surfaces of these granite monuments are rapidly decaying.

AMELIA B. EDWARDS,

DR. SCHLIEMANN'S EXCAVATIONS IN THE TROAD.

AT the last meeting of the Académie royale de Belgique, classe des beaux-arts, a letter was read from Dr. Schliemann, dated May 23, giving a full account of the excavations he is now carrying on in the Troad, in company with two German architects. The chief results are threefold.

First, he has come to the conclusion that he was mistaken in his identification of Homer's *Ilium*. The enormous mass of *débris* that surrounds Hisarlik is now distinguished by him into two cities, of which one occupied only a portion of the hill, while the other extended not only over the whole hill, but also over a large portion of the ground below. It is this second and larger city that he would now identify with the Troy of Homer, with its citadel only upon the hill. The remains lie on the plateau south and east of the citadel. Both cities were evidently destroyed by fire.

Second, the brick mounds marked H in plan iii. given in *Ilios*, which were before thought to be part of the outer wall of a city, now prove to be the ruins of two square brick buildings, a larger and a smaller one, both of which seem to have been temples. A great number of *ex voto*s of Athens were found here; and a gate was discovered on the citadel leading down to them. Both temples, though apparently built at different periods, had fallen in a common conflagration. Traces are still to be seen not only of *agots*, but also of beams let into holes in the wall to assist the burning.

Lastly, Dr. Schliemann has explored the two conical tumuli which tradition associates with the names of Patroclus and Achilles. In both of these he found archaic Greek pottery, not later than the ninth century B.C.; but nothing else. He has also explored one-half of the larger tumulus, named after Protesilaos, on the shore facing the Hellespont. This is strewn with potsherds of prehistoric age—the most ancient that Dr. Schliemann has yet found in the Troad; stone weapons and implements were also found. The diameter of this tumulus is not less than 125 metres.

ITALIAN JOTTINGS.

THE museum at Orvieto, which has been installed in the Opera dell' Duomo, facing the well-known cathedral, was recently opened to the public. This collection has been organised with the help of subsidies granted by the Municipality and the Minister of Public Instruction. The trustees of the Opera have not only granted the use of their building, but have also contributed to the material of the museum by presenting the mediæval antiquities which were originally exhibited in the Palazzo. As yet, two rooms only have been finally arranged. In the first are placed the bronzes, fictile ware, arms, and other relics found in the archaic cemetery known as Crocifisso del Tufo. Here also may be seen a plan of the portion of the cemetery already explored, on which are marked the exact spots where each object was found. These are classified according to the graves wherein they lay. In the second room have been placed a quantity of terra-cotta architectural decorations belonging to a small temple which came to light near the public gardens as a road was being made. In this room is to be seen a reconstructed archaic Etruscan tomb, similar to the most ancient specimens from the Crocifisso del Tufo cemetery, described by Koerte (*Annali dell' Istituto*, 1877, p. 95, Mon. vol. x., tab. xvii.). In the upper story of the Palazzo are exhibited several relics of mediæval art which belonged to the Duomo itself, and form a commentary on its history.

THE works undertaken in the Cathedral of Orvieto for the removal of all the monuments built during the sixteenth and seventeenth centuries are in active progress, and the cathedral is being restored to its original state of severe but beautiful simplicity. Paintings of the thirteenth century have already been discovered on several altars; and it is hoped that these relics, with the inscriptions they bear, may be preserved where they stand.

ANOTHER Etruscan tomb containing sculptured sarcophagi as well as inscriptions has been recently discovered at Ficomontano, near Chiusi. A monograph on this find, by Prof. Helbig, will shortly be published in the *Bullettino* of the Instituto archeologico.

PROF. GAMARRINI has received a commission from the Italian Government to examine the topography of a certain portion of South Etruria, to which the attention of archaeologists had already been called. This district lies between the Lakes Bracciano and Vico. We are glad to learn that the Professor has already succeeded in extending our knowledge of Etruria, and has mapped out the direction of some of its ancient roads.

NOTES ON ART AND ARCHAEOLOGY.

MR. JOHN M. GRAY purposes to produce a book on the Scottish artist David Scott, a graceful record of whose life and imaginative inventions he contributed to a recent number of *Blackwood*. The volume will be uniform with Mr. Gray's *Life of George Manson*. It will contain the result of many researches, and will be largely and carefully illustrated, the remarkable designs to "The Ancient Mariner" being by no means lost sight of, and, among other illustrative contributions, a facsimile in colours of "Man and his Conscience" being inserted in the book. Messrs. Blackwood will naturally be the publishers of Mr. Gray's new volume.

DR. CHARLES WALDSTEIN'S new book on Pheidias will be published simultaneously by the Cambridge University Press here, and by the Century Press in the United States.

MR. G. BARNETT SMITH has published at his address, Cuba Villa, Bickerton Road, Highgate, an almost life-sized etching of the head of Thomas Carlyle, which has obtained the approval of more than one well-known critic. If it recalls in some measure previous portrayals of the subject, it is the result also, we are assured and can well believe, of personal observation. It suggests the character which one is now more than ever inclined to associate with Carlyle, and it is evidently the production of a man of natural insight.

THE opening in the evening of the exhibition of the Royal Academy is a great boon to those who are unable to visit it during the day, but it is given in a way which robs it of half its value. Why should the unfortunate persons who cannot get away from work till night have to wait for two months before they can go at all? Could not the exhibition be opened in the evening for, say, the last week or ten days of each month?

THE exhibition of "American Paintings and the celebrated Low Tiles" at the Fine Art Society's is an interesting one, although the "American Paintings" are all by one artist, and in black and white, and the "celebrated Low Tiles" are only about a dozen in number. Mr. A. H. Bicknell's paintings are in oil, and produce much the effect of etching. They are painted on zinc and transferred to paper. The subjects are mostly woodland scenes, executed with great skill. The "Low Tiles" are still more remark-

able. They seem to us not only beautiful, but to reveal a new phase of art, somewhere between sculpture and painting, admirably suited for decoration. The tiles have all kinds of subjects—pigs round a trough, a starved sheep in a landscape, an old woman's or a young man's head, seem equally adapted to their style. The whole of the design—streets or horses, trees or figures—is modelled in low relief, coloured with one colour, and glazed. The tints employed are rich and soft olive-greens and bronze-yellows; and they are applied with great artistic judgment, giving no little sense of light and air and distance to the landscapes, and heightening, and at the same time softening, the modelling of the heads. Some of these have much of the effect of a vignette, and remind us of the late Mrs. Cameron's beautiful photographs. We are obliged to Mr. J. A. Lowell, of Boston, for introducing us to these charming things, as well as to some beautiful steel-engravings of his own. The tiles are made at Chelsea, Mass., by Messrs. J. and J. G. Low.

AT a small exhibition in King Street, St. James's, with some striking works by Messrs. Monet, Pissarro, and a few other modern French "impressionists" are to be seen good specimens of the lesser works of Delacroix and Millet. By the former is "Les Convulsionnaires de Tangier," a street scene, in the centre of which is a band of the well-known dancing fanatics of Morocco. One man, evidently approaching the final stage of exhaustion, is with difficulty upheld by two others; a fourth, with raised arms and wild, fixed eyes, is the finest figure in the composition; another has fallen on the ground, and is drawing blood from his arm with a fierce bite. A crowd in the streets and on the housetops are watching the scene with Oriental apathy. The colour is rich and fine. The Millet is a picture of a troop of geese taking the water. A few are eating grass and pruning their feathers on the banks; up the road to the river, and winding to the right, are seen the rest of the stiff-necked flock. Each bird has a different character and bearing, and the picture is altogether a grand study of animal life treated with profound knowledge and masterly breadth.

M. BARTHÉLEMY GRÉNIÉ has succeeded in making the colours used in painted tapestry bear prolonged submersion in soap and water. This is the only thing necessary to give confidence to the admirers of this very pretty and useful "minor art," which has made great progress in this country since first introduced by Messrs. Howell and James. M. Grénié is well known as one of the most accomplished artists who have turned their attention to decorative painting, and his exhibition at 168 New Bond Street is well worth a visit. He is well seconded by MM. Antoine Lapenne, Remy Bisch, and Claude Pinet, and by Mr. H. McDowell, his managing director, who is himself a clever artist. Excellent examples of tapestry-painting by M. Grénié, Mr. McDowell, and Mrs. McDowell will be remembered by visitors to the exhibition of tapestry-painting at Messrs. Howell and James's last winter. In a copy of "The Death of Paolo and Francesca" by Cabanel, the strength and range of the colours used are seen to great advantage. "A Nymph," a joint work of MM. Grénié and Lapenne, is one of the most beautiful and suitable designs. As copies of old tapestry, it would be difficult to excel those by Mrs. H. McDowell of the famous "Pluto" and "Europa" panels at Buckingham Palace, which have been taken by the permission of the Queen.

ALTHOUGH Nottingham cannot be said to have produced a school of art of equal importance to that old one of Norwich, it yet claims the names of Niemann and Henry Dawson; and, if we mistake not, that very strong

young landscape painter, Mr. Edwin Ellis, comes from Nottingham. It now possesses a local academy of sufficient strength to make up an interesting exhibition of its own. This is being held at Nottingham Castle, and contains some landscapes of much merit, contributed by Messrs. Black, Bilbie, Seymour, Crossland, Shaw, Turner, Wilde, Wallace, and others. We have seldom seen a better piece of fish-painting than the "Small Fry" of Mr. F. Belshaw; and, of figure-subjects, the "Tired Out" of Mr. Neville Wright and the "Rest" of Mr. Edwin Ward deserve special praise. The Rev. C. H. Baynes sends three charming little pictures of Scotch scenery, full of poetic feeling and fine in colour.

THE fragment that remains of Rembrandt's once famous picture of "Doctor Deyman's Lesson in Anatomy," which was recognised by Dr. J.-P. Richter at the sale of Mr. Price Owen, and bought by Mr. Six for the town of Amsterdam, has been placed provisionally in the Van der Hoof Gallery. The head of the lecturer has gone, but his hands, the corpse, and the portrait of Dr. Calcloen remain. It was painted by Rembrandt in 1656 for the College of Surgeons at Amsterdam, and the greater part of it was burnt when in the possession of that guild in the year 1723. Sir Joshua Reynolds described it in 1781. What the fire left of it was sold in 1842 to Mr. Chaplin, after which it was lost sight of till the exhibition at Leeds, but its authenticity was not established till the Price Owen sale.

THE death is announced of two French artists, both at an advanced age: one is Jadin, the animal painter, who was thought especially great in his hunting scenes; the other is Jouffroy, the sculptor, who obtained the grand prix de Rome in 1842, and was elected to the Académie des Beaux-arts so long ago as 1857.

THE French Government has obtained a vote for 207,000 frs. (£8,280) to purchase for the Louvre the entire collection of the late Charles Timbal. Besides paintings and bronzes, this collection includes a large number of specimens of Italian decorative work in wood and marble of the fifteenth and sixteenth centuries.

AT a recent meeting of the Académie des Inscriptions M. Renan presented, on the part of M. Dumont, the first plates of a collection of photographs of the great mosque at Kairuan, taken by order of the French Government. He said that the photographs fully maintained the fame of this mosque as an exceptionally grand specimen of early Muhammadan architecture. It was probably built in the early years of the ninth century; but, unfortunately, no date has yet been discovered in the inscriptions.

THE statue to Rouget de l'Isle at Choisy-le-Roi, his birthplace, will be inaugurated on July 23.

THE city of Barcelona announces a prize of 20,000 pesetas (£620), founded by the late F. Martorell y Pená, for a work upon Spanish archaeology. The competition is open to foreigners; the work may be written in either Latin, Spanish, Catalan, French, or Portuguese; and it must be sent in by October 1886.

THE prize-jury for the Zwingli-Denkmal, which is to be erected on the Lindenhof in Zürich, has just published its decision. The competition was open to sculptors and architects of any nationality. The first prize has been awarded to Heinrich Natter, of Vienna; and the second to the combined work of the sculptor Ferdinand von Müller and the architect L. Rohmeis, both of Munich. A special commendation has been given to a Swiss sculptor, Ferdinand Schölth, of Basel. The *Zürcher Post* and *Basler Nachrichten* give detailed accounts

of the various sketches, which are now being exhibited to the public.

KARL ECHTERMEYER, one of the most eminent masters of the Dresden school of sculpture, has just finished the last of his series of eight allegorical statues for the Gemäldegalerie at Dresden. Four of these—"Greece," "Rome," "England," and "France"—are already in their places. The remaining four—"Germany," "The Netherlands," "Spain" and "Italy"—will soon be set up.

THE *Gazette des Beaux-Arts* for June is principally occupied with exhibitions. The Salon, the Lisbon retrospective exhibition, that of the works of Courbet, the Salon des Arts décoratifs, the International Exhibition at Paris, the Royal Academy, and the Grosvenor are treated by MM. Antonin Proust, Charles Yriarte, Alfred de Lostalot, Alfred Darcel, and Théodore Duret. Herr Menzel's famous illustrations of the works of Frederick the Great is the subject of a paper by M. Louis Gonze; and M. Jules Laforgue reviews M. Charles Ephrussi's recent work on Albert Dürer. A facsimile of a drawing by M. Puvis de Chavannes of part of his decorative composition, "*Pro patria ludus*," which has gained the medal of honour for painting at the present Salon, and a tender line-engraving by M. Morse of Greuze's "*Oiseau mort*" (both *hors texte*), are the most notable illustrations of the number.

M. A. DAMOUR has noted the frequent occurrence of small unpolished garnets in the gold and other ornaments of the Merovingian age. Hitherto, these stones had been supposed to be bits of glass.

M. H. TARRY has communicated a paper to the Académie des Inscriptions upon ancient Berber towns in the valley of Wed-Mya. His excavations have disclosed important remains, dating from the second inroad of the Arabs into Africa. He found a mosque, a palace, and nine houses, constructed and decorated in a manner that proves a high civilisation. M. Tarry hopes to obtain help from the French Government for the renewal of his explorations.

M. EUG. VAN OVERLOOP is publishing (Brussels: Hayez) a work upon the Beginnings of Art in Belgium. The first part, treating of the Stone Age, has just appeared, with ten photographic illustrations. The second part will deal with ethnological questions.

M. G. SCHLUMBERGER has just issued an important supplement (Paris: Leroux) to his *Numismatique de l'Orient latin*, published in 1878. Besides numerous additions, it contains a full Index of proper names, two new plates, and a map showing the sites of the mints.

THE STAGE.

We cannot share the indignation which some well-equipped critics have expressed at the fact that the performances of some members of the Théâtre Français at the Gaiety Theatre have not been so well supported by the public as was the exhibition of Mme. Sarah Bernhardt. Something of academical prepossession must be at the bottom of the complaint. There is nothing sacred about the Théâtre Français. There is nothing peculiar about it, save that its actors are exceptionally well drilled. But when a few only of its actors cross the water, and perform here in parts for which, as often and as likely as not, they were never previously destined, the charm departs; and common folk are not to be blamed because they find less opportunity for enjoyment in these dignified and respectable scratch performances than in the vivid representations of Mme. Bernhardt. When an actor of the roughish low-comedy order, like the younger Coquelin, is invited to fill a

part sustained hitherto by the ripest comedian of the time—M. Got—the result is not likely to be that perfection of *ensemble* in which the Théâtre Français generally rivals the theatre of Rotterdam. Yet this has been no unusual course during the progress of the brief series of performances now drawing to an end. Again, Mdle. Tholer has been motioned to important places in the drama. She is the result of training only. She wants fire and tenderness, power and fascination. Mdle. Baretta is better; but in losing Mdme. Bernhardt the Théâtre Français has lost its one actress of undeniable genius. Mdle. Bartet, a very agreeable young heroine, who first made a mark at the Paris Vaudeville as the Désirée Delobelle of "*Froment jeune et Rialer aîné*," has been playing in "*Ruy Blas*." The task has been a heavy one; but Mdle. Bartet is endowed with that artistic sensitiveness which is the best order of intelligence. She goes right without much trouble—as easily, in fact, as some people go wrong. Coquelin the elder has been affording the same satisfaction as usual; and Febyre has shown himself, as ever, a useful actor—not a moving one.

MR. EDWIN BOOTH has appeared among us again. Arriving only last Saturday—but with sufficient energy to attend the Lyceum Theatre the same evening—he trod the boards as Richelieu on Monday. He is at the Adelphi, where the support afforded him is in some respects better than that which he obtained last year at the Princess's under the management of Mr. Gooch. Should he act Lear, however, he will hardly fail to miss the presence of Miss Maud Milton, an admirable Cordelia, and of Mr. John Byder, the best Kent it is possible to engage. In other points a change may be for the better. Mr. Booth himself is in excellent condition, and his Richelieu is all that it has hitherto been. Greatly admired as it is, full of intellect as it is, we cannot consider it his finest part. He should again be seen in Lear, wherein he appears most completely to lose himself in the character he portrays. Elsewhere the wheels are apt to creak a little, and the machinery to betray itself; its construction is sometimes too apparent. But in the Lear of Mr. Booth you are brought face to face with the maddened king, and the part is one of the most difficult to enact in the whole range of Shakespearian character. Indeed, our own generation has seen no other Lear. Why, then, should Mr. Booth continue to play Richelieu, in which, on the whole, Mr. Irving competes with him successfully?

MR. CHARLES WYNDHAM and a part of his company at the Criterion are going to America in the course of the autumn.

MUSIC.

RECENT CONCERTS.

THE series of Symphony Concerts concluded on Thursday, June 22, with a programme devoted to Beethoven, which included the symphony in C minor and the "*Missa Solennis*" in D. This great work is no longer the novelty which it used to be, but is now better understood, and consequently better appreciated. The principal vocalists were Mdme. Albani, Miss Orridge, Mr. W. Shakespeare, and Mr. F. King. The performance was a very fine one; and the singing of the choir and the playing of the band testified to the care and patience of Mr. C. Hallé, who throughout the series of concerts has proved himself a most efficient conductor, and has well sustained his high reputation. The symphony was well played; the last two movements particularly so.

The seventh, eighth, and ninth Richter Concerts do not call for any special notice, all the

works being familiar to the musical public. At the seventh concert the "*Missa Solennis*" was performed with the following vocalists:—Frau Peschka-Leutner, Miss Orridge, Mr. W. Shakespeare, and Herr Elmsblad. At the eighth, Beethoven's Pastoral symphony was given in place of Mr. C. H. H. Parry's new symphony in G. The latter work was withdrawn, owing to the heavy duties entailed upon the band by the rehearsals for "*Tristan*." Liszt's "*Hungarian Rhapsody*" was played for the second time, and again encoored. The performance of the whole programme was exceedingly fine, and hearty applause showed how thoroughly the audience appreciate the labours and conductorship of Herr Hans Richter. The ninth concert included Gade's beautiful overture, "*Nachklänge von Ossian*," written in 1841, for which the composer obtained a prize from the Musical Union of Copenhagen; Liszt's second pianoforte concerto in A, admirably played by Mr. E. Dannreuther; and Beethoven's Choral symphony. The rendering of this last work was truly grand, and made more manifest than ever the unrivalled powers of the conductor. The solo parts were undertaken by Frau Peschka-Leutner, Friulein Brandt, and Herren Winkelmann and Gura. At the close of the concert Herr Richter received an ovation.

Mdme. Sophie Menter gave her fourth and last pianoforte recital at St. James's Hall on Tuesday, June 20. The programme was an exceedingly long one, and included many of the pieces by which this talented pianist has won fame and applause on previous occasions. The Scarlatti movements, the Liszt transcriptions, and the Chopin selection were all played with great charm and finish. A transcription of the "*Walkürenritt*" by Tausig was the one novelty of the programme. Mdme. Menter is a phenomenal player, and has given us many proofs of her powers. However, Wagner arranged for the piano is an infeliction; the orchestral effects cannot be reproduced on the instrument; hence there is more sound than music. The concert was well attended, and, altogether, most successful.

M. Vladimir de Pachmann gave a recital on Thursday, June 22. The programme contained an interesting and varied selection of pieces. The rendering of Beethoven's sonata in A (op. 101) was good, though somewhat lacking in dignity; but the exquisite touch and refined style of the player were shown to the utmost advantage in the Chopin selection, Rubinstein's "*Mélancoïe*," and Liszt's elegant "*Etude de Concert*" in D flat. Poor Weber was represented in the programme by his "*Polacca*," arranged by Henselt, and with an introduction by Liszt. Throughout the concert, M. de Pachmann was warmly applauded.

The series of Crystal Palace Concerts terminated on June 17 with a performance of the Choral symphony, after which a well-earned testimonial was presented to Mr. Manns for his valuable services to the Palace and to Art. Mrs. Meadows White (Alice Mary Smith) handed to him a purse containing £700, and an illuminated album with the names of nearly 500 subscribers. Speeches were made by Mr. George Grove and Mr. Flood Page.

J. S. SHEDLOCK.

We are pleased to be able to announce that Mr. H. Franke and Messrs. Schulz-Curtius have re-entered into partnership, and that they intend giving six orchestral concerts in the autumn, a second season of German opera next May and June, and the usual series of nine "*Richter Concerts*" in April, May, and June 1883. Union is strength, and, though each has been able to accomplish much this year, there is every reason to believe that their combined efforts in the future will prove more satisfactory both to themselves and to the public.

LITERATURE.

Essays in Jurisprudence and Ethics. By Frederick Pollock. (Macmillan.)

THE thirteen essays of which this volume consists range over the whole extent of the neighbouring fields of ethics and jurisprudence. The first discusses the nature of jurisprudence; the last criticises Mr. Spencer's *Data of Ethics*; and between come topics purely legal, such as the law of employers' liability; purely moral, such as "Marcus Aurelius and Stoic Philosophy;" and topics which may be said to be of mixed law and morality, such as the "Casuistry of Common-sense" and "English Law as a Branch of Politics." If there is no unity of design in essays of so diversified a character, Mr. Pollock is justified in saying that they are connected by a certain "unity of purpose and ideas" which runs through the work. Law is contemplated in its relations to the wider interests of "history, politics, and practical legislation." Ethical questions, on the other hand, gain in precision by being clothed in the language and the ideas of technical and speculative lawyers. Mr. Pollock's book is of excellent example in that it exhibits in their natural union two great studies which the professors of each have done their best to keep asunder. Law, custom, and morality are all parts of the same subject, and no theory of one will be of much use which does not take account of the others. We are beginning to see this so far as law and custom—and perhaps even so far as custom and morals—are concerned; but the strange divorce between law and morals still remains. Hitherto, the moralists, perhaps, have been more to blame than the jurists for ignoring the kindred subject; but even in jurisprudence, struggling as it has been for a place in the sciences or philosophies, there has been a too anxious avoidance of lights from the ethical side. Mr. Pollock's essays will help to break down an isolation which is not only unnecessary, but pernicious. They will also, it is to be hoped, do something to check another fallacious habit—that of regarding the so-called analytical and historical "schools" as somehow opposed to each other. Mr. Pollock frankly adopts the analytical or the historical, or what may be called the practical method, as best suits his immediate purpose, holding that all are legitimate, and that, "if their results fail to agree, it is the fault, not of the instrument, but of the worker." Those who think otherwise have totally misapprehended the criticism to which

Austin's results have been subjected by the greatest of our historical jurists.

It is difficult to speak generally and yet adequately of the treatment of so many diverse matters, and impossible to discuss in detail Mr. Pollock's conclusions with regard to each of them. The intermediate essays, more particularly those which deal with special heads of English law, are, on the whole, the most satisfactory. They are all of them in the excellent manner which Mr. Pollock has made familiar to law students by his important work on the *Law of Contract*. The essay on "Employers' Liability" is a rationalised account of a most perplexed and perplexing rule of law. Mr. Pollock connects it logically, if not historically, with the rule which makes a man responsible for the consequences of a state of things which he has brought about or maintained for his own pleasure or profit—whether it be "cattle grazing in his field, or water stored in a reservoir, or a structure crossing or overhanging a public road." This is certainly more intelligible than the common theory that the employer is liable as principal for the acts of his servants as agents, and it might have cleared up some confusions if it had been enunciated in the parliamentary debates of two years ago. The articles on "Defects of our Commercial Law" and the "Law of Partnership" are full of acute criticism and valuable suggestions, as to some of which Mr. Pollock speaks with the authority of an expert. And the incidental reflections on English law, which are to be met with in most of the essays, are often singularly felicitous and well informed. We cordially agree with Mr. Pollock's observations on the ill-usage Blackstone has sustained at the hands of his editors, and on the influence and present condition of the Law reports, which he pronounces to be twice as bulky as they ought to be. Some of these *obiter dicta* are not less valuable than Mr. Pollock's more formal conclusions.

Two of the most characteristic essays are those on "The Science of Case-Law" and the "Casuistry of Common-sense." The first attempts to assimilate the methods of the "case-lawyer" to those of the man of science, and the second extends the parallelism to the practical moralist engaged in forming conclusions on a new question of right and wrong. Mr. Pollock might be described as a uniformitarian in jurisprudence; he is penetrated with the conception of that uniformity in human laws which is their point of greatest likeness to laws of nature. Accordingly, he sees in the case-lawyer an expert who seeks to predict the decision of a tribunal, or system of tribunals, which moves with nearly as much uniformity as nature itself. And the parallel is worked out in a variety of ingenious ways, which we need not enter into in detail. As the tribunal whose decision is to be predicted employs precisely the same process as the investigator, Mr. Pollock has some little trouble in adapting his theory to the facts. It would hardly do to say that the court predicts its own decision; and Mr. Pollock dismisses, with less appreciation of its absurdity than we should have expected, the expedient of saying that an inferior court predicts the judgment of a

court of last resort. "This would not be correct," he observes, "inasmuch as the court of last resort itself pursues the scientific method." It is difficult to see why it should not be as "correct" to say that a court of first instance predicts the judgment of a court of appeal as that a case-lawyer predicts the judgment of a court of first instance. It is more to the point that the statement is not adequate because it still leaves the supreme tribunal to be accounted for, which Mr. Pollock does by the theory that "the court, following on the whole the same process as the advising counsel, makes a scientific prediction with reference to an ideal standard." The ideal standard, again, "is nothing else than the objective side of the legal habit of mind itself when considered as independent of the particular individuals in whom the habit is formed." This, then, is the (English) "science of case-law" for which Mr. Pollock claims kindred with the inductive sciences. In the casuistry of common-sense the part of the tribunal is taken by the average judgment of our contemporaries. We are all case-lawyers in morals, and, when I give an opinion on a point of conduct, "I think on the whole I am saying what the community would say." And this "practical standard" is controlled by a "speculative standard"—the "decision of my neighbours, if they were such as I wish them to be"—which corresponds with the legal habit of mind constituting the "ideal standard" of the courts.

The straining of language and ideas by which all this parallelism is established is obvious. The result hardly seems to us to be worth the pains. At the most it is an intellectual curiosity, while it may be suspected that the real resemblances discovered by Mr. Pollock are nothing more than the common characteristics of the reasoning faculty, no matter on what subject it may be employed. To part of Mr. Pollock's argument we have objections of a more formidable character. It is a mistake, we venture to think, to speak of the art of an English lawyer as the "science" of case-law. The real science of case-law—if we are to follow the better ways of recent jurists—would be an account of the "uniformities" discoverable in the evolution of case-law considered as a fact of nature. And we cannot help thinking that Mr. Pollock has not sufficiently defined the subject-matter of case-law. His typical example is a "lawyer who advises on a new case," and who, finding "some general proposition, together with a reference to one or more cases on which it is founded," is satisfied if it is obviously applicable, but, if not, neglects the general proposition and confines himself "to the particular cases from which it is collected, examining their points of likeness or unlikeness to the case before him." A "new case" apparently means a case not obviously covered by some notorious principle, and all principles, it will be seen, are assumed to be founded on decided cases. Now, every case is really a "new case" if it has not previously been examined in its legal relations, and many general propositions are founded on simple statutory enactments which need no interpreter. All this Mr. Pollock appears to ignore. Yet we should like to know what difference there is between the process de-

scribed by Mr. Pollock and that employed by a lawyer who advises professionally on any state of facts whatever. Be the case "new" or "old," be his law certain and statutory or guessed at from decided cases, he always predicts the decision of the court—if we choose to put it in that way. So does the *nisi prius* lawyer who advises on the chances of an action being successfully brought under circumstances which raise no question of law at all. The art of the practitioner who shrewdly forecasts the verdict of a jury may with less impropriety be described as scientific than the habit of the English case-lawyer, in the limited sense understood by Mr. Pollock. And the same may be said of the man of the world who anticipates the judgment of his circle on some fresh scandal of society. The scientific character of his "casuistry" is not, as Mr. Pollock seems to think, less, but more obvious than that of English case-law.

Mr. Pollock's views on the more abstract questions of jurisprudence are to be found in the first and second essays. The former is mainly a review of Prof. Holland's excellent work on jurisprudence; the other is a series of reflections suggested by Prof. Huxley's observation that a "law is simply a statement of what will happen to a man" if he does not pursue a certain course of conduct. An ill-disguised dislike of Austin's method—consistent, however, with a general acceptance of the analytical theory—is to be traced in these pages. Mr. Pollock admits that "Austin's painfully laboured style has an effect amounting to repulsion" on him, and it might not unfairly be retorted that Mr. Pollock occasionally discusses juridical questions in the spirit of a *littérateur* rather than a jurist, as when he pronounces Prof. Holland's work to be "incomparably better as literature" than Austin's, or when he defends the Roman arrangement of the Law of Persons on the ground that it gives a dramatic interest to the subject. Nor does such a sentence as the following seem quite fair:—"The capricious orders of a crazy despot may be laws according to Austin's definition until they are revoked; but, if so, it is the worse for the definition." We hardly know what absurdity Mr. Pollock intends to impute to Austin in this passage; but elsewhere he supplies probably the only defence which Austin would require, when he reminds a high-flying Scotch jurist that "laws made by the supreme power in a State, whether wise or foolish, do create claims which . . . are called rights by everybody save transcendental philosophers when they are philosophising."

A few lines must suffice for the three interesting essays on ethical subjects with which the volume closes. In "Ethics and Morals," Mr. Pollock's refutation of the fallacy, that the fate of morality is bound up with the doctrines with which it has hitherto been associated, is complete and convincing, and hardly less so is his defence of "historical or derivative theories" against the criticism that they leave us helpless in the exercise of moral approbation or disapprobation. The essay on "Marcus Aurelius and the Stoic Philosophy" is, to our mind, the finest in the book.

EDMUND ROBERTSON.

The Temple: Sacred Poems and Private Ejaculations. By Mr. George Herbert. First Edition, 1633. Facsimile Reprint. With Introductory Essay by J. H. Short-house. (T. Fisher Unwin.)

THIS charming reprint has a fresh value added to it by the Introductory Essay of the author of *John Inglesant*. Mr. Shorthouse comments upon Herbert's position as one of the middle party of the Church of England, apart from the Puritans of the closing years of Elizabeth, and before the rise of the High Church party under Laud. His appreciation of his poetry seems to us to be very just, placing Herbert below Vaughan and below John Keble; and, we should add, still more inferior to Crashaw, nor equal even to the best verses of the later Fletchers. But neither Mr. Shorthouse nor any other editor, so far as we are aware, has busied himself with the literary ancestry or genealogy of George Herbert's writings. Yet there is much of curious interest in such an attempt. Herbert's poetry, though smacking of the country, is not that of one intoxicated by the beauty of external nature; it is always the poetry of reflection and of reading. George Herbert was emphatically a scholar and a gentleman. The amusement of his leisure was to write fluent Greek and Latin as well as English verse. He was fastidious to an extreme both in his personal tastes and in his dress; he held himself aloof from the common herd of students at Cambridge, and shrank from coarseness and impurity in every shape. In point of date he belongs almost to the Renaissance; yet how different his tone! *The Temple* was published, posthumously, in 1633; Milton's *Comus*, in which the foul myth of Comus and the stores of classical fable and allusion are transfused into a drama of almost heavenly purity, appeared in 1638. Scarcely later, Jeremy Taylor was writing his *Holy Living and Dying*, in the notes to which, in strange contrast to the objects of his text, he cites obscene passages from Martial and Juvenal and Ovid; and the Discourse on a Christian's Death is illustrated by a tale worthy of Boccaccio or of the Heptameron. Yet in the poems of Herbert, a scholar equal to these, scarcely one classical allusion is to be found. Barnabas Oley, indeed, says: "He that reads Mr. Herbert's poems attentively shall find the excellence of Scripture Divinity and choice passages of the Fathers bound up in metre." This is partly true, especially as to the Scripture; but Herbert's poetry is not Biblical as is Bunyan's allegory; and none of it recalls the Fathers, as Isaac Barrow, for instance, in the style, if not in the matter, of his sermons, reminds us of St. Chrysostom. It is to another literature that we must look for much that is peculiar to George Herbert; and this will not only account for many of his faults, but will explain by what side of his character this scholar and gentleman was attracted to country life, and could find contentment in the talk and ways of villagers.

The writings to which we allude are those of the moralists of the silver age or later, pagans of the decline, or, at best, but demi-Christians, whose works seem to us so trite and dull, but on which our forefathers, un-

spoiled by excitement, and not yet exigent in literary style, ruminated with a quiet delight such as we seldom feel. It is from the writings of these authors in many cases that they formed the proverbs which they esteemed as the highest axioms of practical wisdom, and which George Herbert has treasured so fondly in his *Jacula Prudentum*. The chief of these writers were perhaps Seneca, Plutarch, Boethius, but, above all, the little Pseudo-Cato. Cato's *Distichs de Moribus* are now almost wholly forgotten, yet of this book more than fifty editions were published before the end of the fifteenth century; Caxton printed it in 1483. Erasmus edited it and enriched it with a copious commentary. A copy before us, edited by N. Baily (London, 1757), almost on the Hamiltonian system, and reproducing the comments of Erasmus, shows how long it kept its ground as a school-book. A polyglot edition, with translations into five languages, appeared in Amsterdam in 1769. It was paraphrased or imitated in nearly every idiom of Southern Europe, and it became almost the Bible of the peasant, reflecting, as these paraphrases do, with wonderful accuracy the better, but still harsh and intensely narrow, side of peasant character. No book has been more diversely judged. Cervantes intentionally misquotes it in the Prologo to *Don Quixote*. Sancho Panza has it often in his mouth, but dubs the author "Cato el zonzorino romano," the Roman dullard. Dibdin says, "Dulness can hardly be heavier than are the pages of its text." Yet if we compare the structure of "The Church Porch," the best sustained of all Herbert's poems, with imitations of the lesser Cato, we can hardly doubt that we have here the key to much that distinguishes him so widely from other classical scholars of his age. Compare, e.g., Herbert's first verse with that of the Béarnais imitation and with the opening lines of books iii. and iv. of the *Distichs*, and we cannot hesitate about the relationship.

"Thou whose sweet youth and early hopes inance
Thy rate and price, and mark thee for a treasure;
Hearken unto a Verser, who may chance
Ryme thee to good, and make a bait of pleasure.
A verse may find him, who a sermon flies,
And turn delight into a sacrifice."

"Hoc quicumque voles carmen cognoscere, Lector,
Hæc precepta feres, quæ sunt gratissima vitæ,
Instrue præceptis animum, nec discere cessas:
Nam sine doctrina vita est quasi mortis imago.
Commoda multa feres; sin autem spreveris illud,
Non me scriptorem, sed te neglexeris ipse."

"Si vos sabé quâque petit passatye
Per te maintiène en tout temps san et net
Escoute, amic, lou petit Catounet,
Qué pots, dab eth, ha toun apprentissatye."

— "Lou Catounet Gascon,"
G. Ader (Tolosa, 1611).

The thoughts run on in exactly parallel lines. "The Church Porch" gives only rules for conduct; we are not yet in "The Temple," we catch only from a distance the sweetness of its mystic melody, and are not yet moved to full ecstasy. Even there, as Mr. Shorthouse observes, Herbert cannot sustain his flights; and this comes, we think, from the favourite studies above alluded to, from his habit of thinking in proverbs and sentences. Who but one steeped to the lips in such

literature could conclude the exquisite poem on "Vertue" thus?—

"Only a sweet and virtuous soul,
Like season'd timber, never gives;
But though the whole world turn to coal,
Then chiefly lives."

It would take too long to discuss here how far Herbert was acquainted with Spanish and Italian literature, and his undoubted relationship to them as a poet. (His friend Ferrar translated Valdeso.) Many of his worst conceits and vices of form come thence. This we must leave to those who have access to richer libraries. That, in common with every school-boy of that age, he knew his *Cato*, cannot be doubted; and that it, more than either Homer or Virgil, influenced his English verse is also, we believe, a fact. To all lovers of this typical country parson, a gentleman and a scholar, who could yet sympathise with country proverbs and rustic ethics, this facsimile edition of *The Temple*, with Mr. Shorthouse's Introduction, will be a valued manual.

WENTWORTH WEBSTER.

Henri Dominique Lacordaire: a Biographical Sketch. By L. Sidney Lear. (Rivington.)

THERE was quite room for another book on Lacordaire. Since Miss Greenwell published her *Life*, much of his correspondence has become accessible, and recent events in France and elsewhere have given fresh interest to his generous endeavour to place Catholicism under the protection of liberty. Besides, we are far enough off to judge him better in some ways than when his fame as an orator was fresh. It is very doubtful whether his *Conférences* will live, but the tradition of their vast success will always give interest to the study of a singular and lofty character. The author quotes largely from the *Conférences*, but almost always to illustrate Lacordaire's experience rather than to explain his oratorical reputation. There can be no doubt that he was incomparably eloquent, but his eloquence was as incoherent as the prejudices of his audience. He was always haunted by the idea that it was his mission to reconstruct the whole system of Catholic apologetic; but, after all, he did much less than de Maistre (who made no such pretensions) towards proving that Catholicism has not yet been completely replaced as a working hypothesis. Perhaps it may be said that Lacordaire did as much to recommend Christianity to emotional Frenchmen as Chateaubriand did to recommend it to sentimental Frenchmen. He was manlier himself, and did a manlier work, but the intellectual result was hardly greater.

He understood his character better than his theories. He was struck early by the contrast between his cold intelligence and his fiery imagination; later on, he valued himself on his methodical and patient diligence, doing all the day's work in the day; he complained of the sluggishness of his affections. The author does not reproduce this last confession, which was one explanation of his extreme austerities, and the complaint is certainly puzzling in one so warm-hearted and expansive; perhaps, on some subjects, imagination outran feeling. His need for expansion was so great that, if any friend was a priest,

he was sure to press him to hear his confession. But it is noteworthy that he never made his confession to de Lamennais. In fact, it was impossible to love de Lamennais unless one would be dominated by him, and it almost seems as if Lacordaire had intended from the first to use de Lamennais rather than be used by him. He declined all co-operation till de Lamennais had recanted his absolutism; he was responsible for what was most dangerous in *L'Avenir*, the polemic against the *Budget des Cultes*; and he suggested the chimerical appeal to Rome, which was certain to issue in the disagreeable alternative of recantation or revolt. When one compares his first journey to Rome with his second, one may even imagine that there was a common cause for both. Lacordaire went to Rome the second time because he began to fear he was preaching himself out. Perhaps he took his colleagues to Rome because he suspected that they had come to the end of their ideas as well as of their capital. Both decisions were sudden. Lacordaire liked to feel, from the first day that he threw himself into a seminary, that he was giving himself up to the guidance of Providence; and this explains the extreme contentment with which he drifted out of his work at Paris into his work at Sorèze. Another explanation might be that he was satisfied to give up preaching, and even writing, if he might surround himself with the young and emancipate himself from Archbishop Sibour, who had accepted the Empire. Now that the Empire has gone, and the Bourse is more rampant than ever, it may be doubted whether it was worth the while of a great orator to condemn himself to silence for the sake of a ponderous insinuation that the Empire left Frenchmen no career but money-making. But Lacordaire was always something of a Frondeur; he was always jealous of his independence; his letters are curiously full of what he needs and what suits him, considering how unselfish, how generous, he was in action and affection. He was humble and enjoyed humbling himself to those he loved; but his humility was never unconscious. He saw himself, preaching or founding an order, as an actor sees himself "creating" a great rôle. But Lacordaire was more than an actor; when he had created his rôle, he lived in it.

G. A. SIMCOX.

ENGLISH DIALECT GLOSSARIES.

Five Original Glossaries: Isle of Wight, Oxfordshire, Cumberland, North Lincolnshire, and Radnorshire. By various Authors.

Glossary of the Lancashire Dialect. By J. H. Nodal and Geo. Milner. Part II. (F to Z). (English Dialect Society; Trübner.)

ALTHOUGH the English Dialect Society has entered on its tenth year of life, its operations, so far as the publication of Glossaries is concerned, have as yet extended only to thirteen out of the forty English counties; and several even of these have been but slightly touched. This rate of progress does not seem to afford much encouragement to the hope expressed at the last annual meeting, that the society

would have arrived at the end of its task in four or five years more. No doubt this branch of the society's work will proceed much more rapidly in future than it has hitherto done; but it will be surprising if the work yet remaining can be satisfactorily accomplished in much less than double the time contemplated in this sanguine estimate. In any case, it is to be earnestly hoped that the society will not terminate its labours until the English dialectic vocabulary has been, so far as possible, completely registered.

Of the five word-lists comprised in the former of the two recent publications of the society, two—Mrs. Parker's for Oxfordshire and Mr. Dickinson's for Cumberland—are supplements to the Glossaries by these authors which have been previously published. Mrs. Parker's work, which extends to thirty-eight pages in this volume, deserves especial commendation for its thoroughness. The definitions are very careful, and the illustrative examples are abundant and well chosen. The pronunciation is indicated in Mr. Ellis's "glossic;" and the words which differ from standard English merely in their pronunciation, instead of being scattered through the Glossary, are given in small print in a separate list—an example which might be generally imitated with great advantage.

The Isle of Wight Glossary, by Mr. C. Roach Smith and the late Major Henry Smith, can scarcely be regarded as an adequate representation of this interesting dialect. The vocabulary seems very scanty, when mere peculiarities of pronunciation are left out of account; and the definitions are in general not so careful as could be wished. The writers show some traces of the common disposition among glossarists to exaggerate the eccentric features of their dialects. It is not easy to see the use of such an entry as "Dooman, a woman; only used when preceded by *old*." The verb "Lowz, to think, to form an opinion," seems to be a figment. *I lowz* is doubtless for "I allows," the verb in this sense being not uncommon in provincial use. "Marsh Mallus" (*marsh mallows*) is strangely explained as "mallows beaten into a *mash* for poultices." The most noteworthy feature of the dialect is perhaps the prefixed *w* in such words as *wold* for *old*, *wuts* for *oats*. This is a curious point of agreement with some of the North Midland dialects. The words *bugle* for a young bull, and *zull* (Anglo-Saxon *sulh*) for a plough, are also worth remark. Mr. Roach Smith's abstinence from etymological speculation must be reckoned as a merit. His Appendix contains some racy bits of dialogue which were certainly well worth preserving.

Mr. E. Sutton's eight pages of North Lincolnshire words are very good so far as they go, but the dialect (is it not that of the "Northern Farmer"?) is certainly deserving of much fuller treatment. Among the oddities of the dialect may be noted the word "Spang-wue, to place a toad on a board and project it into the air by striking the other end." It is to be hoped that "Spang-wuing" is not the favourite diversion of North Lincolnshire youth.

The Lancashire Glossary will be found the most generally interesting, as it is the most elaborate, of the works hitherto published by

the society. The dialect of South Lancashire stands alone among English dialects in possessing an extensive literature of great intrinsic merit, and the abundance of extracts which the Glossary contains renders it very entertaining reading. The typographical arrangement of the matter is excellent, and might supply some useful hints to dictionary-makers generally. The definition of the word is followed by illustrative quotations from classical English literature, and after these are given examples from the dialect literature and from colloquial use. The date of each example is noted in the margin. The radical distinction between the speech of North and that of South Lancashire is not ignored by the authors, but they have scarcely brought it sufficiently into prominence. It seems, indeed, impossible to treat satisfactorily in a single Glossary two dialects which differ so widely as do those of North and South Lancashire. The dialect of Lancaster or Cartmel is, in fact, almost unintelligible at Oldham or Bury. The South Lancashire dialect bears a good deal of resemblance, in vocabulary and intonation, to that of the Peak of Derbyshire. The affinities of the North Lancashire speech, on the other hand, are rather with the dialects of Northern Yorkshire, from Craven to Cleveland. As might be expected, the vocabulary of North Lancashire is very largely Norse; but in South Lancashire, also, the proportion of Scandinavian words is very considerable—much more so, in fact, than I was prepared to find. The writers of this Glossary have indicated the Norse etymology in a few instances. Other examples—a few out of the many—are *fattert*, embarrassed (O.-N. *fatrask*, to be embarrassed); *gaum*, to understand (O.-N. *gaumr*, attention); *grummel*, small-coal (in the Peak of Derbyshire this word means “coffee-grounds,” as, curiously enough, it does also in Swedish); *hagworm*, a snake (in the Glossary wrongly explained as “hedgeworm,” but really from O.-N. *högg-ormr*); *ket*, carrion (O.-N. *kjö*); *ogreath*, straight on (O.-N. *á greiða götu*, on a straight road). It seems singular that in North Lancashire, as in some of the Southern counties, the original English “fadder” and “mudder” have been preserved, while South Lancashire agrees with standard English in adopting the Scandinavian pronunciation with *th*. A notable characteristic of the Lancashire dialect is its abundance of humorous descriptive compounds. A good example is *hammil-scoance*, literally “hamlet-lantern”—a designation for a village oracle.

The only considerable defect in this Glossary is the absence of any accurate method of indicating the pronunciation. The ingenious orthography of the dialect literature is not very well adapted to convey a correct notion of the sounds to a stranger. This deficiency, however, will no doubt be supplied in Part III., by Mr. T. Hallam, which is to treat of the grammar, pronunciation, and literature of the dialect, and will be looked for with great interest.

HENRY BRADLEY.

Les Contes populaires de l'Égypte ancienne.

Traduits et Commentés par G. Maspero.
(Paris: Maisonneuve.)

THE “Romance of Setna,” first brought to light in 1852, and the “Tale of the Two Brothers,” discovered in 1865, were for several years our only specimens of the light literature of Ancient Egypt. Their discovery marked a new era in the annals of Egyptology. Apart from such dry matter as funerary inscriptions, geographical and historical lists, contracts, accounts, and judicial documents, we were already in possession of a large number of papyri of a purely literary and scientific character—such as treatises on geometry, medicine, and magic; collections of moral precepts, hymns, poetical invocations and prayers, and the famous heroic poem of Pentaur. But that the “potent, grave, and reverend” princes and scribes of Pharaonic and Ptolemaic Egypt should have indulged in the class of literature called “light” was what no man had dreamed of. “The high personages whose mummies repose in our museums,” says Prof. Maspero, “enjoyed so well founded a reputation for gravity that no one dared to suspect them of having read or written romances during the days when they were mummies only in anticipation.” They did write them, however, and they did read them; not only in later times, when foreign influences might be supposed to have affected the national taste, but at a period so remote that the earliest specimens as yet known to science were already 3,000 years old when Diodorus visited the Valley of the Nile. One of these—a papyrus in the Berlin collection—purports to be copied from a still more ancient original.

Prof. Maspero's charming little volume contains thirteen tales of various epochs, from the XIIth to the XXXIIIrd Dynasty. Of these, a few are perfect, and the rest more or less incomplete. Ten are translations from the original papyri by Prof. Maspero; two are borrowed from M. Golénischeff; and one is reprinted from Pierre Salviat's old French version of Herodotus, “lightly retouched.” With but two exceptions—neither of which is much to be regretted—the collection represents all that has come down to us in the way of salvage from the wreck of Ancient Egyptian romance.

Of Prof. Maspero's ten translations, the most important have already appeared in various scientific publications, and been duly noticed by myself in these columns. The famous “Tale of the Two Brothers,” and that singular narrative of love, fighting, and adventure which purports to be the autobiography of Sinuhit (Saneha), have each been twice translated by the same conscientious and elegant pen; and of these translations the present volume contains the latest. In “Le Conte de Satni-Khamois,” first published in Prof. Maspero's fragment of a commentary on the Second Book of Herodotus* (1879) as well as in “Le Prince prédestiné,” which originally appeared in Part I. of the same author's *Études égyptiennes*† (1879) many little evidences of recent care and study may be detected; and in every instance

where a lacuna has been filled up, or a possible identification suggested, the line which divides conjecture from ascertained fact is scrupulously indicated. Elegantly printed, judiciously but not excessively annotated, and prefaced by an Introduction at once graceful, humorous, and scholarly, it is not wonderful that these ancient stories, in their present accessible and attractive form, should be rapidly achieving a second phase of popularity. Those who read them for amusement only will, however, have little idea of the exceeding patience, ingenuity, and caution which have been bestowed upon every line and every word of the texts which read so smoothly.

M. Golénischeff's translation of a tale called “Le Naufragé” is of great interest. The original papyrus, which dates from the XIIth Dynasty, was found by M. Golénischeff, unopened and forgotten, in the drawer of a cabinet in the museum of the Hermitage at St. Petersburg. This was in 1880. In 1881 (having meanwhile unrolled his treasure-trove, and found the MS. perfect from beginning to end) M. Golénischeff read a translation of its contents before the Orientalist Congress at Berlin. It proved to be a tale of shipwreck told by a sea-captain who commanded a vessel of 150 cubits long by 40 wide, manned by 150 sailors, “the best in the land of Egypt, who had beheld the heavens and the earth, and whose hearts were braver than the hearts of lions.” Thus equipped, our captain performed the startling feat of sailing up the Nile beyond the second cataract, and thence gaining the high seas. After this, it is not wonderful that his vessel was shipwrecked, and that, himself the only survivor, he was cast upon an island abounding in delicious fruits and inhabited by a population of seventy-five amiable and intelligent serpents. The head of this charming family is described as being thirty cubits long, and adorned by Nature with a magnificent beard. “His body was, as it were, incrustated with gold, and his colour like lapis lazuli.” He talks like a book; treats his guest with distinguished hospitality; and, when a ship comes that way, dismisses him with gifts of essences, incense, rare woods, elephant tusks, baboons, green monkeys, “and all sorts of precious things.” M. Golénischeff sees in this story nothing but a fantastic tale which might be the archaic prototype of our old favourite, “Sindbad the Sailor.” Prof. Maspero, however, takes it more seriously. In the island, which is expressly called “the Island of the Double,” he recognises a Paradisaic land, like the Fortunate Islands of classic antiquity. It is peopled, doubtless, with departed spirits; but these are invisible to the mortal who has been cast upon that enchanted shore before his time. The sea is the sea which divides this world from Amenti. The serpent is one of the great bearded serpents which guard the portals of Hades. In short, the whole story, romantic as it at first sight appears, is but a picturesque version of a well-known theological dogma; and, as such, it represents the earliest extant specimen of those universally popular tales which relate the adventures of a mortal intruder into the Land of Shadows.

Where this papyrus was found, by whom it was brought to Europe, when, and for what price, it was purchased for the St. Petersburg

* See the ACADEMY, No. 432, August 14, 1880.

† *Ibid.*

collection, are facts of which all record is lost. The writing, however, is of the style of the twelfth century; and the name of the scribe, duly signed at the end, was Amoni-Amonaa. He lived in the time of the Useresens and Amenemhats, about a thousand years before Abraham journeyed into Egypt.

The Story of Marie Dumont. By Lady Pollock. (Bentley.)

Cora; or, Three Years of a Girl's Life. ("Girl's Own Paper" Office.)

THE novel-reader who desires to sup full of horrors will not care much for *Fortune's Marriage*. It is written in a serene and temperate spirit that reminds us of Jane Austen; but, though the book is quiet, it is not without its pathos. There cannot, perhaps, be a much sadder theme than that of an ill-assorted marriage, where the whole nature of a woman yearns for the love of her husband, and she gets in return a cold and formal response. The course of such a life the author has endeavoured to trace in the career of Fortune Denbigh, and the only objection we should have to take to this novel is the inordinate length to which the incidents of the first volume and a-half are spun out. With an ordinary writer this would be unbearable, but, even when prolix, Miss Craik's narrative is not destitute of charm. In these three lengthy volumes there is no more exciting incident than the death of a little child, but then this incident involves much, and is the turning-point of the story. Fortune is married to Roland Glyn, whose frigid manner drives her nearly to madness; the happiness of both is wrecked for a time, but not lost, and we must leave it to our readers to discover for themselves the manner in which they are, as it were, united in a second marriage after a period of deep sorrow. The story is well told, but it could easily have been brought within the compass of two volumes.

The collection of stories under the title of *Cobwebs* exhibits varied merit, but all are entertaining. Miss Collins has a wholesome contempt for "society" as now understood in fashionable circles, and many of her strictures are no doubt justified. The first sketch is a tale of the stage, showing the difficulties which exist in the way of any modest and sensitive woman who desires to make her *début*. In the second we have a portrait of a well-known American author, who will easily be recognised by his many friends. The conclusion of this story (and the same remark would apply to some others) appears somewhat vague and unsatisfactory

after what has gone before. Next we have an *exposé* of the spiritualistic medium swindle; and then follows an account of the young lady who, from a similarity in name to a member of the aristocracy, was taken up and petted in mistake as an art wonder by fulsome critics and hangers-on of the aristocracy. For the third time in the course of reading our present batch of novels we have come across the portrait of a now notorious character. Miss Collins introduces him as "Mr. Otto Wodehead, the poet of pretty women," and the young bard's vagaries are pretty severely handled. What will Otto do when he hears that Miss Collins speaks of his "vacant orbs"? But, seriously speaking, enough has been made in the press of a craze which never had much vitality, and has collapsed in inextinguishable laughter. The little story "In Cold Blood" is the strongest thing in these three volumes, and the treatment is a little suggestive of Nathaniel Hawthorne. Mr. Andrew Vansittart has a delicate little son, heir to his vast estates; and, when the doctors have given him up, the father, who has the reputation of a wizard and is credited with the possession of other unearthly and inhuman traits, determines that he shall not die. He hermetically seals him up; and, though it is given out that he is dead, he comes to life again in the course of six months, the appointed time, and baffles the expectations of Leonard Vansittart, Andrew's younger brother. There is something really weird and "creepy" in the treatment of this subject. Save for the rather feeble ending of some of the sketches, we congratulate the author on her latest work. There is evidence of considerable skill and power in these narratives. We presume we must credit the printers with the superfluous "o" in the Christian name of Luca Signorelli, and with one or two other errors we have noticed.

Mr. Brooke is without doubt a very vivacious writer, and he has well differentiated the separate individualities of his *Three Fair Daughters*. One of the daughters, by-the-by, is not particularly fair, but, on the contrary, rather plain. She is of a humdrum character, and, not having a large soul, pairs off with a button manufacturer, with whom she is very happy. It is not to be inferred from this that if a girl wants to be happy she must marry "buttons," though the girl in this novel who aspires beyond this goes through much tribulation. She falls in love with a handsome man—oh! those curled darlings of society—and it takes some years to convince her of his absolute worthlessness. At last she comes back to the man who first made her an offer, a sort of affectionate spaniel, who has never forgotten his early love. The third daughter, Gerty, is decidedly unconventional, to say the least. She makes no secret that her object in the matrimonial market is money and position, and she ultimately wins both. One of the best characters in the novel is the father of the three girls, Mr. Chester, who, after being henpecked for some years and nearly ruined by an extravagant wife, at last asserts his masculine rights of government. Provided the reader is not too *exigent* as to the quality of his humour, he will find some

amusing chapters in this story. We had many a hearty laugh over the fair Gertrude's attempt to indoctrinate her affianced, a sporting baronet, with sentiments from Wordsworth, Tennyson, and other poets.

To write adequately a work on "the Dawn of the Twentieth Century" requires the pen of a Swift; and, to break the matter as gently as possible to the anonymous author who has essayed this task, we have not found in him a second Dean of St. Patrick's. It is true he has qualities which undoubtedly Swift did not possess, such as an unlimited capacity for commonplace; but he is lamentably deficient in such minor things as wit, satire, literary skill, and dialectics. Whole pages of this novel, "social and political," read like extracts from leading articles—though, perhaps, that is rather unjust to the journalists—or from platitudinous speeches in Parliament. In a prefatory note the author formulates the startling information that "conclusions from the processes which are now and will continue to be at work in the community and state must infallibly be reached." Now, as the world is always asking for some new thing, what we should really like to see would be processes that had no conclusions of any kind. If the writer could have instanced these he would indeed have given us a novelty. He claims that his reflections will enable anyone moderately acquainted with the politics of the country to "read between the lines" of his work. It does not require much reading between the lines to find out who, for example, is meant in such lines as these about John Freeman:—

"The mistakes he had made came out conspicuously during the hard times through which the country passed. His last years were spent, I fancy, in croaking when he was not either salmon-fishing or at billiards, his two favourite pursuits. He had faded out of the political horizon soon after the downfall of Mr. Glibword's Administration, when they had made such a mess of it in Ireland."

The present Conservative leader figures as Lord Saltburn, and other names are slightly altered, but the author's trouble in finding new names has been completely superfluous, seeing that he details as closely as possible all that is now occurring. Mr. Chamberlain will be surprised at being prophetically informed that by the time the next century dawns he will have become an ardent constitutionalist and a firm supporter of the Church. There is a good deal, too, about the Land Leaguers and Ireland, and "the brief reign of Darnell, Willon, and the rest of their auxiliaries who had brought the whole country to the verge of ruin." Almost half the work is occupied with the story of an attempted Irish murder, clumsily and ridiculously done. We can get up no excitement whatever about the expected hanging of a man who it is obvious never will be hanged. It is long since we read so much padding as in this work. There is absolutely nothing to redeem it or make it entertaining. Political satire, or political prophecy, should be like champagne; but this is the very smallest beer we ever tasted.

Prudence, a little sketch by an American lady, is very agreeably written, and it has the

further advantage of being illustrated by Mr. Du Maurier. Mrs. Lillie, while showing the hollowness of the aesthetic craze—rather in an indirect than a direct manner—writes without bitterness, and her sketches of character have a considerable amount of cleverness. We do not know why, but her manner reminded us somewhat of the very charming style of Miss Thackeray. The reader will easily recognise such characters as Mrs. Poyntsett, "wife of the famous R.A.," and Dr. Huxfell. There are others, also, whom it is not difficult to identify. The book is slight, but it is well worth reading.

Lady Pollock's is also a charming little tale in one volume, consisting of passages in the history of a Swiss farmer's daughter as related by herself. It requires no little art to make such characters as Marie Dumont describe themselves, and preserve in an English dress all their little foreign peculiarities, but this the author has succeeded in doing admirably. So much of plot, too, as there is in the narrative is interesting.

Cora is a pure and wholesome story for girls just verging on womanhood. It is written in a pleasing and unpretentious style, and such books are calculated to do good among the particular classes for whom they are written. It is but justice to the author, however, to admit that not everyone who attempts the task of writing for girls accomplishes it so well.

G. BARNETT SMITH.

THEOLOGICAL LITERATURE.

Micah. With Notes and Introduction. By the Rev. T. K. Cheyne. (Cambridge: University Press.) This new volume of the "Cambridge Bible for Schools" is a valuable addition to a useful, though somewhat unequal, series. The plan, of course, excludes elaborate philological discussions, but the latest results of scholarly research are clearly indicated, great care has been bestowed on historical illustration, and useful hints are given on salient points of Biblical theology. The Book of Micah is in many respects one of the most difficult in the Bible, and most scholars will be disposed to agree with our commentator in believing that the text is in some places almost hopelessly corrupt. In such cases, the frank admission of the difficulty is far preferable to any attempt to strain the Hebrew into a sense it cannot legitimately bear. Where divergent views can fairly be taken, or where the differences of expositors turn on difference of theological standpoint, Mr. Cheyne shows the same caution and fairness as characterise his well-known work on Isaiah; and altogether the little book may be confidently recommended, not only to schools, but to all Bible readers who really wish to understand the prophets, and not simply to make their half-understood words pegs on which to hang religious contemplations. As regards the divisions and dates of the several prophecies, Mr. Cheyne leans to the view of Ewald as modified by Wellhausen. The hypothesis of interpolations, which has of late been largely applied to the solution of difficulties, receives little favour; a notable exception, justified by a strong argument, is that our author, with Noldeke, Kuenen, and other critics, would omit the words "and thou shalt go to Babylon" in iv. 10. Noteworthy, also, are the suggestions that v. 5, 6, may be an after-thought foreign to the original context, and that the first *li-hyoth* of y. 2 ought perhaps to

be struck out. We notice that Asherah is regarded as the name of a goddess. This is at least not proved; the "wooden pillar or artificial tree" is in the Old Testament not the symbol of Asherah, but the Asherah itself.

The Hebrew Student's Commentary on Zechariah, Hebrew and LXX. With Excursus on Syllable-dividing, Metheg, &c. By W. H. Lowe. (Macmillan.) This is a useful and scholarly work. The notes are intended to include the wants of comparative beginners in Hebrew, but they contain much also that will be of value to those who are more advanced; they are always sound, and direct the student's attention to just such points of importance as he is likely to overlook. The volume abounds with suggestions and cautions for which every diligent reader of Hebrew will be grateful; and those who desire to strengthen and increase their knowledge of the language cannot do better than peruse it attentively. The only fault that we have to find is that the notes are apt to be slightly discursive and heterogeneous, and that the editor is too parsimonious in his references to the standard Grammars. The latter omission is, we think, a real deficiency. Excerpts from the Grammars, however full, are no adequate substitute for references to the Grammars themselves; unless these are regularly given, an empirical knowledge is encouraged, in which forms and constructions are viewed as so many isolated facts, and their relations to other analogous phenomena of the language not clearly apprehended. On ix. 9 a misleading rendering of A.V. is rightly corrected, though a somewhat fuller explanation would not have been out of place. P. 94 (comp. p. 122), the note on the accentuation is not clear; in Job iv. 16, too, the *tarcha* is conjunctive; Gen. xxxiii. 13, Eccl. viii. 10 might have been better illustrations. Pp. 130-31, the participle and *lo*, in such a connexion, would be exceedingly anomalous. The Excursus on the rules for placing Metheg (an abstract of Baer's articles in *Morx's Archiv*), which here appear fully in English for the first time, will be found convenient for reference. Altogether, we welcome Mr. Lowe's volume as a real help to the study of Hebrew in this country.

"ANECDOTA OXONIENSIA": Semitic Series, Vol. I., Part I. *Commentary on Ezra and Nehemiah*. By Rabbi Saadiah. Edited by H. J. Mathews. (Oxford: Clarendon Press.) The interest of this volume lies in the Introduction, in which the editor, with great bibliographical research, attempts the identification of the Rabbi Saadiah, to whom the Commentary is attributed. In spite of some external evidence pointing to the famous Saadiah Gaon as its author, Mr. Mathews, by a series of lucid arguments, shows that such a view cannot be sustained, and that the internal evidence tends strongly to connect him with the author of a Commentary on Daniel, which now generally passes under the name of pseudo-Saadiah. Who, indeed, this pseudo-Saadiah was remains undetermined, though various conjectures are discussed; nor do we feel that we really know him better when we learn that he may possibly have been the teacher of a pseudo-Bashi (author of a Commentary on the Chronicles). But it is probable that he lived not later than the twelfth century. Some of the MSS. are dated 1285 and 1288, and it is possible that he is cited by Ibn Ezra. The volume is sumptuously printed, and we are only sorry that the Commentary itself is not of greater intrinsic value. We hope that on a future occasion the editor will give us some work valuable in itself, and thoroughly worthy of the pains and learning which he is clearly able to bestow upon it.

Jewish Christians and Judaism: a Study in the History of the First Two Centuries, by W. E. Sorley (Cambridge: Deighton, Bell, and

Co.), is a Hulsean dissertation, and labours under the disadvantages inseparable from the treatment, in a separate and self-contained essay, of a topic which cannot be fully understood except in connexion with researches into a much wider field. Such a dissertation, too, is almost of necessity an occasional study; and though Mr. Sorley has read widely and handles his materials with skill and intelligence, he plainly has not made himself thoroughly master of the vast Jewish literature contemporary with, or somewhat earlier than, the first spread of Christianity. A study of Jewish Christianity which shall really fill up the hiatus in our present knowledge which the title of the essay indicates can only be accomplished by one who has gone through this laborious preliminary task. On the other hand, the little book deserves to be welcomed as offering, within the limited scope which the conditions prescribe, a readable and useful discussion of a number of questions of great interest to students of the New Testament. It throws, too, an interesting light on the one-sidedness of the historical method of Baur, though, perhaps, it would have been advisable to take up a more independent attitude towards Baur's way of stating the problems of early Christianity. Thus, at p. 26, there is a just criticism on the Tübingen theologian for his thesis that originally the recognition of Jesus as the Messiah made the whole difference between Christian and Jew. It would have been well worth while to carry this criticism out to an independent enquiry whether the idea of the Messiah was so absolutely dominant in early Christianity as is generally supposed. Certainly, in the teaching of the Synoptic gospels, there are features that seem not less notable, especially in antithesis to Pharisaism. At p. 12 the author does not seem to be acquainted with the latest enquiries as to the Therapeutae.

The Question whether Marriages with a Deceased Wife's Sister is or is not prohibited in the Mosaic Writings answered by Paul de Lagarde (Göttingen) is a valuable contribution to the exegesis of Lev. xviii. 18, reprinted from the *Nachrichten* of the Göttingen Royal Society. Prof. Lagarde has chosen the English language for his brochure, our nation having a special interest in the question. That fresh discussion of the passage is not unnecessary for the English public may appear from recent debates in Parliament; but our author brings forward a view of a crucial word in the text which, though (as he points out) not absolutely novel, having both ancient and modern support, is unfamiliar, and has never before been developed with such comprehensive scholarship and methodical argument as in the essay before us. According to the Authorised Version, the Hebrew legislator forbids the marriage of a wife's sister to *ves her*. Prof. Lagarde argues that the words in italics are mistranslated; that the verbal form *וַיִּרְצֵה* is not an infinitive of the bilateral *וָרָצָה*, *to vez*, but a denominative from *וָרָצָה*, the technical term in Semitic polygamy for a fellow-wife. That our translators should not have thought of this view is natural, as they did not understand the nominal *terminus technicus*, mistranslating it *adversary* in 1 Sam. i. 6. The true sense of the latter word is now pretty generally recognised by scholars; but it has not found its way, at least in any clear and sharp expression, into the lexicons commonly used by learners of Hebrew, and the material accumulated by Prof. Lagarde, which is ample and perfectly conclusive, serves to fill up a hiatus in comparative Semitic lexicography. But the point of the paper lies in the argument that the verb in Lev. xviii. 18 is a denominative of equally technical sense. For this we must refer our readers to Prof. Lagarde himself, as the argument is too technical to be reproduced without loss of some of its most interesting features, and the method is quite as instructive

as the results. These are briefly that the form *לצרר* with double *resh* ought not to be derived from *צר*, which forms its first conjugation on a biliteral type; that it cannot in this connexion come from the triliteral *צרר*; and therefore that it must be a secondary formation meaning to take a second wife polygamously. Hence the verse in dispute refers exclusively to polygamous society, and either has no bearing on the Christian law of marriage in a state of monogamy, or only such bearing as flows from the fact that the legislator expressly limits the prohibition to the lifetime of the first sister. The point on the philological argument which is most novel, and calls for further sifting and search for other similar forms, is the distinction between biliteral and reduplicating stems in what have hitherto been known as a single class of verbs (geminant verbs). This is a matter well worth the attention of grammarians; but, even if this point in the argument be not pressed as conclusively settled, Prof. de Lagarde's view of the text has, to say the least, very high plausibility.

Justin der Märtyrer und sein neuester Beurtheiler. Von Dr. Adolf Stählin. (Leipzig.) How far were Justin's philosophical convictions influenced by his conversion? Did they become distinctively Christian, or was Justin what might be termed in modern phraseology a Rationalist, without a real grasp of the fundamental doctrines of Christianity, and still essentially dominated by his old mode of thought? The latter alternative has been recently maintained in an able and elaborate monograph by Prof. Engelhardt, of Dorpat; and Dr. Stählin, in a brochure of sixty-seven pages, manages to combine an effective examination of this paradox with a discriminating survey of Justin's opinions, and an estimate of the position which may be claimed for him in the history of Christianity.

Pirge Aboth. Die Sprüche der Väter: ein ethischer Mischna-tractat mit kurzer Einleitung Anmerkungen und einem Wortregister. Von Lic. Dr. Herm. L. Strack, A. O. Prof. der Theologie. (Karlsruhe und Leipzig.) The "Pirge Aboth" is the most popular and the most generally interesting of the treatises of the "Mishna." It is a collection of maxims or proverbs attributed to different Jewish sages, most of them, speaking roughly, contemporary with the period of the rise of Christianity. From the easy and idiomatic language in which these maxims are generally expressed, it is, moreover, an excellent introduction to the style and usages of post-Biblical Hebrew. Dr. Strack's edition is designed primarily for those who are making their acquaintance with this later language for the first time; and it is admirably adapted for its purpose. The text is pointed throughout, an Introduction deals shortly with the treatise under its literary aspects, while brief but well-selected foot-notes give the reader both such historical illustration as he may require and all needful information on the new words and forms not occurring in Biblical Hebrew. Nothing, indeed, is omitted which is necessary to render the treatise readily intelligible throughout. And the notes are so compact and plain that they may be used with facility by those who have but a slight acquaintance with German. We hope that Dr. Strack's edition may make itself well known in England.

Texte und Untersuchungen zur Geschichte der altchristlichen Literatur. Von Oscar von Gebhardt und Adolf Harnack. 1. Band. Heft 1 und 2. "Die Uebersetzung der Griechischen Apologeten des 2. Jahrhunderts in der alten Kirche und im Mittelalter." Von Adolf Harnack. (Leipzig: Hinrichs.) In this first instalment of what promises to be an important

undertaking, Dr. Harnack has brought together all the facts and testimonies that can be found, whether in patristic or mediæval sources, relating to the Christian apologists of the second century and their works. The first chapter deals with the MS. authorities, and is based chiefly on the labours of von Otto in the *Corpus Apologetarum*, the author not having had the opportunity of consulting the MSS. for himself. The second—the present volume consists of only two—takes up the different writings in their order, beginning with the apologies of Quadratus and Aristides, and discusses every point of interest connected with their history and authorship. The section on the works of Justin Martyr, in which the author takes occasion to cast some doubts on the good faith of Eusebius, will be found to be a valuable contribution to the decision of the vexed question of Justin's Second Apology. Dr. Harnack's conclusion is that no such work was ever written. The *Supplicatio* of the unknown Athenagoras, with the name dropped and the inscription altered, was at an early period, he thinks, transferred to Justin and carelessly accepted by Eusebius, while the Second Apology known to us is properly a part of the First. The section on Tatian, in which some of the positions of Zahn are combated, is also of especial value. The inevitable tendency of such a work as this is perhaps to make too much of small points of evidence, but, if this is ever the case here, the work, on the whole, is characterised by great judgment and caution; and, being intended to be merely a preparation for what, in the author's opinion, does not yet exist—a full and satisfactory history of early Christian literature—it is one which the future student will not be able to neglect.

The New Testament Scriptures in the Order in which they were written: a very close Translation from the Greek Text of 1611, with Brief Explanations. The first portion: the Six Primary Epistles, to Thessalonica, Corinth, Galatia, and Rome, A.D. 52-58. By the Rev. Charles Hebert. (Frowde.) If Dr. Hebert did not tell us in his Preface that "the one thing to which he clings more and more is the letter of the Scripture, with its Divine Plenary Superintendence and with all its historic human peculiarities," a glance at the page in which he gives a list of the New Testament books in what he assumes to be their chronological order, and in which the Revelation of St. John is placed last, about A.D. 94, and the Gospel fourteen years earlier, would show precisely where he stands. The translation is from the text presumed to underlie the Authorised Version as edited by the Syndics of the Cambridge University Press; but we have noticed one passage—1 Cor. v. 1—in which, no doubt through inadvertence, this text is departed from. The translation is very close, but then it is so close that it is not always English. It is not probable that the author will find many to approve of his audacity in translating *Kopios*, not only in quotations from the Old Testament, but in the salutations of Paul, by "Jehovah." The notes, which are chiefly exegetical, are short and to the point.

A Short Protestant Commentary on the Books of the New Testament: with general and special Introductions. Edited by Prof. Paul Wilhelm Schmidt and Prof. Franz von Holzendorff. Translated from the third German edition, by Francis Henry Jones. Vol. I. (Williams and Norgate.) This work, which was designed by its authors to promote the intelligent study of the Bible, and in which the New Testament is criticised like any other book, will supply a want in this country. The commentary, which contains nothing superfluous, tells the reader precisely what it is necessary for him to know in order to understand the text. The Intro-

ductions, though not full enough to satisfy the advanced student, are still excellent summaries of the most trustworthy results of independent criticism as to the date, authorship, and literary character of the different New Testament writings, and will serve to place the reader at the right point of view for appreciating them. That to the Fourth Gospel, by Dr. Späth, may be especially commended. The Short Commentary, which Mr. Jones has rendered into excellent English, is the latest addition to the "Theological Translation Fund Library."

The Present Religious Crisis. By Augustus Blauvelt. (New York: G. P. Putnam's Sons.) Mr. Blauvelt's little book may in a sense be described as a handy abridgement of *Supernatural Religion*. Not that his theological position is exactly the same as that of the author of that book, still less that he has been led to his conclusions by the study of it; he has used it; but the work that had most influence in the formation of his opinions was Strauss' original *Life of Jesus*. But he argues by the same methods, and obtains much the same results, critical, if not theological; this he does with less learning, with much less parade of learning, perhaps with not less good sense, than the author of the more famous work. The book is rather a representative than an instructive one. It might hardly deserve a separate notice but for the rare judgment and good temper with which, in the two last chapters, Mr. Blauvelt discusses the limits within which dissidents from a creed are or are not fairly liable to the censure of those who hold it.

NOTES AND NEWS.

MR. SWINBURNE'S new volume—*Tristram of Lyonesse, and other Poems*—was to be published to-day. It is dedicated, in a very touching sonnet, to Mr. Theodore Watts, written on the third anniversary of the day when the two went to live together at Putney. In his Songs to and about Children the poet strikes a new note which will, we venture to say, win back to him those early admirers who have not been able to follow him in all his later work.

MR. ALEXANDER J. ELLIS will not be able, as he had hoped, to bring out this year, for the Philological, Chaucer, and New Shakspeare Societies, any fresh part of his *History of Early-English Pronunciation* with special reference to Chaucer and Shakspeare. His collections for the present state of our English dialects—which he is treating as part of his subject—are so large (and yet not quite complete) that his digest of them, and results from them, cannot be ready till next year at earliest.

IN consequence of his unlucky accident lately at Heligoland, and probably mindful of the many calls upon his time which render the completion of the work hopeless, Prof. A. Newton has given up the task of editing *Yarrell's British Birds*. Parts not quite equal to two volumes have been issued in more years than we care to remember. These parts were noticed in the ACADEMY two years ago. The undertaking has been transferred to Mr. Howard Saunders, than whom a more accomplished ornithologist does not live; and all who have longed for the completion of the work will be glad to hear that Mr. H. Saunders hopes to be able to finish his labours by the end of 1884. It will be something to possess a history of British birds in which Yarrell, Newton, and Saunders have co-operated.

MR. FURNIVALL'S Wyolif correspondent at Prague, M. Patara, sends the welcome tidings that he has discovered, in a fifteenth-century MS. there, a pen-and-ink portrait of John Wyolif, and also another MS. of the *De Potestate Papae*, which is to be copied for the Wyolif

Society at Prague. The portrait will be at once photographed, and, if it proves good, engraved by Dawson's process for the society.

PERE DIDON's remarkable discourses on "Science without God" have been translated into English by Miss Rosa Oorder, and the work will be issued immediately by Messrs. Kegan Paul, Trench and Co.

A COLLECTION of essays by different writers dealing with current philosophical questions will shortly be published, under the joint editorship of Mr. Andrew Seth and Mr. R. B. Haldane, both of Edinburgh. The writers agree in the endeavour to apply principles derived from the critical standpoint of Kant and Hegel, and their recent English exponents, to the detailed treatment of definite problems connected with the special sciences. The book will be dedicated to the memory of the late Prof. T. H. Green.

MESSRS. W. H. ALLEN AND CO. will shortly issue the translation of Fräulein Lina Ramann's *Life of Lütz*, which has attracted considerable attention in German. This lady is now in England, and we understand that the article on "Bach and Handel" which appears in the current number of the *British Quarterly Review* is written by her.

MR. ELLIOT STOCK announces *The History of the Civil War in Hampshire, and the Story of Basing House*, by the Rev. G. N. Godwin, Chaplain to the Forces, as nearly ready for publication.

MR. WALTER HAMILTON, author of *The Poets Laureate of England* and other works, will soon have ready a volume entitled *The Aesthetic Movement in England*, to be published by Messrs. Reeves and Turner. The book will throw considerable light upon a curious chapter of nineteenth-century life and literature, and will include chapters on "The Pre-Raphaelites and the *Germ*," "John Ruskin and the Critics," "The Grosvenor Gallery and Aesthetic Culture," "Robert Buchanan and the Fleishy School of Poetry," "Patience," by Gilbert and Sullivan, and "The Colonel," "Mr. Oscar Wilde: his Poems and Lectures," "What the Aesthetic Movement has achieved in Art, Poetry, Music, and Decoration."

We are glad to hear that the series of papers now appearing in the *Antiquarian Magazine* under the title of "The History of Gilds," by Mr. Cornelius Walford, will be reproduced in a volume.

MESSRS. TRÜBNER have just issued a new edition of Mr. F. W. Newman's essay *The Soul: its Sorrows and its Aspirations*, which first appeared in 1849.

THE same publishers are also bringing out the *Eight Circulars of Auguste Comte*, translated from the French, under the auspices of Dr. Congreve.

MR. J. JONES is preparing for publication (by subscription) a history of Tottenhall church and parish, Staffordshire. The work, which will be illustrated with etchings and engravings, will contain genealogical lists of the Wrottesley, Fowler, and Wightwicke families, and copious extracts from the parish accounts.

THE Report of the New Shakspeare Society, which has just been issued, contains a set of tables of the number of lines in Shakspeare's plays, compiled by Miss Roehfort Smith and Mr. Furnivall from the Globe numbering corrected. From these it appears that the whole number of genuine and spurious lines attributed to Shakspeare is 114,832, of which only 100,637 are genuine.

MR. JAMES CROSTON has in the press (for publication by subscription) a companion volume to his *Nooks and Corners of Lancashire and Cheshire*.

It will be entitled *Historic Sites of Lancashire and Cheshire: a Wayfarer's Notes in the Palatine Counties—Historical, Legendary, Genealogical, and Descriptive*.

THE Council of University College, London, have received from Mr. Francis Marcet a donation of £1,000 to be applied to the reduction of the building debt. The amount still required to defray the debt is £12,000.

If there be still any persons in existence who believe that the eldest son of James I. was poisoned by his father, or by anybody else, they would do well to read Dr. Norman Moore's *Illness and Death of Henry Prince of Wales in 1612; an Historical Case of Typhoid Fever* (Reprinted from St. Bartholomew's Hospital Reports, vol. xvii.). The demonstration is doubtless interesting from a medical point of view. To the historian it is valuable as putting an end to a long-lived error which might possibly have cropped up again without the complete refutation which is here given.

MR. PAUL TULANE, of Princeton, New Jersey, who made a fortune in business at New Orleans, has given two million dollars (£400,000) for the erection and endowment of a college in that city for teaching languages, literature, science, and art. Its benefits are to be confined to the white race.

THE editor of the *Literary World* of Boston, U.S., has the courage of his opinions, and in his number for June 3 reviews M. Zola's nauseous *Pot Bouille* as "Mr. Zola's Stink-Pot."

THE discovery is announced (not, we believe, for the first time) of a daughter of Alfred de Musset. She styled herself Norma Tessuma—containing the anagram of Musset—Ouda, and died at St-Maurice, in Saintonge, in 1875, at the age of twenty-one. Many of her books contain de Musset's autograph, with the words "à ma fille."

AN exhibition is now open at Buda-Pesth, in the Academy of Science, of ancient Hungarian books and MSS. Here is to be seen the oldest known specimen of Hungarian writing, a "prayer for the dead," preserved in a Latin codex of the thirteenth century. Among the books are sixty-three from the celebrated library of Matthias Corvinus, including those restored by the late Sultan.

AT a recent meeting of the Académie des Inscriptions, M. de Grandmaison, archivist of the department of Indre-et-Loire, read a paper upon some fragments of early records that have recently come to light in a curious way. They consist of more than 500 pieces of parchment, some exceedingly small, which have been used for binding the civil registers of the department. It appears that the original documents were stolen from the archives as recently as 1830. On piecing the fragments together, M. de Grandmaison has been able, with much difficulty, to restore some lines of the originals. They are the charters of the monastery of St-Julien de Tours. The oldest that can be satisfactorily restored is a charter of Archbishop Teotolon, dated 943. The signature of the Archbishop occurs four times, always written in Greek characters; and also the signature of Hugh Capet, before his accession. In many of the documents, dating from the end of the tenth to the beginning of the eleventh century, notes in the shorthand known as "tironian" are found. These notes, and also the use of Greek writing at so recent a date, are said to be peculiarities not known to exist outside Touraine.

Gold is the title of an anthology of German lyrical poetry collected by Dr. Ludwig Eichrodt which has just been published by F. Thiel, at Leipzig. The editor himself known

as a poet in the Rhenish Swabian dialect, describes, on the title-page, the songs gathered by him as "verses that carry music in them." They are chiefly from Goethe, Schiller, Wieland, Rückert, Uhland, Heine, Lenau, Hebel, Freiligrath, Kinkel, Herwegh, Geibel, Justinus Kerner, Karl Blind, Scheffel, Paul Heyse, David Friedrich Strauss, and Alfred Meissner. Goethe's "Nach Golde drängt, am Golde hängt doch Alles" is taken as a motto in a figurative sense.

A BELGIAN bibliophile, who adopts the *nom de guerre* of Ch. de Lovenjoul, but whose real name is understood to be de Spoelberch, has published (Paris: Quantin) a curious little pamphlet intended to be introductory to a history of the works of Théophile Gautier. The present instalment, however, which is entitled *Projets littéraires de T. G.*, deals only with the books that Gautier planned but did not execute. They include the following subjects:—A novel to be called "Le Secret de Georgette," a comedy called "L'Amour souffle où il veut," of which one act was written, "Odes artistiques," "L'Histoire d'un Moutard," a translation of "Struensee" for the music of Meyerbeer, "Les Excentriques de la Peinture," and "La Plastique de la Civilisation."

HERR GENSCHEN's novel *Felicia*, which not long since was threatened with a prosecution by the police authorities of Berlin, has now reached a tenth edition.

AN addition to the long list of French versions of *Faust* has been made by M. Mausezet (Paris: Ch. Leroy.)

A COMPLETE edition has for the first time been published of the works of the poet Lenau. It is in two volumes, and is preceded by a Memoir (Leipzig: Bibliogr. Institut).

We regret to record the death of M. C. L. Fatout, the well-known member of the firm of Morgand and Fatout.

ACKNOWLEDGMENTS.

WE have upon our table a large number of Reports, Catalogues, &c., from libraries and other public bodies, which we are unable to notice separately:—*Transactions and Proceedings of the third annual meeting of the Library Association*, Edinburgh, 1880, edited by Ernest C. Thomas and Charles Welch (The Chiswick Press); *Catalogue of the Books in the Manchester Public Free Library*, Reference Department, Index of Names and Subjects (Manchester: Blacklock); *Catalogue of the Books in the Lending Department of the Rochdale Free Public Library*, compiled by George Hanson (Rochdale: Haworth); *Catalogue, Descriptive and Historical, of the Pictures and Sculpture in the Corporation Galleries of Art, Glasgow*, compiled by James Paton, with a Report by Mr. J. O. Robinson (Glasgow: Anderson); *Report on the Mitchell Library, Glasgow* (Glasgow: Anderson); a popular *Handbook to the Natural History Collection in the Museum of the Yorkshire Philosophical Society*, by Walter Keeping (York: Sampson); *Report of the Public Library and Museum Committee, South Shields* (South Shields: Learmonth); *Fourth Annual Report of the Librarian, Free Public Library, Wigan* (Wigan: Strowger); *Fourth Annual Report of the Free Libraries Committee of the Manor of Aston Local Board* (Aston: Hudson and Son); *Report of Manchester New College*, ninety-sixth annual meeting, January 1882; *Report of the Astronomer Royal to the Board of Visitors of the Royal Observatory, Greenwich*; *Report to the Governors by the Council of the City and Guilds of London Institute for the Advancement of Technical Education*.

(Gresham College); Sixth Annual Report of the Society for the Abolition of Vivisection; Third Annual Report of the Ruskin Society—Society of the Rose (Manchester: Old Town Hall); Report on the London Water Supply, by William Crookes, William Odling, and O. Maymott Tidy; Report of the County College Association, relating to Cavendish College, Cambridge; Calendar of the Departments of Law, Science, and Literature in the University of Tokio, Japan; Report of the Council of the North China Branch of the Royal Asiatic Society for 1881 (Shanghai: Noronha); Report of the Commissioner of Education for the year 1879, with Circulars of Information for 1880 and 1881 (Washington: Government Printing Office); Thirty-third Annual Report of the Trustees of the Astor Library (Albany: Weed, Parsons and Co.); Bulletin of the Library Company of Philadelphia, New Series, 8; Report to the State Board of Health on the Methods of Sewerage for Cities and Large Villages in the State of New York, by James T. Gardiner (Albany: Weed, Parsons and Co.); Fifteenth Annual Report of the Peabody Institute, Baltimore (Baltimore: W. R. Boyle and Son); &c., &c.

ORIGINAL VERSE.

ODELETTE.

*Imitated from the French of Amadis Jamyn
(1538-85).*

ALL the grass is growing,
All the flowers are blowing;
'Tis thy love alone is with'ring
Night and day.

Now to every valley
Melted streamlets rally;
'Tis thy love alone is freezing
Night and day.

Sweet the opening flowers,
Sweet the greening bowers;
'Tis thy love alone is bitter
Night and day.

Sweet the zephyr's sighing
When the day is dying;
'Tis thy love alone is tuneless
Night and day.

Radiant rise the mountains,
Laughing dance the fountains;
'Tis thy lover only weepeth
Night and day.

HANLEY YORKE.

MAGAZINES AND REVIEWS.

WE always read with interest Mr. M. G. Mulhall's contributions to the magazines. No other writer of the day seems to us to have such complete mastery over figures and their political significance. In this month's *Contemporary* he has a paper—barely five pages long—upon "The Financial Aspect of Home Rule." His point is a small one, but, so far as we know, new. First, the proportion of taxation now levied from Ireland is excessive. Second, if no imperial taxation whatever were levied from Ireland, and if she were left to govern and tax herself, Great Britain would lose pecuniarily no more than the value of a single penny in the income-tax. The other article in the *Contemporary* most deserving of notice is that on "Contemporary Life and Thought in France," by M. Gabriel Monod, the historian. What he says about politics, and especially about the position of Gambetta, is very interesting. He repeats a suggestion, to which we have before called attention in the *ACADEMY*, that exemption from military service should be granted only as an encouragement to higher

education. Lastly, he condemns severely (though not entirely without hope) the modern tendencies of literature, the stage, and music in France.

THE *Cornhill Magazine* for July has another of the pleasant articles by which G. A. does so much to popularise the results of modern science. It is entitled "From Fish to Reptile;" and, taking a tadpole for a text, preaches an evolutionist sermon. An article on "The Muses in Tyrol" calls attention to some little-known Tyrolean poets, of whom Hermann von Gilm is the most interesting. The former article on "French Assizes" is supplemented in the present number by one on "French Prisons and Convict Establishments," which contains much information for the student of comparative institutions. A paper on "Whitehall, Past and Future," is appropriate at the present time; and it is much to be hoped that the plan which the writer joins in urging may receive proper consideration—the plan of following in the new buildings the designs of Inigo Jones for the old Palace of Whitehall.

Macmillan's Magazine has a novelette by Mr. Shorthouse, which puts into a short space the moral of *John Inglesant*, that the self-sacrifice of a cultivated man renders him an attractive subject for a story, but is practically futile. Mr. Laing Meason writes with just appreciation on "The London Police." Miss M. A. Lewis contributes "Some Thoughts on Browning." Miss Matheson's "Song for Women" is finely felt; but we thought that such a phrase as "God's sweet air" had been finally destroyed by Mr. Calverley. Sig. Mario's "Reminiscences of Garibaldi" are somewhat scrappy for one who had opportunities of knowing Garibaldi's personal character, and who must have had much more to tell.

In the *Numismatic Chronicle*, Dr. John Evans describes a hoard of early Anglo-Saxon coins found at Delgany, in Wicklow, in 1874. It included some very rare Kentish coins, and was indeed "the most essentially Kentish hoard of which we have any record." The latest in date of these coins are those of Beornvulf, from 820 to 824. It is noteworthy that neither in Sweden nor Denmark have such coins been found of earlier date than 830. Hence Dr. Evans suggests that the invasions of the Danes into Southern Britain during the first half of the ninth century were made not by the Eastern Danes of the Continent, but by the Western Danes from their settlements in Ireland. He thinks that this hoard is part of the spoil which fell to the invaders in 832, when "the heathen men ravaged Sheppey."

WE have received from Messrs. Trübner the first ten parts of the *Nueva Revista de Buenos Aires*, which is under the editorial control of Vicente G. Quesada and Ernesto Quesada. While especially devoted to American international law and to the history, science, and literature of Latin America, it contains a careful review of the leading events in the politics and literature of Europe. B. Mitre argues against the antiquity and authenticity of the Quechua drama of "Ollanta;" A. Lamas discusses the question of the fatherland of Juan Diaz de Solis, who discovered the Rio de la Plata; E. Olivera sketches the history of the Argentine postal service; E. Quesada enquires as to the influence of woman in the works of Goethe, and criticises the *Endymion* of Disraeli; S. V. Guzman estimates Bolivian literature; and I. Torino examines the relations of the evolutionary theory to medical science. There are articles by the editors and others of a more purely local interest, and several essays relating to problems of international law.

RECITATIONS AND SONGS FROM
BROWNING.

THE Browning Society's extra meeting on Friday, June 30, was well attended, the audience, consisting almost entirely of members and their friends, quite filling the Botanic Theatre at University College. The programme included readings, recitations, and music. It is perhaps unnecessary to say that the music was only such as had been composed to Browning's words. The pieces chosen for reading and recitation were "Andrea del Sarto," "Pictor Ignotus," part of the first scene of the second act of "A Blot in the 'Scutcheon,'" "Count Gismond," "The Pied Piper," "Youth and Art," "Home Thoughts from Abroad," "Home Thoughts from the Sea," "My Star," "The Patriot," and "Prospice." The honours of the recitations fell to the ladies. We may notice specially Miss Drewry's fine rendering of "Prospice" (though we think her response to the request to repeat it was artistically a mistake); and Miss Hickey's not less fine rendering of "Life and Art." Of the two given by Miss Marx, "The Pied Piper" was the more effective. The humour of this poem never palls. Mr. Joseph King's reading was very good; his voice is sympathetic as well as powerful, and his style cultured. We did not think his choice of subject (a scene from "A Blot in the 'Scutcheon'") very happy; such a piece does not, to our mind, bear severing from its context.

The soloists did their part well, but the words of their songs were in most cases fragments of poems from which we object to see "elegant extracts" made; and in at least one instance the effect of the words was greatly marred by the way in which they were set. We mean in Virginia Gabriel's setting of part of "James Lee's Wife," where the repetition of—

"And for thee, oh, haste
Me to bend above,
Me to hold embraced,"

is surely wrong. When we read Browning's poem we feel that we are listening to the heartbeats of James Lee's wife. In the "song" the effect is altogether different.

It is pleasant to be able to speak with high praise of Mr. Stanford's settings of the "Cavalier Tunes," and of the manner in which they were given. This part of the performance was delightful. The solo in each was taken by Mr. John Bridson, who possesses a very fine voice, and sings with feeling as well as animation. His supporters in the chorus did their part with great spirit, though we fear that they were not always in correct time. The vigorous applause and *encores* were amply deserved. The society was fortunate in obtaining the help of professionals such as Mr. Bridson, Miss Burnett, and Miss Mary Evans, who accompanied nearly all through.

We were not alone in feeling that the atmosphere of the evening was rather that of a pleasant social gathering than of a formal entertainment.

Mr. Furnivall's words to the breaking-up audience implied that the Browning Society will aim at making their next year's entertainment go up one—or perhaps more.

CHAUCER AND THE EASTERN
COUNTIES.

MRS. HAWES writes to us about the birds' heads, which she believes to be herons, though usually supposed to be crows, on the hitherto unpublished seal of John Chaucer, engraved in her article in *Belgravia* this month. The birds on all three of the Chaucer seals now known seem to link the Chaucer family still closer with Norfolk and Suffolk,

Mary (de Westhale, or Stace), who married Robert le Chaucer as her second husband (a man possessing Ipswich property), and had issue John Chaucer, was probably a Norfolk or Suffolk woman, whichever was her maiden-name. For Walter de Westhale was a Suffolk man; Thomas Stace, defendant in the Norwich case, was burgess and collector of Customs at Ipswich 1307-27.

Heroun, therefore, Mary's first husband, was probably a Norfolk, or at least East English, man, the more so as the heron, like the swan, was, and still is, an inseparable inhabitant of the county. "Swan-hopping" was an annual duty of the old Corporation of Norwich. Herons were commonly eaten, and are still seen in the Norwich game-market. His very name, spelt as Chaucer usually spells heron, suggests a strong probability that he was a native of those marshy lands; and the long-billed birds retained on John Chaucer's shield, and the long-necked bird seen on the seal of Thomas Chaucer (Geoffrey's?), are more than likely to represent Master Heroun—a badge which Mary Heroun transmitted to her younger son, John Chaucer, when she had transferred Heroun's wealth to a second husband.

Robert le Chaucer may have been son of Gerard le Chaucer, burgess of Colchester in 1296. As he was collector of wine duties in London, he and his wife may have lived there for a time, and there she may have met his brother or cousin, Richard le Chaucer, who became Mary's third husband.

Geoffrey Chaucer's familiarity with Norfolk ways and images may thus have come to him through many direct sources—not only from personal observation, if, as a tradition asserts, Geoffrey was born at Lynn, in Norfolk, and spent his childish years there, but from a Norfolk grandmother and her Norfolk husband and son, an Essex great-grandfather, and property he himself may have inherited from Heroun, and his father, and his grandfather, all three East of England men.

Mr. Walford D. Selby, accepting Mrs. Haweis's suggestion, writes:

"*Papworth* (p. 397) gives the coat of the Herons of Essex as—argent, three herons azure. Also, Sir Odinel Heron (Glover's Roll)—Az. three herons argent. Sir John Heroun bore similar arms, and I believe the coat can be traced back to the time of Henry III. or Edward I."

It would be very interesting to trace Mary Chaucer's first husband, Heroun, either to Norfolk, or to the Essex family of Heroun.

THE ENDOWMENT OF RESEARCH AT EDINBURGH.

"ENDOWMENT OF RESEARCH," though still ignored at the old Universities of Oxford and Cambridge, is being recognised elsewhere. Owens College, by the munificence of an anonymous benefactor, led the way last year; and now the University of Edinburgh is enabled to follow, thanks to another private benefactor, who likewise desires to conceal his name. Five fellowships of £100 each, tenable for one year, but renewable for one or more further years, will be awarded at Edinburgh in October. There will be no examination, but the Senatus Academicus will consider only the qualifications and circumstances of the candidates. The fellowships are intended for persons having attained some proficiency in, and who are desirous to prosecute, unprofessional study and research in one of the following subjects:—Mathematics (pure or applied), or experimental physics, chemistry, biology, mental philosophy, history, or the history of literature. They are open to any graduate of a Scottish university not being more than thirty years of age at the

date of application, and provided that he be not an assistant to any professor, or an examiner in any department. Each fellow will be expected to reside in Edinburgh during the winter and summer sessions of the university (1882-83) to prosecute his particular branch of study under the advice of the professor to whose department the subject belongs; and within a year after his election to give evidence of his progress by the preparation of a thesis, the completion of a research, the delivery of a lecture, or in some other way approved by the Senatus Academicus.

MESSRS. HARPER AND BROS.' "FRANKLIN SQUARE LIBRARY."

We have received the following letter for publication:—

"Franklin Square, New York: June 23, 1882.

"Dear Sir,—Our attention has just been called to a circular in which Messrs. E. Steiger and Co., of this city, offer to sell to customers in England copies of our 'Franklin Square Library.' We hasten to say that the course of Messrs. Steiger and Co. in this matter has been adopted without our knowledge or consent, and that it is in direct opposition to our own policy and practice. We are aware of the existence of a demand among many English readers for the 'Franklin Square Library' editions of English copyright books, since, for two or three years, we have been in receipt of numerous orders for them from the United Kingdom. So far as we know, however, we have never sold to British correspondents any of the numbers of the 'Franklin Square Library' which are copyright in England, nor have we disposed of any copies of such numbers here which we had any reason to believe to be destined for the English market. On the contrary, out of regard for the interests of English authors and publishers, it is our custom to return all money sent us from England for our editions of English copyrighted works, and to decline all such sales, the following being a copy of the form which we use in replying to such applications:—

"We beg leave to say that we must decline to send you the numbers of our 'Franklin Square Library' mentioned in yours of ——. We have made it a rule not to sell to any person in Great Britain or Ireland our editions of works copyrighted in England, inasmuch as the sale there of our editions of such works would be unfair to the authors and their English publishers. We accordingly return herewith the amount which accompanied your letter."

"It has occurred to us that, on one occasion, a copy, or two, of our 'Franklin Square Library' was inadvertently sent by one of our *employés* to an English correspondent, but, when our attention was called to the fact, we wrote the purchaser, refunding the amount received from him, and requesting him to return the books."

"Respectfully yours,

"HARPER & BROTHERS.

"R. R. Bowker, Esq."

[We should have thought that it was not a matter of "unfairness" to English authors and publishers, but a question *stricti juris*. See 5 & 6 Vict. c. 45, § 17.—ED. ACADEMY.]

CORRESPONDENCE.

WAS ROGER OF MONTGOMERY AT SENLAC?

Derby House, Ecosse: July 3, 1882.

I do not deserve any thanks for showing either courtesy or deference to one who has taught me so much as Mr. Freeman has, and from whom, if I interpret his concluding sentence aright, I hope to learn a good deal more in the future. He says, very justly, that I am only a casual visitor to a country where he has spent many years. He will, I hope, accept it as a genuine proof of a long-enduring regard for his labours if a holiday rambler through the wood, fancying that he has run on a particular tree in a light which has escaped the master forester, wishes to present his evidence for criticism in, he hopes, becomingly modest and temperate language.

The matter in discussion is reduced to a narrow issue. If it be agreed that, when a reasonable doubt has been suggested, the burden of proof rests upon the person affirming the positive side of the argument, it will be readily seen, without going through a number of obvious links in the chain of inference, that the question is now reduced to the value of the testimony of Wace. On this subject Mr. Freeman objects to my quoting Sir Thomas Hardy as an authority. He will not object to my citing M. le Prevost, the very learned annotator of the "Roman de Rou," whose notes seem to me to completely support Sir Thomas Hardy's judgment. Let us, however, turn to Wace himself. Eustace of Jersey, commonly known as Master Wace, was essentially a *trouvère*. His aim and purpose, like that of the other brethren of the craft, was rather dramatic than historical. Like the Saga writers of Scandinavia, the *trouvères* of the twelfth century was chiefly concerned to tell a forcible and graphic story. The scaffolding upon which he built was supplied by the meagre chronicles which merely furnished dry facts. The incidents, the speeches, the drapery, in fact, with which the painter gave life to his picture, were

added by the artist himself; and his story was as much like the original as Shakspeare's "Hamlet" was like the story of Amleth as told by Saxo Grammaticus. There was no dishonesty in all this, any more than in the proverbial speeches of Thucydides. It was a dramatic colouring perfectly consistent with the aims of the writer and the expectations of his audience, who merely demanded from him a lifelike and consistent presentation of certain old legends and dry facts. This is not a fanciful surmise. It may be tested with the greatest profit in Wace's earlier poem "The Brut," where we can place side by side the exuberant rhetoric and amplified details of the *trouvère* with the more modest prose of Geoffrey of Monmouth. A very fair example of the whole is the encounter between Corincus and the giant Gogmagog told by Geoffrey in the sixteenth chapter of his first book, and told again by Wace with abundant Homeric touches of his own. The "Roman de Rou" is a poem constructed on the same model. Wace does not mention his authorities, but we have little difficulty in some places in tracing them, and can easily test how he uses them; but, apart from the fact that he was a dramatist and not an historian, we have his own admission in the Preface that the Norman nobles were anxious that their names should appear in his poem, which is a diplomatic way of excusing their presence there.

Let us now come to somewhat closer quarters. The "Roman de Rou" (as my old and much-respected friend Mr. Thomas Wright pointed out long ago), in mentioning the coronation of Henry, which took place in 1170, proves itself to be at least of as late a date as that year—that is, 104 years after the Battle of Hastings. The Germans have taught us that an author writing a century after the event must be shown to have had excellent opportunities before we can accept him as an authority. We know the questions that have been raised about many details of that most picturesque work, Mr. Kinglake's account of the Crimean War—a work abounding in such incidents as Wace loved to describe. Yet Mr. Kinglake was not only a contemporary with a keen eye, but has taken pains to have interviews and direct communications with almost every actor of any note in the struggle while his memory was yet fresh and green.

Wace was not born till long after the battle, when its chief actors were dead, and when a halo of mystery surrounded many of its incidents. This is assuredly in itself matter for the gravest hesitation in accepting his statements; but we are not left to these general doubts. Of course, it is a very difficult matter to controvert the statements of an author who lived seven centuries ago, in regard to incidents which he alone refers to. We can only select some which we can test, and make them a touchstone by which to try the whole; and, if we find them utterly wanting, we can come to but one conclusion about those which are beyond the reach of a test. Here essentially we need not eat all the leg of mutton to discover if it be tainted.

Let us examine a few samples from Wace's account of the Battle of Hastings. Mr. Freeman admits that he made a mistake about Neel of St-Sauveur, the viscount of the Cotentin, whom he makes to figure in the battle in the lines—

"E Neel de Saint-Salveor,
Mult s'entremet d'aveir l'amor
E li boen gré de son seigneur."

As M. Leopold Delisle says—

"Quelqu'un aient dit Wace et l'auteur d'une liste publiée par Leland, Neel ne paraît pas avoir pris part à la conquête de l'Angleterre: son nom ne figure à aucun titre ni dans le Domesday Book ni dans les cartulaires des abbayes anglaises" (*His-*

toire du Château et des sires de Saint-Sauveur le vicomte, i. 21).

The lines—

"Roger li riel, cil de Belmont,
Assalt Engleiz el primier front," &c.,

are also admitted by Mr. Freeman to contain a cardinal error, Roger of Beaumont being mentioned instead of his son Robert—an error easily corrected by an appeal to William of Poitiers. Another line tells us—

"D'Avrencoi i fu Richarz."

This, again, is assuredly a mistake. This Richard occurs nowhere in Domesday Book; and M. le Prevost, the learned annotator of Wace, has urged strongly that he was not in the battle. His name, which was a most important one, would have appeared like the other companions of the Conqueror in Domesday book if he had been there. He survived till the year 1082, as has been shown by the authors of the *Recherches sur le Domesday Book* (op. cit. p. 245). While the father does not occur in Domesday, his son Hugh the Wolf fills a very notable place in it. Hugh, however, as is very probable, only came to England in 1067, when he was accompanied by the stem-father of the Percies. Wace writes of the lord of the castle of l'Aigle thus:—

"Et Engerran de Laigle i vint
L'esou el col, la lance tint
Sor Engleiz fiert de grant air
Mult se peine del duo servir
Por terre qu'il li out promise
S'entrentest mult de son service."

Orderic tells us much about this person—*inter alia*, that he was killed in the battle, a fact omitted by Wace; but, what is more important, he tells us his name was Enquenulf, a name which occurs more than once in the history of the family. Wace's name is therefore entirely wrong. The Canon of Bayeux says:

"E li riel Rogier Marmion
S'i contentrent come baron."

Here, again, Wace ought to have written Robert, and not Roger (see Planché, ii. 167, 168).

William Palry de la Loude is named as present at Hastings by our author, but is not otherwise heard of in England, nor are his descendants. Wace, in describing him, makes him recognise Harold after his perjury, and states that the latter was taken before William at Avranches, which is directly at issue both with William of Poitiers and with the Bayeux tapestry. Avenel de Biarz is named by Wace among the conquerors, but we shall search Domesday in vain for a record of any reward the family received—a fact which has naturally been commented upon by the authors of the *Recherches sur le Domesday Book*. The same doubts for the same reason are suggested by Wace's mention of the Sire d'Aluei, the Sire de Monfichet, and several other names. The *trouvère* tell us, *inter alia*,

"De Meaine li riel Gaffral,"

but, as Mr. Planché urges, there is the greatest difficulty in believing that William's implacable enemy, Geoffrey of Mayenne, took part in the campaign, and Wace's mistake seems to have arisen from some confusion between Geoffrey of Mayenne and Geoffrey son of Rotru lord of Mostagne, who is named by William of Poitiers as present at the battle (op. cit. ii. 261).

William de Albini was given the barony of Buckenham by Henry the First by the tenure of butlery, and he was thence known as William Pincerna; yet Wace refers to his father, or grandfather, for there is a doubt as to which is really meant, as

"li bouteillier daubignie,"

which Mr. Taylor points out with justice as an anachronism.

Wace mentions a Willame de Vez Pont as

present in the battle. In his note, M. le Prevost says the right name was Robert.

Another of Wace's names is Raul Tiesron Sire de Cinqueleiz, yet it is strange that neither he nor his descendants are ever heard of in England afterwards (Planché, ii. 104). In the roll of names given by our *trouvère* is

"Dam Willame de Roman."

M. le Prevost has pointed out that Wace has here confused William, created Earl of Lincoln by Stephen, with his father Roger, who was the contemporary of the Conqueror.

Wace speaks of—

"Cil ki fu sire de Reviers
Grant plenté out de chevalliers
Cil i férrent as premiers
Engleiz folent od li destriers."

M. le Prevost urges that this refers to Richard Fitz Balwin, who first assumed the name of Reviers, and who, since he was living seventy years after the Battle of Hastings, could not well have been present there.

Mr. Freeman, in his History, identifies Raul de Gael as the son of Ralph the Staller, while Mr. Planché makes him the son of Ralf Earl of Hereford in the time of Edward the Confessor. Either hypothesis is at issue with Wace's lines—

"Chevalohen Raul de Gael;
Bret esteit e Breloz menont
Por terre servelt ke il out.
Maiz li la per pest, ço for dit."

Speaking of the Bigod present at Hastings, Wace says—

"L'anestre hue li Bigot
Ki aveit terre a Maletot.
Et as Loges et a chanon
Li dus solait en sa maison
Servir d'une senechance.
Mult out od li grant campaignale
Il fien esteit son senechal."

M. le Prevost has shown that Wace has here assigned to Roger le Bigod the post of senechal, which was only conferred on his second son, William. Wace refers, as M. le Prevost and Mr. Taylor agree, to the great Norman noble Hugh de Grentemesnil, to whom he assigns an anecdote in the battle as "un vassal de Grentemesnil," a style that would hardly have been adopted by a writer who knew the facts intimately.

Wace does not apparently name in his account such a famous person as Eustace of Boulogne; he tells us that the Bishop of Bayeux furnished forty ships for the campaign. Taylor's list, which is an earlier document than Wace's, and was drawn up in the reign of Henry the First, says:—

"Ab Odone, episcopo de Baia. C. naves."

This mere gleanings will suffice (even if in one or two of the cases cited Wace should prove to have been right) to show how exceedingly untrustworthy he is, and how undeserving of the eulogium passed upon him by Mr. Freeman—a eulogium which is certainly qualified by the statement that the nearer he gets to his own day the more inaccurate he becomes—a reversal of the general habits of a chronicler, which, to say the least of it, is a psychological puzzle.

I must, in conclusion, devote a few lines to part of Mr. Freeman's letter which I scarcely understand. He twits me with arguing that Roger of Poitou was a grown man in 1066 because he was married and a great landowner in 1085. Why 1085? When the "Domboc" was written, Roger of Poitou had forfeited the various lands which he possessed. That forfeiture, doubtless, took place in consequence of the part he played in the rebellion of Robert Courthose in 1078, when his brother, Robert de Bellesme, and his brother-in-law, Hugh de Chateau Neuf, were prominent in supporting the young prince, and were joined by many others; and we are expressly told by

Orderic that the King took their domains into his own hands, and paid the stipendiaries who fought against them out of the rents (*op. cit.* iv., chap. 20). It is clear, therefore, that already, before 1078, Roger of Poitou was a great landowner; and my contention (a tentative one only) is that the property he received in South Lancashire and Craven was made over to him when the adjoining lands in Cheshire were made over to Hugh Lupus—that is, in all probability in 1069, after the suppression of the Northern outbreak and the confiscation of the estates of the old Northern tenants consequent upon that revolt.

I have no right to occupy any more of your space, but must crave permission to add a short postscript. If it would be a genuine triumph to persuade Mr. Freeman (who I hope will not find a sentence in this letter to the tone of which he can object) to continue his History to the accession of Henry II., it would make that triumph indeed a notable one if, by pressure and persuasion, the continuation of his own work down to the death of John at least could be secured by the pen of the great living master of Plantagenet history, Prof. Stubbs. The prefaces to the Chronicles he has edited, and which Mr. Freeman most properly treats as unique, are so exceptionally full of interest that it is certainly a duty Prof. Stubbs owes to this generation to enlarge them into a monograph on a period he alone can adequately treat. Will not Mr. Freeman add his influence to the voice of almost every student known to me to secure this very desirable end?

HENRY H. HOWORTH.

[In Mr. Freeman's letter last week, the reference "Chron. Petrib." was misprinted "Petrib.;" and the following proper names also require correction:—"Gerberoi" for "Gerbevin," "Tocsny" for "Tocsny," "Longuaille" for "Longuaille."]

THE NEO-CELTIC "P" IN PROF. SKEAT'S DICTIONARY.

Oxford: June 29, 1882.

In Prof. Skeat's "Etymological Dictionary of the English Language," the word *pack* is said to be of Celtic origin, and is accounted for as follows:—

"It is a survival of an O. Celtic *pak*, 'still preserved in Gael. *pac*, a pack, a mob (*cf.* *E. pack* of rascals) . . . *cp.* W. *baich*, a burden; and these words by Grimm's law may fairly be considered as allied to Lat. *pangere*, to fasten, Skt. *pac*, to bind, from *√ pak*, to fasten."

That is to say, we have in the word *pack* an Old Celtic *p* identical with Aryan *p*. But this would seem to be impossible. Aryan *p* is lost in the Old Celtic languages—Gaulish, Old Irish, Old Welsh (see table in Rhys' *Lect. on Welsh Philology*, ed. 2, p. 14).

P in Modern Welsh is not an Aryan *p*, but stands for an Italo-Celtic *qv*, which appears in Old Irish as *c*, *ch*: e.g., Old Welsh *petguar* (modern *pedwar*) = Latin *quatuor* = Old Irish *cethir*, in Sanskrit *catvar*.

P in Modern Irish only occurs in foreign words, and was introduced into Ireland by Latin-speaking missionaries. So we are told by Celtic scholars (see Rhys, *op. c.*, pp. 16, 17, 19, 20, 349, and article by M. d'Arbois de Jubainville in the *Mém. de la Soc. de Linguistique de Paris*, iv. 5, 422). From these facts it would appear that Irish *pac* cannot, as an original Celtic word, be cognate with Latin *pangere* and Sanskrit *pac*, and the etymologies of the following words will have to be reconsidered:—

Pink, to pierce, cannot be of Celtic origin, and at the same time be referred to the same root as Latin *pungere* and Greek *πικρός*, Aryan *√ pik*.

Paw cannot be of Celtic origin. It is, in fact, Old French *pos*, a word not of Low German

origin, as suggested by Prof. Skeat, but = Low Latin *pata* (Ducange), as *noël* = *natalis*.

Paul is not a genuine Welsh word, but is borrowed from English *paul*, borrowed from Latin *palus*.

Pony. The Gaelic *ponaidh* cannot, if pure Celtic, be cognate with Latin *pullus* = English *foal*.

Pool, a pond, is most certainly not of Celtic origin, the German form *pfuhl* clearly indicating a connexion with the Low Latin *padules*, stagna (Ducange) = Latin *paludes* (by metathesis). See Diez (s. v. *padule*), and Cornish Glossary by Whitley Stokes (s. v. *pol*), in Philolog. Soc. Trans., 1869.

Pore (2) and *Four* cannot be "ultimately Celtic."

Pot cannot at once be a genuine "homely Celtic word," and from the same root as Latin *potare*, Aryan *√ pa*, to drink. This root appears in Old Irish in the form *ibim*, bibo (see O'Riordan, 371, and Fick, iv. 159). A. L. MAYHEW.

CARLYLE'S TRANSLATION OF FAUST'S "CURSE."

London: July 3, 1882.

In Mr. Richard Herne Shepherd's valuable *Bibliography of Carlyle* (Elliot Stock, 1881)—the Ana of which want completing as to works or essays published abroad—there occurs, pp. 8-9, paragraph 12, this statement:—

"Faust's Curse. From Goethe. By Thomas Carlyle. Printed in the *Athenaeum*, January 7, 1832.

"There is an earlier attempt at the translation of these lines into blank verse in Carlyle's juvenile paper on Goethe's 'Faust,' contributed to the *New Edinburgh Review*, 1822 (*vide supra*, § 3)."

"Early" would seem to have been a more appropriate term than "juvenile" in referring to Carlyle's essay of 1822. The author was in his twenty-seventh year. This *en passant*.

On turning to the place referred to in Mr. Shepherd's book we find:

"Contributions to the *New Edinburgh Review*,

Goethe's 'Faust,' *Ib.*, April 1822, vol. ii., pp. 316-334."

Most readers, by combining the two statements—as they are meant by Mr. Shepherd to be combined—will be led to believe that, as the translation of the Curse in the *Athenaeum* of 1832 is undoubtedly by Carlyle, so the "earlier attempt at the translation of these lines" is by Carlyle likewise. This assumption, however, on being more closely looked into, proves to be an error. The older translation occurs in a foot-note of Carlyle's essay—*New Edinburgh Review*, vol. ii., p. 325—and the introductory words may indeed, at first sight, be held to indicate, by their very tone (which is more deprecatory than the translation seems to deserve), a certain modesty natural in a young writer dealing with a passage from one he recognises as a master-mind: "We are sorry"—says Carlyle, the reviewer, after introducing into his text the original German of these verses—"we are sorry that to most of our readers, instead of these beautiful verses, we have nothing to show but the following very dim and distorted image of them."

The few other passages quoted by Carlyle from the work under review—"a solid, inoffensive undertaking, founded on the immutable principles of profit and loss, and accomplished quite as well as could be expected" (p. 316)—are given in the text, and with detailed blame of inaccuracy or inefficiency. This alone is found in a foot-note, a circumstance which might contribute to the impression that we had, in this instance, to do not with a translation quoted, but with a translation attempted by the reviewer Carlyle. But on turning to the work itself—to mention which fell outside of Mr. Shepherd's plan—the matter is found to be otherwise.

Here is the title of that publication, which will be found in the British Museum:—"Faustus": from the German of Goethe. London: Boosey & Sons, and Rodwell & Martin, 1821. 4°. viii and 86 pp. With 26 plates, engraved by Moses, from Retsch." Besides being a summary of Goethe's poem, the author says, "this little publication is designed to serve also," or rather chiefly, as an accompaniment to the series of outlines, illustrative of "Faust." The text follows, in a sketchy manner, the poem, and here and there breaks into verse which, towards the end, prevails. In Carlyle's own words, we may say of it that it is "a solid, inoffensive undertaking."

The translation of the Curse, as given by Carlyle on p. 325 of the *New Edinburgh Review*, occurs on p. 25 of this comment to Retsch's well-known plates. In one place Carlyle has introduced the correction of a word—"this den of grief," instead of the analyst's "a den of grief." And that this was not, on his side, an error of transcribing, is shown by the way in which it is printed. Thus:

"... all that captivates
The soul with juggling witchery, and with false
And flattering spells into a [this] den of grief
Lures it . . ."

Mr. Froude, who mentions the translation in the *Athenaeum*, does not seem to have had his attention drawn to the statement in Mr. Shepherd's *Bibliography*. Nor does it appear that other writers on Carlyle have observed the facts I have attempted here to set forth.

EUG. OSWALD.

COUNTY RECORD OFFICES.

Idol, Leeds: July 4, 1882.

Will you allow me to suggest, through your columns, the desirability of establishing County Record Offices? I may mention the materials we have in Yorkshire as illustrative of the utility of such offices:—(1) Wills, ante 1800; (2) Parish Registers, from 1538; (3) Bishops' Transcripts, from 1538; (4) Sessions Rolls, from 1640; (5) Nonconformist Registers, to be recalled from Somerset House, where they have been buried for nearly two generations; (6) Institutions, Presentation and Act Books, now carefully preserved at York, along with other valuable ecclesiastical documents, dating from 1200; (7) Churchwardens' and Constables' Books, dating often from 1600; (8) Manor Rolls, as such may be deposited by favour; (9) purely Yorkshire Muniments at the Record Office and British Museum—e.g., the Calverley Evidences; (10) Bequests of Deeds, &c. A custodian (who could employ his spare hours in transcribing and indexing) and sufficient accommodation would not require more than £300 per annum, exclusive of desks and book-cases. Those who sought information for general historical purposes should be able to obtain access free; others might be charged ten shillings per day; official certificates to be paid for as usual. The income would probably average £200.

As convener of the meetings in Yorkshire at which resolutions were passed (1) disapproving of Mr. Borslase's Bill unless due provision was made for local requirements, and (2) forming a Yorkshire society for the publication of parish registers, I should like to suggest that similar action should be taken in other counties.

J. HORSFALL TURNER.

APPOINTMENTS FOR NEXT WEEK.

TUESDAY, July 11, 8.30 p.m. Anthropological Institute: Special Meeting; "The Egyptian Boomerang," by Gen. Pitt-Rivers; "The Longevity of the Romans in North Africa," by Lord Talbot de Malahide; "Neolithic Stone Implements, &c., from Wadd, on the Gold Coast," by Capt. R. F. Burton and Commander V. L. Cameron; Exhibition of Bushman Drawings, by Mr. M. H. C. Johnson, with a Note by Mr. W. L. Distant.

SCIENCE.

"THE SACRED BOOKS OF THE EAST."

Vinaya Texts. Part I.—"The *Pātimokkha* and The *Mahāvagga* I.—IV." Translated from the Pāli by T. W. Rhys Davids and Herman Oldenberg. (Oxford: Clarendon Press.)

IN his *Seven Buddhist Suttas* Dr. Rhys Davids presented us with some excellent typical selections from the "Sutta-piṭaka," the doctrinal part of the Buddhist sacred books; in the work now before us he has, conjointly with Dr. Oldenberg, the learned and indefatigable editor of the "Vinaya-piṭaka," "Dīpa-vamsa," &c., furnished us with a complete translation of the *Pātimokkha* and of the first four books of the *Mahāvagga*, the third part of the "Vinaya-piṭaka"—that portion of the Buddhist literature which deals with the discipline and outward life of the Order (*saṅgha*) founded by the great Hindu reformer.

The rules and ceremonies contained in the "Vinaya" are ascribed to Buddha himself; but they could not have all come into existence at once, but must have arisen from time to time as occasion rendered them necessary. They are very numerous, and cover almost every case, real or imaginary, that called for judicial decision with regard to the conduct and everyday life of the Buddhist mendicants. The literature of this code of laws followed more or less the growth of the Order, and was now and again augmented and revised to keep pace with the changing circumstances of the *saṅgha* at various periods in its development.

The translators have done well to include the *Pātimokkha* in their version of the "Vinaya," although it is not any recognised part of that ancient code of ecclesiastical laws. It is, in fact, much older than any portion of the "Vinaya-piṭaka," for we find it mentioned in the *Mahāvagga* (book ii.), where rules are laid down for its special use; and it occurs in its entirety, along with a very ancient commentary, in the *Sutta-vibhanga*, the first of the "Vinaya-piṭaka."

The word "Pātimokkha," according to the translators, means "disburdening," but the old commentator gives a different origin and explanation of the term (*Mahāvagga*, p. 243). The work known by this title is a kind of liturgical formulary containing confessions to be made by the Buddhist "brethren" at the half-monthly meetings of the *saṅgha* at the new and full moon—that is to say, on the day called *Upasatha*, the ceremonies of which are referred to in the second Kanda of the *Mahāvagga* and in other parts of the Vinaya literature.

It is well known that Buddha cast aside almost every article of the Brahminical creed. He had been brought up under its influence, and he had discovered its emptiness and uselessness as a satisfying or a saving faith. He did not, therefore, seek to load his followers with a burden that he himself was unable to bear. From his disciples he demanded no elaborate confession of faith. In his creed there was no place found even for a personal God. He acknowledged no soul and no immortality. Buddha enjoined no sacrifices for sin, he composed no prayers, and he made no provisions

for religious services. The early Buddhists were kept together by the personal influence of their master, by the love and respect they bore him; and the lives they led were in accord with the simple moral teaching of Buddha, whose precepts appealed to the hearts and consciences, not only of his immediate followers, who had assumed the garb of mendicants, but of those who preferred to lead the quiet and uneventful life of householders.

Looking then to the attitude of Buddha with regard to the ceremonies of the older faith, we are not at all surprised to find that at first he did not follow the practice of the *paribbājakas* of the Tīthiya schools in regard to their bi-monthly meetings. We learn from the *Mahāvagga* (ii. 1-3) that the Māgadha King Seniya Bimbisāra first suggested to Buddha the keeping up of *Upasatha* in order to counteract the influence of other non-Buddhistic mendicants who met together, not to perform the complex rites of the older *upavasatha*, but to recite their rules, or *dhammas*. The tolerant Buddha, who was ever willing to make allowance for popular prejudice, consented to this arrangement, and his followers assembled half-monthly in solemn silence; but there was no recitation of the *dhamma*, no confession either of faith or of sins. This silence was meant to be, perhaps, a quiet protest against the Brahminical *upavasatha* rites on the one hand, and against the metaphysical discussions of the *paribbājakas* on the other. Be this as it may, however, the people who came to hear some new doctrine were disappointed, and complained bitterly of the "śramanas" sitting silent "like the dumb or like hogs." To remedy this, Buddha (*Mahāv.* ii. 3) prescribed the recitation of the *Pātimokkha* as an *upasatha* service, and the day was observed ever afterwards by pious Buddhists as a solemn fast.

The *Pātimokkha* is hardly a devotional service, but merely a confession of faults. It was to be recited in a chapter of not fewer than four "brethren," and was made by all the members of the chapter to the senior "brother" present. It included, in the first place, confession of the four deadly sins (unchastity, theft, murder, and false claims to sublime or supernatural wisdom); then came numerous other offences, including those against the Order, ill-will to a fellow-mendicant, abusive language, slander, sowing dissension, covetousness, impurity of thought, breaches of discipline, &c. The punishment for offences included reprimand, forfeiture, suspension, and exclusion. Among the *Pācittiya* offences—that is to say, those requiring repentance—we find mention made of eavesdropping, the possession of a bone or ivory needle case, high beds, and stuffed chairs. With regard to matters of discipline, we find in the *Pātimokkha* several curious rules relating to the deportment of the "brethren." In walking there was to be no swaying of the head or arms; the arms were not to be akimbo; food was not to be taken in large balls; in eating, the whole hand was not to go into the mouth; the tongue was not to be put out or the lips to be smacked; the food was not to be tossed into the mouth nor to be daintily nibbled; the cheeks were not to be stuffed out; and

there was to be no licking of the fingers or lips.

Enough has been said of the *Pātimokkha* and its relation to the second book of the *Mahāvagga*; and we will merely mention in regard to the rest of the volume before us that the first book describes the rise of the Order, tells us something of the first Buddhist mendicants, and supplies us with some few interesting incidents in the life of Gotama mixed up with much that is legendary. The other books deal with the residence of the "brethren" in their vihāras during the rainy season (the period of *Vas*).

For other interesting particulars we must refer the reader to this volume of the sacred books. In conclusion, we may be allowed to say that the translation is, as was to be expected from the high position of the names on the title-page, most scholarly and trustworthy. Much of the matter in the Vinaya books is of a technical character, very briefly and tersely expressed, which renders the work of translation, even with the help of Buddhaghosha's commentary, no easy task. The translators have boldly faced the difficulties of their text, and only here and there have they been unable to give a rendering of the original before them. Where they have failed, it would, perhaps, be presumptuous for anyone else to make the attempt. For the consideration, however, of the translators, we attempt an explanation of one or two difficulties.

Anacchariya (p. 85) is explained by Buddhaghosha as equivalent to *anu-acchariya*; and, if the commentator be right, there might be the same relation between *acchariya* and *anucchariya* as there is between *sati* and *anussati*. We think, however, that *anacchariya* is connected with *accharā*, and not with *acchariya*, and should be rendered "extemporaneous."

The Pāli "*obhoge kāyabandhanam kātābam*" (p. 156) is thus rendered: "let him . . . the girdle." The translators, in a foot-note, give the words of the commentary on the passage, which, to our mind, solves the difficulty if we carefully attend to the words immediately preceding the passage we have quoted. The foregoing injunction is "let him fold up the robe." When this is done, the next step is plainly to *roll up the girdle, then to take and place it within the folds of the robe*. This, too, is just what Buddhaghosha really says, "*Kāyabandhanam samharitvā cīvarabhoge pakkhitvā thapetabbam*."

The word *bhūtiya* (p. 156, l. 17) should be rendered "crease," and not "fold."

We trust that the translators will go on with the work they have so well begun, and that they will give us before long an English version of the whole of the "Vinaya-piṭaka."

R. MORRIS.

RECENT CONTRIBUTIONS TO CATULLIAN CRITICISM.

M. ALESSANDRO TARTARA, in his *Animadversiones in locos nonnullos Valerii Catulli et Titi Livii*—a work printed in Rome, which has reached a second edition—discusses several passages of Catullus in a clear style and with an intrepid criticism that is not afraid of contradicting opinions generally, or at least widely, received. His first article is on the much discussed C. ii.

He holds the line *Crede ut cum grauis acquiescet ardor* to be an interpolation, arguing that *ardor* in the sense of *amor* is not found till the Augustan age—e.g., Tibullus. The last three verses, *Tam gratum est mihi, &c.*, are, he thinks, separated from those immediately preceding them by a lacuna the extent of which we cannot guess; and he rejects all attempts to force them into cohesion. In C. vi. 12 he would write *Nam nil ista ualent nihil tacere*, making *ista* a nominative referring to the *cubile puluinis lectus* of the lines immediately preceding. He acutely dwells on Catullus's fondness for iterating an idea again and again in the compass of a few verses, a point which seems to give some confirmation to his conjecture: v. 3, *nec tacere posses*; v. 7, *Nequiquam tacitum cubile*; v. 12, *nihil tacere*, "You may be silent, but they cannot, however much they may wish."

M. Tartara is less happy in his article on C. xxix. In attempting to emend v. 20, which is, perhaps, hopeless, he introduces a spondee in the first foot of a pure iambic poem, *Fiuntque quarta Galliae et Britanniae*, to say nothing of the remoteness of this alteration from the MS. reading, *Hunc Galliae timet et Britanniae*. In C. lxvi. 59 he can hardly be said to be more convincing in his proposal *Sidus ibi uario*; but in C. lxviii. his criticism of Haupt, who altered *densi populi* in v. 60 into *sensim p.*, seems just; and his citation of Hom. *II. p. 2-4*,

Πάτροκλος δ' Ἀχιλλῆϊ παρίστατο, ποιμένι λαῶν,
Ἀδκρυα θερμὰ χέων, ὥστε κρήνη μελάνδρους,
"Ἦτε κατ' αἰγίλιπος πέτρης δυοφερὸν χεῖε ὕδωρ,

and the inference he thence draws as to the simile in C. lxviii. 57 referring, not to the relief given by Allius, but to the tears of the poet, will probably strike most readers as the best argument that has yet been adduced on that side.

M. Tartara, accepting the ingenious view of Lipsius that the words of Seneca, *Ep. 93, 9, Annales Tanusii scis quam ponderosi sint et quid uocentur*, are an allusion to Cat. xxxvi. 1, *Annales Volusi, cacata casta*, repudiates the subsequent superstructure reared by Haupt, which identifies the Tanusius of Seneca with Tanusius Geminus, whom Suetonius (*Jul. 9*) mentions as the author of a *Historia*. He remarks, with justice, that it is a long step from a prose History, such as we should suppose this to have been, to the verse *Annales* of Volusius, and that the mere fact of the other writers quoted by Suetonius in the same passage being contemporaries of Catullus does not prove that Tanusius was also. He inclines to believe that the real name of the poetaster so derided by Catullus was Volusius Tanusius or Tanusius Volusius, but brings nothing to support his view. The only other new point in M. Tartara's pamphlet (for he has been long ago anticipated in 116, 4) is his conjecture on 114, 6, where he ingeniously alters *modo to domus*, "let us praise the park provided only the house is in want."

Prof. Vahlen (*Ind. Lect. of Berlin University for December 1881*) discusses Cat. iv. 20 and lxviii. 157. He finds a difficulty, as Munro also does, in explaining *uocaret aura* of a breeze which rises suddenly and thus invites the mariner to begin his voyage; yet he would not follow Lachmann in reading *Vagaret*, but prefers to explain *Vocaret* of the direction given by the wind according as it rose on the right or left, comparing Verg. *Aen. iii. 269, Quo cursum uentusque gubernatorque uocabat*; Hor. *Epod. 16, 21, quocumque per undas Notus uocabit aut proterius Africus*; Ovid *Rem. 532*. This seems very likely.

Vahlen thinks that the reading of the MSS. C. lxviii. 149, *Et qui principio nobis terram dedit aufert*, in which most recent editors have supposed a proper name, perhaps Anser, to be concealed, may after all be right, if for *Et* we

read *Dum*, and explain of Jupiter: cf. Horace, *Ep. i. 16, 33, Qui dedit hoc hodie, cras auferet*; i. 18, 111, *Satis est orare Iouem quae donat et aufert, Det uitam, det opes*. He paraphrases the passage thus: "Sitis felices tu et tua uita et domus et domina usque dum uita finitur, hoc est dum qui principio nobis hominibus terram ad uiuendum uitaeque dulcedine fruendum dedit, eam quam dedit, aufert, is ex cuius beniginitate nata sunt omnia." But is not this more of a Christian than a Pagan sentiment? And yet, incongruous as it seems, Catullus does introduce a religious tone into this very passage, wishing to his friend all the blessings which *Themis* gave the pious of yore. Still, to us, the rhythm of *terram dedit aufert* is very repellent; nor is the change of *Et* to *Dum* in itself a plausible one.

R. ELLIS.

JOSEPH, KHU-EN-ATEN, AND AMENHOTEP IV.

HAVING received from Herr L. Lund a letter too long for publication as it stands, we give the following summary of its contents:—

Herr Lund objects that in the ACADEMY of June 17 we noticed Mr. Villiers Stuart's argument against his (Herr Lund's) theory respecting the era of Joseph, but omitted to give Herr Lund's reply to that argument. The discussion appears to have arisen thus:—Herr Lund read a paper to show that Khu-en-Aten, the penultimate Pharaoh of the XVIIIth Dynasty, was not only identical with Amenhotep IV., but was also the Pharaoh of the great seven years' famine and the patron of Joseph. To this Mr. V. Stuart objected that, from the time of Joseph's death to the Exodus of the Hebrews, the children of Israel are stated to have increased from seventy souls to 1,000,000; and that, by curtailing the intervening period, such an increase (for which 430 years were none too much) was rendered impossible. Hereupon, Herr Lund replied that, although Jacob's own family numbered but seventy persons, the Bible expressly states that Abraham commanded an army large enough to vanquish the united forces of four kings, and that Jacob was lord of a "territory" in Syria which he bequeathed to Joseph as the conquest of his sword and his bow. Rabbinical writings, says Herr Lund, also record that Abraham, at the very time when he was fighting the four kings, had another force operating against the Egyptians, who accordingly undertook one of their numerous military expeditions to Syria—with what result Herr Lund does not say. Long accounts of these wars are found in the Rabbinical authors; and such wars could not have been carried on by the sons of Abraham alone. "Moreover, seventy souls would have been a pretty thin population for the whole province of Goshen, the most fertile of Egypt." Jacob, therefore, was chieftain of a numerous tribe, and the seventy souls were simply his own family. As to the 430 years mentioned in the Bible, the learned writers of 2,000 years ago were aware of the impossibility of so long a time having elapsed between the arrival of Jacob in Egypt and the Exodus under Moses. The translation of the Septuagint "executed in Egypt" has 215 years instead of 430, and many Hebrew and early Christian authors adopt that view. An old Rabbinical chronicle of the life of Moses puts the birth of the law-giver sixty years after the death of Joseph. Herr Lund computes the period of the sojourn in Egypt at 136 years—a result at which he has arrived in the course of other researches, hereafter to be made public.

With regard to the bas-relief discovered by Mr. Villiers Stuart at Thebes, Herr Lund does not admit that the portraits of two entirely dissimilar Pharaohs as there represented are in any way destructive of his own theory as to the

identity of Khu-en-Aten and Amenhotep IV. He maintains that, unlike as they are, they stand for one and the same person, the name-cartouche of both being the same. For the extraordinary difference in their features he accounts by assuming that the art of portraiture did not in fact exist till this reign; that all heads and figures had hitherto been executed according to a fixed pattern, subject to very slight variations; and that the so-called "caricature" portrait of Khu-en-Aten registers the first honest attempt at an actual likeness. It is not very difficult, says Herr Lund, to account for this sudden change of procedure. It dates from the moment when Amenhotep IV. broke with the civil and religious traditions of his forefathers. He, in fact, abolished the ideal canon in art, and established the law of realistic portraiture. Herr Lund believes that he has also identified the portrait of Joseph.

NOTE.—May I be permitted to point out that there is no Bible evidence to show that the native population of the land of Goshen was evicted in favour of Jacob and his followers? Neither do we read that the Hebrews at any time enjoyed exclusive possession of that province. I would venture also to call Herr Lund's attention to the statues of Prince Rhotep and Princess Nefer-t, the bas-relief heads of Huni, the famous diorite statue of Khafra, the heads of the Syrian immigrants in the equally famous wall-painting at Beni-Hassan, the bas-relief profile of Queen Taii engraved in Ebers' *Egypt*, and other works of portraiture, all anterior to the reign of Khu-en-Aten, all executed in the true spirit of the realistic school, and all evidently representing flesh-and-blood originals.

AMELIA B. EDWARDS.

NOTES OF TRAVEL.

THE Council of the Royal Geographical Society have decided on equipping an expedition to Eastern Africa for the exploration of the snow-capped mountains, Kenia and Kilimanjaro, and the country between them and the eastern shores of Victoria Nyanza. Mr. Joseph Thomson is to be the commander; and, according to present arrangements, he will leave England for Zanzibar to organise his party early next year.

WE take the following from the *Times*:—"Between Akabah, the ancient Elath, the port from which Solomon's fleets sailed for Ophir, and the Sinaitic peninsula, there is a small region of country which is at present unexplored. Prof. E. H. Palmer, author of *The Desert of the Exodus*, has undertaken, for the Committee of the Palestine Exploration Fund, to pay a visit to this district with the endeavour to complete the map of the scene of the 'Wanderings of Israel.' Among the places which he proposes to examine may be mentioned the site of Kadesh Barnea, originally discovered by the Rev. J. Rowlands, and more recently visited by Mr. Clay Trumbull, of Philadelphia. Should time allow, Prof. Palmer proposes also to revisit the very interesting city of El Barid, north of Petra, which he discovered in 1870, during his journey with Mr. C. F. Tyrwhitt Drake."

SCIENCE NOTES.

Jurassic Palaeontology.—The current number of the *Journal of the Geological Society* contains the elaborate address delivered by Mr. B. Etheridge on the occasion of his retirement from the presidential chair at the last anniversary meeting. In this discourse he traces the development of our knowledge of Jurassic

fossils during the last twenty years, and deals in a masterly manner with a great mass of statistics relating to the distribution of these fossils. The attention which has been bestowed of late years upon the Secondary rocks of Great Britain is strikingly shown by the fact that since 1860 no fewer than 113 papers on these strata have appeared in the society's *Journal*, while six complete monographs of Jurassic groups have been issued by the Palaeontographical Society. All this mass of matter has been carefully digested by Mr. Etheridge. His address, apart from the accompanying obituary notices, occupies nearly 180 pages, and forms, in fact, a valuable work of reference which will be an inestimable boon to the student of the Secondary rocks of this country.

At a meeting of the executive committee of the Darwin Memorial Fund, held on June 30 at the Royal Society's Rooms, Burlington House, it was announced that the total subscriptions already promised or received amounted to £2,487 13s. It was decided that the memorial should take the form of a marble statue, and a sub-committee was appointed to make the necessary arrangements. It was agreed to ask the Trustees of the British Museum for permission to place the statue in the large hall of the British Museum (Natural History), South Kensington.

A SPECIAL meeting of the Anthropological Institute, to be devoted entirely to African matters, will be held on Tuesday next at the house of the president of the Institute, Gen. Pitt-Rivers. The president will himself read a note on the Egyptian boomerang; Capt. Burton and Commander Cameron will describe the neolithic implements they have recently brought back with them from the Gold Coast; and Mr. M. Hutchinson will exhibit a collection of Bushman drawings.

THE last part (No. 13) of the *Bibliographical Contributions of Harvard University* contains Mr. Samuel H. Scudder's Bibliography of Fossil Insects. It consists of forty-six pages, and gives references to more than 400 authors. All papers, &c., quoted have been personally examined, unless the contrary is expressed; and, in most cases, brief descriptive notes have been added. The value of such a work as this it is impossible to over-estimate; some part of the labour involved in its preparation may be inferred from the following statement:—

"The multiplication of periodical literature of late years has brought in its train a host of minor papers, many of them wholly popular in character, which, while they multiply titles, do not materially add to our actual knowledge."

THE *Annual Report of the Board of Regents of the Smithsonian Institution for the Year 1880* (Washington: Government Printing Office) has only just reached us, though it bears date 1881, and was ordered to be printed in January of that year. It contains a valuable bibliography of Sir William Herschel, compiled by Prof. E. S. Holden and Dr. C. S. Hastings. This consists of (1) a list of his published writings on astronomical subjects; (2) a list of works relating to his life and writings; (3) a list of the published portraits of him; (4) a detailed synopsis of the sixty-nine different memoirs which he contributed to the *Philosophical Transactions of the Royal Society* between 1780 and 1818; (5) a subject index to his scientific writings. The synopsis alone covers nearly 100 pages. It is modelled upon the synopsis which Sir W. Herschel himself gave of one of his own memoirs. As no edition of his collected works has yet been published, and as the most important of them are only to be found in the original volumes of the *Transactions*, now become rare and costly, the great value of this bibliography will be evident. The volume also contains the

usual "record of recent scientific progress," compiled by specialists in the several departments.

PHILOLOGY NOTES.

At the recent meeting of the American Oriental Society Prof. W. D. Whitney presented and explained a specimen of a list of Sanskrit verbs which he intends to put forth as a supplement to his Sanskrit Grammar, giving all the verbal forms and primary derivatives found in use from each root, with the period of their appearance.

THE Seventh Year-Book of the Society for Low German Philology has appeared. Among others, it contains an article (with map) on the district in the area of Low German dialects in which the pronominal forms *mek* (*mik*) and *dek* (*dik*) occur as against *mi* and *di*. Another article is devoted to Johann Rist, whose dramatic works are now scarcely remembered, though his "intercenia" in Low German give most lively pictures of the relations between peasants and soldiers during the time of the Thirty Years' War. The same society has published the first of a series of Low German dictionaries—viz., that of the Westphalian dialect by Fr. Woeste.

THE two candidates for the Académie des Inscriptions, to fill the place of the late M. Guessard, are the Egyptologist M. Eugène Revillout and the Sanskritist M. Sénart. It is interesting to observe how large a place Oriental learning occupies in France.

WE take the following Greek notes from the *Revue critique*:—Andrew Hidromenos has issued the second part of his translation of Mr. Gladstone's *Juventus Mundi*—*Κόσμου νεότης*—of which the first part appeared in 1879; Agathonikos, advocate before the court of appeal, a translation of M. Taine's *Philosophie de l'Art en Italie*, as a companion volume to his translation of the same author's *Philosophie de l'Art en Grèce*, which appeared some time ago; Prof. Th. Aphentoulis a translation of Lessing's *Nathan* and of Schiller's *Mary Stuart*. George Pagidas has written a work upon the topography of the ancient city of Thebes, with special reference to its walls and the position of its famous seven gates.

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, June 27.)

GEN. PITT-RIVERS, President, in the Chair.—Mr. Villiers Stuart, M.P., exhibited and described a drawing of the funeral canopy or tent of an Egyptian queen, and some casts of bas-reliefs discovered by him within a short distance of the tent.—Mr. E. H. Man read a further account of the natives of the Andaman Islands, in which he treated more particularly of their home life; the food and methods of cooking were fully described, also the games, amusements, and dances.—A communication was received from Mr. H. C. R. Becher on some Mexican terra-cotta figures found near the ancient pyramids of San Juan Teotihuacan; from a comparison of these figures with those in the museum at Palermo, the author argued that they were produced by people of the same race, and that the builders of the ancient monuments were Phœnicians.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, June 28.)

JOSEPH HAYNES, Esq., in the Chair.—Mr. Alfred Marks read a paper on "The 'St. Anne' of Leonardo da Vinci." Taking as his text the well-known account given by Vasari of the cartoon of "St. Anne" executed by Leonardo for the Servites of Florence, Mr. Marks showed that the description confused two designs—that of the cartoon now in the possession of the Royal Academy, and another composition represented by the picture in the Louvre. The differences between the two

designs were pointed out, and Mr. Marks then endeavoured to answer the questions: Was the Royal Academy's cartoon the great work so celebrated by early writers? What was the relationship between the two designs? The conclusion arrived at was that the Royal Academy's cartoon represented an early stage in the development of an idea finally carried out in a work resembling the Louvre picture. That this cartoon was a similar composition to the Louvre picture seems to be proved by the fact that, whereas one copy only was known of the Royal Academy's cartoon, Mr. Marks was able to enumerate nineteen copies or adaptations of the whole or of a part of the Louvre design. Photographs of some of these works were exhibited. Mr. Marks contended that Leonardo's cartoon could not possibly have been executed under the circumstances mentioned by Vasari, and showed grounds for believing that the work was produced at Milan before the fall of Lodovico Sforza. Proof was given of the existence at Milan in 1618 of a cartoon of the Louvre design, probably a genuine work of Leonardo. In 1631, a cartoon ascribed to Leonardo was in the collection at Turin of Charles Emanuel I. Another cartoon, probably a copy by Marco da Oggiono of Leonardo's original, was, about 1695, in the possession of Padre Resta. Mr. Marks then traced the history of the Royal Academy's cartoon, showing that it was probably that mentioned by Lomazzo as being in the possession of Aurelio Luini. It afterwards passed into the hands of the families of Arconati and Camedi, both of Milan (remaining with the former for about a century), and Sagredo, of Venice. It left Italy about 1760, and is first noticed at the Royal Academy in 1791. How it got there is not known. Mr. Marks, in conclusion, urged that enquiry should be made about a cartoon mentioned by Dr. Waagen as being in 1839 in the possession of the Platenberg family of Westphalia, but a few years ago in Count N. Esterhazy's collection at Vienna. This cartoon is stated to be Leonardo's work.

ARISTOTELIAN SOCIETY.—(Monday, July 3.)

S. H. HODGSON, Esq., President, in the Chair.—The following gentlemen were re-elected officers of the society:—S. H. Hodgson, president; W. R. Dunstan, J. Burns-Gibson, and W. C. Barlow, vice-presidents; and Dr. A. Senior, hon. secretary.—A discussion then took place on "Subject and Object and their Dependent Ideas—Ego, Self, Soul, and Mind."

ROYAL ASIATIC SOCIETY.—(Monday, July 3.)

SIR BARTLE FRERE, BART., President, in the Chair.—Papers were read by Mr. W. Simpson on "Buddhist Caves in Afghanistan" and on "The Identification of a Sculptured Tote with Sanchi;" also, by Mr. C. Gardner, on "Written and Unwritten Chinese Laws."—At the close of this paper Sir R. Alcock remarked on its importance, and expressed the hope that it would be speedily printed; and M. G. Bertin, referring to some of the views advocated by the writer, pointed out how remarkable are the affinities between the Chinese laws and those of the Acadians, which he has been recently studying on the clay tablets of Babylon. This view, he added, is not really surprising, when we remember that M. de La Couperie has been able to trace to Western Asia (as its origin) the first idea of much of Chinese culture.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REED, 115, Strand, near Waterloo-bridge.

ART BOOKS.

Architecture, Classic and Early Christian. By T. Roger Smith and John Slater. (Sampson Low.) This is the companion handbook to that on "Gothic and Renaissance Architecture" written by Mr. T. Roger Smith and Mr. E. J. Poynter. The system of classification adopted is this: (1) Architecture of the beam and lintel—comprising that of the Egyptians, Persians, and Greeks; (2) The architecture of the round arch—beginning with the Etruscans

and Assyrians, developed by the Romans into its greatest perfection, and finally adopted by most European nations, in early Christian times, in the forms known as Romanesque and Norman; (3) The pointed arch style, used first by Moslem architects, and then employed by nearly all Western nations from the twelfth to the sixteenth centuries—the latter form being the style that we call Gothic; (4) The period of the Renaissance. The present volume of the series treats of the first two of these great divisions—a very wide subject, extending over a vast area of time and place. A good deal of valuable space is given to the more barbaric forms of architecture, such as that of India, Japan, China, and Persia, which would, perhaps, have better been omitted to allow room for rather more complete treatises on the much more important subjects of Greek and Roman architecture. The accounts of these are, however, very concise and well written, and the examples are wisely selected and fairly well illustrated by wood-cuts. Some corrections are needed—the phrase (fig. 78) “Monument to Lysicrates, as in the time of Pericles,” contains two errors. It was built, not to Lysicrates, but by him, in his own and Dionysos’ honour; and its date is 335 B.C., more than a century later than the time of Pericles. The wood-cut of the Cloaca Maxima shows it with a brick arch, though the text rightly describes it as having large stone *vousoirs*. The view of Sant’ Apollinare in Classe is inscribed “Sant’ Apollinare, Ravenna,” which is quite a different church. There is an excellent sketch of the construction of the Parthenon, with its wonderful optical refinements of universally curved lines and leaning columns—refinements quite unappreciable to the comparatively untrained eye of any of us modern folk. It should not be forgotten how much we owe our knowledge of this widely applied *entasis* to the perseverance and care expended by Mr. F. O. Penrose in the production of his great work on the *Principles of Athenian Architecture*. It is rather strange to find the authors of this handbook expressing a belief in Mr. Fergusson’s extraordinary conjecture of a *clerestory* being the mode by which Greek temples were lighted. Fortunately, the wood-cut shows Bötticher’s much more probable restoration. Some indication of what part is known and what conjectural in the illustrations would have been useful. The figures in relief on the frieze of the Erechtheum (fig. 71) are purely imaginary, and only the holes by which they were fixed to the black marble ground remain. The present state of the interesting fifth-century church at Tourmanin, in Syria, is very unlike the view given on p. 220, though, in this case, the fault rather rests with Count de Vogüé, the whole of whose valuable work on early Syrian churches is a little marred by the absence of information as to how much of his drawings is conjectural. Surely, too, it would have added greatly to the value of the various illustrations if they had each had a scale attached. In spite of these defects, the handbook is a very useful one, and contains a great deal of information in a clear and compact form. It will supply a want widely felt, not only by professional students, but also by many others who do not wish to remain quite ignorant of so important a subject.

“Illustrated Handbooks of Practical Art.” By Henry B. Wheatley and Philip H. Delamotte. *Art Work in Earthenware. Art Work in Gold and Silver (Mediaeval)*. (Sampson Low.) These beautifully got-up and profusely illustrated handbooks are the commencement of a series, cheap and elegant, which has been designed for the purpose of calling attention to “numerous examples, both ancient and modern, of the application of beautiful design to articles of every-day use, and to the various objects which

are frequently employed for purposes of decoration.” There can be no doubt that this purpose is attained. The summary which each of these volumes contains of the history of a particular branch of art is too short to be of much service, but it seems in both cases to have been carefully done.

The Year’s Art, 1882. Compiled by Marcus B. Huish. (Sampson Low.) We are glad to be able to gather from the Preface that this useful annual is appreciated. In this its third year Mr. Huish has endeavoured to make it more complete, and it now may be said to contain everything that the artist or amateur can wish from such a publication. Particularly valuable are the lists of important works sold, with the prices they fetched. Sir Edwin Landseer outstrips everyone, with a total of £21,137 for six pictures, averaging over £3,500 a-piece. The highest sum given for a painting in an auction room in England during the year was £8,615. This was paid for Landseer’s “Man proposes, God disposes,” at the Coleman sale. Turner is the only artist whose water-colours reached over £1,000. Three of his drawings at the Bale sale fetched more than this, and one, “Ingleborough from Hornby Castle,” as much as £2,310. The highest price paid for an engraving or etching was £450 for a first state of Van Dyck’s “J. van der Wouwer;” but Turner (or Lupton rather) follows next, with £210 for a first state of “Ben Arthur,” in the *Liber Studiorum*. We thought that even this price had been exceeded by an “Aeacus and Hesperie.” Mr. Huish is certainly wrong in putting Turner’s name as the engraver of all the *Liber* plates. We have, however, no further fault to find with this well-arranged and laborious work.

Essai d’une Bibliographie de l’Histoire spéciale de la Peinture et de la Gravure en Hollande et en Belgique (1500-1875). Par J. F. van Someren. (Amsterdam: Fred. Muller.) Many thanks are due to the author for the labour he has bestowed on this little book, which will be invaluable to all students of Dutch and Flemish art. Not only has he made mention of all books of any importance published on this wide subject, but he has searched the principal art journals of the Continent, and given the titles of the most valuable articles. In the matter of books, he has not neglected English any more than Dutch authors, and the names of Weale, Eastlake, Heaton, and Gower will be found, as well as those of Vosmaer, van der Willigen, Havard, and Cavalcaselle. It is an admirable book, the deficiencies in which the author will be probably the first to discover. The only additions which we can suggest are references to some journals like the *Portfolio* and the *Zeitschrift für bildende Kunst*, and an index to the names of painters.

Die bildenden Künste in der Schweiz im Jahre 1881. Von Dr. C. von Tschärner. (Bern.) The author, who is the president of the cantonal Art Union of Bern, here gives an interesting conspectus of the art and art-literature of his countrymen during last year, and of the efforts made for the preservation of historic monuments in the Confederation. It is to the disadvantage of the Swiss nationality that Germany and France get the credit of so much that is wrought and written by Switzers. Many foreigners will be surprised at the discovery that not a few eminent artists and art writers whom they have taken to be French or German are really Swiss. Dr. von Tschärner gives an account of the Swiss exhibitions for the year, the chief works of Swiss painters and sculptors in foreign exhibitions, the progress and struggles of local art societies, the eminent Swiss artists who died during the year, and the additions to art history and literature made by Lübke, Wackernagel, Rahn, Vögelin, Trächsel, Kinkel, and others. The little volume contains a portrait

of the late Ed. Girardet, etched by his son, Robert Girardet.

THE Royal Prussian Art Collections have not made any additions of late that claim notice. There are, however, several excellent articles by distinguished writers in the current *Jahrbuch*. Dürer’s knowledge of ancient art, as seen by some critics in his “Apollo” and his “Adam and Eve,” is insisted upon by W. Thode, though his arguments in support of the proposition cannot be said to be convincing. W. Bode gives an excellent account of Verrocchio and his works in Prussian collections; W. von Seidlitz contributes a careful study of the prints of Hans Sebald Beham; and Herman Grimm a scientific note on a work of Raphael’s the date of which seems to be wrong. From these articles and others not mentioned it will be seen that the *Jahrbuch* of the Royal Prussian Art Collections is in reality an art Review of a highly learned and scientific character. It is well that German savants should have such an organ for publishing their opinions, for more popular journals would scarcely appreciate their long disquisitions. Perhaps some day we may obtain an art Review in England where art questions may be discussed with scientific zeal.

THE new number of the *Mittheilungen* of the Historical and Antiquarian Society of Basel is wholly occupied by an account of the Roman Theatre at Augusta Raurica (Augst), with five illustrations, from the pen of T. Burckhardt-Biedermann. In the sixteenth century, when a far larger portion of the ruins was visible above the surface of the ground, exact measurements were undertaken by Basilius Amerbach, but these had remained unpublished. The subject was afterwards studied and described by Bruckner and Schöpflin; and the ground-plan of the theatre, so far as it was possible, was definitely traced out. Since that time, however, a new discovery has come to light—namely, the existence of a double wall of masonry around the orchestra, the lesser wall rising four feet above the ground, and the greater wall rising to twenty-two feet. The author believes that there was a later reconstruction of the theatre, probably about the time of Constantine. It is his opinion that it was originally built merely for dramatic spectacles, but that the later changes were made in order to fit it for gladiatorial shows and combats with wild beasts.

THE Société bibliographique has issued the first volume (A—BLI) of the *Glossaire archéologique du Moyen-Âge et de la Renaissance*, upon which M. Victor Gay has been engaged for many years. It is illustrated with a large number of wood-cuts.

SIG. A. BERTOLOTTI has published (Modena: Vincenzi) a little pamphlet upon Giulio Clovio, “the prince of miniature painters,” containing several new details. He has found the will of Clovio, dated December 27, 1577, in which he describes himself as “patre Macedonico et matre Illyrica,” and gives a list of the miniatures in his possession.

THE HAMILTON SALE.

III.

It is probable that the public interest in the Hamilton sale culminated last Saturday, when the noble and rare instance of the art of Signorelli, “The Circumcision,” passed into the possession of the authorities of the National Gallery for the quite moderate sum of 3,000 guineas, and when several other desirable works were added to the national collection. The representative of the Louvre, M. Gauchez, competed with Mr. Burton for the Signorelli, and it is recorded that from about the sum of 2,200 guineas the bids were confined to these two.

That the Director of our National Gallery should be the victor was only reasonable; it would have been indeed a mistake had so considerable an example of the rare perfection of early art been permitted to leave England. Mr. Burton did not buy the Antonello da Messina which had been a good deal spoken of, and it was carried off by M. Sedelmeyer for 490 guineas. But the National Gallery acquired the beautifully designed and forcibly painted "Allegory" of Giacomo da Pontormo—an allegory which, as far as we are aware, no one has completely explained; and it has also become possessed of El Greco's portrait of a senator, a work by a rare master. To Titian it had been assigned in the Catalogue until the last, but not even at the first in the judgment of the connoisseur; and, whatever may be the facilities for acquiring such work in Spain, here in England the task is at least beset with difficulty. The purchase is generally accounted a discreet one. The subject of the portrait is a more than elderly person, who—like Mr. Mortimer Collins—wrote a treatise on long life, and apparently practised so well what he preached that he continued to live until he was 105. He was painted at ninety-five, but to assert that his eye was not then dim nor his natural fire abated would certainly be to take too flattering a view of his condition. Existence cannot at that time have retained much of its charm for him. We have now named the three purchases of our own National Gallery. The National Gallery of Ireland made two purchases, through its Director, Mr. Doyle. One of these was a Bonifazio, "The Resurrection," a sober and dignified and beautiful work, acquired for 205 guineas; and the other a picture somewhat ignorantly catalogued as Leonardo's, but undoubtedly of the Milanese school in its early time. It was the portrait of a man in early middle life—still almost a young man indeed—very dignified in its quietude and reticence of gesture, nobly coloured, and drawn with a firmness and precision which the highest masters of draughtsmanship could not have more than equalled.

Early in the sale there came a great many portraits, some of them very well painted, though by artists not easily identified. One of the most notable of these portraits was a group, which fell to Mr. Vokins's bid of 350 guineas; it represented Mary Queen of Scots, and her son, a young child, at her knee. A picture assigned to Luini, which had attracted general attention from the force with which a marked character had been realised, became the property of Mr. Agnew for 320 guineas. It represented a Duchess of Ferrara. Mr. Stephen Winckworth—who had been a purchaser on previous days—on Saturday became possessed of what was considered by many, as the famous "Leonardo" of the sale. This cabinet picture—"The Laughing Boy"—is certainly able to cite certain *pièces justificatives* in support of its claim to be directly from the hand of the most admired Milanese master. Experts in the school must be left to determine whether the work be really Leonardo's or Luini's. Another very important purchase was that of a Holy Family by Titian, a picture unsupported by any pedigree, but bearing on the face of it much evidence of its high origin. Mr. Webster, who bought this desirable work for 1,150 guineas, was likewise the purchaser of the most beautiful of several works attributed to Bronzino, a portrait, it was said, of Don Garzia de Medici, which the purchaser secured for 1,700 guineas. The picture was fine, but it is doubtful whether it was cheap. A "Madonna" of Bonifazio, which can hardly be considered second to the example of the master acquired for Dublin, reached the sum of 460 guineas. A well-preserved Garafalo fell for 180 guineas; and the undoubted example of Andrea del

Sarto—the Magdalen—although hardly a pleasing one, must have been bought cheaply for 340 guineas. The Lybian Sibyl of Ludovico Caracci, a magnificent design in a bad school, sold for 270 guineas. At least one genuine Moroni went very cheap; and indeed there were not a few instances of good pictures falling for moderate sums.

THE EXCAVATIONS IN THE FORUM ROMANUM.

THE new excavations in the Forum have laid bare the foundations of various buildings, and the traces of a new road, which will give rise to many theories among archaeologists. They are of the deepest interest, as the ground plot of these excavations takes within its bounds the sites of many of the most important buildings and spots which have long called for identification.

The sites, within the bounds of the late excavations, whose identification has been earnestly sought for are the Via Sacra, the Regia, the Temple of Vesta, the Domus Vestae, the Nova Via, the arch of Fabius, the Temple of Jupiter Stator.

In the late excavations the sites of these have been at last identified, if not with every certainty, at least with the greatest probability. The Via Sacra first claims our notice. It was the well-known principle of a Roman engineer, in making a road, to take the straightest line to the goal to which his road was directed. Now this is fully carried out in the course of the Via Sacra. It led down the Clivus Sacer, from the arch of Titus, passed under the arch of Fabius, which was on the edge of the Forum, then went in a straight line along the north side of the Forum by the Basilica Aemilia, the Temple of Janus, the Curia Hostilia, to the foot of the Capitoline, where it ascended to the Temple of Jupiter Capitolinus. There is nothing to support the view that on reaching the edge of the Forum it turned to the left, then to the right, and on reaching the arch of Tiberius turned again to the right. These frequent turnings were against the well-known principle of the Roman engineer, such turns being, to use Mr. Fergusson's word, "as abhorrent to a Roman road-maker as a vacuum is said to be to nature." There is not the slightest foundation for supposing the course of the Via Sacra was ever changed at a later period. The Romans, who were intensely conservative in their religious practices, would never have changed the course of a via which was consecrated by the use and custom of many ages. According to Ovid, the Via Sacra received its name from the sacred rites which were performed on it.

The site which may, with the greatest probability, be identified with the Regia, or Atrium Vestae, as it is also called, is the platform in front of the Temple of Antoninus. According to ancient writers, the Regia, the dwelling-place of the Pontifex Maximus, was situated on the Via Sacra and on the edge of the Forum, a description which tallies with the site assigned to it. One of the strongest reasons for identifying its site with this platform is that we are told the body of Caesar was burnt in the Forum in front of the Regia, and that afterwards Augustus built a temple to Julius Caesar on that very spot. Now, the sub-structures of the temple of Divus Julius are in front of this platform. The plot of ground on which the Regia was built, and the Regia itself, must have been very small, as Ovid writes:

"Hic locus exiguus, qui sustinet atria Vestae
Tunc erat intonsi regia magna Numae."

In his *Tristia* he notices the smallness of the Regia:

"Hic fuit antiqui regia parva Numae."

The Regia was evidently on a line with the temple of Vesta, as the late discoveries have shown, though at a little distance from it, for Servius says it was separated from it: "atrium Vestae, quod a templo remotum fuerat."

When Horace says, in his IX. Satire, "Ventum erat ad Vestae," he means atrium Vestae, which was the other name for the Regia, which was in the Via Sacra. The temple of Vesta was in the Nova Via.

Of the site of the Temple of Vesta we can speak with every certainty, as its basement, or podium, has been discovered, its circular form clearly identifying it with that temple. According to a passage in Livy v. 31 it was situated below the Nova Via, which passed in the fourth century B.C. along the slope of the Palatine.

The *domus Vestae*, the abode of the Vestal Virgins, may in all likelihood be identified with the spot where the mosaic pavements have been found. These remains are close to the temple of Vesta, and may have been connected with it. The line of the walls appears to turn to the east, and to run parallel with the newly discovered road which joins on to the Via Sacra, near the Temple of Romulus.

We now turn to the Nova Via. There is every reason to believe that in the fourth century B.C. the Nova Via, on leaving the Velabrum, ran along the western slope of the Palatine, then turned the north corner of the hill, whence it continued along the eastern slope of the Palatine, running parallel to the Via Sacra, till it reached "Summa Velia." Livy tells us that, before the approach of the Gauls to Rome, a voice was heard in the Nova Via, *above the Temple of Vesta*, ordering the magistrates to be told the Gauls were approaching. In the time of Augustus its course was evidently changed, for Ovid says in his *Fasti* that in his time on his leaving the Temple of Vesta he stood on the spot where the Nova Via now joins on to the Forum. Ovid's words are:

"Forte revertebar festis Vestalibus illuc
Qua nova Romano nunc Via juncta Foro est
Huc pede matronam vidi descendere nudo."

The spot where Ovid was standing was evidently near the corner of the Temple of Castor, where the pavement of a road occurs by the side of the temple, while the matron was descending that portion of the Nova Via which leads down from the Via Sacra. We may, therefore, with every probability, conjecture that the Via recently discovered, which, in skirting the eastern side of Temple of Castor, joined on to the Forum at the corner of the temple, then, turning at a right angle, passed between the Regia and the Temple of Vesta, and finally merged in the Via Sacra near the Temple of Romulus, was the Nova Via in the time of Ovid. The part of the Via discovered in the latest excavations would appear to be that portion of it where Ovid saw the matron descending towards the spot where he was standing.

The arch of Fabius most probably spanned the Via Sacra near the Temple of Antoninus at the foot of the slope of the Velia, where the road has been recently removed. Several *voussoirs* of an arch in travertine which doubtless belonged to it have been found in that spot.

The site of the Temple of Jupiter Stator next claims our attention. Livy tells us that, the Romans being driven back by the Sabines *over the whole ground now occupied by the Forum*, not far from the gate of the Palatine, Romulus vowed on that spot a temple to Jupiter. The spot which would answer best to this description would be somewhere beyond the Regia, as the Forum extended so far as that. Ovid says the Temple of Jupiter Stator was in front of the Palatine, "ante Palatini ora jugi."

The same spot is in front of the Palatine. Mr. Burn writes:—"The situation is determined by several passages of Livy, Plutarch, and Ovid, which place it by the chief gate of the Palatine, at the junction of the Via Sacra with the Nova Via." Now, on this very spot, close to the junction of the Via Sacra with the Nova Via, and in front of the Palatine, the indications of constructions of an early date have been discovered, which, in all probability, belonged to the foundations of the Temple of Jupiter Stator.

A portion of the ancient plan of Rome has been discovered in these recent excavations, giving one side of the Temple of Castor. A street with shops is represented as passing behind the temple. This has been identified by Sig. Maruchi with the Nova Via. But this street, from its position behind the temple, must have joined on, at its western end, to the Vicus Tuscus, which passed on the other side of the temple; and there is nothing in ancient writers to warrant such a conclusion. We have already shown the Nova Via in Ovid's time skirted the eastern side of the temple. Another point must be taken into consideration—that the plan is of the time of Septimius Severus—that is, about 180 years after the time of Ovid, when many changes may have taken place.

HODDER M. WESTROPP.

OBITUARY.

CYRIL W. HERBERT.

By the death of Mr. Cyril Wiseman Herbert, the youngest son of Mr. J. R. Herbert, B.A., on July 2, at the early age of thirty-four, the artistic world loses one who promised to rank among its brightest ornaments. He was only ill for a week, and it was not until within ten hours of his death that his complaint showed any serious symptoms.

As a child Cyril was brought up in France, and he never lost the fluency of expression in the French language. On his father's return to England he spent some four years at Oscott College, and he completed his classical studies, in which he attained to more than common excellence, at King's College, London. In his artistic training he had the advantage of working constantly, together with his late brother, Arthur, and his surviving brother, Wilfrid, under the direction and in the studio of his father. In the year 1868 he went to Italy, where he made many elaborate and successful studies of pastoral and agricultural subjects, chiefly among the mountains in the neighbourhood of Olevano. He also made himself familiar with the works of the great masters in most of the galleries of Italy and France, as well as at Munich and in Belgium.

Cyril Herbert's first picture, entitled "Homeward after Labour," depicting Roman cattle driven home after the day's toil, was exhibited at the Royal Academy in 1870. The next year his Royal Academy picture was "An Idyl"—two lovers on a terrace, suggested by a love-song he had heard among the Italian hills. In 1874 he exhibited his "Returning to the Fold," the first picture in which he showed his skill in drawing and grouping his favourite sheep. The last picture he exhibited in London, in 1875, was "Escaped Home"—a collie-dog returning to its mistress at her cottage-door, after having bitten through the string by which it had been held in captivity. Since then, however, he had been by no means idle. So far was exactness the aim of all his work that he was never satisfied that he had learnt everything relating to his art. Anatomy, perspective, composition, *chiaroscuro*, costume, and architecture—all these he was constantly studying, and with great success. One of his pictures, "The Knight's Farewell," was sold to a col-

lector without being exhibited. It represented a cavalier leaving his lady in the sombre dusk of evening, with few gleams of light, to denote the heaviness and the faint hope of the hearts that were separating. Another represented a dog guarding the meal of some Welsh peasants. And a large picture—perhaps his greatest work—of Welsh sheep driven home in the gloaming, was exhibited in the Walker Gallery at Liverpool in 1876, and bought by the then mayor, Mr. John Walker, founder of the gallery. Two important pictures he leaves unfinished. One is a pathetic representation of two girls begging on the steps of London Bridge. The other is a convicted vestal at the grave—a large and effective composition containing many figures, and much elaborated in the costume and architecture, to ascertain which he made deep research. Besides these, the charming little landscapes that he painted for his friends remain as evidence of his sympathy with the quiet scenes in which he loved to meditate.

Early in the present year Cyril Herbert obtained the appointment of Curator of Sculpture in the Royal Academy, where he soon endeared himself to the students by his urbanity and his unwearying industry in assisting them. His constant desire to do no work that was not exhaustively thought out and executed to the best of his ability leaves the public unable rightly to estimate what manner of man he was. It is only his intimate friends who have evidence by which they can remember what he was and what he might have been. The tender recollection in which they will always hold him—the warmth of his nature, the vivacity of his temperament, the depth of his affection—all this they alone can realise.

HENRY T. WHARTON.

NOTES ON ART AND ARCHAEOLOGY.

WE hear that the Queen has been pleased to accept the dedication of Mr. Herkomer's engraving of Mr. Millais's portrait of the late Earl of Beaconsfield.

A CONFERENCE will be held next Tuesday, July 11, at 8.30 p.m., in the rooms of the Ascham Society, 18 Baker Street, Portman Square, when Mr. Cope Whitehouse will state the results of his recent explorations in and near the Fayoum, and his examination of the ancient basin of Lake Moeris. The chair will be taken by Dr. Birch.

THE forthcoming autumn exhibition of the Glasgow Institute of the Fine Arts will open on Tuesday, September 5, and will close early in November. As usual, this will be a combined exhibition of works in black and white and of the Scottish Water-Colour Society. In connexion with the former department, there will be, as we have already announced, a complete representation of the works of Méryon, lent by Mr. MacGeorge, of Glasgow.

WE are glad to see that the Société nationale des Antiquaires de France interests itself in the preservation of ancient buildings. At its meeting last month an address was voted to the Minister of War with reference to one of the old gates of Valenciennes which a new scheme of fortification is threatening with destruction.

MR. ALFRED GRAY, of Albert Street, Regent's Park, has sent us several packets of caricatures, &c., which seem above the average of this kind of art. The Academy and Grosvenor Skits are from Mr. Gray's own pencil; but we prefer the political caricatures bearing the signature of Mr. W. G. Baxter. His politics are impartial; but he should not have represented Sir R. Cross as being extinguished by a baronetcy, instead of by a G.O.B.

WE received from the Autotype Company some time ago, but have hitherto been unable to notice, a small series of reproductions from some delightful drawings by Mr. F. G. Shields. They represent idyllic child life, and are remarkable for their grace and true beauty; there is nothing of the prettiness about them which one so often sees in work of this kind. Mr. F. G. Shields is an artist who generally devotes himself to much more serious work. He is at present, we believe, employed upon a series of designs for the windows in a private chapel belonging to the Duke of Westminster. This is an undertaking that must tax his intellectual and artistic powers to the highest degree, for such is his enthusiasm that he is not content with preparing fewer than 100 large cartoons for this purpose. Some of these it may be hoped will shortly be exhibited, for, judging from some small reproductions we have seen of them, they certainly are striking and uncommon work. It is pleasant to find that, amidst the strain of such mighty work as this, Mr. Shields can yet find moments of relaxation in which to draw for us young children gathering limpets from the rocks, children playing a game, a young mother and her child, &c. His drawing in these is somewhat reminiscent of that of Mulready, but with more sentiment interfused. The reproductions leave nothing to be desired.

DR. T. H. HENDLEY, the curator, has compiled an interesting report of the Economic and Industrial Museum which was established at Jeypore in August 1881. During the first three months of the present year the museum was visited by just over 200,000 persons, of whom more than one-half were women and children. In the department of antiquities we notice a collection of stone images of the Chohan period found in the mud of a tank into which they had been thrown, after mutilation, by order of Aurangzeb. We also learn that excavations carried on in the bed of a fresh-water lake near Sambhar have already resulted in the discovery of several interesting relics from ruined houses now twenty feet below the surface. Among these are spindle whorls, fragments of copper vessels and ivory ornaments, curious clay images, and a clay Buddhist seal.

WE have received the third annual Report of the Archaeological Institute of America (Cambridge, U.S.: John Wilson). Of the excavations at Assos, and of the foundation of the school of classical studies at Athens, we have already spoken. A synopsis is given of the results of Mr. Bandelier's explorations in Mexico from March to June of last year. He has concluded that Quetzal-chohuatl, the deity anciently worshipped at Cholula, near Puebla, was an historical hero of the Toltec race; and that the so-called pyramid at the same place is "an artificially elevated, fortified pueblo," composed of the common *adobe* of the country, and the work rather of many years than of a great multitude at one time. At Mitla, in Oaxaca, Mr. Bandelier made an examination of the imposing ruins called palaces, which he regards as "shelters at night and in bad weather," and refuges for the women and children in time of attack.

A CHARACTERISTIC portrait of Gustave Courbet appeared recently in *L'Art*. It was drawn and etched by Bocourt with a powerful touch, but was somewhat heavy about the hair and eyes. The latter wanted both light and life. The portrait was accompanied by a sensible article on Courbet by M. Eugène Veron. It is now the fashion to extol this master as much as it was formerly to hoot at him. M. Veron recognises him as a skilful, realistic painter, but not as a great artist.

M. OCTAVE UZANNE will complete his work

on *Les Ornaments de la Femme*, the first volume of which—*L'Eventail*—appeared last year, with a second volume on *L'Ombrelle, le Gant, le Manchon*, which will have coloured illustrations by M. Paul Avril. It will be published in November next.

THE STAGE.

M^DME. CHAUMONT, who has been appearing at the Gaiety this week, is one of the cleverest actresses of *genre* nowadays to be seen. She is often as good as Mrs. Bancroft, but the public has not seen her to advantage during her present engagement in London. In "*Divorçons*"—Bowdlerised, but we cannot say purified, for representation in England—her art is chiefly exercised in the suggestion of matters which it would never do to actually realise. "*Divorçons*" preaches morality and sound sense, but often by offensive means. Even as it is presented at the Gaiety, it is hardly a piece which an English daughter can take an English mother to see with the comfortable assurance that the English mother will be satisfied. It is more suited for that theatre's habitual patrons, if we may make bold to assume that they not only understand French, but can see with celerity other points besides those that may lie in the dreamy languor of their favourite Miss Vaughan or in the energetic dance of Miss Gilchrist. Put into brief compass, the story of "*Divorçons*" is that of a married couple who seek to rid themselves altogether of that yoke which is upon them, instead of sensibly endeavouring to make it more tolerable each for the other. It is the woman who is most determined to be unconventional; but, when her husband gravely proposes such a legalised separation as will allow her a measure of liberty, she finds that "from the moment this is permitted it has no longer the same savour." As for the lover, when the husband deliberately plans for his final satisfaction by marriage, he looks extremely awkward, has the air of doubting the boon, and mildly insinuates that "his hopes had not extended so far." The silly lover and the sensible *ruse* husband (a very favourite character in French comedy, when French comedy is determined to be moral) are both played well; but it is the wife—that is, M^dme. Chaumont—who has the lion's share of the business. M^dme. Chaumont is throughout ingenious; but, even apart from the questionable taste of the representation, it is open to doubt whether the minute method of painting which carries her well enough through a scene or a dramatic song—well enough through "*Toto chez Tata*," through "*La première Feuille*," and through "*La bonne Année*"—is really adapted for the larger canvas she has now to fill. Anyhow, "*Divorçons*," though not seldom witty, is but rarely enjoyable.

AND, while this adroit little *genre* painting has been going on at the Gaiety, a very exalted artist indeed has been working in masterly fashion at Drury Lane. M^dme. Ristori is a tragedian whom age does not stale; she is a complete and enlightened and dignified student of every character she essays; she is fitted in a high degree to interpret conceptions the most poetical and the most profound. Her Lady Macbeth, now acted for the first time in English as a whole, has accordingly been a performance of real interest and peculiar delight. We do not know how far back we should have to go to find a Lady Macbeth so sufficient. Certainly our own generation has never shown such a Lady Macbeth—no, nor anything like it. Not that there is anything to wonder at in M^dme. Ristori's success, for eight years ago, when she had not properly mastered the language, she gave in English just one scene—the sleep-

walking scene—and it was the most impressive thing we had seen upon the stage since the first performances of Sarah Bernhardt and the latest of Desclée. M^dme. Ristori's art is not occasional, but complete. A curious and admirable unity—the unity that attends on one fine conception carefully kept—marks her performance. We could wish she were more thoroughly supported. Mr. William Rignold is a capable actor, but he is not a Macbeth. Where is Mr. Charles Warner, who has at least many of the qualities the part demands? He showed them at Sadler's Wells. But, however inadequate be the aid M^dme. Ristori has secured, her performance is an occasion on no account to be missed. As long as such an actress treads the boards, it is possible to take a worthy view of the functions of the theatre.

MUSIC.

RE-ORGANISATION OF HENRY LESLIE'S CHOIR.

MR. HENRY LESLIE gave his farewell concert on July 12, 1880. From that time the Choir, as a body, ceased to exist. Last December, however, Mr. Randegger consented to undertake the duties of conductor, if the Choir could be re-organised. Mr. Leslie consented to become its president, to compose a choral work for the first concert, and it was agreed that the Choir should retain its old name and title. The first concert under these new arrangements was given last Tuesday evening at St. James's Hall, and the result of this performance promises well for the future success of the society. The first part of the programme included part-songs by H. Leslie, W. S. Bennett, G. A. Macfarren, A. Sullivan, and others, and Samuel Wesley's fine motett "*In exitu Israel*." The songs were given with great delicacy and refinement, but the motett was not altogether satisfactory. The second part included Mr. Leslie's new part-song, "*Who is the Angel that cometh?*" As a composition it is not remarkable, but it was admirably sung by the Choir, and conducted by the composer, who was enthusiastically received. Miss Orridge sang in an effective manner a cantata entitled "*Alexis*," by Dr. Pepusch, with violoncello *obligato* (Mr. J. A. Bronsil). It was interesting to hear a specimen of the music of the author of "*The Beggar's Opera*." He was contemporary with Handel, and both used to play the harpsichord and the organ at the celebrated private concerts given by the "itinerant small-coal" merchant Thomas Britton. Dr. Pepusch was first chapel-master to the Duke of Chandos at Cannons, but retired in favour of Handel, whose superior merit he readily acknowledged. Mr. Maas sang solos in both parts of the programme, and was greatly applauded. The whole of the concert was conducted in a marked and efficient manner by Mr. Randegger. Mr. J. G. Oalcott presided at the piano.

OBITUARY.

JOACHIM RAFF.

WE regret to record the death, at Frankfurt-on-Maine, on June 25, of the celebrated composer Joachim Raff. He was born at Lachen, on the Lake of Zürich, in 1822. Raff was not specially educated for the musical profession; like Schubert, and at the same age, he became a schoolmaster, and also resembled that great composer in finding time for his favourite pursuit. In 1843 he sent some pianoforte compositions to Mendelssohn, who strongly recommended them to the attention of the publishers Breitkopf and Härtel. From that moment up to the time of his death Raff devoted himself to music, and he produced many

works which have secured to him a foremost place among modern musicians. Of his ten published symphonies, it will be sufficient to name the third, "*Im Walde*," the fifth, "*Leonore*," and the two less-known but very fine ones in C major (op. 140) and in G minor (op. 167), all of which have been heard at the Crystal Palace Concerts. He wrote more than 200 works, including operas, songs, suites, symphonies, concertos, quintets, quartets, trios, sonatas, and an immense quantity of pianoforte music. His quick and versatile pen was never at rest, although one cannot but regret that a composer of such fine talent should have so often written from necessity or habit, rather than from deep inward impulse. The symphonies we have mentioned may perhaps be quoted as representing his highest achievement. Raff's knowledge of instrumentation, his power of inventing simple and pleasing melodies, and his wonderful command of all the resources of counterpoint, canon, and fugue enabled him to write works full of interest both to the student and to the general public. It is, however, his manner rather than his matter which attracts notice in his compositions; and his workmanship, however interesting, often seems to efface, rather than to develop, his ideas and themes. There are moments in his symphonies when heart and head seem to be putting forth equal strength, and then Raff appears not unworthy of a place beside the great masters. He lacked the power of exacting self-criticism; hence his best works, though very far above mediocrity, fall short of the standard which would place them among the masterpieces of musical literature. His patience and industry, which enabled him to conquer many difficulties, deserve admiration. In 1877 Raff was appointed Director of the Conservatoire at Frankfurt, which post he retained until his death. He was also known as a literary writer of considerable merit; and his pamphlet *Die Wagnerfrage* attracted much attention at the time of its publication.

J. S. SHEDLOCK.

MUSIC NOTE.

M^DME. MODJESKA will, next Wednesday afternoon, assisted by Mr. Forbes Robertson and Mr. G. W. Anson, act for the only time this season part of "*Adrienne Lecouvreur*," at a grand musical and dramatic entertainment to be given at the Court Theatre in aid of the funds of the Popular Ballad Concert Committee. The first part of the entertainment will consist of a concert, in which the new Russian soprano, M^dlle. de Adler, will take part, as well as the following accomplished artists and amateurs:—Lady Colin Campbell, Lady Benedict, Miss Damiau, Miss Adela Vernon, Miss Ellicott, Mr. Herbert Thorndike, Sig. Luigi Parisotti, and M. Marcel Herwegh.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Catherine Street, Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

PARIS.

Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

Now ready, large post 8vo, cloth gilt, 21s.

ASIA: WITH ETHNOLOGICAL APPENDIX.

By A. H. KEANE, M.A.I.

Edited by SIR RICHARD TEMPLE, Bart., G.C.S.I., C.I.E.

With Twelve Maps and Seventy-three Illustrations.

Being a New Volume of

"STANFORD'S COMPENDIUM OF GEOGRAPHY AND TRAVEL."

EXTRACT FROM PREFACE.

"Among the comparatively novel points elucidated by this work, the following may be mentioned:—The circumstances of Central Arabia, the decay of the Wahhabi and the rise of the Shammar State; the results of the late Russian campaign in Turkestan, the new Russo-Persian frontier, and the present condition of Merv; the orographic and lacustrine systems of Zungaria, with the lines of approach between the Chinese and Russian Empires in that direction; the recent exploration in Palestine and beyond the Jordan; the geographical results of the late Afghan war, the approaches to the Iranian table-land from the Indus valley and from Turkestan; the investigations by Prejevalsky in the basins of the Lob-nor and the Kuku-nor; the travels by Gill, Baber, and Desgodins, on the frontiers between Tibet, China, and Burma; the determination of the farthest source of the Irish; the political and social changes in Japan.

"Although the information afforded by this book may be of general assistance in mastering or elucidating some among the political problems of the time, yet the utmost care has been taken to keep the matter free from controversial elements."

LONDON: EDWARD STANFORD, 55, CHARING CROSS, S.W.

No. III., JULY, 1882, price Eighteenpence.

THE MANCHESTER QUARTERLY: a Journal of Literature and Art.

CONTENTS: 1. Moss-Gatherers: a Lancashire Specimen. By Abraham Stansfeld. 2. Spenser's "Faerie Queene": its Place and Influence in Literature. By James Crompton. 3. upon the GOSPEL of ST. MATTHEW.**
Translated from the Spanish by J. T. BETTS. LIVES of the TWIN BROTHERS JUAN and ALFONSO de VALDES. By E. BOEHMER. D.D. Ph.D. With Introduction by JOHN T. BETTS. Post 8vo, cloth, 7s. 6d.

**EPISODES in the LIVES of MEN,
WOMEN, and LOVERS.**

By EDITH SIMCOX. Crown 8vo, cloth, 7s. 6d.
CONTENTS: In Memoriam—Consolation—A Ditych—Someone had Blundered—Midsummer Noon—At Anchor—Men, our Brothers—Looking in the Glass—Love and Friendship—Eclipse—The Shadow of Death—Set at Vixies.

NOTES on CONTINENTAL IRRIGATION.
By Henry Ling Roth.
With Plates. 8vo, cloth, 6s.

LAND NATIONALISATION:
Its Necessity and its Aims.

Being a Comparison of the System of Landlord and Tenant with that of Occupying Ownership in their Influence on the Well-Being of the People. By A. R. WALLACE, Author of "The Malay Archipelago," &c. Crown 8vo, cloth, 6s.

"The book is one which every agricultural reformer should read."
Mark Lane Express.

**THE ESSAYS and DIALOGUES
of GIACOMO LEOPARDI.**
Translated by Charles Edwardes.

With Biographical Sketch. Post 8vo, cloth, 7s. 6d.
"He was one of the most extraordinary men whom this century has produced, both in his powers and likewise in his performance."
Quarterly Review

THE RELIGIONS of INDIA.
By A. Barth.

Authorised Translation by Rev. J. WOOD. Post 8vo, cloth, 16s.
"It is not only a valuable manual of the religions of India, which marks a distinct step in the treatment of the subject, but also a useful work of reference."—*Academy*.

LITERATURE.

Natural Religion. By the Author of "*Ecco Homo*." (Macmillan.)

MUCH had happened between the date of the publication of *Essays and Reviews* in 1860 and the time when *Ecco Homo*, in 1866, was half accepted by the orthodox as an ally, if not a champion, of the cause they held dear. Almost more has happened between the publication of *Ecco Homo* and the present day. The public mind has come to regard as open questions, not only the infallibility of the Christian Scriptures, not only the supernatural origin of the Christian Revelation, but the fundamental axioms of all religion as hitherto understood in Europe. Of course the former points of controversy are by no means abandoned; there is probably still a majority of educated Englishmen who believe as heartily as they believed five-and-twenty years ago, not only in the truth of the Apostles' Creed, but in the plenary inspiration of the Bible. Still, before 1860, they not only believed in these doctrines, but thought that the world was agreed upon them, that all who doubted them were actuated by dislike of moral restraint, by vanity, or at best by a habit of paradoxical reasoning that had destroyed their common-sense. But between 1860 and 1870 they learnt that in both points their belief was rejected by men who were both virtuous, candid, and practically intelligent; between 1870 and 1882 they have learnt that virtuous, candid, and intelligent men may be not only unorthodox or rationalistic thinkers, but, in the common sense of the words, atheists and materialists.

The author of *Ecco Homo* (it is decorous to respect his incognito, as he formally maintains it, transparent as it has become) succeeded admirably in seeing what was the religious problem of 1866 as then conceived by the general thought of educated Englishmen, and in gaining their ear for his attempted solution of it; how far his attempt was an approach to a final and satisfactory solution is another question. It is hardly likely that the present work will be equally successful in exactly catching the public attention of the moment, but the wider problem of the present day is dealt with here with more originality, and at least as much force, as the narrower one was there; it may even be thought that the steps taken here towards a solution are of more solid and permanent value.

The book (which includes, but is not identical with, the series of papers published by the author in *Macmillan's Magazine*) is divided into two nearly equal Parts, besides

what is not very accurately called a "Recapitulation." The first Part states what are the religious doctrines on which almost all serious thinkers are agreed, and argues very ably that, essential as the doctrines now controverted may seem, and perhaps may be, to religion, yet there are doctrines still more fundamental which are not, and which scarcely can be, controverted. In the second Part, the question is discussed how far this residuum of incontrovertible truth is adequate to performing the functions of religion as a power in human life. In the Recapitulation some approach is made to a judgment on the question what will be, or ought to be, the "religion of the future."

The first half of the book (which includes, it will be seen, a little more than the first Part) is decidedly the most convincing. It is true, and it is very important, that Pantheism is in a real sense a form of Theism; and that serious thinkers who reject Theism in the ordinary sense almost always hold one form or another of Pantheism, though not always that mystical form, the meeting-point of Pantheism and Theism, to which the term is most commonly applied. Adopting the scholastic explanation of the word "God" as meaning the best or the greatest that is or can be, it is plain that either the Universe itself, or Humanity, or, rather, human Virtue, as the best and greatest thing in the Universe, must be God in the eyes of those who do not acknowledge a Best and Greatest outside and above the Universe. In this way, it is perfectly true that the devotees, both of materialistic science and of non-ethical art, are religious; that both have a God who, if not very like the God of Christianity, yet is, like him, an object of reverence and a standard of obedience to the one class, an object of desire and something like love to the other.

"Something like love;" the one weakness of this part of the book is that the author seems to underrate the importance of belief in the divine Personality, and the extent to which religious emotion is dependent thereon. In fact, he seems hardly to understand in what sense Theists (in the narrower sense) ascribe personality to their God, or the grounds on which they value it. "Personality entire," he says,

"has never been attributed in any theology to deities. Personality, as we know it, involves mortality. Deities are usually supposed immortal. Personality involves a body. The highest theologies have declared God to be incorporeal."

Here there is a very obvious confusion of thought. Personality no more "involves" mortality or corporeity than it involves bipedality. Experience shows us no persons except such as are mortal, corporeal, and biped; but disembodied spirits if they exist, Struldbrugs or Houynnhms if they did exist, are, or would be, just as much persons as the men and women of the known world; popular language would be likelier to question the personality of the Houynnhms than of the Struldbrugs. The true point of the case has been almost reached by the author where he says, "There is one more feeling which a worshipper should have for his Deity, a sense of personal connexion [this word, and others like it, are habitually spelt right] and, as it

were, relationship. The last verse of a hymn of praise is very appropriately this—'for this God is *our* God for ever and ever.'" But he goes on, "This feeling, too, the worshipper of Nature has. He cannot separate himself from that which he contemplates." Just so; he cannot separate himself from it; but *therefore* he cannot enter into "relationship" with it, *therefore* he cannot have "a sense of personal connexion" with it. It is true—perhaps only too true—that "this Nature is *our* Nature for ever and ever," but no one concludes a hymn of praise with that sentiment; the identity of ourselves with the Universe, as parts of the whole, is too close to allow of love, when realised. When we do *not* realise it, when we look at the Universe as something outside us, something abstract, all but personified, then we can worship it; then we could love it, if we only could believe that it loved us. The very beautiful analysis of Wordsworth's religion is marred by the non-recognition of this point. Wordsworth's orthodoxy was by no means a mere survival or an excrescence on his nature-worship; it was the necessary condition of its soul-satisfying power. Wordsworth believed in a God who loved him, and therefore he loved his God the more the more he saw him everywhere.

Perhaps one other point in the first Part is open to criticism: the assumption made, no less absolutely than by the most conservative dogmatist, that real Atheism—the denial not only of a personal or living God, but of any absolutely Supreme and Eternal Power—is only possible as a vicious habit of mind, impossible as a reasoned conviction. The three vicious tempers analysed in chap. ii.—those of the wilful, the over-judicious, and the cynical Atheist—are admirably treated; but none of these include what is surely the real Atheism of a man like the late Prof. Clifford, who feels too strongly the limitations of human experience and the limited duration of human hopes to assert the validity of any laws, even those of geometry, except within the known limits of "here and now."

Still it is true that the noble souls who live without religion are very few; it may perhaps even be said that the few do not live without religion who live without even an impersonal God. And it is good that religious men of all religions should learn to understand and honour one another; and that "the world" (the mass of people who, if not rejecting or avowedly indifferent to any religion, still lead lives substantially uninfluenced by it), should learn the importance, the necessity, of religion to save them from the spiritual death which all religions discern to be the fate of the irreligious. But, true as it may be that any religion is better than none, it is certain that the true religion will be better than any false one; and, after the second Part has opened with an admirable chapter on "Religion and the World," it does comparatively little to help us to the knowledge what the true religion is. Even in the first Part we are told that

"the questions which we all understand to be theological are such as these: Is there a reward for virtue? Is there a compensation for undeserved misery? Is there a sure retribution for crime? Is there hope that the vicious man

may become virtuous? . . . In one word, is life worth having, and the Universe a habitable place for one in whom the sense of duty has been awakened?"

Now, to anyone who has been trained in theological thought of the traditional type it will appear that none of these questions are, in the primary sense, theological questions at all. It is true that almost any theology will supply answers to these questions; it may be true that it is only for the sake of answering these questions that it is worth while to study theology; still, the primary question of theology is one to be asked for its own value, and not for the sake of its corollaries affecting our personal interests. "What is the nature of God? what is the supreme Power, the supreme Law, according to which the course of the Universe in fact goes on?" If we know this, we shall know how that supreme Power or Law affects human life; but the questions of its existence, its nature, its eternity, and the like, are the properly theological ones; the practical applications of the answers to these, though they may be called branches of theology, are theological only in a secondary sense.

Now all through the second Part the author seems to be discussing the question, "What guidance for life does the certain, the uncontroverted, element of religion supply?" while the previous question is left unsolved, or at least is not worked out, "What are the religious truths which remain certain and uncontroverted?" and the question is not even asked or suggested, "Among the religious doctrines tenable among men, are there any which, though not uncontroverted, may yet be regarded as certain?" There seems to be a sort of intellectual quietism, a willingness to swim with the tide of scientific opinion, which is hardly worthy of the author's courage. Of course, in a work on Natural Religion it is not necessary to discuss the Christian evidences. But the old questions which it was understood a hundred years ago that natural religion was concerned to answer—"Is there a God—i.e., a living and personal one? Is there a future life?"—these questions call for an answer still; and it is hardly a satisfactory one, "Whether there be or no, the progress of thought will tell us. But, whether there be or no, it is worth while to be good."

W. H. SIMCOX.

The Russian Advance towards India. By Charles Marvin. (Sampson Low.)

MR. MARVIN, who was already well known as the author of several brilliant essays on Eastern matters, has added to his reputation, while earning the thanks of political students, by this convenient reprint of a series of letters recently contributed to a provincial newspaper. Although such reprints seldom make very interesting reading, the present volume is not only calculated to rivet the reader's attention from the first, but will also be found to possess a permanent value for statesmen willing to be enlightened on the outward relations of our Eastern Empire. The letters may be regarded as the outcome of the late Gen. Skobelev's startling speeches in Moscow and Paris on his return from the Akhal Tekke campaign early in the present year. For

the purpose of ascertaining his real views on the Central Asiatic question, Mr. Marvin was commissioned by Mr. Cowen, proprietor of the *Newcastle Chronicle*, to follow the hero of Geok-tepé to St. Petersburg, and, if possible, obtain an interview with him. This mission was attended with signal success, having led to discussions not only with Skobelev, but also with Ignatieff, M. de Giers, Soboleff, and several other prominent statesmen interested in Central Asiatic affairs. The substance of the conversations with these persons is here reproduced with great fidelity, and is supplemented with some valuable information bearing on the questions discussed, and embodied in a series of Appendices. Almost every topic at all connected with Anglo-Russian politics is thus touched upon, and the special value of the book consists in the frank expression of opinion elicited from the leading Russian statesmen on these interesting subjects.

Although acting under the auspices of Mr. Cowen, whose own views are sufficiently well known, Mr. Marvin deals with the whole matter in a thoroughly independent and unbiassed spirit. In fact he claims to be "both a Russophile and a Russophobe" (p. 6), simply because he is neither, at least in the narrow sense in which these terms are usually understood. In Russia itself, apart from the somewhat extreme views of Soboleff, Martens, and one or two others, "there exists no Anglophobia to match the Russophobia in England" (p. 250). Hence the surprising unanimity of the leading men on the various topics Mr. Marvin had an opportunity of discussing with them. This is, of course, largely due to the fact that, on the main features of the Asiatic question, Russia knows her own mind, and accordingly pursues a definite policy aiming at a definite result. It is somewhat re-assuring to find that this result is not necessarily the conquest of India. Even Skobelev seemed to entertain no present desire to drive England out of Asia; and the author was much impressed by "the unanimity with which Russians of all classes disclaim the existence of any designs upon India, and the earnestness with which they advocate a suppression of the Central Asian controversy" (p. 243).

The immediate results aimed at are "scientific" and permanent frontiers all along the line, towards Persia and China as well as towards Afghanistan and India. If, in the prosecution of this policy, it should become necessary to annex, say, Khorasan or Kulja, or even Afghan Turkestan, then, of course, this will have to be done, however reluctantly, even at the risk of offending the Courts of Tehran and Peking, or provoking an angry protest from the English Foreign Minister for the time being. No urgent necessity is anticipated of having to take over either Kulja or Khorasan; and Mr. Marvin is the first to acknowledge the unexpected moderation displayed by Russia in laying down the new Russo-Persian frontier line. "I have always expressed an opinion that Russia was exceedingly moderate, and that she displayed an appreciation of Persian interests and susceptibilities which, to say the least, entitle her to respect" (p. 244). But, since the recent changes in that region, the best mili-

tary route to Herat runs from Askabad, prospective terminus of the Trans-Caspian Railway, through Meshed, and down the Keshaf-rúd valley to the Hari-rúd. It is obvious that this route would require the consent of Persia—a consent already purchased, as it were, by present forbearance.

On the other hand, it is disquieting to learn that a satisfactory frontier line towards Afghanistan—that is, towards British India—has yet to be determined. Like the Tajand, Murgh-ab, and other rivers of that region, the new Russo-Persian line is at present lost eastwards in the desert. From its eastern extremity near Gyaurs right away to the Oxus there is no frontier at all, and when the Merv Turkomans, now partly occupying this blank, have accepted the protectorate of the White Czar, obvious modifications will, of course, be required. There are the Salars, Jamshidis, Aimaks, Hazarabs, and other border tribes on the new Russo-Afghan frontier, who will have to be controlled—a duty which was necessarily left to Russia when England withdrew from Kandahar. All this is clearly foreseen by Russian politicians who really understand the situation; and, in anticipation of the already contemplated changes, Prof. Martens, one of the greatest living authorities on international matters, now declares that England has no claim to supremacy in Afghanistan! "He said Afghanistan was an independent State and a neutral one," &c. (p. 208). And Baron Jomini is quoted as adding that,

"although we don't intend to go to Merv, or to do anything which may be interpreted as a menace to England, you must not deceive yourself, for the result of our present proceedings [against the Akhal Tekkes] will be to furnish us with a base of operations against England hereafter," &c. (p. 209).

At the same time Ignatieff hastens to reassure us by declaring that "he admires Mr. Gladstone very much;" while Skobelev tells us that he "considers the Central Asian question all humbug" (p. 104).

On Martens and Soboleff's bold utterances touching Afghanistan Mr. Marvin cogently remarks:

"I used to think that the claims put forward by the *Golos* and *Novoe Vremya*, asserting Russia's right to treat Afghanistan as a neutral State, were mere expressions of Anglophobe feeling. It has surprised me to find them seriously maintained by a person of such weight as Prof. Martens. It is better, however, that these opinions should be contested in a friendly spirit than that people should fall into paroxysms of Russophobia over them. At the same time it would be well, perhaps, if the Government made up its mind what English policy ought to be in Afghanistan, and intimated its views to Russia on the points raised by the Professor. We often accuse Russia of shifty evasions; but let us remember that she has to deal with series after series of English statesmen, who do not know their own minds, and have no intelligible policy to present to the consistent officials of the Russian Foreign Office. I believe a careful review of the Central Asian question would reveal that Russia has been frank enough in explaining her policy to us. Her complaint is that we have always met this with carping criticism, while never attempting to reciprocate her action by explaining to her our own policy. That would have been a difficult matter. Russia knows her own policy

in Asia, and we know it. But she does not know England's policy, for the very simple reason that England does not know it herself" (p. 210-11).

Among the many other interesting topics touched upon were the massacres of Turkoman women and children, which there was no attempt to deny; our withdrawal from Kandahar, which was unanimously condemned as a stupid and "glaring error;" the Russian retention of the Akhal Tekke territory, which was fully vindicated from the charge of breach of faith with England; the possibility of an invasion of India, which was held by Soboleff and most others to be quite feasible; the absorption of Bokhara and advance of the Russian frontier to the Hindu-Kush, regarded by all as inevitable; the general ignorance of British statesmen on the actual situation in Central Asia, on which all were equally unanimous.

Altogether, we have here a graphic *exposé* of Russian opinion on the relations of the two rival Powers in Asia. If studied honestly, as it is honestly written, this *exposé* cannot fail to exercise a profound impression on the public mind. It seems eminently calculated to modify the views of all parties, and thus produce a sort of equilibrium, a much-needed general consensus of opinion in England on the burning question of the present generation. In the presence of such a general consensus it may be hoped that the voice of the nation will be heard above the unseemly wranglings of party strife, speaking with a unanimity which must be respected by whatever faction may for the time being be entrusted with the destinies of the empire.

A. H. KEANE.

Altavona: Fact and Fiction from my Life in the Highlands. By John Stuart Blackie. (Edinburgh: David Douglas.)

In his new volume the Greek Professor at Edinburgh has gathered together his impressions and experiences of the Highlands and the Highlanders received during a period of twenty years spent, in great part, in their midst. He has thrown what he has to say into the convenient form of "ambulatory dialogues"—into the conversations of imaginary and typical characters who meet at Oban and Iona, at Kinnaid and Gairloch, and discuss the topics suggested by the localities in which they find themselves. In his Preface the author tells us that one main reason for the selection of this literary form for his book is his desire to give, by the mouth of his various *dramatis personae*, both sides of an argument, "to appreciate my antagonist's point of view, and to state sympathetically any circumstances that may either palliate his guilt or make a sort of reasonable apology for his blunder"—much the same reason, in fact, as that which determined the dialogue as the most fitting form for the calm and deliberate discussions which occupy the ever-delightful *Friends in Council*. But the present volume is a contrast indeed to the quiet and measured exactitude of Helps's work. If we would find a fitting parallel, it must rather be in that typical book of Scottish dialogue—the *Noctes Am-*

brobianas of Prof. Wilson. In both there is the same lightness and buoyancy, the same rush and flow of speech, the same delight in natural scenery and vivid description of it, the same touches of humour and poetry and fervid enthusiasm. There is much good feeding, too, in either book. In *Altavona*, flounders and lobsters, strawberries and anchovies, take the place of the haggis and toddy of the *Noctes*; the festive boards of these happy Highland tourists groan beneath a very load of port and claret and Rudesheimer, and the talk that ensues is proportionately bright and sparkling.

Through the whole book we feel strongly and imperiously the vivid personality of its author, whose main and most authentic exponent is Roderick Gillebride MacDonald, Highlander and Advocate. In his arguments with this formidable personage, his companion, the Rev. Christopher Church, of Oxford and Chitterby, a representative of the more effeminate Southern culture, receives scant justice and no quarter. The other chief characters of the book are Herr Bücherblume, an embodiment of German wisdom and erudition; and Miss Flora MacDonald, a Catholic, a poet, a philologist, and a charming young lady all in one. It cannot, however, be said that the interest of *Altavona* is a dramatic one, or consists in the display and development of character. The book is mainly valuable as an essay on the Highlands—an essay written with profound knowledge and warm feeling, showing the country as seen through a friend's eye, and "a friend's eye is a good looking-glass," as says the Gaelic proverb which Prof. Blackie has chosen as his motto. To this essay the form of "ambulatory dialogue" into which it has been cast gives lightness and literary grace; and it renders possible the touches of that rich humour which the author's soul loves, and the swift discursiveness which is his pleasant and besetting sin—say, rather, the prime necessity of his existence, whether in the professor's rostrum or at the writer's desk.

It is impossible to do more than touch on a few of the thousand topics which the friends discuss. As might be expected from the warm promoter of the Celtic Chair in the Edinburgh University, great prominence is given to "the Gaelic;" the little encouragement which it receives in Highland schools is deplored, and we are led into many abstruse etymological dissertations. The dialogue on the relations subsisting between Highland landlords and tenants will be read with especial interest in this time of Irish agitations. Prof. Blackie draws a gloomy picture of absentee proprietors, tyrannical factors, and suffering tenants, and of the clearances of honest and industrious cottagers by needy Highland lairds and enterprising English speculators to make room for waste deer-forests and immense farms under the management of Lowlanders. The author is one of those not irrational persons who believe that other duties besides that of drawing a rent attach to the possession of land, that it has never yet been justly held except for service done, and that in our own day proprietors are set in the midst of their lands to be captains of industry, that they receive their rents under an unwritten obligation personally to superintend their estates,

and to order them, not as shall be best for their own private interests, but for the interests of the State and of the individuals composing it. The doctrine is scarcely a palatable one either to landlords or tenants in these days of progress, and liberty, and cash payments; but had it been acted upon in Ireland, had something like a natural and human bond been established there between the higher and lower classes, the frightful and hopeless embroilments of the present time might have been averted. Indeed, the Professor cannot be classed with the indiscriminate admirers of this glorious nineteenth century. He finds much that is to his taste even in the "dark ages," believes that the devotion involved in the clan-system was no mere blind and foolish instinct of half-developed humanity, and judges that the modest and humble well-being of a straitened but virtuous and manly peasantry is a greater cause for national pride than any amount of prosperity that is only commercial and monetary. It is curious to note how naturally and with what gusto the author plunges into anything that has a flavour of the past. Before we have read a dozen pages he is deep in the genealogies of the Campbells and the MacDonalds, and the intricacies of clan-heraldry—a dead language, indeed, in these days—discoursing on the "galley with flying pennons" of the Lords of Lorne, and the "fesse chequée" of the Stuarts.

One of the most interesting portions of the book is its Sixth Dialogue, which deals with the present and recent history of religion in the Highlands, and gives an excellent account of the "moderates" of the last generation; of the Disruption of 1843, the causes which led to it, and its results; and of the Free Church, its attitude to the Establishment, and the dissensions within its own pale, which led to the expulsion from his Chair of its learned Aberdeen Professor of Hebrew. It would be impossible to give in equal space a clearer or fairer idea of the ecclesiastical position of Northern Scotland than is contained in these pages, and they will be useful to strangers who wish to inform themselves on such points.

Indeed, the whole book affords an admirable view of national temper and condition, and we can think of few volumes that might more fittingly find a place in the travelling-bag of the Scottish tourist. It is full of valuable information, conveyed in a charmingly fresh and racy manner, for the author has a wholly wholesome horror of dullness, or, rather, a natural incapacity for it. The bright pages are well adapted to wile away the hours of rain which so often afflict the traveller in the not too Arcadian climate of the Scottish Highlands.

J. M. GRAY.

THE BOOKS OF THE ANCIENTS.

Das antike Buchwesen. Von Th. Birt. (Berlin: Hertz.)

In these 500 pages M. Birt works out in detail theories already sketched in the *Rheinisches Museum* (32. 393), and in a paper read at Trier in 1879. Briefly, his results are these:—In classical literature (between 800 B.C. and 400 A.D.) βιβλίον and liber mean

the roll (*volumen*); the whole "work" is called *λόγος*, *σύνταξις*, *σῶμα*, *corpus*, but never *liber*. Papyrus (*charta*) was used for all good editions, parchment only for rough or private copies, for notes, and for book covers and titles. Hence M. Birt explains the books in *membranis* in Mart. 14, 184, 186 ff. This fourteenth book consists of epigrams on Saturnalian presents, so arranged that those on presents to be given by rich and by poor follow in alternate order. The parchment copies mentioned are the gifts of poor *notarii*, who can afford only their own handiwork. Published books on parchment appear only after 300 A.D.; papyrus is used till at least 400 (chaps. i., ii.). As the book is the roll, and as it is *a priori* probable that the rolls were of similar size, M. Birt next (chaps. iii.—v.) inquires what this size was. The book was measured by *στίχοι*, *versus*—i.e., line-lengths (not sentences) of thirty-five letters, as Ritschl, Graux, Wachsmuth, and, quite lately, Schanz (*Hermes*, 16. 309), have shown. It may be added that this agrees with the lines in the Greek papyrus fragments just edited by Blass (*Hermes*, 17. 148, 1882). Their use was probably due to the fact that the hexameter—the metre of the first-written literature—averages thirty-five letters. This "normal line" was employed for first and good editions, but, when once noted on the margin as the standard of calculation, other line-lengths were used. It is often kept in our codices, on the margin—e.g., of the Clarkianus of Plato (Schanz), or "subscribed" at the end of the roll or work, and thus helps in detecting interpolations. The sheets of the roll (*paginae*) were made in the Nile delta from the inner fibres of the papyrus and exported already put together (*βιβλία ἀρραφα*). Loose sheets were used only for letters; book rolls were nearly always made up *before* being written in. The *pagina* agreed in width with the column of writing. M. Birt discusses at length Pliny's much-vexed description (n. h. 13. 74 ff.) of the nine kinds of *chartae*, distinguished by their width, and suggests several new views. Thus, in § 74, he reads for *philyras, fibras* (qs. *filras*), thus dismissing the notion that the *charta* was the papyrus bark (though, it must be added, even *philyra* cannot really mean papyrus bark); in § 77, he explains *scapus* from Löwe's glosses as "a roll." He then tries to show that many extant papyri correspond in width to one or other of the kinds mentioned by Pliny, and that those which have thirty-five letters to the line are of the same width as the *chartae* which Pliny calls the best. As he admits, there is little evidence yet collected on which to argue. It may be hoped that the notes gathered by M. Graux before his death, and his memorial volume promised by M. Chatelain, will touch on this point. By estimating (chap. vi.) the number of letters in the books of most of the extant literature, M. Birt concludes that, in poetry, the length of the book varies between 700 and 1,000 lines, monobibla and didactic poems (as the *Culex* and Vergil's *Georgics*) being shorter. The prose book averaged 2,000 normal lines, but ranged from 1,000 to 3,500. Lexica and didactic works, again, had shorter books; monobibla varied very widely. Chap. vii. discusses pub-

lication, publishers (Atticus, Tryphon, &c.), and libraries; it is suggested that a *collegium librarium* maintained copyright. The original division of books was often lost in the change from roll to codex; and M. Birt examines (chap. viii.), from this side, several works which greatly exceed the normal limits—Ovid's *Heroides* and Propertius (on the lines laid down *Rh. Mus.* 32. 386 ff.), Nonius, Justin, Tibullus, and especially Theokritus and Catullus. Our text of the former he holds to be a selection made in the fourth century, including all the poet's *Bucolica* (*Id.* 1 and 3–11) and parts of the rest. Catullus, he thinks, published four books—*Heptasyllables*, i.e., the *Passer* (1–61), the *Nuptiae* (64), *Epigrammata* (67–116), and a *Carminum liber*. M. Birt lays much stress on the limits he has fixed for the *liber*; but clearly they are nearly as wide as those of the modern volume, and such a statement as "Anfang u. Ende seiner Meditationen . . . richtete ein Seneca getreu nach den Raumgrenzen ein, die ihm ein alexandrinischer Glutinator gesteckt" (p. 343) seems exaggerated. The restrictions which these limits caused may explain the classical *συμμετρία τοῦ λόγου*, but the value of the enquiry is best seen in the application of the maximum limit to Theokritus or Catullus. In chap. viii. (das voralexandrinische Buchwesen) M. Birt shows at length that our present book-divisions of even Homer are relatively modern, and argues that, before 300 B.C., Greek writers used long rolls of even 25,000 lines. For the convenience of readers, these rolls were marked off into *μέτρῃ*, varying in different copies; hence came our "books." This lasted till Kallimachos, whose favourite (*ελεγεῖν*) saying, *μέγα βιβλλον μέγα κακόν*—for M. Birt proves that it cannot have been aimed at Apollonius, since the latter used short rolls—marks the introduction of the "short roll" system, suited to an age of personal luxury. The Alexandrian Library contained long rolls, most of which held two or more works (*συμμετρίαι*); many of its copies must have been duplicates. Greece had been emptied of rolls to form it; Alexandria became the centre of the book trade, and Kallimachos was thus able to carry out his reform.

This sketch gives little idea of the richness of detailed illustration, touching on almost every writer, sacred or profane, lost or extant, from Homer to Tzetzes, of the wealth of new matter, as general as the title of the book itself, and of the many conjectures, always ingenious, if not convincing, which this book contains. It is obvious that our English accounts of ancient books must be much modified, both in general conception and in detail. A German reviewer said lately that every important German work on classics is at once reviewed and read in France, and *vice versa*. It would be well if this were true of England also, for even Rich's dictionary and Metcalf's translation of Gallus are notably inferior to any of the better German authorities.

I have noticed one or two slight mistakes, which do not affect the arguments; thus, p. 295, *exiguo libello* in *Ibis* 451 (it should be 449) cannot refer to Ovid's own poem; p. 463, *Fabius' graeci annales* ought, as Prof. Nettleship has said, to mean "history of

Greece." There are a good many, generally obvious, misprints—e.g., p. 15, 12 from bottom, for *viere* read *vier*; p. 22, 10 from bottom, for *Ibis* 641 read 639; p. 67, for *φαιλόνης* read *φαινόλης*; p. 290, 9, for *Martial xviii. 29* read *viii. 29*. F. HAYFIELD.

NEW NOVELS.

Vice Versa: a Lesson to Fathers. By F. Anstey. (Smith, Elder & Co.)

How They Loved Him. By Florence Marryat. (F. V. White.)

A Ball-Room Repentance. By Annie Edwards. (Bentley.)

It would be a pity if the success of *Vice Versa*, which deserves to be great, were injured by the somewhat injudicious flourish of trumpets with which it was heralded. The abuse of the system of announcing "we understand that a work of great interest and entirely novel kind," &c., &c., was so great fifty or sixty years ago that for a time it was discredited and thrown out of fashion. It seems now to have revived; and it is, we repeat, a pity, because the only effect it can have is to prejudice some readers against the book so treated. If anybody be prejudiced in this way against *Vice Versa* to the extent of refusing to read it (and such things have happened) he will really lose something. The book is not faultless. It is a little too long for its rather fantastic kind of interest; the reader's sympathies are sometimes repelled where they ought to be attracted, and the fun is sometimes, though rarely, a little conventional. But it is certainly the best book of its own kind that has appeared for a long time; and, in the way of provoking laughter by certain old-fashioned means which do not involve satire or sarcasm, it has few rivals. The oldest and the most genuine, if not the most amiable, resource of him who would produce laughter is to exhibit someone in an intensely uncomfortable situation; and certainly the discomfort of the situation of Mr. Paul Bultitude, merchant and householder of Westbourne Terrace, exceeds in pungency and ludicrousness almost any other that we remember. The initial or fantastic motive of Mr. Anstey's story is simple enough and not specially novel. The idea of two souls changing bodies, so that, the outer man remaining the same, the inner man becomes quite different, has often been used in fantastic fiction. The two most famous instances are Gautier's charming *Avatar*, and the story (was it not in *Blackwood*?) where an unhappy student engages in actual combat with his tormentor and substitute, and is distracted between hatred of the latter and anguish at inflicting damage on "my own dear body." But Mr. Anstey's application of the *vice versa* idea is entirely fresh. A father and his son, who are not sympathetic, change persons by the operation of the Garuda stone, a mysterious talisman which grants one wish of this kind to its possessor for the time being. The consequence is that the father, with his mind and habits of fifty, has to return to a private school and suffer the woes of boyhood, intensified a thousand times by his utter unpre-

paredness for the situation. How he, half unintentionally, breaks every clause of the code of school-boy honour; how he is mercilessly bullied in consequence; how his middle-aged susceptibilities fail to answer to the blandishments of two rather precocious maidens of tender years, in whose eyes his good-looking and good-for-nothing son had found favour; and how, thanks to different peculiarities, his tribulation with masters is as great as with boys—all these things Mr. Anstey tells with immense spirit and inventiveness, and with a most comic blending of probability and improbability. We do not think that he has out his knot very happily; and it would have been easier to enjoy Paul Baltitude's tribulations if his son Dick had been somewhat more of a good sort—we do not mean a goody sort—of boy. But what a French critic finely calls the insensate quest after perfection is nowhere more out of place than in novel-reading. Mr. Anstey has provided us with a very satisfactory *Thais*; let us take her as she is provided.

To say of a book that it is disagreeable is sometimes thought to be a feeble, not to say feminine, form of criticism. In truth, it is nothing of the kind, but (if the word is used in its proper sense) one of the severest and most final reprobations possible of any product of art. A book may be as pitiful or terrible as its author can make it (they are not often able to make it either, more's the pity), but if it is disagreeable it is bad. Now, *How They Loved Him*, though in some respects it has advantages over most of its author's books, is essentially disagreeable. There is an indefinable kind of smirch over everybody in it. The "he" is such a pitiful he that he betrays in the last and basest fashion a girl of sixteen who has trusted him, not in the least on the Lovelace and Lothario principle, but because the parents of another girl threaten him with an action for breach of promise, against which, if the text is to be believed, the deserted one had given him a good legal defence. Further than this, he allows himself to be bullied by his wife long afterwards into telling the whole story, and thereby wrecks the last chance of happiness of the unlucky heroine, who has since married. But this is not the worst. Fenella Conroy, the innocently betrayed damsel, foists her illegitimate child on her husband; and that husband himself, on learning this and his other misfortunes, behaves with a violence which is indeed quite excusable in degree, but altogether coarse and ungentlemanly (he is said to be a model gentleman) in kind. A man of Sir Gilbert Conroy's class does not shake his wife when he learns that she was unfit to be his wife. As for Fenella's mother, though she is detestable enough, she is at least in keeping, and so is the best character in the book. Lastly, Sir Gilbert's sister, the Countess of Marjoram, who is the only morally respectable figure, is as vulgar as she is respectable. Such a company of sneaks, ruffians, haridans, and angels who fall with remarkable ease and provoking innocence, do not make pleasant acquaintances; and we are only sorry that the author has wasted on them the really well done first volume in

which the luckless loves of Fenella and Geoffrey Doyné, the sneaking "he" of the title, are sketched.

There is not much to be said of a *Ball-Room Repentance*; indeed, it would be almost enough to say that it is written in the present tense. When that monstrosity was committed because authors knew no better there was some excuse for it; but now that they have had fair warning, the repetition is simply contumacious. A Lake Leman boarding-house, an American grass widow, a vulgar family of Continent haunTERS, a refined ditto, a weak-minded young Oxonian, an older person who is deluded by a brazen married woman with a conniving husband, Monte Carlo, Rome, &c., &c.—these are the well-worn ingredients of the book. That they are not mixed up without a certain cleverness is as much as saying that Mrs. Edwardes is the author; but the book makes us deplore more than ever that a narrative faculty so considerable should not have been able to associate with itself better taste, fresher materials, and more conscientious workmanship. There are touches, too, of occasional grandiloquence in this book with which Mrs. Edwardes has not always been chargeable. Here is a wonderful specimen: "The process of degeneration makes itself visible by no outward or visible sign in Roger Tryan. The poppy retains its surface-whiteness, the man approaches our ruined cousins the *Ascidians* by steps as yet imperceptible." Mrs. Edwardes might have abstained from reminding us so soon after Mr. Darwin's death of the sufferings which a great man sometimes unwittingly brings upon humanity by making persons who are not great talk nonsense. GEORGE SAINTSBURY.

CURRENT LITERATURE.

Translations from Heine, and other Verses. By Ernest Radford. (Cambridge: E. Johnson.) Here is a little book which the lover of what is genuine and fresh in poetry will read once through, and will read again, and perhaps often. Its author, we believe, has published little or nothing until now; but many small reputations, laboriously worked for during a series of years, have in truth less foundation than that which this little book may honestly secure to Mr. Ernest Radford within the next week or two. For the little book has good thoughts and bright fancies, and they are expressed with curious excellence. Mr. Radford's verse is not of the kind that betrays at once the ambition of the poetaster and his fatal limitations. It is neither a plagiarism nor a *pastiche*. It is novel and real. The translations from Heine, modestly put to the front, are, in fact, comprised within twenty-two pages out of the ninety of which the volume consists; the rest of the matter is original, though the Heine influence is clear throughout much of it. And yet it is not Heine that has made Mr. Radford devoted to irony and satire—rather his own love of satire and irony has made him devoted to Heine. Goethe and Browning and the wonderful German of Paris have been the proper food for him, and he has had what he wanted. Heine, a master of style, has deserved at least a student of style for his translator, and we know of few translations which betray style so much as do Mr. Radford's here. The work must have been sympathetic. Almost for the first time something of the charm of "Die Bergetimme" comes

into English verse, and the purposely roughened beauty of "Am Kreuzweg wird begraben" is retained in English lines. From these we pass to "Evening Involuntaries," which in their turn are followed by "Brands from the Burning." Both these sections of the volume are wholly original. The second of the two is, for the most part, amusing, audacious, and cheeky. Mr. Radford was lessened in no school of prudes when he wrote the following lines on a picture at Dresden:—

"True, true, very true; but you see
It's no use to argue with me.
Aesthetic scruples! Fiddle-de-dee!
She's there—in the Dresden gallery
'A Girl with a Candle,'—19 C.

"And anyone worthy to loosen her sandal
Would give, though a belted earl,
His total possessions to blow out her candle,
I tell you, and kiss that girl!"

The mood passes, and, in "Evening Involuntaries," a writer who has been artistic in his energy may be at least as artistic in quietness and restraint.

"Hands clasped a moment on the strand;
The one must stay, the other go;
There is not any sign to show
That friends have parted, hand from hand.

"And years roll on; the two friends stand;
The welcome spoken, speech is slow;
Still is there not a sign to show
Friend dead to friend, as hand strikes hand."

A slight thing again; but even in so slight a thing so done there is evident that novelty of presentation which is the business of literature. And there is something even more than novelty of presentation—there is a high and melancholy beauty—in the lines with which we close:

"For one who long a worldly gain
In worldly paths has sought,
May aught of better worth remain,
Save, peradventure, caught
On cobwebs in the brain,
Some fragment of untainted thought."

And if we close the book here, it is for others to open it. It contains very little that has even a suggestion of the feebleness of immaturity, and, of course, nothing that has the dulness of incompetence. Among the lovers of good writing it will make its mark.

Selected Poems of Robert Buchanan. (Chatto and Windus.) Mr. Buchanan's readers have excellent reasons to be satisfied with this beautiful and comprehensive selection. Within some 300 pages may be found by much the most memorable part of the poet's work. In the manner of Wordsworth, Mr. Buchanan has divided his poetry into sections indicative of its nature and aim. First, we have "Ballads and Dramatic Lyrics" (we think the sub-title is scarcely defensible, but we have previously touched upon this point in the same connexion); then we have "Nature Poems," "Narrative Poems," "London Poems," and "Spiritual Poems." In the first of these subdivisions the very fine "Ballad of Judas Iscariot" is included; in the second, the "White Rose and Red" is laid under contribution for some passages of conspicuous beauty, notably "The Great Snow," "Drowsietown," and "Spring-tide;" in the third of the subdivisions, "Meg Blane" is reprinted from the volume under that name; and among the "London Poems" we find "Up in an Attic," "The Starling," "Nell," and the "Wake of O'Hara." The "Spiritual Poems" come chiefly from "The Book of Orm," being, among others, "The Vision of the Man Accurst" and "The Soul and the Dwelling." The titles we have given will enable readers familiar with the author's work to judge of the merit of the selection. Excellent as we think the choice must, on the whole, be considered, it has the (perhaps inevitable) disadvantage of excluding poems

which certain of Mr. Buchanan's admirers must be sorry to miss. The volume reached us in May, and the recent *Ballads of Life, Love, and Humour* was published in March; we cannot, therefore, suppose that the earlier book would have suffered any serious dislocation by the reprinting of certain of its more conspicuous poems in the present volume of selections, which, if it be anything, ought to be representative of the poet's genius and indicative of the range of his powers. We think, therefore, that the "Lights of Leith" might, with advantage, have appeared in place, say, of the "Two Sons" and "Charmian;" and that "O'Connor's Wake" would better have represented the author's view of the lower Irish character than the "Wake of O'Hara," which has less of the humour of grim jollity, and has, moreover, a most lame and impotent conclusion, although, indeed, it possesses a few touches quite on a level with anything in its companion poem.

"God bless old Ireland!" said Mistress Hart,
Mother to Mike of the donkey-cart;
'God bless old Ireland till all be done,
She never made wake for a better son!'
And all joined chorus, and each one said
Something kind of the boy that was dead;
And the bottle went round from lip to lip,
And the weeping widow, for fellow-ship,
Took the glass of old Biddy and had a sip,
At the wake of Tim O'Hara."

We might dispense with "Barbara Gray," which, though fraught with some genuine passion, is disfigured, we fear, by not a little forced emotion; but we are sorry to miss the strong grip of reality which is seen in "Phil Blood's Leap." The two poems "To David in Heaven" and "The Snowdrop" bear reference to the young poet David Gray, the story of whose hapless life is told in a brief, but touching, Appendix. The poems in question derive, no doubt, their chief interest for the author from their melancholy association with his friend; but there is nothing quite worthy of the author in either of the poems (certainly not in the first-named of the two), and, perhaps, now that we have realised that Gray himself, though a man of very pure poetic feeling, was by no means a great poet, it might have been as well to omit them. But this is a matter on which Mr. Buchanan must naturally feel deeply. On the whole, as we say, the selection is a good one, and affords an excellent view of the author's gifts. That this is poetry with a fundamental body of stuff in it is the least we can say for the work as a whole; and that it is marked by a right instinct of aspiration and by purity of motive must also be affirmed. We feel, as we read, that Mr. Buchanan's poetry comes from someone, and in this respect has an enormous advantage over a large part of modern verse, which, coming from nobody in particular, can scarcely hope to appeal to anyone. "Nell," in the volume under review, is an excellent example of the author's real-life work, and is, moreover, a sheer slice out of life, and as vivid a portrait, in its way, as the Bill Sykes of Dickens. Mr. Buchanan is weakest in the "Spiritual Poems;" the province of the purely spiritual is foreign to his powers. The career of this author has been one of peculiar interest, and is now not without pathos. Mr. Buchanan, at the outset, either resisted coterie tendencies or was resisted by them; and very soon the few intimate friends with whom he started in life—Gray, Dobell, and others—were removed by death. He had established a high place among younger poets after Tennyson, when he had the misfortune to acquire the reputation (not unmerited) of a literary Ishmael, and since then he has been struggling against many odds. Nevertheless, he has done, and is still doing, work that must honour him in a high degree.

National Pictures. From the Spanish of Fernan Caballero. By the Author of "Tasso's Enchanted Ground." (Burns and Oates.) The tales in this volume are abridged translations from the *Cuadros de Costumbres* of Fernan Caballero. We have no fault to find with the curtailing somewhat the prolixity of modern Spanish. Caballero's style fully rendered might seem too luxuriant for English readers. The delicate touches of her poetical descriptions, her graceful fancies, so vividly contrasted with the directness and rudeness of the snatches of song and proverb which she puts into the mouth of her peasant characters, render her by no means an easy author to translate. In the present version this luxuriance is pruned down to the sober taste and commonplace of the English; the phrase, "She was so pretty that even the sun envied her," becomes simply "bright as the sun;" the willow merely "hangs over the water" instead of "sipping it daintily with her lips." Many of the similes are omitted; the difficulties of the proverbs and proverbial locutions are constantly shirked; only a few of the snatches of song are rendered at all, and those not very satisfactorily. It is almost a triumph of ingenuity to get

"At the gate of heaven displayed
Little angels, though poor, ever live"

out of

"A la puerta del cielo
Venden zapatos
Para los angelitos
Que están descalzos."

(At the gate of heaven shoes are sold for the little child angels (i.e., dead infants) who go there unshod.) The exquisite tenderness of the last verse of the ballad of the "Cruel Sister," in Lucas Garcia, is very inadequately given. In moulding two sentences into one, grammatical constructions occur of a harshness from which the original is entirely free, and sometimes the essential word on which the idea of the whole paragraph depends is the one omitted. On p. 84 it is "the severe and inflexible laws of honour" (*honra*), not of religion merely, which the Spanish peasantry are said to observe so strictly. But it would be ungracious to insist on these shortcomings. They will be wholly unobserved by English readers, who will enjoy the narrative, and will get a deeper insight into certain phases of Andalusian life than can be obtained from a hundred guide- or tourist-books, without a suspicion that there is anything more behind.

Not the least acceptable volumes of the "Parchment Library" (Kegan Paul, Trench and Co.) are those which it is practically impossible to review. Of such are the *Horace*, edited by Mr. F. W. Cornish, of Eton; and the *Shakespeare*, of which the first volume has just reached us, containing four plays—"The Tempest," "The Two Gentlemen of Verona," "Measure for Measure," and "The Merry Wives of Windsor." In these days of innumerable school editions of the classics, compiled to meet the insatiate demand of examinees, the "gentleman and scholar" has hitherto been quite overlooked. Aldines and Elsevirs are not within the reach of all—not even when historic libraries are broken up. There must still be many who want a *Horace* of home manufacture, which shall be both *utendo habilis* and *formae elegantioris*. Mr. Cornish has done his part with more labour of textual criticism than might be inferred from his modest Preface. We thank him especially for having brought back the asterisk and the obelus in their old-fashioned use. Altogether, we know no recent book that deserves a more hearty welcome from those who can distinguish between books and books. Of the *Shakespeare*, we forbear to commit ourselves to any definite

criticism. There is no editor's name and no Preface, and (we may add) no frontispiece, such as has heightened the charm of all the preceding volumes of this series. We decline, therefore, to undertake a collation of the text, though we are not unwilling to yield our confidence to publishers who have already given us Prof. Dowden's scholarly edition of the *Sonnets*. We may be wrong (and we do not profess to any special knowledge of these matters), but the printing of the *Shakespeare* strikes us as being not quite so clear as that of the *Horace*.

Don Quixote. A Translation based on that of Peter Anthony Motteux. Edited by Edward Bell. (George Bell and Sons.) Since 1612, when John Shelton's version of the first part of *Don Quixote* was issued, several English translators have tried their hands on Cervantes' masterpiece, the latest being Mr. Duffield, whose translation appeared last year. It cannot be said that the work of any one of these craftsmen is a conspicuous success; but the version "by various hands," which was revised by Peter Anthony Motteux, and first published in 1712, has preserved a fair amount of the spirit of its original in very bold and idiomatic English. This version has been reprinted, with revisions and emendations, by Messrs. Bell, and forms a fresh instalment in their continuation of "Bohn's Standard Library." On the whole, the editor has decidedly improved upon the work of Motteux, for he has judiciously pruned many of the latter's too ample sentences, and has generally toned down those passages in which the dry humour of Cervantes was presented as broad farce. Lockhart's Life of the author of *Don Quixote* has been reprinted, as well as his notes; and some further notes have been added, chiefly to explain the proverbs which are at once a beauty and a difficulty in the original. We may add that in the Preface the editor acknowledges the valuable assistance afforded him in the work of revision by Mr. Duffield's scholarly work.

ANOTHER addition to "Bohn's Standard Library," which was published earlier in the year, is entitled *Classic Tales*. It contains, in the following order, "Rasselas," "The Vicar of Wakefield," "Gulliver's Travels," and the "Sentimental Journey." The text of each has been arrived at from a collation of the earliest editions.

We have received English versions of two works by Herr Georg Ebers—*A Question*, translated by Mary J. Safford, and *The Emperor*, translated by Clara Bell, in 2 vols. Both these works are issued by Mr. Gottsberger, of New York, who has already published several other novels and tales by Ebers. The volumes before us are well printed, and their shape and size are identical with the convenient pattern of the Tauchnitz series. Herr Ebers has won a world-wide name by his attempts to portray the life of the ancient world in various works of fiction. For our part, we must confess that in reading his books we generally find lifeless figures, not very well grouped, against scenery which is both vivid and historically correct. In other words, Ebers is a good scene-painter, but a poor dramatist. To *A Question* this criticism is not altogether applicable. The story possesses no plot, and its characters are drawn in the barest outline; but, on the other hand, it is instinct with a life and vigour not always possessed by Herr Ebers' tales, and affords a charming description of country life in ancient Sicily. *The Emperor* presents a study of the Emperor Hadrian and his times. The lines of the principal portrait are carefully finished, but we cannot say that its effect is lifelike. Both translators have done their work well.

NOTES AND NEWS.

MISS ELEANOR MARX, who recited the "Pied Piper" so admirably at the Browning Society's extra meeting, is drawing up a short account of Mr. Browning's musician, Abt Vogler, for the second part of the Browning Society's *Papers*. The Abbé Vogler was the teacher of both Weber and Meyerbeer, and Weber always entertained the highest regard and affection for his "dear master." On the other hand, Mozart disliked Vogler, and ran him down, a proceeding in which he has been followed by other musicians—but not without protest from many men of note. Abbé Vogler's "Orchestration," the instrument mentioned by Mr. Browning, will be described by Miss Marx.

WE are promised two volumes of articles reprinted from the periodical press—one is the "Modern Arabian Nights," which Mr. R. L. Stevenson contributed about four years ago to *London*; the other is "My Watch Below," which appeared quite recently in the *Daily Telegraph*, signed by "A Seafarer." We understand that the "Seafarer" is none other than Mr. Clarke Russell, author of *The Wreck of the Grosvenor*—by far the best of modern sea novels.

THE third volume of Mr. Percy M. Thornton's *Foreign Secretaries of the Nineteenth Century*, to be issued almost immediately by Messrs. W. H. Allen, will include a special analysis of the foreign policy of the Duke of Wellington in 1834-35, and of that of Sir Robert Peel in 1841-46. It will also elucidate the condition of affairs which precipitated—if it did not absolutely cause—the Crimean War. The Foreign Secretaryships of Lord Malmesbury, Lord Russell, and Lord Clarendon, compiled from private records and public sources, will also form part of the book. In the Appendix reference to some private memoirs of Napoleon I. is made, as illustrating his dread of Stein's influence with Germany in 1808. A facsimile of the last electoral letter of Mr. Pitt and portraits of Peel, Wellington, Aberdeen, Russell, Clarendon, and Malmesbury accompany the volume.

THE new bell at St. Paul's Cathedral, which will shortly be properly rung, has excited a great deal of interest among London folk. Messrs. Griffith and Farran have nearly ready a little book by Mr. S. J. Mackie, entitled *Great Paul, from its Casting to its Dedication*, with a chapter about bells by Dr. J. Stainer, the organist of St. Paul's. The little volume will have several illustrations, and will furnish a complete history of the undertaking.

UNDER the title *The Ancient Manuscripts of the New Testament for English Readers*, the Rev. F. T. Bassett, of Dulverton Rectory, will shortly publish a translation of the five earliest MSS. of the New Testament. The work will be issued by Mr. Elliot Stock.

WE take from the *Scotsman* some interesting details about the burial-place of Carlyle at Ecclefechan. A few gentlemen having the right of sepulture in the ground have had the enclosing wall rebuilt, the refuse removed, and walks opened. The gate is open throughout the daytime to all comers. Mr. James Carlyle, of Newlands, near Ecclefechan, has recently erected a large tombstone to the memory of his two brothers, Thomas and John Aiken. Near the top of the stone is the motto "Humilitate," and underneath the Carlyle arms (!). The inscription reads, as far as regards Thomas:

"Here rests Thomas Carlyle, who was born at Ecclefechan, 4th December 1795, and died at 24 Cheyne Row, Chelsea, London, on Saturday, 5th February 1881."

At the foot of the actual grave is a small stone, with the initials "T. C." At the house in which

Carlyle was born a visitors' book is kept, the gift of Dr. Joseph Cook, of Boston, U.S.; and among the more recent names in it are those of the Earl of Rosebery and Lord Young.

MR. EBSWORTH announces that his Part 10 of "the Roxburghe Ballads" for the Ballad Society (1881) will contain a large Group of Anti-Papal Ballads; that Part 11, for 1882, will include a large Group of Historical Ballads on the Bye House Plot, 1683, Jack Presbyter, and the Duke of Monmouth's Insurrection in the West, 1685; and that Part 13 will begin vol. v., in 1883, with a Group of Legendary Romantic Ballads, from the Roxburghe Collection, few of which have ever been reprinted. Legendary Historic Ballads will follow soon. The completion of the whole Roxburghe series is now within measurable distance, and may probably include a General Introduction on Ballad History, and full Index to the whole collection, from the present editor. When the Roxburghe Ballads are complete, Mr. Ebsworth will edit "The Civil War and Protectorate Ballads," in five parts, arranged chronologically.

WE understand that a work entitled *Bicycles and Tricycles, Past and Present*, by Mr. Charles Spencer, author of *The Bicycle Road Book*, will be published shortly by Messrs. Griffith and Farran.

A NEW volume of the Classified Catalogue of the Library of the Royal Institution of Great Britain, by Mr. Vincent, the librarian, is now ready. It includes the most important works published during the last twenty-five years, placed under their respective heads, accompanied by a synopsis and indexes of authors and subjects.

MESSRS. CHATTO AND WINDUS have issued a new and uniform edition of the works of Mr. Charles Reade. It is handsomely bound, and illustrated by Mr. Du Maurier, Mr. W. Small, and other well-known artists.

THE Index Society have just issued their two volumes for last year, being the *Index of Obituary Notices for 1880*, and Mr. Walter Bye's *Index of Norfolk Topography*; and also, as one of their volumes for the present year, the *Literature of Vegetable Technology*, by Mr. B. Daydon Jackson, founded on the collections of Mr. J. G. Symons. Of these two last we may say something hereafter. The *Index of Obituary Notices* is, we believe, the first of the kind that the society have yet published. Such an enterprise, as its value will only be appreciated hereafter, so it can only be improved by time. Apart from American papers, not a single foreign journal is indexed; and but two insignificant provincial journals. We would specially call the attention of the compilers to the excellent obituaries that appear in the *Scotsman*. Surely they must have some North Briton among their number. Of London dailies, again, only the *Times* is mentioned; whereas three New York papers are thus honoured. The rule ought to be to include every notice that has any independent value, and to omit those which have not, wherever they may appear. Provincial obituaries are often by far the most full.

MR. J. T. GILBERT has rapidly followed up his publication of the *Aphoristical Discovery* by a *History of the Irish Confederation and the War in Ireland, 1641-1643* (Dublin: Printed for the Editor by Gill and Sons). The work is from the pen of Richard Bellings, who, as secretary to the Confederation, had excellent means of acquiring an insight into its working and sufficient abilities to enable him to make use of his position. There never was a time when the study of Irish history was more needful, because, whatever be the view taken of actual political difficulties, these can never be ap-

proached with any reasonable prospect of a solution until the chasm which divides the two races is fully acknowledged to have come into existence through the wrongdoing of past generations of Englishmen. It is needless to say that in Mr. Gilbert the reader will find a competent guide; and the documents with which the Appendix is enriched, notably those relating to the eviction of the O'Byrnes, are enough in themselves to explain why the name of English justice was held in Ireland as no better than a mockery. Even for the English historian of the reign of Charles I. the book is invaluable.

MR. ALEXANDER MAXWELL has in the press (to be published by subscription) a *History of Old Dundee*, narrated out of the town council register and other sources. Many local incidents will be described that are connected with events of national concern, such as the Reformation and the Revolution; the modes of action in the municipal life of the town will be illustrated; and curious details given about old punishments. The work will contain an engraving of St. Mary's Tower, as it stood before the nave of the church was destroyed; a reproduction of Crawford's map of 1786; and a facsimile of the title-page of "The Book of the Church."

PROF. INGRAM, the librarian of Trinity College, Dublin, has issued separate copies of his paper before the Irish Academy on "The Earliest English Translation of the *De Imitatione Christi*," a MS. in the library under his charge, lettered "Musica Celi" on the cover, and being of the middle of the fifteenth century, but containing only the first three parts. There is another less complete MS. in the Cambridge University Library, and, seemingly, one in the Bodleian. The earliest printed English version is Atkynson's in 1502, the first three parts, printed by Wynkyn de Worde, and Queen Margaret's translation of the fourth part, 1504, also printed by de Worde. Atkynson's is a much more florid and puffy version than the simple and racy MS. one, as Prof. Ingram shows by extracts. The Professor proposes to edit the MS., if not for the Dublin University Press, then for the Early-English Text Society; and, if for the society, he will make a parallel-text of it by reprinting Atkynson's edition, or a fresh MS. version, if one should turn up.

WE learn from the *Critic* that Mr. John Burroughs, the American essayist, is now in this country, visiting the scenes associated with the lives of English and Scotch men of letters.

MESSRS. REES WELSH AND Co., of Philadelphia, announce a volume of the prose works of Mr. Walt Whitman, under the title of *Specimen Days and Collected*. The volume is divided into three parts. The first contains reminiscences of his early life; the second, a diary of his experiences during the war; the third, a collection of essays on political and social subjects, republished from the *North American* and other Reviews.

MR. GRANT ALLEN's *Vignettes from Nature* has had the honour of being reprinted by a New York publisher, and sold for 15 cents (7½d.).

MR. JOHN MORLEY's monograph on Rousseau has been translated into Russian.

DR. EUGEN OSWALD has contributed to two recent numbers of the *Magazin für die Literatur des In- und Auslandes* (July 1 and 8) an elaborate paper upon the relations between Goethe and Carlyle. Though the materials are in great part derived from Mr. Froude's biography, Dr. Oswald has the advantage of approaching the subject from the German standpoint. There is probably no one else who could have treated it so thoroughly.

THE President of the Russian Academy lately presented to the Ozar two volumes of *Reports and Decisions of the Governing Senate in the Reign of Peter the Great*. These form merely instalments of a series which, it is expected, will extend to twenty-six volumes in all. They refer to the most important matters in every branch of administration, and afford ample material than has hitherto been accessible for a study of the epoch of Russian regeneration. The credit of the publication is in a great measure due to Senator Kalachov, who has charge of the Moscow archives of the Ministry of Justice, and who superintended the making of extracts and the process of printing.

VICTOR LAFERTÉ, whose *Alexandre II. : Détails inédits sur sa Vie intime et sa Mort*, has recently appeared, is said to be the *nom de guerre* of the Princess Dolgorouki, morganatic wife of the late Ozar.

PROF. A. NEWTON, of Cambridge, wishes us to state that the paragraph about his edition of *Yarrell's British Birds*, which appeared in the last number of the ACADEMY, is "almost wholly inaccurate"—so far, at least, as regards himself.

FRENCH JOTTINGS.

THE Académie française held its annual public meeting on Friday, July 7, when the report on all the literary competitions of the year was read by the permanent secretary, M. Camille Doucet. The Montyon prizes for virtue were distributed by the president for the current quarter, M. Mézières. As usual, the larger number of these fell to women; but on this occasion several sailors and others received rewards for saving life.

THE French papers announce that Mlle. Dosne, while arranging for publication the papers of Thiers, has come across a bundle endorsed simply "Notes," which seem to contain the materials for a projected volume of private memoirs. Here is a sketch of Louis-Philippe, another of Jacques Laffitte, a conversation with Talleyrand, and a philippic against the author of the *coup d'état*. Whether Mlle. Dosne will consent to the publication of these fragmentary notes is uncertain.

THE Ecole libre des Sciences politiques annually awards a sort of travelling fellowship of the value of 4,000 frs. (£160) to one of its old pupils. The holder must spend at least six months abroad, and must write a memoir upon some subject approved by the body of professors. This year, M. Bedout, a clerk in the Ministry of Foreign Affairs, has been selected to study the decisions of the English admiralty courts during the period of the Revolution and the First Empire.

SEVERAL changes have recently taken place in the political press at Paris. The *Gaulois* has amalgamated with the *Paris Journal*, under the joint editorship of M. Henry de Pène; and consequently M. Jules Simon has had to found a new paper of his own—the *Passant*. Another new daily is announced, entitled the *Indépendance française*, to be edited by M. Charles Boysset, one of the chiefs of the coalition in the Chamber of Deputies that overthrew M. Gambetta last January.

ACCORDING to the *Annuaire de la Presse*, edited by M. Mermet, the total number of journals published in France is 3,272, being 1,343 in Paris and 1,929 in the provinces. Of the former, it is surprising to find that the most numerous class is financial (209), then medical (97), illustrated (88), fashions (81), political (71), law (64), Catholic (64), science (41), literature (30), and art (19). The provincial papers are thus classified according to their politics: Republican

(615), Legitimist (177), Orleanist (146), religious (108), Bonapartist (100).

THE fourth part of the sale of the Bibliothèque Didot took place in Paris last month. The number of lots was 500, and the total price realised was 253,146 frs. (£10,000). Several *Horæ* were sold, one of which was bought by the Baron de Beurnonville for no less than 30,500 frs. (£1,220). This was a MS. written in France in the first half of the fifteenth century, probably for the Duke of Bedford. It is on vellum, with twelve large and 369 smaller illuminations, of which fifty-eight illustrate the dance of death. In the beginning of the last century it was given to Dr. Richard Meade by Louis XV., and only returned to France in 1863.

A CHEAP but well-printed series of little books is being published at Paris by M. Léopold Cerf under the title of "Nouvelle Collection illustrée." Each is an original work by a writer of repute, containing about 160 pages; and the price is only one franc a volume. One of the three that have already appeared is an historical sketch of English literature, by M. Léon Boucher, of Besançon; and among the announcements are *Les Races humaines*, by M. Abel Hovelacque; *Les Basques et le Pays basque*, by M. Julien Vinson; and *L'Espagne des Goths et des Arabes*, by M. Léon Geley.

OBITUARY.

DR. ERNST HAAS.

WE much regret to announce the death of the well-known Orientalist Dr. Ernst Haas, of the British Museum, which occurred on July 3, at his residence in Westbourne Park. For more than a year Dr. Haas had been invalided by a malady the seeds of which had been present all his life, and against which his naturally strong constitution battled for fourteen months. Dr. Haas was born at Oeburg in April 1835, and was therefore in his forty-eighth year. In 1852 he matriculated at the University of Berlin, and for two years devoted himself both in that city and at Bonn to the study of the Teutonic languages, as well as those of Latin origin. With that desire for thoroughness which he showed in everything he put his hand to, he at the same time turned his attention to Sanskrit in order to gain a more complete knowledge of the objects of his study. But, having taken up Sanskrit as a means to an end, he became so fascinated by the taste it gave him for Oriental literature that he further directed his energies to acquiring a knowledge of Persian and the kindred languages. These he studied under Prof. Roth at Tübingen, and subsequently he returned to Berlin to work on the Oriental MSS. in the Royal Library. From the information gained from these MSS. he compiled a dissertation on Indian domestic life which gained for him the degrees of M.A. and Doctor of Philosophy at Tübingen, and a portion of which was afterwards published in the fifth volume of Weber's *Indische Studien*. After leaving the university Dr. Haas spent two years in Paris, and then went to Scotland, where he acted as tutor in the family of Lord Minto for three years. In 1866 he was appointed to a post in the Oriental branch of the Library of the British Museum, which office he held until his death. With indefatigable energy he devoted himself to the work of that department, and, single-handed, for fifteen years succeeded in performing its duties with thorough efficiency. In 1876 he printed, by order of the Trustees, his Catalogue of the Sanskrit and Pali books under his charge—a Catalogue which is pronounced by those who are best able to judge to be free not only from a single error, but from a single inaccuracy. As an able public servant, his

death is a loss to the country, while a wide circle of personal friends share with his relatives their grief at his untimely end. His unswerving uprightness of character, the constancy of his friendship, and his natural kindness, endeared him to all who associated with him either among the books in the British Museum or in private society. The only works of which Dr. Haas was author are two papers, entitled "Ueber die Ursprünge der indischen Medizin, mit besonderem Bezug auf Susruta," and "Hippokrates und die indische Medizin des Mittelalters," both of which appeared in the *Zeitschrift of the Deutschen morgenländischen Gesellschaft* for 1876 and 1877. For some years Dr. Haas had held the office of Professor of Sanskrit at University College, London.

ROBERT K. DOUGLAS.

DR. W. G. WARD.

DR. WILLIAM GEORGE WARD, who died at Hampstead on July 6 at the age of seventy, was the most remarkable of the younger generation of thinkers who "cut into the movement" of 1833 "at an angle." His *Ideal of a Christian Church* was published in the interval between Newman's secession to Littlemore and his submission to Rome. And it immediately superseded *Tract XC.* in the public mind, and created, by no fault of Ward's, a very unfair impression that all Tractarians claimed to hold and teach all Roman doctrine in the Church of England. After a dramatic scene in the Sheldonian Theatre, he was deprived of his degree, became a Roman Catholic, and married the lady with whose letters he solaced himself in the intervals of his defence. The Pope made him a Doctor of Divinity, and Card. Wiseman made him Professor at St. Edmund's College at Ware. He wrote a sequel to his *Ideal*, and a treatise, unpublished, "De Obduratorem Peccatis Mortalibus," on the guilt of doing what by your own fault you cannot help; and began a treatise on the theology of Nature and Grace, in which he showed, perhaps, more sustained speculative power than in any of his other writings. This was published in 1862. Its completion was interrupted by his succeeding Card. Wiseman as editor of the *Dublin Review*. Henceforward his activity had two directions—a vigorous championship of *a priori* philosophy, and a yet more vigorous insistence on the Papal claims. His resolute opposition to the scheme of a Roman Catholic college at Oxford was quite unsoftened by his personal attachment to Dr. Newman; his championship of the Syllabus contributed something to the definition of 1870. He was always paradoxical: he argued that, though he was bound to hold Intellectus in Latin to be one aspect of man's highest good, intellect in English was hardly a part of man's perfection at all; he never discussed the relations between cleverness and insight into truth, and contented himself with proving to demonstration that it is more to be good than to be clever. He proved that it was quite right to condemn Galileo, and incidentally that Galileo shuffled badly; and he also proved that the Church stopped short of finally condemning the theory of the solar system now received. He certainly kept himself and his *Review* singularly clear from any attempts to hamper positive science; in this, as in much else, he resembled the elder Froude. His essays on Scriptural and devotional subjects and on questions of theology were collected in 1879 and 1880. His laborious demonstration of the elements of theism was interrupted by his death. Perhaps one of the most effective chapters was the doctrine of "anti-impulsive effort," which, whether it proves "free-will" or no, disproves utilitarianism, as it shows clearly that the permanent set of our activity is independent of our desires.

MAGAZINES AND REVIEWS.

THE most important paper in the July *Antiquary* is Prof. George Stephens's "Letter from Denmark." His knowledge of Northern lore is unsurpassed, and he has here given us a condensed account of what is being done in Scandinavia on matters historical and antiquarian. It seems that there are three dialect societies in the North, one with its head-quarters at Upsala, another at Christiania, and a third at Copenhagen; all of them are doing good work. The Danish society, as representing a tongue the most nearly related to our own, will probably have the greatest interest for English-speaking people. "Its object is to publish dictionaries of the book-language and of the great local dialects, to prepare works on proper names and place-names, to print old Danish manuscripts. . . . It consequently unites in itself more than is attempted by both the Early-English Text Society and the English Dialect Society put together." Such a body must be doing work that will be very instructive for English people. We trust it may receive a large measure of support from this country. Mr. Wheatley's paper on "Saint Swithin" is interesting, as he has collected notices not only of the Bishop of Winchester whose festival has become to the English peasant a weather prognostic, but also of the other watery saints whose feast days perform a similar function in foreign lands. We are not aware that the tradition can be traced back in this country beyond the borders of Christianity, but it is almost certainly of much earlier origin. From Mr. William George Black we have a paper on "Shakesperian Folk-Lore." Mr. B. L. Lewis discourses on "Parish Registers," and Mr. J. H. Round gives us a second part of his valuable studies on "The Dome-day of Colchester."

In the *Revista Contemporanea* of June 30 Señor Gonzalez Janer discusses the question of cereal production in Spain in face of American competition. His conclusion is that, in the Centre and North, wheat may still be profitably grown for home consumption, but that the export to the colonies had better be surrendered to America, which can supply them more cheaply. In the South and East of Spain corn cannot be profitably cultivated on irrigated land, and on unirrigated the crop too often suffers from drought; wine, oil, fruits, vegetables, and pasture should be the sole agricultural produce there. "La Juventud Dorada" treats slightly of the reigns of the Catholic Kings and of Charles V., and rather more at length of the sons of Catherine de Medici in France. "La Literatura Española en Francia," by M. Magnabal, is one of the studies to which the Calderon centenary gave rise. The regulations of the Spanish Theatre in 1818 are curious, showing how completely it was under Court subjection. The Diary of the Conde de Toreno in Italy, and the æsthetic study, "El Último Suspiro," by Tinajero Martinez, are concluded in this number.

THE ROSSETTI SALE.

THE sale of the late D. G. Rossetti's household effects took place at 16 Cheyne Walk, on Wednesday, Thursday, and Friday, July 5, 6, and 7, after one day of private view and two days of public view, in which it was estimated that scarcely fewer than 3,000 persons visited the house. The attendances on the sale days were very large, the bidding was brisk, and the prices fetched were unusually high—higher, proportionately, it is thought, than at the Hamilton sale. The most spirited bidders and principal purchasers were Messrs. Ellis, Christie, Fairfax Murray, Howell, Nutt, Heaton, and Marks. A number of the deceased poet's friends were present on each of the three days;

and, as these were determined to carry off relics at any cost, the inevitable contingent of the broking fraternity seemed heavily handicapped, and their disappointment and indignation were obvious enough. Messrs. Wharton, Martin and Co. were the auctioneers.

A carved oak cabinet, inlaid with pearl, fetched £22 (Howell); a couch, painted in three panels and round the lower stile by Rossetti (subjects being "Amor," "Amans," and "Amata") brought £54 12s. (Murray); a pair of fire-screens in tapestry, representing the Prodigal Son, 25 guineas (Christie); a sofa, with back painted in figure and landscape, 33 guineas (Fred. Looker); Rossetti's secretaire, 34 guineas (Howell); a Portuguese cabinet, covered in leather and brass, £45; Rossetti's bookcase, carved mahogany Chippendale, £50 (Marks). The brasses and bronzes, of which there were many curious examples, from a large sixteenth-century chandelier to small incense-burners, fetched exceptionally high prices; as also did the pieces of jewellery, which were for the most such as Rossetti had used to paint from. Among the latter, a large black Oriental pearl mounted in silver, from Rossetti's design, and painted by him in *Mona Vanna*, went to Howell. The engravings included twenty-four after Fuseli and nearly eighty after Stothard; they all fetched good prices. The most interesting of the drawings put up were four or five by the early pre-Raphaelites W. H. Deverell, W. Holman Hunt, and J. E. Millais. The paintings were not of great interest.

Perhaps the most interesting items of the sale were the books of the poet-painter. Of these, *Poliphili* fetched £38 (Ellis); *Songe de Poliphili*, £9 9s.; Gerard's *Herball*, £4 5s.; *Capriccios de Goya*, £12 12s.; Gilchrist's *Blake*, two volumes, £5 5s.; *Il Decamerone di Boccaccio*, with annotations by Rossetti, £2 15s.; the interesting MS. and sketch-book of William Blake, which was bought by Rossetti about 1848 from Palmer, an attendant at the British Museum (and relative of Blake's Palmer), for 10s., fetched in the sale 105 guineas (Ellis); Frederick Locker's volume of unpublished poems, £1 6s.; Rossetti's *Dante and his Circle*, £1 7s. 6d.; a curious little volume entitled *Endimion*, by Gombaud, £1; Landor's *Count Julian*, £1 3s.; F. J. Shields' Illustrations to *The Pilgrim's Progress*, £2 5s. (H. T. Dunn); an unbound copy of the pre-Raphaelite magazine *The Germ*, £6 6s. (Stevens). For the Presentation copies the bidding was very brisk, W. B. Scott's *Poems* going for £3 3s.; Coventry Patmore's three volumes, £2 15s.; Sir Henry Taylor's two volumes, £2 2s.; John Payne's *Mask of Shadows*, £1 17s. 6d.; P. B. Marston's two volumes, £6 6s.; E. W. Gosse's *New Poems*, £1 12s. 6d.; Hall Caine's *Sonnets of Three Centuries*, with marginalia, £2 15s.; Swinburne's *Atalanta in Calydon*, £32 11s. (Stevenson); Trenchard's edition of Rossetti's *Poems*, £1 1s. per copy; Rossetti's *Hand and Soul*, 17s. Besides the above, a number of Presentation copies, including Ruskin's *Modern Painters*, had been previously sold by private treaty. The total realised by the sale was over £3,000.

Rossetti's own drawings, of which there remain nearly one hundred, are to be sold next season at Christie's.

We understand that Rossetti's will provides that his property be divided between his mother and brother, with mementoes to eight or nine intimate friends—Theodore Watts (for many years his closest friend), Frederick Shields, F. Madox Brown, T. Hall Caine, F. R. Leyland, W. B. Scott, Burne Jones, and Swinburne.

CORRESPONDENCE.

WAS BOGER OF MONTGOMERY AT SENLAC?
Somersetshire, Wells: July 10, 1882.

The controversy between myself and Mr. Howorth ought certainly to come to an end some time, and the sooner the better. I had somehow fancied that my last letter would be the end. At any rate this present one shall be, as far as I am concerned. For dispute might be endless, when no new facts are brought forward, but when each side simply asks the other to take a different estimate of facts which are already known.

Mr. Howorth's main point is that Wace sometimes makes mistakes. I never denied it; indeed, I supplied him with some of the instances which he now uses, and I have no doubt that, if I went through Wace for the purpose, I could find other mistakes which Mr. Howorth has not quoted. On the other hand, Mr. Howorth charges Wace with special ignorance as to English affairs. I have answered by quoting some instances of remarkable and unexpected accuracy on his part as to English affairs. It is plain that of this kind of work there is literally no end; the real point is, not whether Wace sometimes makes mistakes, whether he

sometimes writes Roger for Robert, or Robert for Roger—a thing which I may say from sad experience is almost as easy as to write "east" for "west" or "west" for "east"—but whether his elaborate picture of Roger of Montgomery's exploits in the battle, a picture so remarkably suiting the position of the man, is likely to be sheer invention; mere mistake it cannot be. At the same time, I can relieve Wace from some of Mr. Howorth's smaller charges of inaccuracy. He does not miscall Eginulf, Ingenuif—or however we are to spell him—of Laigle (Mr. Howorth's *Enguenulf* is doubtless owing to the printer, like so many odd forms in my own last letter). He certainly appears as *Engerran* in Pluquet's text; but it is plain from the new edition of Andressen (i. 366) that the true reading is *Engenouf*. So I do not see how Wace's statement, true or false, that Harold was brought to William at Avranches contradicts anything in the Tapestry, which does not mention the place of meeting. If Mr. Howorth is thinking of the oath of Harold, as to that Wace and the Tapestry agree as to both time and place, though both differ from William of Poitiers. (On the import of these differences I have spoken at length, *Norman Conquest*, iii. 696.)

I will mention one or two other points. Mr. Howorth does not seem to have understood my remark that Wace had taken more pains with his account of the battle than he has taken with the later war between William Rufus and Helias. He says that my

"eulogium [on Wace] is certainly qualified by the statement that the nearer he gets to his own day the more inaccurate he becomes—a reversal of the general habits of a chronicler, which, to say the least of it, is a psychological puzzle."

I am always puzzled when it comes to hard words like "psychological;" but I should have thought that what I meant was plain enough. A chronicler of, the ordinary kind will doubtless become more trustworthy when he reaches his own time. But Wace is rather the author of an epic, with a great central piece to which he naturally gave more care than he gave to the parts of the story before and after it. I thought I was right when I said (*William Rufus*, 516) that the time of which most men know least is the time just before and just after their own birth.

There is no doubt, from the last words of Wace's poem, that he lived to see the coronation of the younger Henry in 1170. But Mr. Howorth is surely hasty in inferring that the whole of his long poem was written—still more that all his researches were made—after that date. As Wace's father crossed in 1066, and as Wace himself was alive and writing in 1170 or later, he was most likely an old man when he wrote the last words of his poem, and he was most likely the son of his father's old age. So Agésilaos was the son of Archidamos; so Lewis the Twelfth died at no advanced age exactly a hundred years after his father's captivity at Agincourt. So in the pedigree of the Sicilian kings four generations cover a good deal more than 200 years. I should have taken for granted that Wace was collecting materials, and even writing, many years before 1170.

Mr. Howorth says that I

"twit him with arguing that Roger of Poitou was a grown man in 1066 because he was married and a great landowner in 1085. Why 1085? When the 'Domboc' was written, Roger of Poitou had forfeited the various lands which he possessed."

Undoubtedly; and so I said. I spoke of him "as holding, or, rather, as having held, a vast estate." It is certain that, by 1085, Roger had received his lands and had lost them, and had married his Poitevin wife. But there is no evidence as to the time when any of those three events happened. Mr.

Howorth before assumed without evidence that the lands were granted to Roger for services done in 1066-70. He now assumes, also without evidence, that the loss of his lands was the punishment of rebellion in 1079-80. I can say nothing about this, because my authorities say nothing. Robert of Bellême was undoubtedly concerned in the rebellion of the king's son Robert. His brother Roger may also have been concerned in it; but it is nowhere said so. I still do not believe that a man whose elder brother was reckoned among the "juventus" as late as 1088 could have held a great command in 1066. And that argument would remain the same, even if it could be proved, instead of merely being assumed, that Roger of Poitou, as well as his elder brother, had a hand in Robert's rebellion.

On one point I do certainly fully agree with Mr. Howorth—namely, in wishing that Dr. Stubbs would work the materials of his wonderful Prefaces into a connected History of the Angevin kings. EDWARD A. FREEMAN.

Derby House, Eoates : July 8, 1882.

I am suffering from two infirmities: one, my abominable writing, which is a miserable medium in which to convey Old French poetry to an unsophisticated printer; and, secondly, my distance from London, which prevents my corrections from reaching you in time. Under these circumstances, I must ask you to lend me the aegis of your columns under which to protect myself from the cavils of those who may mistake printer's errors for the ignorance of the author.

In my letter of last week on Roger of Montgomery, will you kindly correct the following errors?—"Run on a particular tree" should be "seen a particular tree." For "Corincus" read "Corineus." For "rial" in three places read "viel" (i.e., old). For "s'entremest" read "s'entremist." For "service" read "servise." For "Enguenulf" read "Enguenulf." For "contendrent" read "contndrent." For "Patry de la Loude" read "Patric de la Lande." For "Alwei" read "Alnei." For "Mortagne" read "Mortagne." For "Tiesron" read "Tiesson." For "Cingueleiz" read "Cingueleiz." For "Willame de Roman" read "Willame de Romars." For "premiers" read "primiers." For "Brelouz" read "Bretonz." For "per pest, go for dit" read "tint aser petit." For "sèneschancie" read "sèneschancie." HENRY H. HOWORTH.

CHAUCEER AND THE EASTERN COUNTIES.

Brighton : July 10, 1882.

Though I have no special knowledge of the Chaucer family, I venture to think that, as to the Heron theory, the evidences are slender and somewhat confused.

1. The coat of John Chaucer on the Record Office seal is too hastily assumed to be that of Heron. The Heron coats adduced are not in point, for they are, heraldically, totally distinct from it.

2. Mrs. Haweis states that "sons often took their mothers' arms." Possibly they did. But the arms on John's seal, if those of Heron, would not be his "mother's arms," but those of her former husband—a very different matter. To these John could have no claim.

3. The thrice-married Mary cannot, as suggested by Mrs. Haweis, have carried the Heroun fortune to her second husband (or even to her third), for it must have passed to the younger Heroun, and been his till his death in 1349.

4. It must not be assumed that every "long-billed" or "long-necked" bird is a heron. The bird on the reverse of Thomas (Geoffrey?) Chaucer's seal at the Record Office seems an

unmistakeable pelican (close) vulning, and quite distinct from a heron.

5. I would suggest that the mystery of the bird in the corner of Thomas Chaucer's seal (in the Cottonian MS.) might at once be solved by regarding it as the Chaucer badge, the unicorn's head being the crest. It is singular how persistently these two accessories are confused. Moreover, on this hypothesis, we may even infer from the seal on the Record Office seal being crestless (the crest was a mark of distinction, the badge was not) that the crest was granted subsequently, as the family rose in the world. If so, this seal would be earlier than the Cottonian one, and may therefore (as Mrs. Haweis believes) be that of Geoffrey himself. A well-known instance of a bird badge is that of the swan of the Bohuns, which is to be seen appended to the collar of SS. on the effigy of the poet Gower.

6. As to Geoffrey's age. Mrs. Haweis tells us that in 1349 he "was either nine or twenty-one according as the late or early date is accepted for his birth." She indeed inclines to the former opinion; but surely there can be no question at all about it if, as she herself states, his father was "under fourteen" in 1326, for, had Geoffrey been born in 1328, his father would thus have been under sixteen at the time. And, though he was certainly "ravi" when young, we are assured that he was not married. J. H. ROUND.

THE ENGLISH DIALECT SOCIETY.

Cambridge: July 10, 1882.

In a review of some of our books, Mr. Bradley points out that we have only, as yet, published books relating to thirteen counties out of forty, and draws the inference that we have much yet to do. The inference does not follow, because much of our work is supplementary. A large number of works upon dialects appeared before the society was started, and we actually published our "Bibliographical List" in order to point out that such was the case.

WALTER W. SKERT.

RECITATIONS AND SONGS FROM BROWNING.

Hampstead: July 8, 1882.

In the article on Recitations and Songs from Browning which you are good enough to insert in this day's issue there is one passage which seems to me to call for a word of comment. After "his [Mr. Bridson's] supporters in the chorus did their part with great spirit," there comes the qualification, "though we fear that they were not always in correct time." May I just say that these choruses were got up at a very short notice and under considerable difficulties, and that the gentlemen who so kindly sang them had not been able to rehearse them together more than twice; indeed, some had been unable to attend more than one rehearsal? I hope you will not think me over-sensitive in the matter, but I am anxious that the performance should be judged fairly, and that can be done only by taking into account some circumstances adverse to perfection. I hope we may "go up one," at least, next year. This year our preparations were begun much too late, as the thing had not been thought of in good time, and there were other difficulties, whose narration I need not inflict upon you.

M. H. HICKEY,

Co-founder of the Browning Society, and hon. secretary thereto.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, July 17, 7.30 p.m. Aristotelian: "Spinosa," by Mr. W. R. DANSTON.

SCIENCE.

Ants, Bees, and Wasps: a Record of Observations on the Habits of the Social Hymenoptera. By Sir John Lubbock. "International Scientific Series." (Kegan Paul, Trench & Co.)

SIR JOHN LUBBOCK'S admirable investigations into the habits of ants and bees have been so long familiar to most scientific workers, either from the biological or the psychological side, that it seems almost like an anachronism to be reviewing them at the present day. His papers are already classics in the subject of which they treat; but he has done well to gather them together from the pages of sundry learned *Transactions*, so as to bring them to a focus in this delightful and popular volume. Ants and bees are full of interest for the unscientific public, and Sir John Lubbock has here collected all that was most valuable both in his own observations and in those of his numerous predecessors. The result is a work amusing enough to please even that omnivorous person the general reader, and yet solid enough to deserve the highest recognition from men of science.

To summarise the contents of a book which goes over so much ground would be practically impossible within the limits of a short review, and that is the less to be regretted because everyone must read it for himself and discover its chief points of interest at first hand. Ants fill the larger part of the volume. A brief account is given, to begin with, of their individual life-history and of their main divisions and classes. Then some attention is bestowed upon the problem of the formation of nests, as well as on such curious phenomena as those presented to us by the American and Australian honey-ants. Next, we pass on to the relations of ants with plants, which may be either hostile, as in the case of flowers which arm themselves against their incursions by hairs, moats, and sticky secretions, or friendly, as in the case of those trees which entice a body-guard of ants to defend them by means of extra-floral nectaries. Under this head are also included the strange habits of the agricultural and the harvesting ants, as observed by McCook and others. Finally, we get a valuable chapter on the relations of ants with other animals, such as the aphides, which they keep as cows; the blind beetles, which they domesticate for some unknown purpose; and the insects which they actually appear to adopt as the pets of the community. Here, too, come some interesting remarks on slavery among ants, in which Sir John Lubbock attempts to account on evolutionary principles for the degraded condition of such types as *Strongylognathus* and *Anergates*. All this portion of the work, though necessarily somewhat less original than that which follows, is full of valuable *aperçus* and novel facts, especially as regards the length of life attained by ants, their care of the eggs of aphides during the winter, the structure of their formicaries, the fertility of workers, and the evidence of progress among the different species as contrasted with one another. In many cases, the author has been enabled to make fresh observations which establish new and important results, or

refute old errors; while, throughout, his cautious employment of the evolutionary method, and his ingenious suggestions of analogy with the stages of human progress or degradation, give special value to the theoretical parts of his work. It is not too much to say that the labour bestowed upon the *Origin of Civilisation* has evidently proved an admirable preparation for the elucidation of ant life, as attempted in this volume:

It is on the later and more psychological portion of his book, however, that Sir John Lubbock has expended the greatest pains. True, the results are here scarcely so definite and certain as elsewhere; but then the subject-matter was more difficult to investigate, and the chance of arriving at any result at all was far more doubtful. With singular ingenuity and patience, however, Sir John Lubbock set his ants their examination papers, and generally succeeded in obtaining some sort of answer, if only a vague and uncertain one. The great value of his work in this direction consists in the soundness and originality of his method. He has been almost the first worker who has applied experiment instead of mere observation to animal psychology—certainly the first who has applied it on anything like so extended a scale. The care with which he watched his ants and bees reminds us often of the care with which Mr. Darwin watched the movements of plants or the habits of earth-worms. Even where the final result is somewhat inconclusive, the experiments have a lateral value of their own in some other application; but many of them have also distinctly proved the particular facts they were meant to test as to the perceptive or intellectual powers of the insects. Those on the recognition of friends by ants, and on the colour-sense of bees, seem to us the most conclusive; those on the power of intercommunication appear rather to suggest than to prove the existence of some formicarian device remotely analogous to human language. As to the sensitiveness of ants to colour, may it not be that the violet rays really give pain to the insects in some distinctly physical way, rather than that they merely cause a feeling of aesthetic dislike? Certainly, the frightened manner in which the ants sometimes run away from violet light (as in Sir John Lubbock's Royal Institution experiments) suggests the notion of absolute bodily discomfort; and, if this be so, then the insects may perhaps be quite devoid of a real colour-sense in the strict signification; they may be affected rather as we are by an intolerable heat or an electric shock. In every case it should be added that Sir John Lubbock himself estimates the proved results of his experiments in the most modest manner; he never jumps at conclusions or claims to have established a single point more than the observations warrant; on the contrary, he states the facts with every possible reservation, and with due recognition of all alternative explanations. This is especially noticeable in the interesting chapters on the ethics of ants and on their general intelligence. At first sight, one might be half inclined to doubt whether the numerous tabular statements of observations, both in

the body of the work and in the Appendix, were quite desirable in a popular treatise like this; they tend, perhaps, to deter the casual reader. But, on second thoughts, we are inclined to think Sir John Lubbock has done wisely to include them. Many of the statements about the ants must seem to the unscientific so marvellous, or almost incredible, that it is well to let them see by what patient and ceaseless care the observations on which such assertions are based have been carried out by men of science. Had the book contained only the first four papers, it would have been a most interesting statement of ascertained facts; by containing the last six also, it is made into a very valuable lesson in method as well.

GRANT ALLEN.

CORRESPONDENCE.

SUMER AND AOCAD.

Göttingen: June 26, 1882.

Mr. Fritz Hommel, of Munich, has with more or less plainness attacked Dr. Paul Haupt, *privat docent* in the University of Göttingen, in the *Literarisches Centralblatt* of May 6, the *Academy* of May 20, and the *Ausland* of June 5, accusing him of having plagiarised from M. Fr. Lenormant, of Paris, in his article on "A Dialect of the Sumerian Language" which was laid by me before the Royal Society of Sciences at Göttingen on November 3, 1880, and was published at the same time in our *Nachrichten*. Yet, in his work on the Semites, bearing date 1881 and dedicated on June 9 of that year, Mr. Hommel had spoken of "Paul Haupt's recent discovery" without any reference to the priority in it he has since claimed for M. Lenormant in his three publications of May and June this year.

It is certainly true that, in his work on the Magic and Divination of the Chaldeans (Jena, 1878, p. 399), M. Lenormant maintains the existence of "a certain diversity of dialects within the pre-Semitic idiom spoken in the lowlands of the Tigris and Euphrates," and has clearly stated "the inelination of these words to substitute *m* for *b*." What Dr. Haupt, however, puts forward in his article goes, in my opinion, far beyond these few lines of M. Lenormant.

When the question arose whether Dr. Haupt should be admitted as teacher of Assyriology in our university, as I was not myself in a position to form a judgment on the subject, and yet at the same time was called upon to advise the philosophic faculty, I obtained the opinions of Messrs. Oppert, Halévy, Lenormant, Friedrich Delitzsch, and Sayce. With the permission of the writer, I here quote the following sentences from the letter addressed to me on November 25, 1880, by M. Lenormant:

"Pour ce qui est de l'accadien ou sumérien, la part d'originalité personnelle" of Dr. Haupt "est encore plus considérable. Sur certains points, où il s'est trouvé d'accord avec mes derniers travaux, ses résultats, concordants avec les miens, ont été obtenus par lui d'une façon entièrement indépendante. Sur d'autres, il a fait avancer la science d'une façon très-heureuse et définitivement éclairci des questions de grammaire ou de lexique jusque-là très-obscurées. C'est une véritable découverte et des plus importantes que celle qu'il vient de faire du dialecte sumérien, différent de l'accadien classique, et la dissertation où il l'expose, est excellente de tout point."

And in the letter of June 24, 1882, in which M. Lenormant empowers me, at my request, to make public the words just quoted, he says: "Je ne retranche aucunement ce que j'avais eu l'honneur de vous écrire en 1880 au sujet de

M. Haupt." I had sent a copy of this to M. Lenormant.

After quoting the passage of his book on Chaldaean Magic, referred to by Mr. Hommel, M. Lenormant proceeds:—

"Je n'avais pas été plus loin dans mes travaux imprimés.

"J'avais bien reconnu qu'il existait plusieurs textes continus du second dialecte, ainsi que je crois l'avoir écrit à M. Haupt en recevant son mémoire."

Thus, after Dr. Haupt had sent him his printed work: "Mais comme je n'avais rien imprimé d'un côté, M. Haupt y est arrivé de son côté d'une manière pleinement indépendante"—the last five words M. Lenormant underlines—

"Il ne saurait y avoir de sa part aucun plagiat de travaux qu'il ne connaissait pas et ne pouvait pas connaître, puisque je les avais gardés pour moi. Ainsi ai-je toujours regardé sur ce point la vraie découverte, celle des textes du second dialecte, comme étant alenne [M. Lenormant underlines étant alenne], lui appartenant personnellement aussi bien que celle des lois phonétiques qui caractérisent le dialecte (sauf la substitution de m à b, que j'avais indiquée: *de Magic*, p. 399). Pour ma part, je n'élève ici aucune réclamation contre lui, je reconnais l'entière originalité de sa découverte et j'y rends la même justice qu'en 1880, ajoutant seulement pour précéder les faits que ce que j'avais imprimé en 1878, s'il en a eu connaissance, a pu le préparer dans une certaine mesure, mais ne lui en a aucunement fourni l'élément le plus essentiel, qu'il a dû nécessairement trouver à lui seul, et par son travail personnel et indépendant."

It only remains to compare with the original the beginning of the translation of the passage published in the ACADEMY, which Mr. Hommel has thrice in thirty days brought into the field against Dr. Haupt:

"Ueberdies bleibt noch immer die Frage offen, ob das Ideogramm *MMKKU* in der That eine Erfindung der Assyrier war, oder ob es nicht vielmehr einer früheren Periode angehört. Lässt sich letzteres durch Auffindung eines noch unbekannten älteren Beispiels nachweisen—was ja immerhin möglich ist—dann würde natürlich der Gegensatz, den das Ideogramm anscheinend zwischen den Sprachen der Sumerer und Akkader besteht, nur ein rein dialectischer und kein absoluter sein, wie er zwischen einer semitischen und turanischen Sprache besteht."

Mr. Sayce, who has added his *latæses passer* to Mr. Hommel's letter in the ACADEMY, has found nothing to complain of in this translation.

I expect that the *Literarisches Centralblatt*, the ACADEMY, and the *Ausland* will communicate in full to their readers this explanation of mine, which has been sent without the knowledge of Dr. Haupt.

PAUL DE LAGARDE.

Prof. de Lagarde ascribes to the words I appended to Dr. Hommel's letter an importance altogether inconsistent with the principles upon which the ACADEMY is conducted. The scholars who write in it are alone responsible for the statements they put forward, and need no passports for their opinions. Dr. Hommel had a perfect right to claim a hearing for his attack on the currently received doctrine of Assyriologists. If this involved an "attack" on Dr. Haupt, it was for Dr. Haupt, not for me, to answer it. He is well able to defend himself. I could criticise Dr. Hommel only in so far as

his remarks touched myself. My own opinion of Dr. Haupt's merits as an Assyriologist, and of his share in the discovery of the two pre-Semitic dialects of Babylonia, is well known to the readers of the ACADEMY as well as to Prof. de Lagarde himself, who, I am sure, has not forgotten the letter I wrote to him on the subject two years ago. He has full liberty to publish all or as much of this as he likes.

A. H. SAYCE.

WRITTEN AND UNWRITTEN CHINESE LAWS.

London: July 8, 1882.

I have to thank you for your notice in the ACADEMY of July 8 of the paper I read before the Royal Asiatic Society on July 3.

With regard to the remarks of M. Bertin, I would observe that the affinities he imagined that he observed between the Accadian and Chinese laws are points common to all primitive law, and do not support the theory of the Chinese descent from tribes in Western Asia—a theory, however, I am inclined to agree with on very different grounds.

The only opinions I expressed were three. First, Austin and Bentham's theory of resolving laws into the commands of law-givers do not apply in China, while Sir H. Maine's views do. Second, Huxley and Spencer's views of the advance being from the tribe to the family, and not *vice versa*, do not hold good in China; Sir H. Maine's views do. Third, John Stuart Mill's views that individual ownership in land arose from conquest and occupation do not hold good in China; Sir H. Maine's views do.

Sir R. Alcock mentioned three most characteristic features in the Chinese legal system, all of which were valuable as showing the primitive stage of Chinese law. It is just because Chinese law is so primitive that it may throw a light on the first origin of more advanced systems of which we have very scanty historical knowledge.

O. T. GARDNER.

NOTES OF TRAVEL.

M. GIRARD, a young French naval officer, started last week for Zanzibar to undertake a lengthy journey of exploration in the lake district of Central Africa. He hopes to follow in the track of Stanley, crossing the continent to the Congo. He has taken with him a small boat, which has been constructed in England. The cost of the expedition is entirely his own, though he has received a mission from the Minister of Public Instruction.

WE learn from the *London and China Telegraph* that two German naturalists, Messrs. Schadenburg and Koch, had just arrived at Manila from Mindanao, where they had recently successfully ascended a volcano called Apo, the highest mountain in the Philippines, a feat only once before achieved by Europeans. They made two ascents of the Apo in February and March last, under the guidance of several savages, during which they ascertained the height of its south-west peak to be 3,000 metres (10,824 English feet) above sea-level. They intend to publish an account of their expedition, with map and illustrations.

JOHANN JAKOB BINDER, who for some years past has shared with Pfarrer J. G. Grob the editorship of the well-known *Alpenpost*, died at Zürich on July 5. He was born in 1829. He was originally a school-teacher, and of late years an inspector. He was well known throughout his fatherland as a journalist and a writer upon pedagogic matters, while his "*Alpenklubistische*" and tourist works had earned him a wider repute. Between 1860 and 1870 he worked with Dr. Escher and Prof. Greig as co-editor of the daily *Neue Zürcher Zeitung*, but left that journal in order to devote

himself more entirely to the *Alpenpost*, which he raised to its present success. Several of Orell and Füssli's series of illustrated *Europäische Wanderbilder*, which are published in German, French, and English editions, are from his pen.

SCIENCE NOTES.

The Fossil Sirenia of the Mayence Basin.—A valuable monograph, by Dr. G. R. Lepsius, has been issued under the title "*Halitherium Schlesi, die fossile Sirene des Mainzer Beckens: eine vergleichend-anatomische Studie.*" The first part is devoted to a description of the skeleton of this fossil, and a comparison with that of other Sirenia. The author then gives a comprehensive review of all the known fossil forms arranged under the four genera—*Procastomus*, *Halitherium*, *Metaxytherium*, and *Felsinotherium*. These are then compared with the recent genera *Halicornes* and *Manatus*, and with the recently extinct *Rhytina*. Dr. Lepsius discusses the relations of the Sirenia to the other orders of the Mammalia. The species which forms the special subject of this memoir belongs to the Oligocene strata, and has a very wide geographical distribution.

MESSRS. GRIFFITH and FARRAN will publish immediately, under the title of *Talks about Science*, a collection of popular lectures on scientific subjects by the late Thomas Dunman. It will be prefaced by a brief biographical sketch by Mr. Charles Welsh.

THE Académie des Sciences has undertaken the publication of the complete works of Augustin Cauchy, under the editorship of the members of the Section of Geometry. They will occupy twenty-six volumes, eleven volumes of which will be devoted to memoirs, notes, and articles originally published in the Academy's *Transactions*, and the remainder with separate publications, reviews, &c. Vol. I. has just appeared. The terms of subscription may be obtained on application to M. Gauthier-Villars.

EGYPTOLOGY NOTES.

ON Tuesday last, July 11, Mr. Cope Whitehouse read a paper upon the results of his recent exploration in and near the Fayoum, with special reference to the ancient basin of Lake Moeris. During March and April of the present year, Mr. Whitehouse made two expeditions into the desert—once in company with Mr. Tristram Ellis, the second time with Mr. Flinders Petrie—with the object of determining precisely the present levels of the country, and thus ascertaining the site of Lake Moeris. All ancient historians agree in stating that, from a very early period of Egyptian history, a large body of Nile water was diverted into the desert to form this lake; and also that the amount of water had been gradually decreasing. The result of Mr. Whitehouse's observations, carried out with theodolite and photography, is to prove that there exists a depression, of not less than 200 feet below Beni-Suef, in the desert between the Wady Moieh and the Fayoum. This depression bears visible traces of having been filled with water at a comparatively recent period; and here Mr. Whitehouse would place the Lake Moeris of the Greek historians.

MISS HELEN BELON has begun a second course of six lectures on "Egyptian Antiquities" at the British Museum, addressed to women only. The lectures are given on Wednesday, at 4 p.m., in the First Vase Room, Greek Antiquities. They are illustrated by diagrams, and afterwards by a visit to the monuments in the Egyptian Galleries. The object of the course is to give such an outline of the history, religion, manners, and customs of ancient

Egypt as may be a guide to those previously unacquainted with the subject. The three first lectures have dealt chiefly with history, running rapidly through the period from Menes to the Exodus. Something also has been said about the find at Dayr-el-Baharee, and the proposed excavations at Zoan. Next week funeral rites and the future state of the soul, according to Egyptian belief, will be treated of.

A Correction.—Herr Lund has written to us saying that our summary of his letter on "Joseph, Khu-en-aten, and Amenhotep IV.," printed in the *ACADEMY* of last week, fails to express correctly his views. He denies that he "read a paper to show that Khu-en-aten . . . was . . . identical with Amenhotep IV.," because this is commonly admitted by Egyptologists; he denies that he called Khu-en-aten "the penultimate Pharaoh of the XVIIIth Dynasty," because four kings after him are generally counted in that dynasty; he did not compute the period of the sojourn in Egypt "at 136 years," but at something like 138 years; he did not assert that "the art of portraiture did not in fact exist till this reign," but that during the *XVIIIth Dynasty*, until the reign of Khu-en-aten, the representations of both kings and magnates were not portraits; he did not say that this change of representation "dated from the moment when Amenhotep IV. broke with the civil and religious traditions of his forefathers," but only when he broke with the magnates; on this point, he suggests that Amenhotep IV. had most likely never adhered to those traditions. In l. 25 from the bottom, for "Abraham" read "Jacob."

PHILOLOGY NOTES.

We take the following from the *Times*:—The Trustees of the British Museum have just acquired a most important collection of Oriental MSS., consisting of 138 volumes, more or less fragmentary, containing (1) Arabic commentaries of the Bible, with the Hebrew text written by Karaite Jews; (2) liturgies and hymns both of the Karaites and the Rabbinic Jews; (3) Karaite polemical treatises; and (4) grammatical, lexicographical, and philosophical treatises. Among the commentaries with the Hebrew text are some of the highest importance. They rank among the oldest Arabic MSS. hitherto known. Three are dated A.H. 348 = A.D. 959, A.H. 395 = A.D. 1004, and A.H. 437 = A.D. 1045. The British Museum has hitherto possessed only one single MS. of this kind, dated A.H. 398 = A.D. 1007. Besides being of so early a date, these MSS. show the cause of the law laid down in the Talmud "that the sacred Scriptures must not be written in any than the square Hebrew characters." They demonstrate for the first time that the Jews were in the habit of writing the Scriptures in other characters. Another point of extreme interest to the Oriental student is the fact that, though the commentaries are written in Arabic, they contain large quotations from Anan's commentaries in Aramaic, thus proving beyond doubt that Anan, the founder of the Karaites, wrote in Aramaic—the language spoken in Palestine in the time of Christ.

We learn from the *Jewish Chronicle* that Mr. Louis B. Abrahams' *Manual of Scripture History* is being translated into Marathi for the use of the children of the Beni Israel attending the school of the Anglo-Jewish Association at Bombay.

M. SMART, the Sanskrit scholar, has been elected a member of the *Académie des Inscriptions*, in the place of the late M. Guessard.

THE thirty-sixth meeting of German philologists will be held this year at Karlsruhe from September 27 to 30, under the presi-

dency of Dr. Wendt, of Karlsruhe, and Dr. Wachsmuth, of Heidelberg.

M. OPPERT is continuing his series of papers before the *Académie des Inscriptions* upon the cuneiform inscriptions brought back from Mesopotamia by M. de Sarsac. He holds to his view that they are the records of a king named Gudea, and not of the god Nabu; and he thinks he can interpret the dedication of an intoxicating liquor called *sikaru*.

UNDER the title of *Specimina lingue palaeoslovenice* the Academy of Science at St. Petersburg has published a small, but important, collection of early Slavonic texts, edited by Prof. V. Jagic. Most of the texts are printed in the Glagolitic character.

DR. FRIEDRICH KLUGE, *privat docent* at Strassburg, has issued the first part of a German Etymological Dictionary, which he hopes to complete in eight parts before the close of the present year. It is favourably noticed in the *Literarisches Centralblatt* for June 10.

THERE has just been published at Copenhagen (Reitzel) a little book on Danish popular etymology by Kr. Nyrop.

MEETINGS OF SOCIETIES.

BROWNING SOCIETY.—(General Meeting, Friday, July 7.)

PROF. E. JOHNSON in the Chair.—After a few words from the Chairman, the Report was read. It was shown that the society had, in a fair degree, attained the objects set forth in the *Founders' Prospectus*, issued July 1881, which said:—"This society is founded to gather together some, at least, of the many admirers of Robert Browning, for the study and discussion of his works, and the publication of papers on them and extracts from works illustrating them. The society will also encourage the formation of Browning Reading Clubs, the acting of Browning's dramas by amateur companies, the writing of a Browning Primer, the compilation of a Browning Concordance or Lexicon, and generally the extension of the study and influence of the poet." Some of Browning's admirers have been gathered together; his works have been studied and discussed; papers on these works and extracts illustrating them have been published; several Browning Reading Societies have been formed; one play has been acted by amateurs, and one is to be acted this autumn; the society has given an extra meeting to readings and songs from Browning; a Browning Primer is in hand, likewise a Lexicon of Browning allusions and a Concordance; and the study of the poet has indisputably been extended.—The rules of the society, which had been carefully considered in committee and otherwise, were accepted, and the officers recommended by the committee were duly elected.—Votes of thanks to the University College Council, and to several members and non-members for special services, were passed.

FINE ART.

Japanese Marks and Seals. By James Lord Bowes. (Sotheran.)

THE only objection which can be raised against a book of this sort is that it is not final. The Japanese are inveterate markers. Not only do they delight to inscribe their productions with the sign of the special factory, but they are addicted to dates and to signatures, and to the addition of other notes and remarks on occasion. Such habits, though interesting to themselves and all acquainted with their language, are extremely puzzling to the legion of foreigners who admire their productions and would fain learn all of their history which is inscribed upon them. It is difficult enough to obtain

a knowledge of Chinese marks. Even the "six marks" and the seals of the different dynasties are hard to remember when the memory has to depend entirely upon the eye for prompter; but with perseverance a man may master the difference between the hieroglyphs of Kia-ting and those of Dai-ming, and may fix upon his retina the cyphers of Teh'ing-hoa and Wan-li; but how shall he ever master by mere staring the complicated characters which tell that such a piece was "made by command of the Prince of Kuwana, in the period of Bunkwa, the Zodiac year of the sheep," or even such comparatively simple legends as "Made by Mori Chikara, Michawachi"? In Japan there is no knowing what a man may or may not think an appropriate commentary to his work of art—whether porcelain, ivory carving, or lacquer work; and the collector who has learnt by rote of eye all the marks that he has ever met with may be completely floored by the simple statement "Engraved—the mark of the lady Tomi-haru in the house of Seiyo by the River Ka-ai, in the province of Iwami."

Nevertheless, the ordinary European who loves Japanese curios, and has not the heart, or the time, or the opportunity to learn a language which takes so many years to master under the most favourable circumstances, may well be satisfied with Mr. Bowes' learned and beautiful book. If, as this article is being written, there are many Japanese workmen inventing inscriptions which Mr. Bowes' labours will help him little in deciphering, he, unfortunately, need not greatly care. The principal use to him of Mr. Bowes' book, as regards modern productions, will be to enable him to distinguish between what marks are modern and what are old. Nothing except personal experience will, indeed, tell him if a piece be a forgery or not, but he will probably be able to find out what it pretends to be. As far as my own experience of the book goes, out of six pieces, the marks of which I had not been able to identify, I found five with the help of Mr. Bowes; and of the other piece, I am uncertain whether or not it be Japanese. If the destruction of the feudal system in Japan did not, as I would fain hope it did not, strike a fatal blow to the art of Japan, it will never be what it once was. "New Japan" may in time make a new Japanese art, but the old is gone for ever—gone with the power of the Daimios and the Shogun and the old exclusive policy, never to return. To those who love the old art, and can distinguish between its products and those monstrous hybrids of East and West which now flood the market, and can detect those daily deteriorating repetitions and imitations of old patterns which, with all their faults, are so pretty and so cheap, this book will be invaluable. They do not need to see the mark to judge the merit, but, when they have made their purchase and landed their treasure, they will be able to consult Mr. Bowes with confidence as to details of maker and age. To all those happy individuals who have inherited old Japanese curios the book will also be an unfailing source of knowledge and pleasure. To them will come no misgivings as to forgery. Their possessions may not be antique (some of the most beautiful work in pottery, lacquer, and illustrated books is not a hundred years

old), but they will be of a date before "the treaties," when art was the expression of the nation, and not the answer to the demand of commerce. In some sense, therefore, Mr. Bowes' work may be said to be final, for it treats of a period that is finished. That it is final in the sense of being absolutely accurate or complete it would be rash to say; but it is certain that he has not spared any pains to make it so, and that his own long study of fifteen years, and the co-operation of two Japanese gentlemen in translating the inscriptions, have made it a book of great and lasting authority.

COSMO MONKHOUSE.

THE HAMILTON SALE.

IV.

VERY few things of the first class remained to be sold last Saturday; but, as far as oil pictures were concerned, it was the last chance for the purchaser, who accordingly—especially if he were the reckless or ill-advised purchaser—came into the auction-room prepared to draw his biggest cheque and get for himself certain of the dual possessions, cost what they might. They did cost a great deal. Fifth-rate pictures, which nobody but a Wardour Street dealer would have looked at on any other occasion, sold for good prices; and, when a picture reached the level of the respectable second-rate, it was accounted a masterpiece. And generally, indeed, it had need to be, if the character of the collection was to be kept up, for of real masterpieces there were few. Leaving aside much of the insignificant and pretentious, we shall here note but a few pieces, most of them really worthy of remark, and some of them quite excellent in their kind.

Three important public institutions were enabled to make acquisitions. While the National Portrait Gallery bought for 2,400 guineas the remarkable portrait group of eleven English and Spanish statesmen—a valuable historical record attributed to Juan Pantoja, a pupil of Coello, but really, perhaps, the work of another artist working in England a few years after the date to which the inscription on the picture assigns it—the National Gallery of Ireland, for the moderate outlay of 480 guineas, obtained the characteristic and desirable instance of the learned art of Nicholas Poussin, "The Entombment;" and our own National Gallery, at the cost of 6,000 guineas, secured the Velasquez which the Louvre and an ardent and well-provided American collector both coveted. Six thousand guineas—it may as well be said with complete frankness—is a large sum of money to have paid for the Velasquez; but such a Velasquez as the National collection required does not offer itself to public competition every day of the season; and, moreover, the purchase of this particular example went far towards completing the purchases which the Director and the Trustees had probably from the beginning desired to make. Mr. Burton had previously obtained bargains; and, if the Velasquez was hardly a bargain, it does not follow at all that it was unwise to buy it. The National Gallery, it seems, made another and a smaller purchase, acquiring for 195 guineas an elaborate and careful example of the art of Steenwyck—an interior. Of minute and precise work this was a good specimen. Another interior, of a very different kind, by de Lorme—a broad effect of light in a Dutch church, the rays of sunshine starting and moving across pillar and wall—passed into private hands for 680 guineas. A noble picture, undoubtedly, but paid for with no stinting hand.

One of the highest prices paid at the sale was the sum of 2,400 guineas, which a private pur-

chaser gave for a Murillo, of which the attribution was hardly questioned, but of which the merit was not conspicuous. Murillo's vision of the child Christ here took the form of an indolent and feeble-looking Spanish infant. The Claude, engraved in *Liber Veritatis*, and otherwise an unquestionable production of the great Italianised Frenchman, sold for 800 guineas, which would not have been at all dear for it if it had retained much of its pristine beauty. This, however, was chiefly lacking to it; and 800 guineas is by no means a trifle for a picture replete with damage. Still it must be conceded that some measure of the placid atmospheric effect which is the charm of the master remained on the canvas. A yet higher price than sufficed to acquire a Claude out of condition was laid down to secure a Wilson of the second rank, no less than 1,000 guineas being offered before the hammer fell, and ere Mr. Graves became the possessor of Wilson's work. More than one so-called Rubens appeared at the sale. By far the best of them, and this was indeed a genuine work and a masterly piece of painting, was that denominated "Bellerophon slaying the Chimera." The price paid for it was 360 guineas. No less than 900 guineas was paid for a set of four pictures painted on alabaster by Botenheimer, taking skilfully into account the value of the material for texture and hue. The same painter, with the assistance of Breughel, is responsible for a dainty little work upon copper—a fair Venus and a company of Amorini—which sold for 290 guineas. There was a good Teniers in the sale, a picture in fine condition, crisply painted, brightly lighted, and of happy colour, a very good picture indeed of the second rank. It sold for 900 guineas—as if it had been of the first. After the mention of some of these prices there will be "nothing left remarkable" in the fact that a very small landscape by Gainsborough—once a dainty enough example of his early manner, but now, as we should take it, irretrievably damaged—sold for 160 guineas. We can well imagine such a picture selling for a fifth of this sum under more commonplace conditions. But a Hamilton sale does not occur every season; and, had the little Gainsborough been sold for a reasonable sum, it would have been difficult to believe that it had formed part of a collection in which, with very few exceptions, only first-rate things have been cheap—in which, certainly, nearly everything that has been second-rate and undesirable and unauthentic has found a ready purchaser for a high price.

OBITUARY.

HABLOT BROWNE.

BY the death of Mr. Hablot K. Browne, whose work was familiar to the public under the name of "Phiz," we can hardly be said to lose an artist who would have done more work or better work if he had lived; but we lose rather an artist whose career was complete, and who belonged almost to the last generation. Hablot Browne is scarcely to be thought about apart from the thought of Dickens. Of course he did much work besides illustrating our greatest novelist; but it is by association with Dickens that Browne will live; and this, though it seems to be a tribute to Dickens, is in reality a tribute to Browne, for the vivid imagination of Dickens was not wholly an assistance to the artist called upon to illustrate him. The genius of the novelist was, at the least, exacting; it was a responsibility to be expected to keep pace with it; and no weak artist could possibly hope to be remembered in association with the novelist's strength. Hablot Browne was a perfectly spirited and thoroughly sympathetic interpreter of the conceptions of Dickens from the young manhood of Dickens to his late

middle life. When Dickens had been more purely extravagant and fantastic, as in *Pickwick* and in *Oliver Twist*, Cruikshank had served him; nor had Cruikshank—who was so much wider a genius than he is generally known to be—failed where it was pathos that was wanted, or a picturesque vision of the old-world streets. But, on the whole, Hablot Browne was even better fitted than Cruikshank for the novels of the middle period. If he did not quite do justice to *Copperfield*, which is comedy, he did complete justice to *Bleak House*, which is effective melodrama. In the *Bleak House* illustrations, hardly anything is wrong; there is hardly any shortcoming. Not only is the comic side, the even fustily comic, such as "the young man of the name of Guppy," understood and rendered well, but the dignified beauty of old country-house architecture or the architecture of the chambers of our inns of court is conveyed in brief touches; and there is apparent everywhere that element of terrible suggestiveness which made not only the art of Hablot Browne, but the art of Charles Dickens himself, in this story of *Bleak House* recall the imaginative purpose of the art of Méryon. What can be more impressive in connexion with the story—nay, even independently of the story—than the illustration of Mr. Tulkinghorn's chambers in gloom; than the illustration of the staircase at the Dedlocks' town house, with the placard of the reward for the discovery of the murderer; than that of Tom All Alone's; the dank, foul darkness of the burial-ground shown under scanty lamplight, and the special spot where lay the man who "was very good to me—he was!" And then again, "the Ghost's Walk," and once more the burial-ground, with the woman's body—Lady Dedlock's—now close against its gate. Of course it would be possible to find fault with these things, but they have nothing of the vice of tameness—they deliver their message effectually. It is not their business to be faultless; it is their business to impress. Dickens later on, as his own manner changed, wanted different illustrators, and very likely he had what he wanted in Mr. Marcus Stone, and certainly he had what he wanted, with Mr. Fildes, in *Edwin Drood*. But the higher technical perfection attained by Mr. Fildes, and the greater charm and amenity of his work on Dickens's latest novel, need not prevent the full recognition of Hablot Browne's merits, and of how successfully, during a score of years, Hablot Browne's invention went hand in hand with the novelist's. Of what is called "Society," "Phiz's" view may have been a conventional one—an impression culled from comedy and novel; and of rural life it would appear that "Phiz" knew nothing. But he knew best the class Dickens studied the most—the lower middle class. He knew it from Islington to Camden Town, and from Camden Town to "the Borough." And, like Dickens himself, he made this vast dulness interesting.

It is with the deepest regret that we learn that Mr. Charles Heath Wilson, who for many years has been a constant contributor to the ACADEMY, died at Florence, where he has long resided, on July 3, aged seventy-three. He was buried in the English cemetery outside the Porta Romana on July 5. We hope to give some details of his life next week.

THE death is also announced of the great Belgian sculptor Eugene Simonis, at the age of seventy-two. His chief works are the bronze equestrian statue of Godfrey de Bonillon in the Place Royale at Brussels (1848), an "Innocence" in the Musée royale, and a statuette of a boy crying over a broken drum. M. Simonis was married to a sister of M. Frère-Orban, the Belgian Minister for Foreign Affairs.

CORRESPONDENCE.

BOTTICELLI'S "ASSUMPTION."

Florence: July 3, 1882.

The following passage, which I have translated with some slight omissions from *Lezioni di Antichità Toscane*, by Lami, may be of interest as giving an account of the landscape in the picture by Botticelli of the "Assumption of the Virgin," recently purchased at the Hamilton Sale for the National Gallery. The passage occurs in the Preface, at p. xxviii. After stating that the Ponte del Mugnone is represented in a picture painted by Botticelli for the Capella Palmieri in the church of S. Pier Maggiore about 1470, the learned author proceeds as follows:—

"The picture represents the bridge with three arches spanning the river, which follows a winding course beneath the hills of Fiesole, near the church of S. Maria della Quercia, and thence skirting the hill called 'delle Forbici' approaches the monastery of S. Giusto alle Mura and the modern Porta di Platil. . . . To the left of the bridge, towards the east, is the road leading to the Badia di S. Bartolomeo. The church and monastery are represented in the picture, but the façade of the church appears at that time to have had three doors, and not one only, as at present. Probably the façade, previously to the restoration by Cosimo de Medici after the designs of Brunelleschi, existed as represented in the picture. In those days [1766] the bridge has one arch only, and appears to have been reconstructed by the Consoli of the Arte della Lana, inasmuch as their arms—an eagle grasping a babe—are represented on the parapet. Possibly, however, the artist intended to represent the still more ancient Ponte del Mugnone which exists in these days, situate about half-a-mile from the above-mentioned bridge, on the road to Borgo S. Lorenzo, close to the mountain of Fonte Lucente. This bridge has several arches similar in form to those in the picture. It is probable that in former times there was a road, at either end of the bridge, leading to the mountains, in which case the one on the left of the bridge would be in the direction of the monastery of S. Bartolomeo. On ascending the hill opposite to the modern bridge before alluded to one arrives at the extensive Villa Salviati, which is represented in the picture approached by a circuitous path. This path commences at the Ponte del Mugnone, which was near the Porta S. Gallo, and is represented with one arch only. Beyond this villa, and on the hill in an easterly direction, is represented the parochial church of S. Martino a Monte Ughi. It is true that the artist has not been absolutely faithful to the actual distance and to the landscape; but his task was not that of geographer, and he was, moreover, limited by the necessities of his picture, and by the groups of figures occupying the centre of the composition. The picture also contains an excellent view of Florence seen from the north, near Camerata, where was situated the villa called 'de' Tre Viali,' belonging to M. Matteo di Marco Palmieri, at whose expense the chapel bearing his name was constructed, and for whom also the picture was painted; in it is seen his portrait, as also that of his wife, Niccolosa d' Agnolo Serragli. Francesco Bocchi, p. 354 (*Bellezze di Firenze*), is incorrect in stating that the city of Florence is there represented before its last aggrandisement, the contrary being the fact."

R. C. FISHER.

NOTES ON ART AND ARCHAEOLOGY.

EXETER COLLEGE, OXFORD, has distinguished itself by electing to a fellowship Mr. W. M. Ramsay, upon certain conditions for archaeological research. We believe we are not wrong in saying that another college, far better endowed than Exeter, had declined so far to depart from the beaten track as to have a student-fellow who should be neither elected by examination nor engaged in teaching.

AN influential committee has been formed for the purpose of obtaining subscriptions towards the erection of an appropriate memorial to Samuel Pepys in the church of St. Olave's, Hart Street, Crutched Friars. The committee consists of the chief representatives of the institutions with which Pepys was connected—viz., the Master of Magdalene College, Cambridge; the President of the Royal Society, the Deputy-Master of the Trinity House, the Secretary to the Admiralty, the Master of the Clothworkers' Company, and some others. The treasurer is Mr. Owen Roberts, clerk to the Clothmakers' Company; and Mr. Henry B. Wheatley, 6 Minford Gardens, W., is hon. secretary.

MR. MATTHEW BLOKAM is about to publish an eleventh edition of his *Gothic Ecclesiastical Architecture*. It is over fifty years since the book first appeared; and, by its successive revisions, it has always kept its place as the best text-book on the subject. For some years it has been difficult to get, and the last edition commands an extravagant price. A hearty welcome therefore awaits the new one, which has been rewritten, and enlarged to three volumes.

A BEAUTIFUL piece of pure line engraving has just been issued by Mr. Lefèvre. It is a print executed by Auguste Blanchard from the picture by Mr. Alma Tadema, "The Torch Dance," now exhibiting in the Grosvenor Gallery. Small in size, like the picture itself, the execution is exquisitely delicate; we have seldom seen anything so bright and lucid as the face of the dancer—a modern English face of great beauty.

AT Messrs. Gardiner's show-rooms at 453 Strand, there has lately been on exhibition a small but interesting collection of old wrought-iron work. The articles included a very elaborate little key, with the crown and monogram of Mary Queen of Scots exquisitely wrought and chased. This, with many other beautiful and interesting specimens, was lent by Mr. G. Truefitt. Of the bolder work, nothing was finer than a floriated ornament belonging to Mr. Schuster, probably the work of a Florentine artist of the sixteenth century. The Duke of Norfolk contributed a very large bracket of elaborate pattern, partly gilt; and Mr. Marks Durlacher an iron chest of Italian make, with an elaborate contrivance for hiding the key-hole, which is under a flap in the cover. In order to touch the spring which causes the flap to fly open, it is necessary to insert a finger, or something longer and stronger, through one of the eye-sockets of a mask which decorates the front of the lid. Some handsome knockers—especially one with the Austrian two-headed eagle—a finely chiselled look-plate of the fourteenth century, an elaborate arrangement for cooking purposes, and some English brackets are among the contributions of Mr. A. Newman, by whose energy the collection was brought together. A dagger with the blade pierced with receptacles for poison, candle brackets of Cromwell's time, iron coffers and caskets, pierced sword-hilts, keys and padlocks, andirons, and balustrades were among its other components; and we must not forget a handsome ornament of the time of Sir Christopher Wren, lately taken down from over a door in Mark Lane, and now the property of Mr. T. Anson.

THE *Portfolio* this month is rich in illustrations. Besides three full-sized etchings, it gives us a number of excellent little engravings in the text illustrative of the various articles. The most interesting of these articles is that on Autun, by the editor. Autun is a delightful little French town, dating back to Roman times, with which Mr. Hamerton is intimately acquainted. Judging from the illustrations in this number,

it would seem to be composed of nothing but quaint towers; but Mr. Hamerton promises to tell us more about it, the present article being merely intended as an introduction. An article by Frank Schloesser, describing the Maison Plantin, in Antwerp, and the continuation of Mr. Chambers Lefroy's "Ruined Abbeys of Yorkshire" make up, with the usual Art Chronicle, the rest of the number.

IN "A Middlesex Lane" the *Art Journal* for July contains a good example of the etching of Mr. Frederick Slocombe. Mr. Beavington Atkinson's article on Prof. Manzel has several very vigorous and characteristic illustrations of the art of that distinguished German; and Mr. Ruskin has allowed extracts from *Our Fathers Have Told Us* to be printed, with wood-cuts of some of the photographs which accompany his eloquent handbook to Amiens Cathedral.

THE article in the *Magazine of Art* which pleases us most is that by Mr. Austin Dobson, on Jacob Oats. It is mainly occupied with a description of the designs by Adrian van der Venne to Schipper's well-known folio edition of the Dutchman's poems, and is written with vivacity and sympathy, in a gentle vein of humour not unlike that of Charles Lamb.

WITH the number for June the *Revue des Arts décoratifs* commenced its third year of existence. Two series of articles are commenced in it by MM. E. Garnier and Victor Champier. The former writes of painting on porcelain; the latter, of the model house and its furniture. The illustrations are numerous and good, and include a photograph of the silver *plaque*, designed and executed by M. Morell Ladeuil for Messrs. Elkington, which was presented by Sir Albert Sassoon to the Duke of Albany on his marriage. It represents a scene from "The Merry Wives of Windsor." The exhibition of the decorative paintings of M. Baudry and the "Salon des Arts décoratifs" are the subjects of other articles.

At a recent meeting of the Académie des Inscriptions a paper was read from M. E. Masqueray upon his recent excavations in Algeria upon the site known as El Meraba of the Beni Welban. Working with fifty natives, during a fortnight he discovered abundant remains of a Roman city—a forum, a cemetery, and about 180 inscriptions. The name of the city was Colonia Celtianensium.

THE Bavarian National Exhibition of Art and Industry, which has been held this summer in Nürnberg, has proved of much larger importance than was at first supposed. In one respect these local and national exhibitions have more interest than the larger international ones, for everyone is more concerned in the growth of art and industry in his own country than in any other, and this Bavarian one especially has revealed many capabilities of which the country was before unaware.

MR. SATCHELL has sent us the first part of a work upon the Seals and Armorial Insignia of the University and Colleges of Cambridge, by Mr. W. H. St. J. Hope, which is to be completed in twenty-five parts. There is, no doubt, a good reason for this mode of publication; but it is very puzzling to the reviewer, who never knows when to have his deliberate say. The work is to be illustrated with twenty-five chromo-lithographs, and sixty engravings of seals, &c., by the Dallastype process. In the text of the part before us, Mr. Hope traces the history of the seals of the university and of the university officers. He thinks that the oldest dates back probably to the charter of Henry III. (1261); the earliest impression of it is attached to a deed, among the muniments of Peterhouse, dated 1291.

THE STAGE.

OBITUARY.

BENJAMIN WEBSTER.

THE veteran Benjamin Webster died on Saturday at his house by Kennington Oval. He was eighty-three years old. For sixty years, more or less, he was connected with the stage—sometimes as author, often as manager, nearly always as actor. During his term of life he had two notable managements—first, that of the Haymarket, at which theatre true comedy was then wont to be played by as strong a company as could be got together; and then at the Adelphi, which became the home of clever or impressive melodrama. To name all his associates and servants in these two undertakings would be to name the principal performers during about two generations. As an author, Benjamin Webster was less conspicuous, nor did he claim for his work much of the merit of originality. As an actor, few men were more original; and it is gratifying, in reading the criticisms of his career which have appeared within the last few days, to notice that the fact that he has been little seen on the boards within the last fifteen years has not made people forgetful of the excellence of his method, of his intelligence, and of the continuousness of his labour. Benjamin Webster belonged to a race always rare, and rarer now than when he was young or middle-aged—the race of true comedians. It is the tendency of the day to make of the comedian a comic actor, and often it is the success of the comedian that does the most to bridge the distance between the comedian's work and the comic actor's—between comedy and mannered farce. But excellent old Benjamin Webster had at his command the resources of the true comedian: he could at need compel tears as well as laughter, nor did he seek his effects in excess of either. He went through many decades, including those very dull years for the English theatre—the years of pure sensationalism—which lasted from about 1855 to 1865, without ever forgetting that, though little art remained upon the stage, he was himself an artist, and that, when it was sensationalism—the headlong plunge, the breakneck leap—that was triumphant in his own theatre, it was not for him to descend to the antics of the acrobat. He was then rarely seen behind the float. Even in sensational days, or days when sensationalism was still surest of success, Mr. Webster attracted attention to a thoroughly artistic performance of his own—that of William Fenholder in "One Touch of Nature." It was among the latest of his fine impersonations. Likewise, about the same time—it must have been in 1863 or 1864 if we remember correctly—he enacted Triplet, in "Masks and Faces," to the Peg Woffington of Mrs. Stirling. But that was not the original performance of the part. He played Triplet with thorough understanding and skill, as well as with all the sympathy that an actor who has known the world may be expected to bestow upon such a character as that of Triplet. Here, and in many another part, Mr. Webster proved himself—notably, say, as Joey Ladle in "No Thoroughfare"—an actor of dry and telling comedy and restrained and suggestive pathos. But his pathos, controlled as it was, was hardly that of the drawing-room; nor did he often portray the annoyances of polite life. Indeed, he did for a long spell of years, and with less of intensity, something of what Robson did for fewer years, and with more of intensity—portray the sorrows and the humours of those who are rough but not vulgar, often uneducated but never hopelessly commonplace. His stage world was a world in which individuality was preserved, and angles were not rubbed down. He was also not one of those actors who are determined to be fine gentlemen before they are artists. If he

was a gentleman, well and good; but he was, primarily, an artist, a student of various humanity, a participator in active life, a sportsman, a man about town. In this way, his existence did not move within narrow limits, and he brought to the creation of his best modern characters the aid of an experience of many men and women, and of various fortunes. We have had few more complete actors, few of wider range.

MUSIC.

Joseph Haydn. By O. F. Pohl. Vol. II. (Leipzig: Breitkopf and Härtel.) Nearly seven years have elapsed since Herr Pohl's first volume of Haydn's biography appeared. It gave the history of the composer's early years, his life at Vienna, his studies at the Cantorei of St. Stephen's, and his wanderings after his dismissal from the choir; and closed with his few years' services as second Capellmeister under Werner, first to Prince Paul Anton Esterházy, and afterwards to his brother Nicholas, at Eisenstadt. Werner died in 1766, and Haydn became sole director of the music. Prince Nicholas, who had succeeded his brother in 1762, spent more than a million of money in transforming a wild and desolate portion of his Hungarian estates at the south end of the Neusiedler Lake into a fertile and attractive spot. A splendid palace was built, rivalling even Versailles in beauty, grandeur, and interest. In this magnificent place—Esterházy by name—Prince Nicholas settled down, shortly after Werner's death, with his whole establishment, including, of course, his band, singers, and his Capellmeister, Joseph Haydn.

The second volume gives a detailed and glowing description of the stately building, with its noble suites of rooms crowded with paintings, statues, ornaments of the most costly description, rare books, and valuable MSS. The gardens, with their many objects of interest, the opera house, and the Marionette Theatre also come in for their share of notice. Haydn's time was well occupied, for he had to hold daily rehearsals with the band, to attend to the chamber concerts and to the orchestral and operatic performances, to look after the singers and players, seeing to their wants and settling all their disputes, and, in addition, to write music for the palace, the theatre, and the church. He was orderly in his mode of life, and found time not only to discharge all the duties connected with his position as Capellmeister, but also to give lessons and to devote a regular part of each day to composition. Haydn was free from material cares, valued and honoured by his patron, beloved by the musicians, yet his life was not a happy one, for though his position was in many respects advantageous to him as a composer (and this he freely acknowledged), yet he sighed for freedom and longed to travel. The glimpses, too, of happy social intercourse and healthy artistic rivalry which he obtained from time to time during his short visits to the Austrian capital made him more and more dissatisfied with his lot; and in his letters to his friend and benefactress, Frau von Gensiger, he constantly speaks of his solitude and of his need of encouragement.

Of the happy days spent by Haydn in Vienna Herr Pohl has much to say. The performance of Haydn's opera "Lo Speciale," at the private house of Herr von Sumerau in 1770 and of his first oratorio "Il Ritorno di Tobia" by the Tonkünstler Societät in 1775, the concerts and entertainment given by the Prince's band and singers at the Court festivities in 1777, the musical evenings at the house of the English composer Stephan Storace, when Dittersdorf, Haydn, Mozart, and Vanhall

played quartets, and among the audience were Paisiello and the poet Casti, the happy hours spent with the Gensiger family, and the celebrated evening when Haydn met Leopold Mozart at his son's house—about all these, and other matters connected with musical life in Vienna, we find in the volume before us many interesting details. The meeting at Mozart's house on February 12, 1785, is an event of the deepest interest. After listening to three of the six celebrated quartets dedicated to himself, the noble-minded and open-hearted Capellmeister thus addressed the father: "I say to you, before God, as an honest man, your son is the greatest composer I have ever heard; he has taste, and wonderful knowledge of the art of composition." These were no empty words of praise, but a real and honest expression of his opinion. When in London, the news of Mozart's death greatly affected him, and he wrote to a friend in Vienna thus: "I could scarcely believe that Providence would so quickly summon to the next world a man whom it is impossible to replace."

Herr Pohl gives a graphic account of several events which occurred to relieve the monotony of the composer's life at Esterházy. In 1772 Prince Rohan, the celebrated French ambassador at the Court of Vienna, visited that place, and for four days there was nothing but mirth and revelry. In the following year the Empress Maria Theresa honoured the Prince with a visit, and on this occasion was performed Haydn's symphony which bears her name. Again, in 1776, the Archduke Ferdinand (son of Francis I. and Maria Theresa) was brilliantly entertained at Esterházy. The visit, too, of Michael Kelly and Bride, in 1784, the two friends and admirers of Mozart, was most agreeable to Haydn. They had much to tell him about Italy and England—two countries in which he was particularly interested. Two great fires occurred at Eisenstadt in the years 1768 and 1776, and on both occasions Haydn's house became a prey to the flames. Many of his MSS. were destroyed. In 1779 the theatre at Esterházy was burnt down.

Between 1767 and 1790 Haydn wrote no less than 63 symphonies, 43 quartets, 19 concertos for various instruments, 28 pianoforte sonatas, 13 pianoforte trios, 5 Masses, 1 oratorio, 1 "Stabat Mater," 12 operas, besides a quantity of instrumental and vocal pieces. Every page of Herr Pohl's second volume testifies to his patient and minute research. Not only does he give us all possible information about the origin of these compositions—their character and peculiarities, the different editions, the performances—but he also tells us much about Haydn's predecessors and contemporaries. This knowledge is of immense importance to the student of musical history. One is too apt to single out for praise and admiration the greatest geniuses, and to forget how much they owed to the labours and works of inferior and now forgotten composers.

The present volume brings us to the end of the year 1790. On September 28 Haydn's patron, Prince Nicholas, died. At this moment Salomon arrived in Vienna, and persuaded Haydn to visit England. On Wednesday, December 16, he left Vienna for London. Mozart, in parting from his true and faithful friend, was moved to tears. He seized hold of both his hands, and said, "I fear, my father, this will be our last farewell." Within a year from that time, and before Haydn had returned from London, Mozart was in his grave. Herr Pohl's book contains a portrait of Haydn, some valuable supplements giving details of music and musicians at Esterházy, and a chronological and thematic catalogue of Haydn's compositions from 1767 to 1790.

No. 533, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Funeral Tent of an Egyptian Queen.
By J. Villiers Stuart. (Murray.)

MR. VILLIERS STUART has done good service by reproducing in his present volume the patterns, colours, and inscriptions of the extraordinary piece of ancient Egyptian embroidery which was last year found in the tomb of the Her-Hor family at Dayr-el-Baharee. To call it a "tent" is, however, a misnomer. It is an heraldic pall, or canopy, expressly designed to serve the double purpose of covering the deck-cabin of a funeral galley or the frame-work placed above the coffin on a funeral sledge. These sledges, drawn by bullocks, are frequently represented on the monuments. Such a frame-work, minus the pall, was actually found by Mr. Rhind some years ago in a tomb at Thebes; and upon such a frame-work the pall of Queen Isi-em-Kheb was doubtless suspended during the two land processions of her funeral cortège—that is to say, when the mummy was carried for embarkation to the eastern bank of the Nile, and again, after crossing the river, from the western bank to the family vault. Only thus, indeed, can its presence be accounted for in the place where it was found.

Mr. Villiers Stuart has executed his difficult task with conscientious fidelity. Every part of the canopy is exactly copied, described, and drawn to scale. The patterns are given both in outline and in chromo-lithography; while, in order accurately to reproduce the tints of the ancient dyes, Mr. V. Stuart obtained some broken fragments of the original leathers. The result is an exact reproduction of the design, showing the canopy as it appeared when first turned out from the workshops of the Memnonium. How it looks now, after thirty centuries of burial and the rough handling of Arab plunderers, may be seen in the magnificent fragment photographed with all its rents and tatters at pl. xvii. of Prof. Maspero's official Report, *La Trouvaille de Deir-él-Bahari*. The chromo-lithograph supplements this photograph as an architectural elevation, perfect in all its details, supplements an artist's sketch of the same subject in ruins.

Mr. V. Stuart describes the pall as

"a mosaic of leather work, consisting of thousands of pieces of gazelle hide, stitched together with thread of colours to match. The edges are neatly bound with a pink cord of twisted leather, sewn on with stout pink thread; each colour is a separate piece, no one section bearing two colours; thus each square of the chess-board-patterned foot-stool upon which the gazelles are kneeling is a distinct mosaic stitched

to its neighbours. The colours consist of bright pink, deep golden yellow, pale primrose, bluish green, and pale blue. . . . Much of the surface still retains a gloss similar to that upon a kid glove; the pink, yellow, and green have not faded at all, though dulled to some extent by the dust of ages."

Mr. V. Stuart has had the pink dye analysed by an expert, who reports it to consist of red hæmatite mixed with lime, the colouring matter being chiefly peroxide of iron. The blue, being a vegetable dye, has decomposed. The leather is found to have been tanned with acacia-bark. The pall consists of an oblong centre, or roof-piece, measuring nine by six feet, from which depend four large flaps. The centre is patterned, half with rows of emblematic vultures and half with pink and yellow rosettes on a blue ground. The side-flaps, being the most seen, are ornamented each with a "spear-head" frieze and a broad band of metopes filled with heraldic and allegorical devices, below which comes a margin of pink and green chequers. The end-flaps are patterned with chequers only. The vultures, the metopes, the devices, are all divided and bordered by hieroglyphed inscriptions and royal cartouches; the heraldic insignia, the hieroglyphs, and every minutest detail being out out in coloured leathers. "The entire fabric measures 22 feet 6 inches in length, and 19 feet 6 inches in width, and covers a space of 201 square feet of leather" (p. 7). The inscriptions are of great historical interest. They show Queen Isi-em-Kheb to have been a daughter of the Prince-pontiff Masahirti, a grand-daughter of King Pinotem II., and wife to her uncle King Menkheperre. "Thanks to which information," writes Prof. Maspero in his official Report, "we have been enabled almost entirely to reconstruct the succession of the priest-kings of Amen." For the way in which Prof. Maspero has effected this reconstruction I must refer readers of the ACADEMY to his own pages; premising only that, having subjected the sarcophagi, inscriptions, papyri, and other Dayr-el-Baharee relics to an exhaustive analysis, he has, with scrupulous caution, drawn up a genealogical table of the Her-Hor family (p. 30), thereby showing the unbroken succession of seven male rulers—some kings, some pontiffs—beginning with Her-Hor and ending with Pinotem III. To this I may add (I hope without indiscretion) that Prof. Maspero has lately found the marriage-contract of Queen Isi-em-Kheb; and that this document, together with the three hieratic graffiti which he discovered about the same time upon the walls of the Dayr-el-Baharee vault (see ACADEMY, No. 519, April 15, 1882), abundantly confirms his previous conclusions as to the alliances and succession of the priestly line.

Unless he is prepared to prove his position (which, in view of the foregoing, seems scarcely possible), it is to be regretted that Mr. Villiers Stuart, by the interpolation of two Pisebkhans, should have essayed to graft the genealogy of Brugsch upon the genealogy of Maspero. So important a re-arrangement would, at all events, be the better for explanation. Again, when writing of Shishak the First's "double claim to the throne [of Egypt] by right of his wife and by right of

his mother" (p. 36), he adduces no proof that the father of Shishak wedded a Rameside princess. Brugsch himself only points to the well-known fact that this lady was Egyptian and of royal descent (see *Königsbuch*, pl. xlv.); thereupon suggesting that she was, "in all probability, a daughter of Rameses XIV."* The length of the Amenide succession, as now ascertained, disposes, however, of that "probability." Rameses XIV., whose history is a blank, may or may not have actually reigned before Her-Hor united the spiritual and temporal crowns; but, in any case, a lady who had survived seven successive Sovereigns, two of whom certainly reigned over sixteen years each, would scarcely have been of marriageable years when the first Bubastide Pharaoh ascended the throne. As regards the wife of Shishak I., Lepsius gives no cartouche by which she may be identified. Brugsch, it is true, assigns to this Shishak a certain Princess Makara, or Karama-t, who figures in genealogical table No. IV.† as a daughter of Menkheperre and Isi-em-Kheb; but that assumption is not corroborated by the discoveries at Dayr-el-Baharee. Neither does it agree with the same writer's entirely opposite statement at p. 204 of the same volume, where he again gives Shishak a wife called Makara, but identifies her this time with a princess of that name who, according to an inscription at Karnak, was daughter to Piseb Khan Mer-Amen (the Petuxanu II. of the *Königsbuch*, pl. xliii., No. 565)—a king whose place has yet to be determined. Moreover, this Karnak inscription, which relates to the restitution of certain lands belonging to the said Makara, or Karama-t, contains no syllable to show whose wife she really was, nor in what king's reign the record was sculptured. The name of Karama-t, or Makara, appears, indeed, to have been particularly popular at this period. Various spellings, we find it occurring no less than seven times in the course of the XXIst and XXIInd Dynasties (*Königsbuch*, pl. xliii.). In treating, therefore, of the Amenide and Bubastide lines, it is but too easy to confound the identity of these numerous princesses; and that Brugsch has done so is sufficient apology, perhaps, for Mr. V. Stuart. It would, however, be less easy to find a precedent for other innovations, of which *The Funeral Tent of an Egyptian Queen* contains not a few. Take, for instance, the conversion of the "Hall of the Two Truths" into the "Hall of Double-Edged Justice," a translation for which there is no *raison d'être*; or Mr. V. Stuart's new spelling for the name of Hatasu, which, if carried out, would give a feminine termination to the names of the Amenemhat Pharaohs and practically abolish the first syllable of the names of Osiris and Isis. However one may dissent from a translation which reads Heka Neb-t (i.e., the Lady, or Goddess, Heka) as "Mistress of the Toad," Mr. V. Stuart may be congratulated upon his identification of this deity with the Hekate of the Greeks and Romans; but, after all that has of late been written upon that subject by Prof. Maspero and Mr. Le Page Renouf, it is strange that so painstaking

* Brugsch's *Egypt under the Pharaohs*, II. 197.
† *Ibid.*, vol. II.

a student should confound the *Ka*, which is the *eidolon*, or double, with *Ba*, the soul. The confusion between Mut and Nut (p. 50) must be a printer's error.

The latter half of the book consists of detached chapters on tombs and pyramids in various parts of Middle Egypt; of an essay on comparative philology, which may possibly provoke criticism; and of an Appendix containing a Table of Temperatures and a series of meteorological observations extending over a period of five months. Of especial archaeological interest are Mr. V. Stuart's descriptions of the primitive brick graves of Dashoor, and his account of an early rock-cut sepulchre at Gow-el-Kebeer, which is decorated to imitate the interior of a dwelling-house of the period, with mock windows and doors, and a roof sculptured to resemble the ordinary palm-trunk ceiling. Further details and illustrations are also given from the tomb excavated at Thebes by Mr. V. Stuart in 1879; the inscriptions being translated by Prof. Wiedemann, of Leipzig, and the façade carefully reproduced in the large folding plate which forms the frontispiece to this handsome volume.

AMELIA B. EDWARDS.

"ENGLISH MEN OF LETTERS."

Gray. By Edmund W. Gosse. (Macmillan.)

THERE is no difficulty in fixing the position of this book—it is the fullest and the best Life of Gray. All important sources, including the Pembroke MSS., have been discreetly used. Criticism and biography pleasantly intermingle. In 220 pages there is room to show the bard, and to show the paces of the only steed he cared to ride—his too rarely mounted Pegasus. The small volume is not a "Little Ease" where the victim's knees and chin must meet; Gray and his odes and his harpsichord and his mignonette and his blue and white china fit well into the neat chambers provided for them by Mr. Gosse.

"Knowledge, penetration, seriousness, sentiment, humour"—so Mr. Matthew Arnold counts over the five talents committed to Gray. Five talents; yet it is not easy to think of him as ever to be a ruler of five cities. With his gathered learning, his insight and his power of organising knowledge, his judgment at once delicate and solid, his feeling for beauty in nature and in art, his amiable irony and his brightness of style, why was Gray a failure, and why does the story of his life hang weights upon our courage and our hope? One can imagine his biographer protesting in lively tones against the word "failure." Gray created a style in English poetry; he was perhaps the most cultured Englishman of his generation; he interpreted Icelandic literature; he heralded the romantic revival; he felt the beauty of Gothic architecture; he revealed the wonders of lake and crag in Cumberland and Westmoreland; he sustained classical learning in his university; he made true friends and kept them. And, doubtless, compared with many lives, that of Gray may almost deserve to be called a success. Yet, on the other hand, there have been gallant defeats which, compared with such success as his, look like

victories. After all contentions to the contrary, the settled conviction returns and maintains its hold upon our minds that Gray failed to work out the possibilities of his nature; that, but for some enervating cause within, some retarding cause without, his powers must have carried him much farther than they actually did.

"Spirits failing and health not sound" is part of Mr. Arnold's proposed explanation; and it is certain that thunderclouds of melancholy passion are less depressing to genius than the long, low-lying cloud of habitual *ennui*. But one great thought, one sudden ardour, has proved itself able at times to pierce and break up such a cloud of barren sadness. With Gray it was not so; the cloud hung lower and grew denser towards the close. "Gray, a born poet, fell upon an age of prose," adds Mr. Arnold; and this it was, in his opinion, which gave power to Gray's reclusion and ill-health to induce his sterility. "He fell upon an age whose task was such as to call forth in general men's powers of understanding, wit, and cleverness rather than their deepest powers of mind and soul." True; yet the age which gave birth to *Clarissa* and *Ivanhoe* was not without its imaginative creations, its tragedy, its comedy, and was not wholly unfavourable to seriousness, sentiment, humour. Gray's Odes, novel in style, were called obscure, and he addressed them *suaviter*; but his "Elegy" received a prompt and universal welcome. He was acknowledged to be the chief living poet of England; yet in the decade of his highest fame he made "less and less effort," says Mr. Gosse, "to concentrate his powers." To quote the text of Mr. Arnold's discourse, "he never spoke out."

Gray was an elegiac and a lyric poet; a poet of sentiment and reflection in the "Elegy" and in the minor Odes; a poet of imaginative enthusiasm of a sustained and deliberate kind in the greater Odes. Never, perhaps, did a distinguished lyrical poet possess so little of native passion. The poet, we all know, is born,

"With golden stars above,
Dowd with the hate of hate, the scorn of scorn,
The love of love."

Whether Gray felt the influence of golden stars in Cornhill, or at Stoke Pogies, or in Cambridge, where the wild beasts of the deserts dwelt and the great owl made his nest, may be doubted. He was a languid hater; his scorn was the delicate satire of an onlooker at the follies of life, amused more than indignant, and sometimes wearied more than amused. His love—alas, his pallid passion which died before it was born, Delia's gentlest philanderings, his "amatory lines"! And yet ideal topics through his imagination could excite in Gray an ideal passion. No pressure of personal feeling compelled him to song; but the "Lyric Muse," as Gray knew her, was willing, "like other fine ladies, to be courted," and the poet's imaginative passion rose with the occasion. "I was the Bard," he said, when asked how he felt when writing that Ode. And Nicholls speaks of his awe at the lightning of Gray's eye, "at that *folgorante sguardo*, as the Tuscans term it." But a lyric poet who does not sing as the bird sings, but must court the Muse, requires a faith in himself, a strength of will, a power

of strenuous self-sacrifice—sacrifice of inferior appetites and faculties of the mind for the sake of the higher faculty—and to these Gray did not attain. "If I do not write much," he said, "it is because I cannot." And this is true; but sterility was inevitable for one who lacked energy of soul to live in his highest faculties, who would not place his noblest power at the head of the rest to lead them all on to victory, who would not tax the inferior powers in the service of the superior, who chose rather the luxury of endless intellectual acquisition, the ease of one who is increased in goods, the narcotic of erudition. Yet the still small voice of poetry was never quite silenced within him, and his was the grief of those who know that the purpose of their lives is frustrate through the sin

"Of the unlit lamp and the ungirt loin."

This is a severe judgment; but if Gray's life tells us anything it tells us that an ascetic principle is needed in the intellectual and spiritual life.

As a poet "of sentiment and reflection" Gray's view of the world is in large part that of his age. In the *saeculum rationalisticum* a temper of moderation was predominant. There were no transcendental views as to the individual man; no one had announced that each of us is a part of "the vesture of the Unnamed;" nor was there yet any extravagant hope of a sudden Millennium for society, any widespread faith in a remote yet glorious triumph of humanity to which each of us may contribute a little. To Gray the general aspect of society was saddening; life upon the whole seemed a poor affair.

"How vain the ardour of the crowd,
How low, how little are the proud,
How indigent the great."

What are mortal men but a tribe of insects? What their strivings but a aimless fluttering? And what am I, poor moralist, adds Gray, but a fly like them, and, unlike them, a sad and solitary fly? To escape from the folly of life, to conquer its pain—this is what we need. Even the escape through ignorance and youth and animal spirits has in it something which assuages while we contemplate it; therefore, let the Eton school-boy chase the hoop and urge the ball—"Thought would destroy his paradise." Some of Gray's delight in his mercurial friend, Bonstetten, doubtless arose from the pathetic interest of the contrast between himself, the frustrate man who knew everything, and this immortal boy who promised to be all that Gray was not, and who seemed never to feel the weight of years or custom. Happier, however, than the average Eton lad, by-and-by to degrade into a member of the House of Lords, is the peasant "whose sober wishes never learned to stray," and who will rest so well at last in his village churchyard. Gray felt deeply the worth of simple goodness even while doing honour to genius, and the peasant and the poet of his "Elegy" are two of those who have escaped from the vain turmoil of human life. Even in a stern retreat from the world dwells truer happiness than in its tumult; such happiness is that of the monk of the Grande Chartreuse, whose silent abode and quietude were envied by Gray. Unhappily, Pembroke was no Carthusian monastery; but

the harpeichord, and the mignonette, and the china jars, and an eye which took an amused interest in the foibles and follies of those around him, made amends. It is a pity that some poetical medium was not discovered by Gray in which his humour, his sentiment, his knowledge, his wisdom of life, could all have coalesced—some medium which might have been to Gray what the blank verse of "The Task" was to Cowper. Perhaps Gray thought of this, and then took a dose of his favourite anodyne, *fastidium*. EDWARD DOWDEN.

Madeira: Its Scenery, and How to See it. With Letters of a Year's Residence, and Lists of the Trees, Flowers, Ferns, and Seaweeds. By Ellen M. Taylor. With Frontispiece, Map of the Island, and Plan of Funchal. (Stanford.)

MISS ELLEN M. TAYLOR is evidently unused to the making of books. Had she consulted some experienced literary friend, she would probably have changed the *mécanique* and the order of her volumes. "Letters from Madeira," now relegated to chap. ix. (pp. 187-236), should have followed the Preface and the Introduction. The reader's appetite would have been whetted and tickled by the light fare, and in some way prepared for so solid a *pièce de résistance* as chap. i., "Routes to Madeira—the Union Steamship Company," and so forth, all facts and figures. Moreover, the author would not have assigned "Trees, Fruits, Flowers, Ferns, Seaweeds" to chap. viii. (pp. 164-82), and withal have buried "The Mosses of Madeira" in Appendix ii. (pp. 248-50).

Despite these and other small blemishes, the pretty volume, whose "auriverde" cover bears the Loo Rock and the arms of the fair Island, is sure to do well. As the Preface says, and says truly, "no place is in such want of a handbook as Madeira." The excellent volume, *Madeira, its Climate and Scenery*, by (the late) Robert White and (the living) James Y. Johnson, has been long out of print. Written in 1851 and published (second edition) in 1860, much of the matter is necessarily obsolete. It has been proposed more than once, I am told, to reprint it, with information brought up to date. This has virtually been done by Miss Taylor, who, belonging to a family well known in Madeira and not unknown in England, has had a life-long acquaintance with the beautiful island she describes. We have to thank her also for the map, which is an improvement upon that of White and Johnson; and for a fair plan of the city of Funchal, which her predecessors wholly ignore. The housekeeping vocabulary (pp. 32-38) will also be found useful; but it is a mistake to omit the "explanation of local appellatives" given by the older guides (Appendix J., pp. 329, 330). And we should much like to see a list of words in which the Madeiran daughter differs from her Portuguese mother.

In such a volume the number of quotations must necessarily be considerable. The late Mr. William Longman's article on Madeira (*Fraser's Magazine*, August 1875) supplies the Introduction with a long extract, and is again referred to in p. 115. The late Rev.

J. M. Neale, an authority on ecclesiastical architecture, depicts in eight pages the Funchal Cathedral, which has been somewhat neglected by former writers. "The fossil bed [of Madeira] can best be described by giving Darwin's account of a similar one in New Zealand" (!); and "Some Particulars about Madeira" are condensed (pp. 156-58) from Dr. Hawksworth's account of Cook's first voyage. The *Insecta Maderensis* of Mr. T. Vernon Wollaston is also pressed into the service (pp. 134-36), though it ends with such a monster platitude (italicised withal) as "happy and wise is the man to whose mind a trifle existeth not." This borrowing is inevitable. Even in the last century Humboldt assured us that the subject of Madeira had been worn threadbare, and proceeded at once to indite a rather lengthy account of Sylvania, the Isle of Wood.

The reader will take pleasure in chap. v., "Inhabitants — Customs — Occupations — Sugar-Canes — Vines — Vineyards — Manufactures — Agriculture — Public Walks — 'Festas';" and the expert will regret only that Miss Taylor has not made more extensive use of her local knowledge. The derivation of Malmsey from Malvasia, originally Monemvasia (μόνη ἐμβασία = simple entrance) or Minoa Island, will be new to many. Some account of the old Anglo-Madeiran society and the Consuls who succeeded John Carter, the first appointment in 1658, would also have been interesting. This, too, was the place for notes on the peculiar cookery and the folk-lore of the Madeirenses. Chap. vi., on rides, excursions, and pedestrian tours, would also bear further detail. On the other hand, the history of the discovery of Madeira and its neighbours, taken from an anonymous account written at the beginning of the century, and from the *Saudades da Terra* (Longings for the Land) of the learned Jesuit Dr. Gaspar Frutuoso, repeats all the old and exploded fabrications about the exploration, utterly neglecting the French and Spanish claims in deference to the apocryphal Robert à Machim and the impossible pilot Juan Morales, alias João dos Amores.

It has often been remarked that English who live much out of England write and speak a peculiar English. *Madeira* has been carefully corrected; yet there is a redundancy of "very," and the unfortunate adverb "only" is usually made to qualify the wrong word. When, too, will ladies learn that "each other" and "one another" are not synonyms; that "love each other" and "love one another" mean very different things?

But these are trifles, and for the most part the writing is fairly good. The following extract from the "Letters" (p. 210) will show it at its best:—

"We were then close to the *Homem em pé* (the man standing), a most singular rugged mass of basaltic rock, forty feet high, and standing alone, rising out of the turf. We got into our hammocks again for the last steep ascent. Dawn was fairly breaking when we reached the top. The opening day came quickly on; masses of grey, and dark-looking clouds were transformed as by magic into every shade of glorious gold and crimson. Soon every mountain top brightened as if gladdened by the fast-

coming day, and their roseate, jagged pinnacles contrasted well with the deep azure sky above. We felt spell-bound, and for some moments too much awed by the grandeur and transcendent beauty of the scene before us to speak. Even the hammock-bearers seemed to feel the same, and all felt that, for a while, silent contemplation was most in harmony with the sublime and marvellous beauty of those moments. As the sun emerged from its gorgeous bed of crimson, gray, and golden clouds, it shone forth in all its majesty, lighting up with golden edges the layers of soft, fleecy cloud which lay in a mass on the horizon all around us. These soon toned down to the sober greys and whites of day, till at sunset, perchance in bidding the ended day farewell, they will be clothed again in all their glory, and then each colour will gradually merge again into the other as if unwilling to give place to the shades of night. One sunset I saw from the New Road, near Funchal, I never shall forget, when bands of rose colour melted into pale gold, and these again into the most exquisite soft green. Such, I fancy, must often be the effect as seen from *Pico Ruivo*."

We can hardly expect a resident on the island to enter into its serious grievances of taxation and repressed emigration. Suffice it here to say the unfortunate peasant can hardly afford his poor meal of *milho*, or Indian corn. And Madeira has at last found out her "manifest destiny"—that of being an orchard for Northern Europe and a kitchen-garden for the Gold Coast and for the 800 ships, steamers, and sailers which annually anchor in her dangerous roadstead miscalled a harbour. A casual visitor may speak with more freedom upon such delicate subjects as the maladministration of taxes; and this shall be done at the earliest opportunity.

RICHARD F. BURTON.

Records of Later Life. In 2 vols. By Frances Anne Kemble. (Bentley.)

THE appearance of three more volumes of Mrs. Kemble's history of her past life is the best proof of the popularity of their predecessors; and the fact that the latest issue only covers a period of fourteen years, from 1834 to 1848, is probably an indication of the publication at some future date of another series of volumes. In this country Mrs. Kemble was admitted into the most cultivated society of fifty years since, and she settled in America at a time when life in New England was less familiar to the English world than it is now. Still, if every accomplished lady who has enjoyed the good fortune of meeting some of the leaders of English thought and of visiting new countries were to narrate her recollections in a dozen volumes, the shelves of the circulating libraries would cry aloud for enlargement. The letters of Mrs. Kemble are sprightly and unaffected, showing a candid and thoughtful mind, and they deserve a considerable measure of success. This year, however, has been a year of Reminiscences and Recollections, and these volumes will have to battle for dear life with some vigorous rivals.

When the records open, their author had been "a wife nearly five mortal months" and was on her way to her new home in America. A sentence or two in the first twenty pages shows her frank disposition. She had not met Miss Martineau, and somewhat distrusted both her reception by "that enlightened and clever

female" and the impression which she would receive from Miss Martineau's conversation. A very brief interview between the two ladies was sufficient to dispel this hesitancy. They had scarcely exchanged a few sentences before Mrs. Kemble felt the conviction that they might become good friends. In other respects the feelings with which she went out to the States soon found a rude shock. Life at Butler Place was tolerable, in spite of the six miles of dusty road which separated it from Philadelphia; but by-and-by she went South to Georgia, and then her troubles began. Dwelling in a remote plantation among swampy rice-fields, and in the midst of a population of slaves, her senses sickened. The white men and women around her had grown up in a slave-owning district, and their feelings had become habituated to sights and acts which struck a young Englishwoman with wonder. Mrs. Kemble was out of harmony with the surroundings of her life, and the time came when the opposition of some of her husband's relatives to her spending another winter in Georgia compelled her to return to her own country. With the close of her American visit ends the freshest part of her letters.

Mrs. Kemble was one of the ladies whose acquaintance was sought by the mistress of Holland House when it stood out as a centre of politics and literature; but the qualities of Lady Holland were not suited to her taste, and she kept the rude lady at a distance. If the world has not of late years been satiated with anecdotes of Lady Holland and her tame Atheist, it may find fresh matter for contemplation in these volumes. Another lady, whose talents and manners are possibly less familiar to anecdote-mongers, desired the friendship of Mrs. Kemble. This was Mrs. Grote, whose residence among the beeches of Burnham is described in some very vivid sentences. But by far the most striking lady in these pictures of past life is Mdle. d'Este, a granddaughter of George the Third, and a figure who is now for the first time introduced to the knowledge of the general world. Many readers will of course rejoice in Mrs. Kemble's anecdotes of theatrical life, and in her criticisms of the illustrious actors of forty years ago. In these and the other parts of her reminiscences there are a good many plums for the diligent reader. We will content ourselves with selecting a single story of Sydney Smith's son. His inclinations were all for horses and horse-racing, and on one occasion, when seated next the Archbishop of York at dinner, he was at a loss for an appropriate topic of conversation. To the astonishment of the Primate of the Northern province, his next-door neighbour enquired, "How long do you think it took Nebuchadnezzar to get into condition again after his turn out at grass?" W. P. COURTNEY.

Shakespeare's Tragedy of Hamlet. Edited by Karl Elze. (Sampson Low.)

THIS edition is welcome as a sign that editors of Shakspeare for students and scholars, as distinguished from the many-headed multitude, are at last acquiring common-sense in part of their treatment of the poet's text. Following the good example of that sound

English scholar, Dr. F. H. Stratmann, in 1869, and my declaration in the Prospectus of the New Shakspeare Society in 1873: "It is surely time that the patent absurdity should cease of printing sixteenth- and seventeenth-century plays for English scholars in nineteenth-century spelling." Dr. Elze has rightly printed his "Hamlet" in the spelling of Shakspeare's day, and has thus forestalled a portion of our long-announced "Old-Spelling Shakspeare" and of Miss Roachford Smith's *Four-Text Hamlet*.

But, while doing this, Dr. Elze has unwisely disregarded the true canon of editing any MS. or printed text, which is: After careful examination of your documents, settle on the best and most authoritative text, and never depart from it except in case of manifest corruption or error. In the case of "Hamlet," an editor's course is clear. He has before him three texts—the genuine one of 1604, Quarto 2, disfigured only by omissions of the copier and the mistakes of him and the printers; the botched Quarto 1 of 1603; and the First Folio of 1623, which Dr. Tanager has shown, in the New Shakspeare Society's *Transactions* 1881–82, to have been cut down and handled or cooked by the players of the Globe, though it contains genuine passages omitted in Quarto 2, but none to compare in importance with those which it has not and Quarto 2 has (see my Forewords to Griggs's facsimile of Q 2). An editor's duty, therefore, is plain: to hold to the text of 1604, and not alter it except in cases of necessity. Dr. Elze's plan, on the other hand, is to consider the three texts of 1603, 1604, 1623, as of equal authority, and, when any two agree against the third, to adopt the reading of the two, as a general rule, though the third may be a clearly sound reading of Q 2. When a disputed reading is only in two texts, Dr. Elze again holds himself free to prefer Q 1 or F 1 to Q 2; and occasionally, though seldom, he has taken readings from Q 1 in opposition to both Q 2 and F 1. That this method of editing will satisfy any sound scholar or careful student I cannot believe. Let us test it by a leading passage, or rather word. Quarto 2 has in I. i. 90–96,

"Against the which a moitie competent
Was gaged by our King, which had returned
To the inheritance of *Fortinbrasse*,
Had he bin vanquisher; as by the same comart,
And carriage of the article demaigne,
His fall to Hamlet."

Now in this passage there is a special Shaksperian word, one with his mint-mark as clear on it as on any of his known coinages—"comart," mutual dealing, or "joint bargain," as Singer explains it, who rightly leaves the word in his edition of the play. Compare Florio's "*Marcantare* . . . to bargain . . . to mart," 1598—"A Worlde of Wordes." But, knowing Dr. Elze's weakness of always emending the precisely aptest word that a poet can possibly use—witness his "*heathen* Adam" for "*leathern* Adam" (Adam clad in skins) in "Edward III.," his horse champing the *rein* for Milton's champing the *curb* (bit), his ships' *breasts* ploughing the sea for Dryden's *crests*, &c.—I felt sure that he would change (and follow many other editors in changing) the happy "comart," with the stress in its proper place, to the unhappy "Cōu'nant" of the Globe cooks in F 1, with the stress

in its wrong place. And, accordingly, on Dr. Elze's page, 5, last line, "cov'nant" stands, though altered in the six pages of Corrections, &c., to "Cōu'nant." His only excuse for the change is that *comart*, "The reading of QB [Q 2], in my opinion, is nothing but rank corruption" (p. 113). But his remark on p. 174, when holding to Q 2's "despiz'd loue" as against F 1's "dispriz'd Loue," is more to the point: "QB, which was printed in the poet's lifetime, offers an unexceptional reading; what occasion is there for introducing an after-growth of difficulty into the text?"

In Hamlet's first soliloquy Dr. Elze has the courage of his canon, and for the Folio *solid* leaves the reading of Qos 1 and 2,

"O that this too too sallied flesh would melt,
Thaw, and resolve it selfe into a dewe,"

though he suggests no meaning for *sallied*. Yet he surely might have said that, as in Cotgrave, Fr. *saillie* is a "sallie, eruption, violent issue, or breaking out upon," so Hamlet's "sallied" flesh may be that which has been broken out upon by "The slings and arrowes of outrageous fortune," or, as Cotgrave has it, "*Assailli*, assaulted, assayed, set vpon." (Miss Roachford Smith cites Spenser's *salliaunce*, onslaught, attack, *F. Q.*, II. i. st. 29.) Certainly, the reading "sallied" is capable of defence, except to those folk who believe that Hamlet was thinking, in this speech, of how fat he was (shall we say sixteen stone?), and scant of breath, as his mother afterwards assures us.

Another corrupt passage in I. i.—where I have no doubt that a line has dropped out—

"and the sheeted dead
Did squeake and gibber in the Roman streets,
As starres with traines of fire, and dewes of blood,
Disasters in the sunne,"

Dr. Elze leaves without a word of comment, as if it wanted no insertion after "streets" like "While in the Heavens themselves were Signs," or any other change. "Cursed *Hobona*" he does note, but only to explain, wrongly, as "ebony" instead of "yew." (See the convincing paper of the Rev. W. A. Harrison in the New Shakspeare Society's *Transactions*, 1882.) In the "drum of eale" passage he rightly holds no emendation needed. Anyone who works his Quarto 2, and knows that the word *devil* is printed *deale* twice in one line in it (II. ii. 628)—

"The spirit that I have seene
May be a *deale*, and the *deale* hath power
T' assume a pleasing shape,"

and that *doth* means "puts"—compare *doff*, do off, put off, &c.—can make good sense of Shakspeare's words as they stand (*eale* being "evil") and will therefore leave them alone.

For Ophelia's "tis twice two months, my Lord," in the play-scene (III. ii. 135), Dr. Elze rejects both his best concurring authorities, Q 2 and F 1, and reads "within two months," because he cannot see how natural it was for Ophelia, in her eagerness to defend the Queen, to lengthen the period since Hamlet the father's death when answering Hamlet's absurdity of making the time "two howres." In many other points Dr. Elze's text comes short of the standard that one could have wished it to reach.

His plan of numbering his lines, not by the

lines themselves, as in the *Globe*, Leopold, &c., but by long arbitrary paragraphs which, as on p. 95, sometimes stop at a comma in the third line of a speech, cannot be too strongly condemned. The annoyance it causes when one has to refer from his text to the Quarto facsimiles or other editions is most irritating.

Dr. Elze's notes are, in the main, careful, and show diligent reading; but he passes over without notice several small differences in his authorities, as, for instance, "returne, des-eigne," Q 2—see the first quotation above—for the "return'd" and "designe" of F 1, which he prints "returnd" and "designd." The only Germanism I have noticed half-a-dozen instances of is in the use of the auxiliary *do*—"does not only seem," for "not only seems" (p. xv.); "did not only consist," for "consisted not only" (p. 187); "does by no means belong" (p. 201); &c. The get-up of the book does great credit to the German printer and the English publishers; though the printing of all the notes in large type like the text, as if they were of equal importance with it, has unduly swollen the size of the work.

F. J. FURNIVALL.

The School System of the Talmud, &c. Derek ha-kinnukh l'fi shittath ha-Talmud. By the Rev. B. Spiers, Dayan and Librarian to the Beth Hamidrash. (Trübner.)

MR. SPIERS has brought together from various Talmudic sources and from the Midrashim a number of Rabbinical sayings upon the subject of education. The result is hardly connected enough to be called a system; but the book will interest teachers on account of the shrewdness and good sense, obviously the fruit of experience, which characterise many of its maxims. The wisdom of the Rabbis is evident in the rule that school training should not commence before the sixth year; as also in the remark that children do not usually evince much capacity before the age of twelve, and consequently are not to be forced (p. 19). Subjects should not be crowded one upon another, for, "If you try to grasp too much at once, you grasp nothing at all." As being the foundation of erudition proper, memory should be strengthened by the practice of "repetition;" and the value of this method may be much enhanced by getting up the lesson aloud—a precept which anticipates Dr. Schliemann's advice as to the best way of acquiring a foreign language. Relations of friendly confidence between the teacher and the taught were encouraged: "Push them [the pupils] away with the left hand, but draw them nigh with the right" (p. 39); and great value was attached to discussion and cross-questioning between master and pupil, and among the scholars themselves: "As iron sharpeneth iron, so does one student sharpen another." Rabbi Chanina said: "I have learned much from my teachers, more from my school-fellows, but most of all from my pupils" (p. 37). The danger of falling into a groove is well illustrated by another saying: "Whoever learns continually under but one instructor, and hears the interpretation of the Law from but one point of view, seldom attains to marked success in

his studies." In regard to numbers, it was ruled that twenty-five was the proper maximum for each teacher; for forty, a pupil-teacher (*rēsh dūkādā*, Head of the Form) should be allowed as well, and he was to be maintained at the public expense. Corporal punishment was discountenanced, and due attention was given to bodily exercise. Swimming was considered a necessary accomplishment (p. 29). (The *gymnastic* feats of R. Simeon ben Gamaliel, described on the same page, are somewhat startling to a Gentile reader.) The practical aim of education is thus declared: "Not the mere learning is the principle [*sic*], but practice. . . . The study of the Law is important, because it leads to good action. . . . He who has had the theory only, and no practice, is uncultivated" (p. 32).

Mr. Spiers is perhaps a little too anxious to prove that the ancient sages of his race forestalled all the latest ideas of modern educational reformers; but he certainly has ground for his concluding assertion that "the school boards now established throughout this country are only the practical recognition of the correct principles of education, both universal and compulsory, which were enunciated among ourselves by Rabbi Joshua ben Gamla eighteen centuries ago." C. J. BALL.

The Naval War of 1812. By Theodore Roosevelt. (New York: G. P. Putnam's Sons.)

OUR last war with America was on the whole both dreary and uneventful, consisting of a succession of petty actions, in which little damage was done to either side. It has therefore been almost eclipsed, at least on this side of the Atlantic, by the stirring events which were passing in Europe at the same time; and, until the close of the Peninsular War, it was chiefly confined to naval operations, both at sea and on the great lakes between Canada and the United States. These actions undoubtedly deserve more attention than they have generally received, most Englishmen being still content to accept the famous fight between the *Shannon* and the *Chesapeake*, so dear to the hearts of English school-boys, as a standard by which to gauge the respective merits of the British and American Navies in the early part of this century. But, though we may well be proud of Sir Philip Broke's chivalrous challenge and brilliant gallantry, it is idle to disguise the fact that, in spite of our overwhelming naval supremacy when war was declared, the American ships were on the whole victorious in the apparently unequal struggle; and that the men who had conquered the best seamen in Europe, and crumbled to pieces the navies of France and Spain, were in their turn obliged to succumb. And since quite as much can be learned from reverses as from victories, it is better to find out the real causes which led to such unexpected results than to console ourselves by attributing them to "those unforeseen or uncontrollable agencies which are vaguely described as the 'fortunes of war,' but which usually prove to be the superior ability or resources of the antagonist" (Gen.

A. S. Webb, *The Peninsula*; McClellan's *Campaign of 1862*: New York). Hitherto, however, no single work has appeared which can be accepted as giving a satisfactorily full or impartial account of the naval events of the war. Among the earlier British writers, James is by far the most valuable authority, and he has supplied both material and opinion for every subsequent account by British authors, from Alison downwards. But, to say the least, he evidently disliked Americans, and made out as strong a case as possible against them. American naval historians, on the other hand, with the exception, perhaps, of Fenimore Cooper, are equally biassed against the British, though Niles and Emmons are invaluable authorities as regards their own side. Nearly all these writers are, in fact, special pleaders rather than impartial historians; and though admirable criticisms on individual actions are to be found in standard works on other subjects, such as Sir Howard Douglas' *Naval Gunnery* and Admiral Jurien de La Gravière's *Guerres maritimes*, it has hitherto been exceedingly difficult to arrive at the exact truth among so many widely contradictory statements. Mr. Roosevelt's attempt to supply an impartial work which might be "received as an authority equally among Americans and Englishmen" must, therefore, have been a very laborious undertaking, and he has executed it with a painstaking regard to detail and an evident sincerity of purpose which cannot fail to inspire confidence. His reasoning is close and lucid, and the figures given are copious and well chosen, but his running commentary on James rather suggests a comparison with those zealous sailors who "overloaded their carronades so as to very much destroy the effect of their fire" (p. 393). This does not really impair the sterling value of his criticisms, which are, indeed, by no means the least important part of the work; but they would have been more artistic, and quite as telling, if they had been less strongly worded.

The most remarkable and instructive feature of the war was that, in nearly all the "single-ship duels" where the opponents were at all evenly matched, the victory rested with the Americans. Only two American ships, the *Chesapeake* and the *Argus*, were fairly beaten in single fight; and it is but just to remember that, while the *Shannon* had been seven years in commission, the *Chesapeake* was leaving port with a raw and mixed crew. Much of the American success was undoubtedly due to superiority of force in metal, men, and tonnage; but the damage done to our ships was out of all proportion to the difference. The real advantage consisted in the fact that the American seamen were better trained, and that, owing to their being chosen purely for merit, the American captains were an overmatch for the British unless they encountered "our best officers on even terms" (Admiral Sir E. Codrington, *Memoirs*).

"The British captain, often owing his command to his social standing or to favouritism, hampered by red tape, and accustomed by twenty years' almost uninterrupted success to regard the British arms as invincible, was apt to laugh at all manoeuvring, and scorned to prepare too

carefully for a fight, trusting to the old British 'pluck and luck' to carry him through."

As Sir Howard Douglas observes,

"We entered with too much confidence into a war with a marine much more expert than any of our European enemies. . . . There was inferiority of gunnery as well as of force," &c.

Admiral de La Gravière, whose criticisms are particularly valuable as coming from a perfectly unprejudiced expert, says, in effect, much the same thing, and speaks of the war as illustrating "that great truth, that there is only success for those who know how to prepare it." The actual disparity of force was by no means overwhelming, and, moreover, British ships had often conquered against greater odds, as, for instance, when the *Sea Horse* captured the great Turkish frigate *Badere-Zaffer*; when the *Astrea* captured the French frigate *Gloire*, which threw at a broadside 286 pounds of shot to the *Astrea's* 174; and when Lord Dundonald, in the gallant little *Speedy*, actually captured the Spanishxebec *Gamo*, of over five times her own force! In fact, there seems to be no doubt that at the beginning of this century British gunnery had fallen off, though the declension had not been felt in contending with European foes who were equally unskilful.

Mr. Roosevelt considers that, of all the excellent single-ship captains, British or American, produced by the war, the palm should be awarded to Hull, who was as cool and wary as he was bold and skilful. "The deed of no other man (excepting Macdonough) equalled his escape from Broke's five ships, or surpassed his half-hour's conflict with the *Guerrière*." But almost all the American captains deserve high praise, and "on a par with the best of them are Broke, Manners, and also Byron and Blythe." No Norse viking slain over shield ever died better than Capt. William Manners of the *Reindeer*; and it would be difficult to surpass Porter's stubborn defence of the *Essex* as an exhibition of dogged courage. Mr. Roosevelt's stirring descriptions of these desperate fights recal the deeds of derring-do of the heroic age of the Teutonic navies, when Drake singed the beard of the King of Spain, and when Klæsson, after fighting through two livelong days, blew up his ship rather than surrender to the hereditary foes of his race, and was bitterly avenged by the grim "sea-beggars" of Holland. The principal engagements are clearly illustrated by diagrams, and the plan of the work is excellent, while the general tone is fair and discriminating. The author is a little "mixed" with regard to British titles, both Sir H. Douglas and Sir E. Codrington being styled "Lord" (pp. 60, &c.), and there are other slips which are more curious than important. But, on the whole, the work is valuable to students of naval history, and interesting to all who take pride in the doughty deeds performed by seamen of English stock, although we cannot but feel grieved "that such men—men of one race and one speech, brothers in blood as well as in bravery—should ever have had to turn their weapons against one another."

GEORGE T. TEMPLE.

NEW NOVELS.

The Way Thither. In 2 vols. (Elliot Stock.)

Northam Cloisters. By the Author of "Alcestis." In 2 vols. (Smith, Elder & Co.)

Was Hers the Fault? By Lolo. In 3 vols. (F. V. White.)

THE author of *The Way Thither* has chosen fiction as a pulpit for preaching morals. It is doubtful whether a novel with a purpose can ever be a perfect work of art; but the writer of this story has certainly succeeded in clothing the views of life held respectively by a Roman Catholic, a Protestant, and an Agnostic in a very beautiful parable. It is evident that the author's sympathies are Protestant, but the views that would commend themselves to other sectaries are stated with force; and it is chiefly by showing the effect of Jesuit ethics upon the lives of their votaries that the author points his most forcible arguments against the moral system of Rome. The scene opens in Ireland, and we are called to follow the fortunes of Kathleen Nugent, the daughter of a gentleman who owns an estate near Lough Atrain. The heroine, having lost her mother, is sent to a French school to finish her education; and, at Chaudeville, a girlish freak is the means of providing her with a lover. But Kathleen is unable to return the affection of the Marquis Raoul d'Orgenton, and goes home after having foolishly given him a written promise that she will make him happy at the end of a year. On returning to Lough Atrain, she meets Ernest Vereker, a playmate of her childhood, who is about to take holy orders, and is a High Churchman of a very extreme type. He, too, has set his affections on Kathleen, and would make her a good husband; but fate wills otherwise. Ernest is perverted by a skilful Jesuit, and becomes a missionary-priest. The shock to Kathleen is severe. Raoul d'Orgenton re-appears under a strange disguise, which is the cause of many complications. The story is not brought to an orthodox conclusion, yet we cannot say that the result is unsatisfactory. Throughout, the writer exhibits power of no common order; the plot, though not faultless, is constructed with skill; and the dialogue is thoroughly easy and natural.

We have read *Northam Cloisters* through to the last word, and the task has been attended with labour and sorrow. It would be difficult to conceive genuine literary ability more wasted than in the pages which unfold and develop this story. The author possesses a keen love of inanimate nature, and can describe the breezy moors of North Devon in terse sentences which are bright and living pictures. Nor does he lack a power of realising the inner motives of shy and sensitive men. But with these gifts there seems an utter lack of that perception of symmetry indispensable to the charm of a coherent plot, and a deplorable ignorance of the value of English. Especially in the first volume are to be found sentences in thick clusters which express absolutely nothing. It is only too evident that the writer has let

ideas wait upon words, instead of formulating his ideas and then clothing them in some intelligible figure of speech. The scene of the story is laid principally in the cathedral and collegiate town of Northam, a place relieved from utter stagnation by the presence of factories and workshops. It is amid these surroundings that Althea Vyvyan, the daughter of a canon, has grown into comely womanhood. Her mind has been formed partly by the care of her father, partly by the instruction of William Milton, a fellow of the college, a grave and learned man, who has led his interesting pupil through the thorny paths of Greek. Of course a tenderer chord than that of mere friendship is touched, but the course of true love is crossed first by a friend of Milton, to further whose suit the generous lover retires for a time. When this individual has met with a refusal, Milton discerns another rival in an undergraduate at Northam, who had lately succeeded to a poor and deeply mortgaged estate in North Devonshire. Hence more delay. The lover again hangs back for fear lest he may mar Althea's happiness and take the place of a better man. But the squire marries a boatman's daughter, and takes his lowly bride to a coffee plantation in Ceylon. It is not necessary to say how things come right in the end, but the author makes her chief personages happy after all with more skill than might have been expected. As we have said, the story throughout moves but slowly; and for the most part the dialogue is stilted and unnatural—nothing could well be more unreal than the words put into the lips of the students and dons of Northam. With the exception of certain traits in the male characters, the portraits resemble nothing in actual life. But now and again the author strikes one of the strings that makes the whole world akin, as when depicting the genial Canon's tender affection for his daughter. On the whole, there are not wanting indications that the writer of *Northam Cloisters* may, with practice, write a novel worth reading. One word more. No doubt from inadvertence, one of the characters in this novel—a Northam tutor who coached the eight for Henley, and who throughout appears as a rude boor—has been endowed with a name and described in terms which will recal one who, not many years ago, rowed stroke at Putney in a Cambridge crew, and who is admitted by all who know him to be a courteous gentleman.

It is impossible to give any special criticism of *Was Hers the Fault?* The people to whom we are introduced do not rise above golden mediocrity, but they are living men and women, and when they begin to speak they let fall no false notes. The hero of the book is a young Englishman of good prospects, who has brought home from an Italian tour a bride, the Contessina Ida Laurenti. The young people are happy till a former admirer of Ida meets her in England at a country-house, and causes much needless heart-burning between the husband and wife. All comes right after three volumes have been duly completed, and the villain who has been the cause of so much undeserved misery is

left in a mad-house. The book is very readable, and its writer deserves no little praise for his cleverness in touching a good deal of pith and yet not soiling his fingers.

ARTHUR R. R. BARKER.

SCHOOL BOOKS.

M. EUGÈNE FASNACHT, of Bedford School, produces French school books with such rapidity that it is difficult to keep pace with him, and in Messrs. Macmillan's Catalogue he will soon occupy as much space as Mr. Todhunter or the Rector of Glaston. In his *Organic Method of Teaching Languages*, he elaborates a system already attempted by others, which is commended to its patrons by some few paradoxes, so to speak, which a boy learning French in the old-fashioned English way has to meet—e.g., the subjunctive is, in most Grammars, conjugated with *que* before it; but *que* does not always take the subjunctive, and the subjunctive is sometimes used without *que*; the whole system is therefore wrong. Now the study of French may be regarded in three ways: firstly, as a matter of mere convenience; secondly, as a vehicle of education; thirdly (and rightly), as a combination of the two. Our English scholars who find themselves called upon to teach, or supervise the teaching, of French complain of the French teacher who considers a mistake of accentuation in a theme a worse fault than a violation of syntax; and thus they are supporters of the second view of French teaching. We do not wish to credit M. Fasnacht with the first view, though he openly disavows allegiance to those formal rules which have educated, and educate, our classics and mathematicians. He begins with three regular conjugations; and, after all that has been said in his Preface, it is disappointing to find, on his first page, the stock *je parle, tu parles, &c.*, embellished merely by an adverbial phrase. Our old friend the definite article poses as the determinative adjective, the inflection and an imperfect syntax of which occupies as much space as in most French Grammars. And, after all, M. Fasnacht only combines a few nouns, or sentences involving verbs, some of which the pupil cannot parse, with the ordinary article of the Grammars. Again, on past participles conjugated with *avoir*, the out-dried rule is stated with as much formality as in other Grammars; but the cases in which the past participle does not agree with its apparently direct object are banished to a remote corner, and not referred to in the Index. Again, five rules on the subjunctive—rules which every good teacher loves to teach—are only given in the middle of the conjugation of that mood, and that, too, in smaller type, so that the careless boy has every excuse for overlooking them. Without meaning to be unkind, we must say that this method of M. Fasnacht's has only its novelty to commend it in our eyes. On the other hand, his editions of *Le Misanthrope*, *Les Femmes savantes*, and *Le Cid* (Macmillan's "Foreign School Classics") leave little to be desired. The notes, etymological and other, are so good that one can only lament the impossibility of getting boys, at any rate, to study notes. Each book has also a grammatical glossary and a literary introduction, which includes, e.g., in the case of the *Misanthrope*, extracts from Nisard, Rambert, and Coquelin (Comédie française); and each set has its argument in English. The books in this series are priced at a shilling each, and further instalments in French and German are promised by Mr. Colbeck, of Harrow; Mr. Ball, of Wellington; and others.

MESSRS. HACHETTE have brought out an edition of that part of *Mdme. de Staël* which

is the subject for the Cambridge Local Examination, edited by M. Victor Oger. This book abounds in historical and critical notes, and its subject commends it to students of the period of English history set for the army examinations. The notes, however, too often supersede the dictionary; e.g., why give the meanings of *fatal*, *approfondir*, *rendre les armes*, *transiger*, &c.? From the same firm comes also an edition of *La Tulipe noire* by Paul Blouët. To its use as a school book the English translation, obtainable for a shilling, is an insuperable drawback. The notes are mainly historical. Messrs. Hachette also send us a *First German Book*, by Mr. Leopold Becker, who follows the strong and weak classification of nouns. Exercises and a vocabulary are included, as well as some etymology under the title of "Interesting Facts for the Inquisitive."

Essentials of German, by the Rev. R. H. Quick (Longmans), may claim a welcome from schoolmasters, who know that "sometime Master in Harrow School" means that its author was on the staff of a general who rarely chooses his aides wrongly, while the *Companion to Schiller's Wilhelm Tell* by the same author is a second credential. There is, we may begin by saying, much in this little book which is good—too good, indeed, for the beginners for whom it is intended; chap. vii., on prepositions, may be specially instanced. As for Mr. Quick's speciality:—

"I would begin with the 'Lorelei.' The pupils learn first the English translation, and then the German for it, line for line. The German should then be given *via voce*, and the pupils should be able to say it by heart before they read or write it. But the course of learning poetry and proverbs with variations [of these a large stock is given in the book] should take a part only of each lesson. The other part should be given to a drill in the grammar forms, beginning with the auxiliary verbs."

With thus much of concession, Mr. Quick throws down the gauntlet to the school of teachers "plein by rote," to many of whom his method will seem an experiment, capable, doubtless, of much in the hands of its inventor, but *caviare* to the general.

MR. ALFRED MILNES has struck a new vein in his school edition of *Hudibras*, Part I. (Macmillan)—expurgated, it is true, but with the original numbering of the lines retained, which is a new phase of Bowdlerism. The archaeology of the book is done very well, but the critical notes are occasionally unsatisfactory: e.g., we should like to see the school-boy who would carry out the instructions conveyed in the note on syllogism, mood, figure, on p. 111, and consult "any treatise on logic." A note is given on *nuncheon* which omits the interesting derivation from *none* (noon) *schenche* (a pouring), and does not distinguish the word from *luncheon*—deriv. *lunchion* (piece of bread). Nor are we reminded that *fustian* is one of the many foreign words for a stuff (Ital. *fustagno*). To the instances of the participle *distract* might be added ("Julius Caesar," IV. iii.) "with this she fell distract;" but all Mr. Milne's examples are addenda to par. 342 of Dr. Abbott's *Shakespeare Grammar*. The word "splay-footed" occurs twice, but the deriv. from *splay* (ply hence dis-*ply* "to unbend") is not given. The note on wedding-garters, p. 143, is another concession to Bowdler; and, as a solver by a reference to cricket of the "long-field Parthian" difficulty, Mr. Milnes cannot safely be given "not out" by an impartial umpire. With the explanation of "black art" as magic (scarcely necessary) might have come a reminder of the deriv. of alchemy. On p. 161, "bolter, a sieve," might well have been illustrated from "Coriolanus," III. i.: "Ill school'd In bolted lan-

guage; meal and bran together he throws without distinction." Space might have been found for some of these omissions by cutting out references to notes on a word which has occurred perhaps only a few lines previously. The book is, however, a valuable addition to the list of English school texts, and we shall be glad to see Mr. Milnes continue his work. We would, moreover, commend the subject to the notice of the Civil Service Commissioners and their Examiners as being not so easily crammed as some of their recent selections.

NOTES AND NEWS.

WE are glad to hear that the Dean and Chapter of Westminster have resolved to place in the Abbey a memorial tablet to the late Col. J. L. Chester, in recognition of his valuable and disinterested services as editor and annotator of the *Westminster Abbey Register*. It is also stated that Col. Chester's papers, the result of many years of unwearied and discriminating industry, have been placed in the hands of Mr. Cookayne, Norroy King of Arms.

PROF. MONTAGU BURROWS's excellent little book, *Wyclif's Place in History*, has reached a second edition; and in it he makes a strong appeal for support for the Wyclif Society, which has been founded to attain the objects he desired—the printing of all Wyclif's "priceless Latin works." Thirty-five of the 209 members of the Wyclif Society have paid their five guineas in advance, to enable MSS. to be copied quickly; and Mr. Samuel Morley has subscribed ten guineas a-year for ten members or libraries to be nominated by him. The German university libraries have responded well to Dr. Buddensieg's appeal to them to join the society. Three volumes are preparing for the press; and arrangements are making to have Dr. Buddensieg's volume of Wyclif's *Polemical Writings*, now ready for the press, as the first volume of the society's publications in November.

THE Council of the Camden Society are glad to be able, contrary to their expectations, to publish during the present year a holograph letter-book of Gabriel Harvey of Saffron Walden. It is a small quarto volume of 105 folios, of which fols. 1-34 and 85-105 contain fair copies of his letters during his residence at Pembroke Hall, Cambridge. The middle part of the book is filled with rough drafts of his poems and correspondence—mostly unpublished—with his great friend, Edmund Spenser, the poet, under the *nom de guerre* of "Immerito," about the year 1579. This portion of the book (from the many allusions to the contemporary literature and drama of the day, as well as the mention of Sir Philip Sidney, George Gascoigne, Edward Dyer, Tarleton the Jester, and many other celebrities) is extremely valuable and interesting, being, in fact, the earliest scrap-book or private note-book of an English poet and author. Unfortunately, it is just anterior to Shakspeare's time; otherwise we might have expected some curious notices of him, or, at least, of his works. The book will be edited by Mr. E. J. L. Scott, of the British Museum.

WE hear that the post of English lecturer at Groningen has been given to Mr. Sidney L. Lee, of Balliol College, Oxford, the editor of Lord Berners's englished *Huon of Burdeuze* for the Early-English Text Society.

PROF. ZUPITZA, of Berlin, will be working at Cambridge in August, and will spend September in London collating his transliteration of *Beowulf* with the unique Cotton MS. of it.

PROF. PAUL MEYER, of Paris, will spend a few days early in August at the British Museum.

Nor long ago Mr. Bright expressed the wish that Mr. John Morley's *Life of Cobden* might attain the wide circulation that can be got only by a cheap price. We understand that an abridged edition, in the form now made familiar to us by the popular sixpenny editions, will be issued immediately. But its price will be, not sixpence, but one shilling.

THE two next volumes in the "English Men of Letters" series will be *Swift*, by Mr. Leslie Stephen, and *Sterne*, by Mr. H. D. Traill.

DR. JAMES MARTINEAU will shortly publish, with Messrs. Macmillan and Co., a book on *Spinoza*.

M. KARL BLIND has put together "Personal Recollections about Garibaldi," ranging over about twenty years, the first part of which will be published in the August number of *Fraser's Magazine*.

MESSRS. HURST AND BLACKETT will shortly publish a new novel, in three volumes, entitled *Saint and Sibly*, by O. L. Pirkis; and also, during August, *New Babylon*; or, *Daughters of Eve*, by Paul Meritt and "Owl."

MR. FURNIVALL is finishing for the New Shakspere Society his edition of the second part of Phillip Stubbes's famous *Anatomic of Abuses*—namely, "The Display of Corruptions requiring Reformation," which has never before been reprinted since it came out in 1583. It is not so interesting or racy as Part I., and only breaks out into violent abuse of the great ruffs then worn, those "cart-wheels of the Devil," the Pope, landlords, and a few other folk; but it has many passages of value on the abuses in trade, the administration of justice, the poor-law, education, the Church, &c., which the after-statutes of Elizabeth and James show to have been real, and which they tried to remedy. Stubbes's amusing description of the Elizabethan barbers we quoted two years ago.

THE *Girton Review*, in its second or July number, gives very pleasant accounts of the girls' work at Girton, Newnham, and Somerville Hall, Oxford. It has an interesting article on the Anglo-Saxon Cemetery, with a few Roman graves, too, discovered under the rough field in front of Girton College while being turned into a lawn; and an amusing account of a Little-Go coach's experience in getting mathematics into non-mathematical girls' heads:—"They expect their lecturer not only to put everything into their minds, but to keep it there; and, consequently, it is no unusual thing, during a trigonometry or statics lecture, to be greeted with a deeply reproachful 'I have forgotten all my algebra!'" The Browning Society at Girton flourishes; though at Newnham there were only twelve supporters of the motion brought forward in an able speech by Miss Radford, "That Robert Browning is the greatest poet of this generation." At Girton, the resolution, "That it is desirable that the House of Lords be abolished," was carried by 27 to 14. Good books are still wanted by the libraries of all the girls' colleges.

A GREEK MS., the "Typike Diatheke" [of the Monk Neophytus, written in Cyprus in 1216 A.D. (formerly the property of the late Mr. David Laing, of the Signet Library, and bequeathed by him to the University of Edinburgh), has been printed by the Rev. F. E. Warren, and appears in *Archæologia*, vol. xlvii. It is chiefly concerned with rules and counsel for the monastic life, much after the usual manner; but there are some allusions of historical interest to the sufferings of the Cypriotes under the rule of the House of Lusignan, on whom Richard Cœur de Lion ("the miserable wretch," "the wolf," as Neophytus elsewhere calls him) had conferred the sovereignty of the island. He complains of the oppression of the Latins and of the exactions of harsh tax-gatherers—

ἀσυνταβὸν φορολογόν—and he calls their rule a grievous slavery. There are also a few glimpses that show us the low state of learning at the time. This Neophytus is the same as the author of two MSS. in the National Library at Paris—one a volume of sermons (still unpublished); the other, "Concerning the Calamities of Cyprus" (περὶ τῶν κατὰ Κυπρὸν σκαίων) printed by Ootelerius in vol. ii. of his *Ecclésiæ Græcæ Monumenta*. From this latter work Mr. Freshfield has drawn some particulars of interest, and printed them in the same volume of *Archæologia*. Our present relations to Cyprus add an interest to the subject of its earlier history under Western rule.

THE *Journal of Education* for July 15 contains a letter, signed R. H. Q., advocating a proposal to appoint a professor of education to superintend the work of young teachers, in reply to certain objections that have been urged against the scheme.

THE distribution of prizes at University College School will take place on Wednesday, August 2, at 2 p.m. Lord Reay will preside.

QUEEN ELIZABETH OF ROUMANIA, to whose literary works under the nom de guerre of "Carmen Sylva" we have frequently called attention, has recently been elected a member of the Roumanian Academy of Sciences. She proposes to deliver the usual speech, or rather essay, on the occasion of her official reception.

THE last literary event in Paris is the publication of a political satire by M. Francisque Sarcey—*Les Misères d'un Fonctionnaire chinois* (Calmann Lévy)—which, if by its title it recalls Goldsmith, has been compared in its style and irony with Voltaire.

THE long list of nominations and promotions in the Legion of Honour issued on the occasion of the national fête of July 14 includes the following names:—MM. Marcy, Perrot, Heuzey, Elie Soria, Rayet, Aicard, and Daremberg.

AN *édition de luxe* has just appeared (Paris: Dentu) of M. Arsène Houssaye's curious book on the "forty-first chair in the Académie française"—that is to say, on the illustrious authors who have never been elected. These include the names of Descartes, Pascal, La Rochefoucauld, Molière, Le Sage, Beaumarchais, Béranger, Dumas père, &c. This edition, which is printed for subscribers, contains etchings after the most authentic portraits.

THE Holy Synod of the Russian Church has recently adopted a resolution to authorise a translation of the Bible and of a portion of the liturgy into Livonian and also into Esthonian. This resolve is said to be not unconnected with the sympathy that the Government has begun to show towards the nationalist or Finnish movement in the Baltic provinces.

M. KOBKO has published a historical study in Russian, entitled *The Tsarévich Paul Petrovich*, being an examination of the early life of the Prince who subsequently reigned as the Czar Paul I. Little that is definite has hitherto been known regarding the personal history of this Czar prior to his accession to the throne. M. Kobko has filled up the gap by presenting an interesting sketch of the Court in the midst of which the Prince was brought up, enabling the reader to form a clear idea of the atmosphere of suspicion and deceit which constantly surrounded him. The Empress Catharine II., and her Minister, Nikita Panin, the latter of whom M. Kobko endeavours to exculpate from blame in regard to the treatment of the Prince, are carefully delineated; and the inner and outer life of the Tsarévich are developed step by step, the result being a study of considerable dramatic and psychological interest.

THE Bulgarian Literary Society, which had its seat before the war at Braila, in Roumania,

has now been reconstituted at the new capital, Sophia. It proposes to issue its volumes of *Transactions* every alternate month.

M. DROZ, one of the members of the Swiss Bunderath, has published in the new number of the *Bibliothèque universelle et Revue suisse* an essay upon "La Propriété intellectuelle," in which he deals chiefly with the international regulation of the subject. He contends that an international agreement for the protection of literary and artistic property really offers fewer difficulties than a convention between different States for the protection of commercial property. M. Droz states incidentally that the International Literary Congress, which held its fifth assembly in Rome last May, will meet next in Bern, and that the formation of an International Bureau for the defence of literary and artistic property, with a central seat in Switzerland, is now under consideration. The position of the writer as one of the seven members of the Supreme Executive Council of the Swiss Confederation, a post which he has held since 1875, gives additional value to his remarks. In his younger days M. Droz was editor of the *National suisse*.

A WHITE marble tablet has been placed upon the house in Paris, at the corner of the Rue Rollin and the Rue Monge, which occupies the site of that in which Pascal died.

UNDER the title of *Dante Gabriel Rossetti: his Work and Influence*, Mr. William Tirebuck, of the *Yorkshire Post*, has just published, through Mr. Elliot Stock, an essay of some sixty or seventy pages, beautifully printed and bound. As a literary performance, the paper is not of equal merit throughout, the opening and closing pages being somewhat cumbersome in style and laboured in thought. Not a few of the intermediate passages, however, exhibit considerable originality of view and wealth of expression. Of the attitude adopted towards the subject of the essay it seems difficult to present a synopsis, and scarcely possible to say whether Mr. Tirebuck sees most to commend or most to deplore in those recent art tendencies on which he dwells at length. His thought occasionally lacks sharpness of outline, and his critical estimates (which he honestly endeavours to make judicial) sometimes prove indefinite. It will be obvious enough to those who realise Rossetti's importance both as poet and painter that Mr. Tirebuck can hardly have realised it when, even in the most conjectural statement of popular agencies contributory to Rossetti's fame, he permitted himself to number the accidental circumstance of "rubbing bricks-and-mortar shoulders with George Eliot and Thomas Carlyle" in Oheyne Walk. Nevertheless, Mr. Tirebuck's essay must be read as an appreciative monograph, written wholly from an independent standpoint; and as such it will doubtless find many readers among those who are anxious to acquire information, however indirect, touching the most fascinating personality of the age. Mr. Tirebuck is favourably known as perhaps the first writer on the remarkable painter William Daniels.

WITH reference to a little book entitled *Paradise Found, and other Poems* (Niabet), which was noticed in the ACADEMY of May 27, we are requested to state that the author's name appearing on the title-page is entirely fictitious. There is no such person as "Lady Frances H. Cecil."

AMERICAN JOTTINGS.

It is now stated that the authorised *Life of Longfellow* will be written by his brother, the Rev. Samuel Longfellow, who has resigned his pastoral charge in Germantown, Pennsylvania,

and come to live with the poet's daughters in the house at Cambridge.

A CIRCULAR letter has been addressed to the boards of control of the several colleges in the United States by a joint committee of the American Association for the Advancement of Science and of the American Philological Association, setting forth the history of the degree of Ph. D., and the abuses in the bestowal of it, and praying for a discontinuance of the practice of making this degree and also that of S.D. (So.D.?) honorary. It appears that during the seven years ending 1879 seventy-nine colleges granted the degree of Ph.D. to 345 persons, of whom only 175 had passed an examination for it. The circular states that

"this degree is in a pre-eminent sense the appropriate degree for teachers, a large and growing class of persons in this country. Three colleges in the United States have within the last twenty years conferred this degree after examination upon 119 different persons, of whom seventy-five per cent. have adopted the profession of teaching. It is reasonable to suppose that the number of colleges in the United States which within the next fifty years will establish graduate schools in philosophy will be large. The degree which these schools will then confer will be that of Doctor of Philosophy, and it is for the interest of all alike that its significance should not be obscured."

COLUMBIA COLLEGE, in New York, which already possesses six student-fellows, has recently established three teaching-fellows after the analogy of the German *privat docents*. Each fellow, whether student or teacher, receives 600 dollars (£100) a-year; the term is for three years, but renewable. The student must study under the direction of the president of the college, but he may choose his own place of study; the teacher is required to give only twelve lectures in the year. When will Oxford and Cambridge learn to liberate some of their endowments from the bonds of tutorial and prize fellowships?

PROF. J. A. HARRISON, of the University of Virginia, has been invited to give a course of lectures at the Johns Hopkins University, Baltimore, upon "Anglo-Saxon Poetry."

A NEWLY discovered "Fourth of July Oration" delivered by Daniel Webster in 1802, when he was twenty years of age, has been published by Messrs. A. Williams and Co., of Boston.

THE new volume in the series of "American Worthies," published by Messrs. Henry Holt and Co., is *William Penn*, by Mr. Robert J. Burdett.

THE last number of the *American Journal of Philology* contains a very characteristic article from Mr. Fitzedward Hall, on "The Separation, by a Word or Words, of 'to' and the Infinitive Mood." In disproof of the dogmatic rule of would-be purists, that such separation is absolutely inadmissible, Mr. Hall quotes examples to the contrary, dating back as far as Wyclif and as recent as Mr. Matthew Arnold. There are some gaps in the chain; no instances are adduced for the first half of the fifteenth century, nor for the fifty years after 1471. But Mr. Hall hints that his reading has been less thorough for these periods. For the seventeenth century, he quotes (among others) Sir Thomas Browne, Pepys, and Bentley; for the eighteenth, Defoe, Burke, and repeatedly *Mme. d'Arbly*; for the nineteenth, Southey, Coleridge, Lamb, Wordsworth, Mr. Baikin, &c. It is noticeable that he has been able to find only a single instance of the separation in each of the following voluminous authors:—Dr. Johnson, De Quincey, and Macaulay. After all, it would seem that the balance of authority is the other way; but to make hard-and-fast rules in such matters is absurd.

ACKNOWLEDGMENTS.

WE have on our table the following:—*Exercises on Morris's Grammar*, by John Wetherell, "Literature Primer" series (Macmillan); *Practical Lessons in Welsh*, in Imitation of the Natural Method of Learning to Speak a Language, by William Spurrell (Oarmarthen: Spurrell); *Preparation for Science Teaching: a Manual of Suggestions to Teachers*, by John Spanton (Griffith and Farran); *Elementary Botany, Theoretical and Practical: a Text-book designed primarily for Students of Science Classes*, by Henry Edmonds (Longmans); *How to Prepare Notes of Lessons*, with Directions and Specimen Notes on every Subject, by T. J. Livesey (Moffatt and Paige); *Elements of Morality*, in Easy Lessons for Home and School Teaching, by Mrs. Charles Bray (Longmans); *Geographical Readers for Elementary Schools*, by Charlotte M. Mason, "The British Empire and the Great Divisions of the Globe," with maps and illustrations (Stanford); *Great Englishmen: Short Lives for Young Children* (George Bell); *Empire Readers*, by S. B. Tait, Books III., IV., V., and VI. (Jarrold); *The Illustrated Readers*, Books III. and IV. (Longmans); *The Standard Grammar: being a Complete View of the Words and Sentences of the English Language, with Parsing, Analysis, and 356 Exercises*, by Prof. J. M. D. Meiklejohn (Chambers); *Exercises in English Grammar and Composition*, by David Salmon (Moffatt and Paige); *Answers to Arithmetic*, Parts I. to V. (Longmans); *Means for Learning how to Reason Certainly and Easily*, with the Elementary Ideas of Logic, translated from Condorcet by Dr. J. Kaines (Reeves and Turner); *An Aid to Arithmetic*, by Dr. E. Diver (Griffith and Farran); *Guides for Science Teaching*, No. VII., "Worms and Crustacea," by Alpheus Hyatt (Boston, U.S.: Ginn, Heath and Co.); &c., &c.

AND also the following pamphlets:—*Standard Stenography: being Taylor's Shorthand Improved and Adapted to Modern Requirements*, by Alfred James (Coghlan); *The Rapid Shorthand Writer*, by Francis John Lock (Leicester: Roberts); *Easy Shorthand Systems*, with Illustrations, by Dr. John Westby-Gibson (Jas. Wade); *Views on Spelling Reform*, by G. L. Larkins (Stanesby); *Hothouse Education*, by J. A. Digby (Stanford); *Science in Popular Education, as a Means of Promoting Health, Well-being, and Industrial Success*, by T. Twining (Twickenham: Franklin); *A Manual of Elementary Drill in Short and Easy Lessons, for the Use of Schoolmasters*, by Edmund T. Hunt (Heywood); *Graduated Exercises in English Grammar*, with Definitions, by M. Hickey (Heywood); *Primer to Tropical Reading Books*, intended for Use in the West Indies and Elsewhere, by E. C. Phillips (Griffith and Farran); *English Annals, 1790-1820*, by A. J. de H. Bushnell (Stanford); *Education Code*, Lord Norton's Speech, House of Lords, May 19, 1882 (Ballantyne, Hanson and Co.); &c., &c.

ORIGINAL VERSE.

KATEY'S MOTHER.

(Scene—a London Hoepital.)

"ARRAH, yer Riverence is welcome! please to sit down by my bed.
Thankye! how kind o' ye, sir, to settle my poor owld head!
I wish ye a better offus! Well, God 'll be yer reward!
Won't ye sit down? I'm afeard that chair is a thrifle hard.
I heard ye spakin' just now, an' wasn't I glad for to hear!
Like jew on the grass, there's a taste o' the brogue on yer tongue, my dear.—

Oh, I ax yer pardon, sir, but it carries me far away
Out o' this great big London, it carries me over the say
Back to my Irish mountains, back to my dear owld home—
Ah, did I want for to lave it? ah, did I want for to roam?
Didn't I want for to lie, when the Lord 'ud call me to rest,
Close by my owld man's side, in his grave away in the west?
Didn't I think my daughther 'ud close my eyes for me
There, in my green Ballymore, an' go back—ah, machree! machree!—
To her husband's comfortin' arms, an' the childher about her knee!

"There's tears in yer Riverence' eyes! well, God reward ye, sir;
I won't be throublin' ye long.—Last night I was dhramin' iv her:
She came an' sat by my bed in the chair you're sittin' in now;
She was dhrest in a long white gownd, an' she lookt—I can't tell how—
Purty an' swate is no words; she'd got a look in her eyes
I niver seen there afore, so innocent, yit so wise.
She sang a soft little song, the kind o' song that we
Do sing when we've suckled our babies an' sits wid 'um on our knee;
So happy we wants no words, but can't help singin', ye see.
The baby was in her arms, an'—this is the strangest part—
I was glad for to see that baby, whose bornin' broke my heart;
It smil'd up into my face, an' I lov'd it, an'—what did she say?
I can't remember a bit—an' she kiss'd me an' wint away.

"I'd niver refus'd her a kiss; I somehow think, if I had,
That kiss iv hers 'ud ha' scorcht me, an' burnt me, an' dhruven me mad:
But I hadn't; she lay in my arms, an' I spoke not a word o' blame;
For wasn't she flesh o' my flesh, an' wasn't her shame my shame?

"I'd always held up my head; I'd always been stout and sthrong
In blamin' the laste little turn away from the right to the wrong;
An' I hadn't no pity for them that takes, as people say,
The right o' the marriage-time afore the marriage-day.
But she, my girl! my girl! I knew that she was good;
No thought iv her heart but clane; ay, sir, I undherstood
Much more in that hour I sat wid her poor little head on my breast,
Much more in that hour o' my life nor in all the years o' the rest.
Ay, it was sinful, I know, but wasn't it dhreadful sad?
An' when them we cares for goes wrong, sure it don't seem quite so bad.

"He, who was he? what matter! it's better to let 'um be!
One o' the quality, sir, a gentleman born was he.
He might ha' made love to a lady, a lady he could ha' wed;
But he chose to make love to my girl, an' ruun my girl instead.
The minister's daughther, she lik'd 'um, an' she would ha' been a prize,
Wid larin' galore in her head; but she hadn't my colleen's eyes;
An' my colleen lov'd 'um so, an' thought every word he said
As thrus as the Bible itself, an'—O God!—my girl is dead.

"Thankye! it does me good to have ye howld my hand,
You that are clane in the sowl an' yit can undherstand
All o' the sin an' the pain—No, plase don't go away—
God bless ye for cryin' them tears!—'An' what iv him?' ye say.

"Sir, I dunno, an', what's more, I think I don't want to know:
Afore I knew how it was, he had gone away, an' so
I niver axt anny qeshitions; I owe 'um a terrible grudge,
But I don't want to pay it, yer Riverence; I lave 'um to God, his Judge.

"What do ye say, sir?"—"Suppose he had never dreamt how it was,
Had never thought that could be—had gone away because
Things of importance had call'd him—"?" "Well, sir, I only say
God knows all about them things iv unportance that call'd 'um away."

"But suppose when he heard—when they told him that Katey—that she was dead,
He had nearly died o' the sorrow, and scarce could lift up his head?
And suppose he had sought out her mother and meant—ah God!—to atone,
But found she had left the place, and none knew where she had gone?"

"Well, suppose all this, yer Riverence? If he had ha' found me, ye see,
He'd ha' offer'd a five-poun'-note, or even a ten, maybe:
An' I might ha' spit in his face an' curst 'um: an' now I say,
'May God forgive 'um his sin, as I forgive 'um to-day.'"

E. H. HICKEY.

[NOTE.—The short *u* is sounded as in *put*: the short *o*, when it represents an older *u*, as in *come*, *love*, and in some other instances, as *word*, has the same sound. The *i* in the part of Ireland which I know is incapable of being symbolised; it is a short, close sound, entirely unlike the *ei* of the stage Irishman, or the *ai* of the cockney. The *r* is always a full consonant.]

MAGAZINES AND REVIEWS.

THE present number of *Mind* contains a third article from the pen of the late Prof. T. H. Green on the subject "Can there be a Natural Science of Man?" This article shows the connexion between the foregoing analysis of knowledge as involving an active principle not in time, which is here identified with an eternal consciousness, and the enquiry into man's moral freedom. In the reaction of man on circumstances giving shape to them, and taking a motive from them, we have "a certain reproduction of itself on the part of the eternal self-conscious subject of the world." Thus, neither on his intellectual nor on his moral side can man be brought wholly within the series of natural phenomena. We learn from a note at the end of this article that these three papers are the commencement of an important work, to be entitled *Prolegomena to Ethics*, and to be published at the close of the present year. It is a matter for congratulation that Prof. Green was able to complete this work with the exception of twenty pages only. Mr. E. Gurney contributes an ingenious article on "The Utilitarian Ought." The writer only concedes the appropriateness of using the term "ought" in relation to ultimate ends by making it synonymous with a necessity of thought or rational intelligence. In other words, we can only say to a man in the last resort, "You ought to do so-and-so," in the same sense in which we should say to him "You ought to see that two is greater than

one." This is to give the "ought" a scientific character. The writer proceeds to argue that the desirability of the general happiness may be exhibited under the form of a self-evident axiom. The reasoning is skilful, and the whole essay is worth reading along with Mr. Sidgwick's well-known attempt to deduce Utilitarianism from a principle of reason. Mr. E. Montgomery continues his elaborate enquiry into "Causation and its Organic Condition," and Mr. J. Sully contributes a lighter article on "Versatility," its nature and conditions, and its practical value. The critical notices and the notes and discussions continue to render *Mind* a valuable guide to the student of psychology and philosophy.

THE *Revue historique* for July has an article by M. Jusserand which is of great interest to English readers. Its subject is "La Vie nomade et les Routes d'Angleterre au Moyen-âge." The writer calls attention to the important part played by pilgrims and other wanderers in educating public opinion in early times—indeed, we might say that they filled the place of the modern newspaper. Taking the many documents which have lately been published about the reigns of Edward III. and Richard II., M. Jusserand traces the condition of the roads and bridges in England, the circumstances of travel, and the state of public security. M. Giry pays a tribute of respect to the learned historian Jules Quicherat, whose recent death has deprived France of one of her most conscientious historical students. M. Jullian contributes a valuable study—"De la Réforme provinciale attribuée à Diocletien." He takes a geographical survey of the administrative divisions of the Empire so as to trace their formation up to the time of the *Notitia*; he shows that financial divisions (*regiones*) were gradually converted into administrative divisions (*provinciæ*), and that Diocletian recognised this state of things as accomplished.

THE *Archivio Storico per Trieste e l'Istria* for May publishes a noticeable document, edited by Sig. Combi. It is a speech of Pier Paolo Vergerio the elder before the Cardinals immediately after the death of Pope Innocent VII. in November 1406. It gives a *résumé* of the attempts to heal the schism in the Church, as they presented themselves to an Italian, and is remarkable as showing the effect which had been produced by the long discussions on this point. There is also a good article by Sig. Grion on "King Berengar I. in Istria."

THE LATE PROF. LOTZE.

HERMANN LOTZE, one of the distinguished professors lost to Germany by death in the past year, must be numbered among those great speculative intellects who have helped to form the thought of their generation. The special significance of his position is that he was not only a metaphysician, but an acknowledged authority in physiology and psychology. He took a degree at Leipzig both in medicine and philosophy, and qualified soon after as a university teacher in both faculties. His principal writings in the domain of biology are *Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften* and *Allgemeine Physiologie des körperlichen Lebens*, to which may be added as kindred *Medizinische Psychologie oder Physiologie der Seele*. At a time when not a few profess that metaphysic is only possible through ignorance of physical science, and metaphysicians incline to reply that scientific men do not comprehend the elements of what they reject, the study of a thinker so exceptionally qualified as Lotze cannot safely be omitted by either side. Even those who differ from him will probably be struck by the moderation of his adverse criticism; by his scientific self-

control in estimating the limits of his own arguments; by the refinement of style and freedom from pedantry which he combined with so much knowledge of mathematical and physical science.

The work by which Lotze is, and perhaps will continue to be, most widely known is the *Microcosmus: an Attempt at an Anthropology*, of which his friend and colleague, Prof. Rehnisch, writes " (perhaps with a touch of partisanship foreign to Lotze himself) somewhat as follows:—

"The book came at the right moment. Just when materialism was at its high water, when its disciples proclaimed that it could only fall with the fall of natural science . . . Lotze let not only specialists, but the educated world in general, see that materialism was not the philosophy of natural science. . . . This was an opponent such as the apostles of materialism were unaccustomed to. He was not one whom they could try to discredit in the favourite fashion by denying him the necessary special knowledge; for they had too often appealed to him as a competent judge. He cherished no secret aversion for the modern impulse to physics; on the contrary, in him the pride felt in the brilliant conquests of science by those who conduct its researches found the readiest sympathy."

The *Microcosmus* would, by itself, witness to other interests beside the purely metaphysical and scientific, to a love of art and to a temperament naturally poetical. But Lotze also wrote specially upon art—two short treatises on the Beautiful and a History of "Aesthetic" in Germany. A volume, entitled *Gedichte*, published at the age of twenty-three, appears in the catalogue of his writings; at forty, he published a translation of the "Antigone" into Latin verse.

With all his literary activity and many-sided studies, Lotze was scrupulous in the discharge of his academical duties, arduous as they sometimes were. Though his health was bad, he seldom put off one of the eight lectures which he delivered weekly. When he did, it must have been from sheer necessity. He would come sometimes to the lecture-room with severe headache, and only allow himself the respite of omitting the elucidatory discussion which otherwise preceded the dictated paragraphs, asking (for the dictation was extempore, like the rest of his lecture) indulgence for faults of expression—an unnecessary request, since a kind of classical finish had become second nature to him. He was a charming lecturer. Quiet and unassuming in manner, absorbed in his theme, and scarcely conscious of his audience, he spoke with the rapidity and precision of one who had thought out his own view too thoroughly to hesitate either for matter or for words. His quick delivery was compensated by a clearness of arrangement which made him easy and pleasant to follow.

Göttingen was the scene of Lotze's activity as "ordinary professor" for about thirty-seven years. He did not leave it till shortly before his death. It was reported that he had refused attractive offers from other universities—according to the articles by Prof. Rehnisch, already quoted, he was invited in the winter of 1866-67 to Berlin, Leipzig, and Bonn—it was therefore a surprise to many that he at last, at the age of sixty-three, accepted a call to Berlin. He had lectured there only a quarter of a year when death overtook him. Unfortunately, he had only completed and published two parts of the *System of Philosophy* which he was bringing out—namely, the Logic and the Metaphysic. A second and enlarged edition of the Logic had just been printed. For the third and last part, Ethics, and Philosophy of Religion, no MS. mate-

* See three interesting articles, entitled "Hermann Lotze," in the *National-Zeitung*, August 21, 23, and 24, 1881.

rial, as the writer is informed, has been found among Lotze's papers, except an ethical essay which has been posthumously published in the June number of *Nord und Süd* (1882) under the title "Die Principien der Ethik." Some additional matter promised for the English translation of the Metaphysic seems not to have been begun. Prof. Rehnisch has undertaken the office of editing the lectures of his departed friend from a careful revision of dictation-notes taken down by students the last time that each course was delivered. These are a boon to the friends and pupils of Lotze, and it is hoped that they will be generally serviceable as an introduction to the study of Lotze's works. A list of these lectures has appeared in the ACADEMY. Three courses have been already published—Psychology, Practical Philosophy, and Philosophy of Religion.

The following particulars relative to Lotze's brilliant university career are taken from Prof. Rehnisch's articles in the *National-Zeitung*. He entered the University of Leipzig in 1834, at the age of seventeen; took a doctor's degree in the two faculties of medicine and philosophy in 1838, at twenty-one; became "extraordinary professor" of philosophy at Leipzig in 1842, at twenty-six; and at twenty-seven succeeded to Herbart's chair in Göttingen. From the seemingly complete bibliography appended to the lectures on Psychology, it appears that he published his first Metaphysic at the age of twenty-four, and his first Logic at twenty-six.

In private life Lotze was retiring, yet easily accessible, and not unwilling to converse. His manner was inexpressibly winning and courteous. He seemed a noble and gentle spirit, removed beyond all petty ambitions and party quarrels, and with a fine sympathy for the ordinary joys and sorrows of mankind. Like Plato's ideal wise man, his character was of one piece—his life and his philosophy agreed. It was hardly possible to know him without feeling a deep regard for him, and doubtless his death came to many like a personal bereavement.

CORRESPONDENCE.

CHAUOER AND THE HERONS.

London: July 15, 1882.

The first question is, Are the things on John Chaucer's seal herons' heads at all? Judging from Mrs. Haweis' drawing of them, I can only say that things less like herons' heads I have seldom seen. Unable to make out what they were, I turned the seal upside down, and then saw that the supposed herons' heads were—or looked extremely like—three pairs of half-boots, meant, I suppose, for *chausses*. That term was used for shoes as well as hose, and would, I think, include anything that the chaucer—the hose- or shoe-maker—might manufacture. At present, I don't believe in the "herons" one bit, though I can't assert that the half-boots upside down may not be meant for birds' heads.

F. J. FURNIVALL.

PS.—My friend Mr. Walford D. Selby, of the Public Record Office, has again carefully examined John Chaucer's seal, and says that the things questioned "are birds' heads undoubtedly." His judgment is final. I can then only say that the heads are far too stumpy for long-billed herons' heads.

THE ROSSETTI SALE.

London: July 17, 1882.

In your interesting account of the Rossetti sale, you omit two of the names which appear as recipients of mementoes in the poet-painter's will. These are Mr. William Graham, late M.P. for Glasgow, and Mr. Leonard Rowe Valpy, of Bath, both very dear friends of Rossetti's, and important owners of his pictures. I make this correction because I know that these two gentlemen fully appreciate the honour of appearing in the will of such a man.

THEODORE WATTS.

[We take this occasion to explain that, by an accident, the second portion of the name of the book *Poliphili Hypnerotomachia* was dropped out of the sentence.—ED. ACADEMY.]

THE POLE FAMILY.

Colchester: July 15, 1882.

I ventured lately to question Mr. Bent's assertion that the Arthur Pole referred to in the letter he had discovered was the son of Arthur Pole the conspirator of 1562. I have since found that he was undoubtedly the son of Geoffrey Pole, one of the nephews of the Cardinal, whom Mr. Froude (and, consequently, Mr. Bent) has overlooked. Milles, in his *Catalogue of Honour* (1610), p. 1054, speaks of Geoffrey, the Cardinal's brother, as "great-grandfather [it should be "grandfather"] of Geoffrey and Arthur Pole, who lately lived in Italy"; and the Visitation of Sussex (1634) in the Harleian MSS. assigns to the younger Geoffrey two sons—(1) Geoffrey, living 1606, and (2) Arthur, "slayne at Rome." Arthur's death must therefore be placed between 1600 and 1606. It is interesting to observe that the letter of 1600 speaks of Arthur as "brought up from a child in the house of the Card. Farnese." Now, in the archives of the English College at Rome there is an entry relating to the arrival from England, on October 20, 1582, of a "Dominus Galfridus Polus cum filio et servo." There can be little doubt that this "filius" was the Arthur in question, then about seven years old, not "exiled," but brought over by his father to be trained, like Reginald before him, in Italy for the Church. The prefix "Dominus" was a mark of respect paid to Geoffrey Pole as a nephew of the great Cardinal.

J. H. ROUND.

SUMER AND AKKAD.

London: July 10, 1882.

In the ACADEMY for May 20, 1882, Dr. F. Hommel, of Munich, advanced a theory of his own upon the dialects, known to us by means of the cuneiform inscriptions, which scholars have lately agreed to call Sumerian and Akkadian.

It is now established almost beyond a doubt, and is generally admitted, that Akkad was the north, and Sumer the south, of Babylonia; and what Dr. Hommel seems to be trying to prove is not that these identifications are wrong, but that the principal tongue was the Sumerian, and Akkadian was the dialect—in other words, that what has been decided to be Akkadian, spoken in the north of Babylonia, is in reality Sumerian, and was spoken in the south, and that Sumerian is in reality Akkadian, and was spoken in the north. All the arguments brought by him to support his theory it is needless to cite here; but the following, which are the principal, may be noticed.

That the names of northern towns are to be found in the *eme-sal* or dialectic texts. This is indeed true, but is no argument, as the names of southern towns occur in as great, if not in greater, number. And though in a text in the ordinary Akkadian the hill Sābu is called "a remote place," it does not follow that this remote place was north Babylonia (Prof. Delitzsch's completions, though very probable, are not certain). Even admitting, however, that Sābu be where stated, it might still be remote from the place where the tablet was written.

That the language of the kings of Ur and Eridu was the ordinary Akkadian dialect. This is true; but it says nothing, or very little, seeing that we do not know what were the boundaries of the districts Sumer and Akkad. That Eridu had names in the two dialects (*Gurudug* in ordinary Akkadian, *Eri-siba* in the dialect) only proves that it was a border town.

It is contended by Dr. Hommel, when speaking of the word *Tintir*, one of the ancient names of Babylon, that, because the form *ti* is used in both dialects with the meaning of

"life," that therefore *tin*, given in the list of gods *W. A. I. ii. 59*, Rev. 31, as the Akkadian form of the word, must also be common to both. This, however, does not by any means follow, and only indicates that the dialectic form *ti* had crept into the Akkadian language. Besides this, *Tintir* does not mean "Tree of life," but, according to a mutilated unpublished syllabary, "Seat of life" (*subat balati*). Now the Akkadian sign for "to sit" is KU, and the most likely pronunciation in that case is *dur*, or, with the first consonant hardened, *tur*. For this latter form we have some authority in *W. A. I. iv.*, pl. 5, col. ii., l. 20, where *ba-ti* is translated by *tib*, "he sat," in which *ti* is evidently shortened from *tir* (= *tir*). Two lines lower down occur also the words nu-tur, translated in Assyrian by *al dñib*, "he sat not" (*dñib* permansive-form). *Tir* is therefore another form of *tur*, meaning "seat," so that the literal translation of *Tin-tir* is "life-seat." The dialectic form of *tir* or *tur* seems to have been *tuj* (see Haupt, *Keilschrifttexte*, p. 185). As for Ka-dingira, this form is quite certain, for we never find it written Ka-dimmira; and if we ever find, in dialectic texts, the signs (the ordinary Akkadian form), used for "god," it must be regarded as an error of the scribe. The dialectic word *dimmer* seems also never to take the lengthening *a*.

Dr. Hommel's argument, based on Prof. Fried. Delitzsch's renderings of *Eme-ku* or *Sumer*, and *Eme-lağa* or *Akkad*, as "the tongue of the lord" and "the tongue of the servant" respectively (with the latter of which Dr. Hommel seeks to connect the words *eme-sal*, contending that "the language of the woman" (*eme-sal*) must needs be the same as "the language of the slaves"), even supposing these renderings to be correct, says nothing in favour of his hypothesis, for it is well known that these nations regarded their women with peculiar veneration, and it is more likely therefore that "the woman-speech" should be that of the lords than of the slaves.

In Dr. Hommel's article in *Das Ausland* (No. 23, June 5, 1882) he quotes, as an argument in his favour, a colophon (already noticed by Prof. Fried. Delitzsch in his book *Wo lag das Paradies?*) which occurs at the end of a tablet from Babylon, published in *W. A. I.*, vol. iv., pl. 47, of which the following is a translation:

"Tablet 22nd of Šumer (beginning): *al dannuti*. The tablet which is after it (begins): 'In the month Nisan, the 4th day.'"

Now the obverse of this tablet (pl. 46) contains some quotations in the tongue which, it was decided, is the dialect—the (*eme sal*); and the name of Šumer, in the colophon, is expressed by the usual signs *Eme-ku*. In most people's minds this identification would have been conclusive. Not so, however, with Dr. Hommel, for he there continues:

"The reader can now convince himself how this colophon of a purely Semitic text, only interrupted by a few citations from a hymn in the Woman-speech, can give no proof for a more precise determination of this dialect. It will besides be the best thing if, according to the experience now gained by Assyriologists, they will in future disregard these colophons for such a purpose. After the principal dialect (which was the only one formerly known) has been proved to be Akkadian (Schrader), then Sumerian (Delitzsch), the first name must now again come forward, in contradiction to the geographical proofs of the Sumerian-Akkadian literature itself—ground enough to prevent the drawing of more such conclusions from these dockets, which only designate the neighbourhood or the land in which the Assyrians had the last original to copy. In the above colophon,

'Tablet of Šumer' very likely designates nothing else than 'Babylonian tablet' in general."

Here, however, Dr. Hommel is wrong. In the first place, this tablet, having been obtained by Mr. Geo. Smith at Babylon,* and being written on Babylonian clay in Babylonian handwriting, cannot be an Assyrian copy. It cannot, therefore, be said that "Tablet of Šumer" means only "Babylonian tablet" in general, for it is not likely that the Akkadians, who were the real Babylonians, would use the word *Eme-ku* or *Sumer* to designate Babylonia, even as a general term. This being so, it is only natural to suppose that those extracts which the tablet contains are drawn from the current literature of the place indicated in the colophon; and the value of this tablet in determining the place where the dialect was spoken will easily be seen.

Important also in determining the localities of these two dialects are the names borne by each district. The original inhabitants of Babylonia, it must be borne in mind, did not call their country Akkad, but Ura.† Now this Ura may be the primitive form of the word; but it is more likely that it is weakened from an earlier form—namely, *Gura*. From this early Akkadian word we should expect to find a dialectic form with the *g* weakened into *m*, and with the vowel *u* changed into *e*, according to the laws of sound-change in the two languages.

Examples of the first change (that of *g* to *m*) are: *gala* (Akk.), *mala* (Sum.), "to be;" *gara* (Akk.), *mara* (Sum.), "to make;" *gír* (Akk.), *mer* (Sum.), "dagger."

Examples of the second change (that of *u* to *e* or *i*) are: *duğa* (Akk.), *siba* (Sum.), "good;" *sur* (Akk.), *mer* (Sum.), "strong;" *uru* (Akk.), *eri* (Sum.), "city."

Applying, therefore, these laws, we get the form *mer* quite regularly; and it is not by any means impossible that it is this word which forms the second syllable of the name Šumer. It is certain, therefore, that these two names, Ura or Uri, and Šumer, bear distinctly the impress of the dialect spoken in each.

Names of towns and districts beginning with *Su-* are by no means uncommon in Akkadian. Compare, for example, *Su-anna*, another name of Babylon, meaning "(the city) whose power (or hand) is high."‡

As has been observed above, the translation of *Eme-ku* and *Eme-lağa* as "the tongue of the lord" and "of the master" is very uncertain; and I have never abandoned my translation of *Eme-lağa* as "the pure tongue," which seems to me to be a much better rendering. Prof. Sayce, in his *Assyrian Grammar* (p. 40, No. 462), gives to the sign (*ku*) the meaning of *sakru*, "to record." Now the titles of several of the legends known to the Babylonians have before the name of the hero the signs *ku*, which may be either a compound ideograph, or an ideograph with its phonetic complement.

* This text is mentioned and translated in Geo. Smith's *Chaldean Genesis*, p. 395.

† This reading is placed beyond a doubt by a small fragment of a text, in which the first of each three lines contains the Akkadian words spelled out, the second the ideographs themselves, and the third the Assyrian translation.

‡ From this example it will be seen that the primitive form of *Ura* could also have been *Sura*.

§ If the name *Ura* be from *Sura*, the meaning of *Su-mer* is "(the people or district) whose power (or hand) is mighty." It seems more likely, however, that *Gura* was the original form, and means simply "the country" *par excellence*. The common word for "country" in Akkadian is *kura*, and its connexion with *Gura* would be obvious. *Mer* could be quite regularly the Sumerian form, but the difficulty would then be to explain the name Šumer.

The latter explanation is, perhaps, the better one, for we should then be able to read some noun from this root, with the meaning of "story" or "legend," and translate, for instance, (KU-KAR AN-GIS-TU-BAR) as "the legend of Gišfubar" (*šikar Gišfubar*). The rendering of the character *KU* by *sikaru* receives as well some support from the fact that it has also the value of *gi*, which would be the regular Akkadian form of the evidently dialectic *mu*, rendered by *sikaru* in *W. A. I.*, ii., pl. 7, l. 9 cd. On account of this rendering, Prof. Sayce, with great acuteness, suggests that *Eme-ku* (or rather *Eme-gi*) means "the tongue of records"—an explanation which is extremely probable.

As remarked by M. Terrien de La Couperie, not only were the two dialects mentioned above spoken in the region of Mesopotamia in ancient times, but also several others, of which we have here and there isolated words (principally names of gods). The Kassite is, perhaps, the most interesting of these languages, and its connexion with Akkadian and Sumerian can be easily traced.* Those who regard Sumerian and Akkadian as mere cryptographies will have to take into account not only the regular dialectic changes shown in each of these two tongues, but also those in the Kassite language as well. That the Assyrian scribes should have invented for their own private use a language entirely distinct, both in grammar, words, and modes of thought and expression, from their own, and should have created, moreover, two or more dialects connected with this principal tongue, showing regular and natural laws of sound-change, is utterly impossible. Even had the Assyrian scribes been such extraordinarily clever philologists, they were by far too practical a people to take upon themselves a task so difficult and, at the same time, so useless.

THEO. G. PINCHES.

A CURIOUS ITALIAN BOOK.

London: July 13, 1882.

I lately picked up from an East End book-stall a little book which seems to have some literary interest, and is probably known to some of the readers of the ACADEMY. Its title is "*Così va il Mondo: ovvero Istorielle Veridiche di Diletto ed Amena*." In Londra, MDCCCLXXI. The booklet has the names of several owners, and notably, in bold handwriting, "Byron," much resembling the poet's autograph, in my opinion. One of the owners has written on the fly-leaf: "Questo libro è rarissimo. Lo comprai a Parigi. Si dice che fu scritto da [and here is an erasure, but badly done, and which might be traced through]. E. V." In another handwriting is the following note:—"È molto certo che questo libretto non era mai pubblicato in Londra. Ma per qual ragione è così detto non è così certo. Il soggetto di ciascuna storia non è tale che domandar esser il libro segretamente pubblicato, o senza il nome dell'autore." Another owner, apparently of stricter views, has added: "Ed è egualmente certo che le novelle nel questo libretto son d'un carattere impudico e molto magro."

The main interest of the book consists in what I believe to be the Byron autograph, but the notes I have quoted show that there is something of a mystery about it. It is dedicated "Alla mia signora amabile N. . .," the dedication being signed "Vostro affezionato N. . .," and contains four "Istorielle"—viz., "D'Ornival," "Madamigella Rosa," "Aurora," and "La Donna Casta è un Dono del Cielo."

JAMES HOOPER.

APPOINTMENTS FOR NEXT WEEK.

FRIDAY, July 20, 8 p.m. Quakett: Annual General Meeting.

SCIENCE.

The New Phrynichus: being a Revised Text of the Ecloga of the Grammarian Phrynichus. With Introduction and Commentary. By W. Gunion Rutherford. (Macmillan.)

AMONG the writings of the purists who sought to preserve the genuine traditions of Attic Greek in a literary world overspread by the so-called Common Dialect, the Ecloga of the Bithynian Phrynichus occupies a foremost place. By its date, about A.D. 150–200, it carries us some centuries farther back than most of the other grammarians; and the writer had also the advantage of approaching the subject from a truer point of view. In the words of his dedication to his friend Cornelianus, which have furnished Mr. Rutherford's motto for the title-page of this edition, he looked not to exceptions, but to rules; not to the possible blunders even of good writers, but to the most approved ancient usages (*πρὸς τὰ δοκιμώτατα τῶν ἀρχαίων*). Phrynichus was the contemporary of Lucian, the most copious and successful writer of artificial Attic in post-Macedonian times. He could no doubt have anticipated Cobet in pointing out various blemishes in Lucian's Attic diction; but when he comes to write a paragraph himself he shows only too clearly that the secret of style has been lost, and that the most pedantic strictness in the choice of words would not enable one whose thoughts were moulded in the common dialect to cast off its trammels.

It is a mistake, but one sometimes made in unexpected quarters, to speak of the Common Dialect as a fusion of the four ancient dialects—Attic, Ionic, Doric, and Aeolic. Its vocabulary is tinged, no doubt, with words picked up in the outlying parts of the Grecian world, wherever the Macedonian and Roman arms had extended; but it is still essentially Attic Greek, though Attic which has lost its savour. To arrest the further decay of the language, and to restore, if possible, this lost aroma, was the aim of the so-called Atticists, and among them of Phrynichus.

The work has hitherto been known to scholars chiefly through Lobeck's standard edition. The task for which Lobeck was well fitted by his more than German learning was to collect examples from writers of late Greek in general, and especially from Plutarch, of the words and phrases denounced by Phrynichus as incorrect; or, less frequently, to correct and modify the statements of Phrynichus himself. But there was room for a different treatment of the Ecloga, comparing the rules of Attic Greek as there laid down with the practice of the Attic writers themselves as evidenced by existing MSS. Mr. Rutherford has seen the new use to which his author could be applied, and the result is a monumental addition to the masterpieces of English scholarship.

The systematic application of the writings of the grammarians to the correction of MSS. is the growth of recent times. Isolated glosses had been happily applied, as by

Bentley and before him by Scaliger, to the elucidation of corrupt passages; but the notion that a pure stream of Attic undefiled percolates through these writers, that it has disappeared from the texts of the classics through corruptions not altogether accidental, and that the "Atticists" ought always to be followed in preference to the consensus of all MSS., is mainly the work of a living scholar, Prof. Cobet, of Leyden, and is by no means universally recognised. Errors were regarded as due to mistakes either in the eye or the ear of the scribe, according as he copied or wrote from dictation. The new doctrine attributes to him a less passive form of stupidity, and supposes that "what he was pleased to call his mind" was mischievously employed in substituting the familiar forms of late Greek for the genuine Attic of the archetype before him. Recent editions of the classics show that this view is everywhere partially accepted, but seldom carried out with entire consistency. Cobet almost alone has the courage of his opinions, or, as Mr. Rutherford would call it, the "nerve" which he attributes to his favourites, such as Phrynichus among the ancients and Dawes among the moderns. It is but a single step, though a long one, from the legislative to the executive—from *aut scripsit aut scribere debuit* to *non potest non scripsisse*. But to carry out this theory to its extreme consequences is to do violence to some of the most cherished traditions of English scholarship.

The contrast between the freedom of Greek—the language of life—and the narrow rules of Latin—the language of law—is sufficiently familiar, and we have lately been reminded of it in Prof. Jebb's charming little volume on Bentley. The tradition of freedom has indeed been kept up by a succession of Cambridge scholars from Bentley to Shilleto, not to mention living names; and among those who have been trained in this school there is a natural reluctance to accept Cobet's rigid dogmatism, on points whether of accident or syntax, in all its fullness. He seems to have come in to spy out our liberty of believing that, though the usual form of construction may be so-and-so, the Greeks, out of that love of variety on which Shilleto was never tired of decanting, occasionally indulged in a fling outside the strict grammatical traces. Cobet's attitude towards the texts of ancient authors is that of a schoolmaster possessed of full confidence in his own infallibility. His ideal critic in the past is a man like Henri Estienne, who wrote before the complex phenomena of Greek grammar had been investigated, and used his native vigour in correcting everywhere the recondite into the obvious. The later Greeks, Cobet tells us, imposed upon Hemsterhuis and Heindorf, but they could not impose upon H. Stephanus; and incidentally we learn that Bekker and Dindorf are also among those who have been weak enough to defer to MSS. This was written nearly thirty years ago (*Var. Lect.* 1854, pp. 98 ff.); but W. Dindorf, in his honoured old age, has not yet been drilled into uniformity. We will give an example or two in illustration of our meaning. In his text of the *Oratores Attici*, Dindorf now refuses, on subjective grounds,

to believe that Demosthenes can have used *οἶμαι* interchangeably with *οἶμαι*, *ἐάλωκα* with *ἤλωκα*, *τέως* with *ἔως*; but he still allows evidence to decide between *εἶθνα* and *εἰθύνη*, between the Attic and un-Attic futures of *καλῶ* and its compounds. And Classen, in his edition of Thucydides, leaves in his text the aorist infinitives (in a future sense) which excite the wrath and contempt of Cobet.

Mr. Rutherford is a disciple of Cobet, but an independent and discriminating one. The more doubtful part of Cobet's system, his ruthless elimination of everything exceptional in point of syntax, fortunately lies outside the scope of the present work. One of the few exceptions is discussed farther on. Phrynichus himself is mainly occupied with the purity of the Attic vocabulary and the genuine Attic forms of words, to the exclusion of syntactical discussions. In the hands of its present editor, the Ecloga becomes the vehicle of much new truth respecting the Attic verb, to which he has devoted special attention; and we are glad to learn that this is only an instalment of an "authoritative" work on the same subject. Among the observed facts of Attic usage which he has formulated for the first time, the most important is one relating to dependent verbs. He states it as "a rule which is quite absolute in Attic Greek," that "all verbs expressing the exercise of the senses, or denoting any functional state or process, have the inflections of the middle voice either throughout or in the future sense" (p. 138); and gives the proofs at great length in another article (pp. 376–412). Another good generalisation is at p. 99, where it is shown that the perfect and aorist passive always agree in the presence or absence of the *σ*—e.g., *τέτραμαι ἐτάσθην*, but *ἐγνωσμαι ἐγνώσθην*. On the metaphysics of grammar Mr. Rutherford is sometimes equally happy; a subtle distinction between the Greek and English perfects is well pointed out at p. 200.

On the rare qualities of the Attic dialect, "the precision and symmetry which were peculiarly its own," "its grand and simple outlines," our author rises into eloquence. Of one of these qualities we cannot but think that too much is made. The "law of parsimony," to which he repeatedly refers as excluding alternative forms, is alone insisted upon; the counter claims of variety are systematically depreciated. A tendency to narrow the available choice of words and forms was undoubtedly at work during the culminating period of Attic Greek, but before it had had time to bear its full fruit the Macedonian sway had begun, and the loss of political independence had been instantly followed by the decline of the language. The imperial instinct, as Mr. Rutherford has himself well pointed out, was an important factor in making the Attic dialect what it was. It is no casual coincidence that Menander, in whose style, charming as it is, Cobet traces the first serious falling off from the standard of purity, was a child at the time of the battle of Chaeronea, and brought out his first play a year after Alexander's death. On the other hand, that "the law of parsimony" was arrested in its course is shown by significant traces in the very authors to whom the purists appeal. No form in Attic Greek

is better attested than *πρόβεις* as the plural of *πρεσβυτής*, yet no one doubts that Demosthenes used the obnoxious *πρεσβευταί* in at least one passage (703, 22), as Andocides used it before him and Deinarchus after him. Plato alone among prose writers has the form *ἔκτῃμαι* interchangeably with *κέκτῃμαι*. We may be told that the MSS. are at fault, but in such passages as Theast. 198D, ἡ μὲν πρὶν ἐκτῆσθαι τοῦ κεκτῆσθαι ἔνεκα, and 199A, δὲ μὲν τις ἔκτῃται μὴ κεκτῆσθαι ἀδύνατόν φαμεν εἶναι, the ear at once recognises, not merely the "love of variety" for which Mr. Rutherford makes no allowance, but a subtle instinct of euphony upon which uniformity either way would jar. We cannot, therefore, subscribe to the dogmatic assertion at p. 82:—"This only is certain, that in a language so precise as Attic the same writer did not, as MSS. would indicate, use two kinds of augment in the same work and the same page of that work."

At p. 425 we find an admission which, if accepted, would be somewhat damaging to the "precision and symmetry" claimed for the Attic dialect. The dictum of Phrynichus, that the aorist infinitive after *μέλλω* is simply a mistake, any instances to the contrary notwithstanding, is noticed in the Preface as a characteristic example of his "scholarly nerve and wholesome masculine common-sense." We at once concede to Mr. Rutherford that his predecessor Lobeck is wrong in claiming this construction as allowable in prose; and that Sophocles in *Oed. Tyr.* 967 must have written *κτενεῖν ἐμμελλον* (for which there is MS. authority) not *κτανεῖν*, as he had no temptation to write otherwise. But Mr. Rutherford is much exercised at *μέλλω παθεῖν* in Aesch. *Prom. Vinct.* 625, and still more at two passages in his favourite Aristophanes, where the aorist cannot be altered or explained away. But instead of assuming that such exceptions are due to "negligent or ungrammatical writing," an almost fatal admission if the "Lessons of Comedy," on which he so much insists, are to have their full weight, it is easier to suppose that in Comedy, no less than in Tragedy, some allowance was made for the exigencies of metre. Dindorf, who himself reads *κτενεῖν* in the passage from Sophocles, agrees with Porson in accepting *μέλλω παθεῖν* in Eur. *Med.* 392, while altering *κτανεῖν* in *Orest.* 1578 and bracketing, on other grounds, *ἀναλαβεῖν ἐμμελλε* in v. 292 of the same play.

The same unwillingness to allow for metrical considerations vitiates, we cannot but think, Mr. Rutherford's whole argument as to the choice between *χθές* and *ἐχθές*. The cognates, Sanskrit *hjas* and Latin *hesi* (*heri*), as well as Greek usage from Homer downwards, point to the guttural as the initial letter. Yet on the strength of thirteen examples of *ἐχθές* in Aristophanes and the Comic Fragments and one in Tragedy (*Antig.* 456), as against eight of *χθές*, we are told that *ἐχθές* was the regular Attic form; that the old Ionic *χθές* was naturally retained in phrases like *χθές τε καὶ πρόωγ* (a rather large deduction), but that "to a seeing eye the principal fact is placed beyond dispute by the evidence given" (p. 372). To an eye which does not see through Mr. Rutherford's spectacles, the *ἐ* in *ἐχθές* is as much an excrescence as the *α* in *ἀσταχυς* or

ἀστερονή. From the nature of the word, it is likely to occur only in dialogues—i.e., in the Dramatists and in Plato. Is Mr. Rutherford prepared to alter the famous opening words of the *Republic*, *Καθὼν χθές εἰς Πειραιᾶ*? On the question between *χθίνος* and *χθεινός* as the adjectival form, *χθίνος* being admittedly poetical, it is stated that "it occurs twice in Aristophanes, *Ran.* 987 and *Vesp.* 282, but in metres too irregular to control the form." This is a slip; for in the passage from the *Frogs* the metre is dimeter iambic, and *χθίνος* is obviously required.

Among other slight errors of the pen may be noticed the phrase "late writer," twice applied to Aristotle (pp. 357, 500). We know what Mr. Rutherford means; but the expression would be misleading if the *Phrynichus* were likely to be read by any but advanced scholars. He is also unfortunate in giving "Phaborinus" as the name of the writer whom Phrynichus singles out some ten or twelve times for unfavourable remark, and who, he tells us, picked up the barbarism *ἐπεξελευσόμενος* from the gutter (*ἐστρεψεν ἐκ τριόδου*, p. 103). Mr. Rutherford is of course aware that the name of the rhetorician of Arles was Latin before it was Greek, and that *Φαβωρίνος* is Phrynichus' transliteration of *Favorinus*. By a curious coincidence, one of the earliest modern editors of Phrynichus (in 1523) was a certain Guarino of Faversham, Bishop of Nocera, who Latinised himself after the fashion of his age as Varinus *Phavorinus*—a further reason, it would seem, for spelling the name of the first-century Gaul correctly with an F. W. WAYTE.

A NEW SANSKRIT GRAMMAR.

MR. ANONDORAM BOROOAH, of the Bengal Civil Service, whose Anglo-Sanskrit Dictionary was favourably reviewed in the ACADEMY by Prof. Max Müller, intends to publish a comprehensive Sanskrit Grammar in twelve volumes. Its object will be to simplify the rules as far as possible; to illustrate them fully from the existing literature, both ancient and modern; to give a complete commentary on all the Vedas; and to lay the foundations for a critical examination of the language in all the philological and indirectly historical bearings.

"The first volume will be the preface to the series, and will contain a thorough examination of the native grammarians. All the rules of Pāṇini will be quoted in my order, and translated and explained in the spirit of his distinguished commentators, with elucidatory citations and reproductions of modificatory views, whether found in them or in later grammarians. At the same time references will be given to the body of my work where my views are stated and the amount of evidence on which they rest, including in some cases the language of the very grammarians who have laid down antagonistic injunctions. Other old works bearing on the structure of the language, such as the *Unādi Sūtras*, will also be quoted and commented on. At the end of the volume, tables will be given, showing the order in which the *sūtras* are quoted, explaining the technical terms and the *sūtras* where they occur and so forth.

"The second volume will treat of letters and their changes; the third, of derivations from roots both primary and secondary; the fourth, of secondary derivatives; the fifth, of compounds; the sixth, of declension; the seventh, of verbs; the eighth, of accent; the ninth, of syntax; the tenth, of prosody; the eleventh, of rhetoric; the twelfth volume will be the index and will consist of about 2,000 pages. It is hoped this Index will be a more complete

registration of Sanskrit words than any Sanskrit Dictionary yet published. Exercises from printed works will be given for correction, so that the rules may be thoroughly comprehended.

"The work will be published after the materials for the first nine volumes are collected, but not necessarily in the order here indicated. The materials already collected enable me to state that even in the simplest matters, such as letters, simple combination, declension of masculine stems in short *i*, I shall be able to produce facts which are recognised in practice but not touched upon in any Sanskrit Grammar I have yet come across. Great care will be taken in the selection of examples, so that there may be on the one hand no mistake about the gender and feminine stems of words, and on the other a sufficient variety from the different stages of Sanskrit literature. The principles of selection will be explained at the beginning of each volume. Being free from official duties, I am enabled to devote my entire energies to this work, and several *pandits* will assist me in its mechanical execution.

"To subscribers, the price of each volume will be at the rate of 1 R. 12 as. (in India) or 3s. 6d. (in England) for every 100 pages. To non-subscribers the price will be considerably higher.—ANONDORAM BOROOAH, 49 Cossypoor Road, Calcutta."

NOTES OF TRAVEL.

DR. EMIN-BEY'S map of the country to the east of Gondokoro forms the leading feature in Petermann's *Mittheilungen* for July. Being based upon careful route surveys and numerous compass bearings, and supplemented by information collected by Mr. Lupton, it constitutes a valuable addition to the cartography of the Upper Nile. The accompanying notes, like everything from the pen of Dr. Emin, are full of interest, and abound in information on the flora, fauna, and inhabitants of the country explored. The Latuka, whom Sir S. Baker believed to be Gallas, are described as Negroes occupying an isolated position in the valley of the Nile, and differing in every respect from their neighbours; while the Behr or Berri and Shuli, respectively to the north and south of them, are kinsmen. To the east of the Latuka, at a distance of a few days' journey, begins the country of the Gallas, whose lofty mountains were distinctly visible beyond the broad valley of the Tu.

THE same number of the *Mittheilungen* contains a connected account of the Arctic expedition of the *Jeannette*, with maps; an article on M. Charnay's discovery of the "Phantom City" in the territory of the Lacandonnes; and Dr. Behms' usual monthly record of geographical progress.

SCIENCE NOTES.

Formation of Metalliferous Veins.—Prof. J. Le Conte and Mr. W. B. Rising have contributed to the current number of the *American Journal of Science* an interesting paper on the phenomena of metalliferous vein-formation now in progress at Sulphur Bank, California. The bank is a low, rounded hill, rising from the margin of Clear Lake, and consisting of lava resting upon highly inclined beds of sandstone and shale. Below the lava-cap is a soft breccia, with hot muddy deposits, permeated by solfataric waters. These thermal waters are charged with mineral matter, and throw down precipitates of sulphur, silica, iron-pyrites, and cinnabar or sulphide of mercury. Some of these deposits are sufficiently important to be worth systematic working. At first, the workings were for sulphur only; then, for sulphur and cinnabar; and now the operations are carried on extensively for cinnabar only. The phenomena presented at Sulphur Bank are

extremely interesting to the student of mining, inasmuch as they afford an example of a metalliferous deposit which is in course of formation under our very eyes.

THE sixteenth and last ordinary meeting for the session of the Royal Society of Edinburgh was held on July 17. Prof. Balfour, the vice-president, called attention to the fact that the centenary of the society is approaching, and suggested the propriety of some celebration of the event. The following is a classification of the subject-matter of the papers read during the session:—Natural philosophy, 25; geology, 9; mathematics, chemistry, and natural history, 7 each; physiology, 6; botany, 4; mineralogy, 2; and a few others upon literature, antiquities, &c.

PROF. LUNGE, of Zürich, whose important work on Sulphuric Acid and Alkali Manufacture is well appreciated in this country, has completed a very elaborate treatise on the Distillation of Coal-tar. The book will be published by Mr. Van Voorst during the present month.

MR. GROTE, President of the New York Entomological Club, on the occasion of a recent visit to England, left with Mr. Van Voorst material for an essay on the *Noctuidæ* of North America. This is now printed, with four coloured plates of these beautiful moths, and will be ready for publication very shortly.

PHILOLOGY NOTES.

In the last *Programme* of the Gymnasium at Dordrecht, Dr. S. J. Warren has published a very able comparison of Alkestis with the Indian heroine Sāvitrī; and some curious notes on the origin of *stipulare*, or the breaking of a stalk in confirmation of a promise, a contract, a sale, or a gift. It was well known that this custom existed both among the Romans and the Germans, and that traces of it survive to the present day in such expressions as "mit Halm und Munde," "mit Hand und Halm," "rompre le festu," &c. Dr. Warren has been the first to point out a survival of the same custom in India. Hariakandra, when he had lost everything, is represented as selling himself; and in offering himself for sale he places a stalk on his head (*sirasi trinam dattvā*). This can hardly be taken in the sense of *trinīkar*, *vīṇḍere*, for he asks a lakh of gold pieces as his price. Dr. Warren thinks it is simply a sign that the king is a *bona fide* article of sale.

DR. HAUSKNECHT has taken over from Dr. Parow the task of re-editing from the MS. the Duke of Orleans's fifteenth-century English poems for the Early-English Text Society. They will probably be issued in the society's extra series this year.

THE first number of a quarterly journal of philology, entitled *Arkiv for Nordisk Filologi*, is now in the press, and will shortly be published in Christiania. The new organ will be edited by Prof. Gustav Storm (Christiania), assisted by Sophus Bugge (Christiania), Nicolai Linder (Stockholm), Adolf Noreen (Upsala), Ludv. F. A. Wimmer (Copenhagen), and Theodor Wisén (Lund); and various eminent Scandinavian and German savants have promised their support. All questions relating to Northern philology will be dealt with in its pages, which will also contain bibliographical notices and reviews; and contributions are invited in the English and German, as well as the Scandinavian, languages. Communications intended for insertion may be addressed to any of the editors.

SCHALICH EFFENDI, who was recently appointed by the Turkish Government to be curator of the libraries at Constantinople, has begun to compile a Catalogue of the MSS. and

printed books. Among the former he has already found some of great value, including a codex of *Anecdota*, which purports to be copied from one in the library at Alexandria. The original was doubtless destroyed in the general conflagration by order of Omar in the seventh century.

M. LAMY has presented to the Académie royale de Belgique the first volume of a critical edition of the works of St. Ephrem, or Ephraïm the Syrian—the popular divine of the Eastern Church in the fourth century. Hitherto the best edition has been that published at Rome (1732-46) by two Maronite priests. M. Lamy has collated the MSS. in the British Museum, the Bodleian, and the Bibliothèque nationale at Paris. With the Syriac text he has given a Latin translation, critical notes, and prolegomena. This first, entitled *Hymni et Sermones*, comprises fifteen hymns upon the Epiphany, fifteen upon the Last Supper, eight upon Good Friday, and eleven homilies upon the Passion, the Resurrection, &c.

A POSTHUMOUS work, by the late A. de Longpérier, has just been issued by M. Ernest Leroux, entitled *Mémoires sur la Chronologie et l'Iconographie des Rois Parthes Arsacides*. It is illustrated with eighteen copper plates. A complete list of the papers contributed to various journals, &c., by de Longpérier will be found in the *Bulletin* of the Société nationale des Antiquaires de France.

HERE TURNER, of Leipzig, announces the first volume of a translation of the Edda into Hungarian by M. Lomnitz Meltz Hugo. It will contain the *Atlamal*.

THE next volume, being the seventh, in the series entitled "Porta Linguarum Orientalium, sive Elementa Linguarum," published by H. Reuther, of Carlsruhe, will be *Grammatica Persica*, by Dr. S. Landauer, of Strassburg.

MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, July 6.)

THE LORD TALBOT DE MALAHIDE, President, in the Chair.—The Rev. W. J. Loftie read a paper, and offered some observations, on the Hawk sacred to Chonsu, with special reference to Ramesses XII., and Raneferoo his Queen; and described the manner in which the various towns of Egypt favoured the worship of different animals, and the high favour in which the hawk was held, evident indeed, as the noble chairman observed, at the present day.—Mr. W. Brailford read a paper on the Monuments of the Seymours at Great Bedwyn, Wilts, which included a notice of the remarkable and lengthy inscription on the tomb of Sir John Seymour, the father of Edward Duke of Somerset and Jane Seymour, who died in 1536.—Prof. Bunsell Lewis read a paper on the Antiquities of Autun, the capital of the Aedui of Cicero, giving an eloquent and exhaustive account of the treasures in the Musée Lapidaire, including the famous Christian epitaph; the Ceramic inscriptions; the architectural peculiarities of the Cathedral; the Roman gates, &c. Mr. Lewis stated that according to the best authorities Bibracte was situated, not at Autun, but on Mont Beuvray; this Gallic *Oppidum* included within its ramparts three plateaus, La Terrasse, Le Parc aux Chevaux, and Le Champplain, separated by three valleys, La Goutte Dampierre L'Écluse, and La Come Chaudron. In ancient times La Terrasse was the most important locality, as it contained the Temple and the Forum. On the other hand, La Come Chaudron is the most interesting to us, on account of M. Bulliot's discoveries, which throw much light on the art of working in metal as practised by the Gauls, and more especially on their processes of enamelling. Mr. Lewis further expressed a hope that English antiquaries might be induced to deviate from the beaten path of tourists, and see for themselves the results of the "Fouilles du Mont Beuvray."—Capt. E. Hoare read some notes on a sepulchral

statuette, which he exhibited, of an hereditary lord and landowner, of a very rare type, circa 1000 B.C.—Mr. H. R. H. Gosselin laid before the meeting some fourteenth-century tiles from Bengoe Ohroh, Herts.—The noble Chairman made some observations on the Roman remains and other antiquities in Algeria, and exhibited some flint celts and several early antiquities from that country.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, July 11.)

GEN. PITT RIVERS, President, in the Chair.—Lord Talbot de Malahide read a paper on the longevity of the Romans in North Africa. The author gave several instances of epitaphs and inscriptions on tombs of persons whose age had exceeded 100 years; in some cases the age of 120, 130, and even 140 years had been attained.—An interesting discussion ensued, in which Mr. Villiers Stuart, M.P., Mr. Moncreux Conway, Commander Cameron, Mr. John Evans, Mr. Francis Galton, Sir Joseph Fayrer, Dr. Allen Thomson, Mr. Carmichael, and the President took part.—Capt. E. F. Burton read a paper on some Neolithic implements and other objects brought by himself and Commander Cameron from Wassa, on the Gold Coast. A large number of objects were exhibited by the authors and Mr. Ross.—Gen. Pitt-Rivers read a paper on the Egyptian boomerang, and exhibited several specimens.—A large collection of Bushman drawings was exhibited by Mr. M. Hutchinson.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oleographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

On *Imitative Art, its Principles and Progress*. By Thomas H. Dyer. (Bell & Sons.)

DR. DYER, whose useful books on the Antiquities of Athens and Rome are so well known, brings to the production of this last work of his, not only a vast amount of accurate and varied learning, but also a keen natural appreciation of beauty in the art of various times and countries. His book comprises critical and historical treatises on the art of Greece and Rome, as well as on the later art of Italy during the Renaissance, with an introductory essay on the general principles of Beauty. A large amount of information about these periods is compressed into a single volume without the subject being rendered dry and wearisome—the usual result of condensation. The chief fault of the book is its want of arrangement and classification. Accounts of the art and intellectual state of mediæval Italy are mixed up with descriptions of the various classical periods in a very confusing manner.

In the earlier portion of this book Dr. Dyer discusses Burke's and other theories of Beauty. He comes to this conclusion:—

"Beauty is subjective; it lies, not in the object, but in the mind which perceives it. If it lay in the object, it would be absolute, and capable of definition, in which case there could be no difference of opinion about it."

With regard to the propriety of the colossal in art, the author regards largeness, though not colossal size, as being a necessary element of sublimity in sculpture; contrasting it with painting, which may be diminished in scale without loss of grandeur. He instances Raphael's painting of Ezekiel's Vision, in the Pitti Palace, as an example of great pictorial grandeur in a miniature form. It

may, I think, be doubted whether this distinction is even generally true. The wonderful Siris bronzes now in the British Museum—small *repoussé* figures of a hero combating with an Amazon—not quite six inches high, were thus criticised by Thorwaldsen:—

"In my judgment, these bronzes afford the strongest possible proof of this truth—that the grandiose does not lie in the mass, since this diminutive work is truly great, while many of the modern colossal figures are, notwithstanding their dimensions, extremely petty and mean."

In like manner the little bronze heroic figure from Tarentum, also in the British Museum, is no less striking an instance of stateliness and breadth of effect produced in plastic art by a figure quite insignificant in size.

Dr. Dyer carefully examines and criticises the views taken by Winckelmann and Lessing as to what amount of expression should be attempted in sculpture. The masterpieces of Greek art are remarkable for their noble simplicity and quiet grandeur, united with a certain reserve, which avoids the portrayal of a too complex frame of mind. Some one attribute, such as power, strength, wisdom, and the like, presents itself in the Greek statues of the gods. Each has a well-defined character, and is not made up of a compound mass of varied feelings and passions. Even when mortals are represented, their physical beauty is not marred by the struggles of a tortured human soul within the body. In spite of their wonderful power, a Greek would have shrunk with disgust from such representations as the statues by Michelangelo on the Medici Tombs—figures whose whole attitude and expression epitomise, as it were, the crimes and fruitless struggles of the age and country in which Michelangelo lived. The happier Greek could represent life without a painful sense of its mystery and sorrow; he could contemplate death without shrinking.

"*Nam triste videtur
Quoquam? Nonne omni somno securius exstat?*"

Christianity had not yet added needless terrors to men's thoughts of death by making a hell of endless torture a prominent dogma of its faith. "Even Medusa's petrifying head wanted not a certain beauty. Death was personified, not, as with us, by a hideous skeleton, but as the gentle twin brother of sleep." Dr. Dyer gives as an instance the statue of Death in the Louvre—a beautiful youth crowned with poppies; but he does not mention the more thoroughly Greek example, a very graceful figure sculptured in relief on one of the columns of the great Temple of Artemis at Ephesus, the work of Scopas or his school.

The various periods of Greek and Graeco-Roman sculpture are treated of in this volume at considerable length, and with much clearness and appreciation. Hardly sufficient allowance, perhaps, is made for the brilliance of the surroundings, and the Greek skill in dealing with various materials, when the author says of Pheidias' Chryselephantine statues:—

"Add that these statues were rendered imposing by the costliness of their materials being partly made of ivory and gold—a remnant of barbar-

ism which must rather have detracted from their merit as works of art in the eye of the cultivated spectator, however calculated to strike the imagination of the vulgar."

His estimate, too, of the artistic value of the Venus of Milo (Melos) is surely too low when he writes:—

"There are faults of execution which destroy the idealism of the work, and would hardly have been committed by an artist like Scopas. The head is disproportionately small, the right cheek is larger than the left, and the angles of the mouth are dissimilar."

Judging from the sculptures from the Mausoleum of Halicarnassus—the best-known works of Scopas and his pupils—it can hardly be thought that these statues and reliefs, fine as they undoubtedly are, belong to a school of sculpture superior, or even equal, to that which produced the Melian Aphrodite.

A smaller portion of the book is devoted to the history of Italian painting from its revival at Siena in the thirteenth century down to the time of Michelangelo. This part is no less chaotic in arrangement than the rest, but, in other respects, it is very ably written. Dr. Dyer gives an excellent description of the fresco of the Last Supper in the Monastery of S. Onofrio (now the Egyptian Museum) in Florence. In discussing the question as to whether it is the work of Raphael, he writes: "On the tunic of this figure [St. Thomas] some letters are said to have been discovered indicating Raphael's name, but they vanished in the cleaning." And farther on: "There is neither proof nor remote inference by which the authorship can be even probably established." Having examined and made notes of this fresco before it was scraped and repainted, I can bear witness to the fact that the letters RAZ. VR. MDXV were really on the collar of St. Thomas's tunic—very strong proof as to the authorship. Of one of Raphael's works much later in style Dr. Dyer says:—

"The picture of Christ bearing his Cross, called the 'Spasimo di Cecilia,' now at Madrid, I have not seen; but, from the descriptions and engravings of it, it would appear to be a masterpiece of pathos, especially in the attitude and expression of the Virgin."

The name of this picture should be "Lo Spasimo di Sicilia," so called from its having been painted for a church at Palermo. Its drawing and composition can hardly be praised too highly; but the somewhat harsh colouring and the prevalence of heavy purple tints bear witness to its not being wholly the work of Raphael's own hand, but as having been painted, at least in part, by one of Raphael's pupils, probably Julio Romano or Perino del Vaga.

J. HENRY MIDDLETON.

THE HAMILTON SALE.

v.

TO-DAY we close the brief notes for which space has here been afforded on the Hamilton sale, and the art season at Christie's may be said to end almost at the same time; little is likely to appear of interest after that dispersion of Mr. Ruskin's lovely Turner drawings which occurs only to-day. Saturday last at the Hamilton sale was devoted to miniatures. There were about 200 of these. Some were of undoubted

value and interest, and many were extremely poor and worthless. Excellent judges reckoned that of absolutely first-rate miniatures there was hardly one in the sale. But the public were very mad, and it seemed that second-rate things could not be paid for too dearly. Were the Janets entirely undoubted? one would like to know. Was the Hilliard, even allowing for its brilliancy, worth quite the 2,700 guineas more or less cheerfully paid for it? How about the Petitots? And were even the Cosways—which, though attractive, are less valuable—favourable instances of that agreeable art? In truth, the *provenance* of the collection had much to do with its prices. These were, in many instances, without shadow of reason; and service is done to that part of the public which may still some day buy intelligently when it is declared in plain speech that the purchases during the last few weeks have too often been silly. We append a list of some of the principal prices obtained on Saturday.

A portrait by Hilliard fetched, as has been said above, 2,700 guineas. It was richly set with diamonds, represented James the First of England, and was bought by Mr. Joseph, of Bond Street. The miniatures which were attributed to Janet reached the sum of 1,875 guineas. Petitot's miniature of the Dauphin fell to Mr. Joseph's bid of 650 guineas. The same buyer, who was really the purchaser of nearly all the much-sought-for things on Saturday, acquired a large miniature portrait of Henry the Fourth of France assigned to Philippe de Champaign; for this he paid 310 guineas. Messrs. Colnaghi acquired, for 280 guineas, Oliver's brilliant little miniature of Lady Digby after Vandyke. A head and shoulders of a girl, after Greuze, by Lenglois, fell for forty-two guineas. By Cosway—on the whole, the most fashionable, the most widely admired, of English miniature painters—there were not many examples. Two, however, fetched 140 guineas and 185 guineas respectively. A Zincke sold for 25 guineas: it was stated to be the portrait of a Duchess of Suffolk. A portrait of Lord Sandwich, in a brown dress and lace cravat, was attributed to Cooper, the famous English miniaturist of the Commonwealth; and Mr. Philpot became its possessor for 205 guineas. A little work on vellum, a "St. George and the Dragon," stated to be after Rafael, and given by the Duke of Urbino to our Charles the First, fell for a very moderate sum; and, it is surmised by a daily paper, passed into the collection of the Queen. Again, for a very moderate price, there went to a private purchaser a desirable little work on copper by Breughel. Such opportunities, however, were few; and we must end, as we began, by saying that, on the whole, Saturday's sale was distinguished for high prices and for second-rate things.

By Monday the fever seemed to have abated, and, though there was a good attendance, at all events of on-lookers, the china went for sums that bore some relation to the value of the pieces purchased. Sèvres, Frankenthal, Dresden, and Berlin were included in the sale of that day. At the same time, there were exposed to view for sale later in the week certain only too brilliant, and not very tasteful, pieces of tapestry, which, nevertheless, sold for large sums, and many miscellaneous objects of art and what the French call high curiosity. There were tazas of jasper, specimens of rock crystal and of agate, cameos, intaglios, some Greek coins, few in number, but deemed good; and, in fine, something of almost all that is collected, or, at least, that was collected years ago by men of taste who had a fortune to expend on the acquisitions of the grand tour, and a fortune with which to recruit, during subsequent years, the countless treasures of their cabinets.

ARCHAEOLOGICAL DISCOVERIES AT ARDEA.

THE Roman Press has noticed, but in a very inaccurate fashion, the Ardea find, which yielded antiquities that were subsequently exhibited in the prehistoric and ethnographic museum in the palazzo of the Collegio Romano. I addressed the Imperial Institute of Archaeology on the subject of these discoveries at a meeting held on March 17 last (*vide Bullettino Inst. corr. arch.*, 1882, p. 72), when I specially called attention to a vase bearing an incised archaic inscription, which I myself had found, and recalled the fact that about a year ago my friend the Duke Sforza-Cesarini presented to the prehistoric museum some rudely fashioned vases similar to the specimens found in the archaic cemeteries of Mount Albanus, and that the fact of these vases having been found in the district of Ardea then induced me to cause further explorations to be made, in the hope of discovering the site of the cemetery of the capital of the Rutuli and the city of Turnus.

Profiting by the researches of the first explorers, the Duke Sforza-Cesarini and myself began to excavate on the left bank of the little river Incastro, close to the castle which once belonged to the Colonna family, and passed in the sixteenth century into the hands of the Cesarini. This castle was built on the exact site of the acropolis of Ardea. I found on a spot which had evidently been already disturbed several fragments of archaic stoneware, and among these a portion of a hut-urn like those found on Mount Albanus. Unfortunately, it was not possible to get a single tomb intact, the earth having been disturbed to a depth of nearly ten feet; and we came upon vases and lamps of the late period of the Republic, mixed with archaic pottery.

Subsequently to this meeting, I made further explorations in the company of my friend Dr. E. Dressel. By the kind permission of the Duke Sforza-Cesarini, I was able to continue the explorations on the left bank of the Incastro; and I carried out other excavations on the level ground known as Civitavecchia, lying north of the existing castle, which was the actual site of the town of Ardea. This ground is bounded on the north by the massive walls which served as the foundations of the *agger*. These walls are very well preserved, and altogether present a far more imposing appearance than the *agger* of Servius Tullius discovered at Rome near the railway station.

But these fresh explorations also failed to yield virgin soil. Among the antiquities found were stoneware fragments of the most archaic type of Latin pottery, which are worthy of careful attention. Some of these fragments bear the closest similarity to the relics found in the *Terramare* of the Emilia.

The Roman papers also made mention of discoveries of bronze fibulae; but herein they confounded the results of my researches with those obtained during the construction last year of the Ardea cemetery, when, as I am informed, some bronze fibulae and stoneware fragments of the usual archaic pattern came to light as the foundations of a wall were being dug.

F. BARNABEI.

OBITUARY.

CHARLES HEATH WILSON.

CHARLES HEATH WILSON, whose death was recorded in the ACADEMY last week, was the son of Andrew Wilson, a distinguished Scotch landscape painter and master of the Trustees' School at Edinburgh, where Wilkie and several other pupils of note were first taught. It was in this school that the young Wilson received his early education in art; but in 1826

Andrew Wilson went to Italy and settled there for twenty years with his family, painting Italian landscapes that were much esteemed. Charles Heath Wilson, however, when grown up, returned to Edinburgh, and began to practise as an architect. Shortly after this the so-called "schools of design" were instituted by Government; and Mr. Heath Wilson was appointed to the difficult office of Director "at a time," says Mr. W. B. Scott (who has kindly supplied me with much of this information), "when neither artists nor manufacturers, and still less the Board of Trade, had arrived at any definite understanding of what should be done." The students, also, were insubordinate, so that Mr. Heath Wilson, after some trial, resigned. He was next appointed master of the New Art School just opened at Glasgow, where he continued for eighteen years, until, the old Board of Trade appointments being withdrawn in 1864, he retired on a sufficient pension. From this period Mr. Heath Wilson, following the example of his father, lived with his wife and family in Italy, and principally at Florence, where he was the life and centre of a large literary and artistic circle.

So much I have been able to learn concerning the outward facts of Mr. Heath Wilson's life; but how shall I speak of the man himself, whom I have never seen, and yet whose loss I mourn as that of a dear friend? Our acquaintance was somewhat singular. It began in 1874 by my writing to him, as a perfect stranger, to ask information on some question of art in which he was interested. He replied with such kindly courtesy and fullness of detail that I was at once charmed. Ever since then we have kept up a constant correspondence, chiefly in the interests of the ACADEMY, but diverging very often into personal and general themes. Delightful letters some of his were, describing the various places—Lucca, Cadore, and others—where he went for his summer holiday when the heat of Florence became intolerable. Often, also, these letters were illustrated by delicate little pen-drawings, beautifully finished, giving views of places he thought would interest me. His enthusiasm for art was quite wonderful. One need only remember that some years ago, when he was already seventy, he had a scaffolding built five stories high in order to examine the frescoes by Michelangelo on the ceiling of the Sistine. On this he mounted day by day, and, as he told me, "dusted with reverent hand the dirt and cobwebs from the work of the master." In all that related to Michelangelo, indeed, his zeal was untiring. At the time that the Medici tombs were opened his excitement was unbounded, and I had two and sometimes three letters a-week from him detailing proceedings; and he did not, like most correspondents of the present day, write in post-card fashion, but filled six or eight pages in goodly old-fashioned style. For his services to art and literature Mr. Wilson was raised, a few years ago, to the rank of Cavaliere. His chief literary work was his *Life of Michelangelo*, published by Murray in 1876. This, though begun as a compilation from Gotti, ended in being an entirely independent work. Many of the views expressed in it are striking and original, and it has a delightful freshness about it that no mere compilation could have. It was this freshness, indeed, that was Mr. Heath Wilson's chief charm. He took an eager interest in all that was going on, whether it were English politics—which he often denounced most fiercely—art questions, the comet of last summer, or British tourists in Italy, who also excited his wrath. Never was any man more ready to impart his knowledge to others, or to do any act of kindness for them. Very many, besides myself, have lost a kind and ever-ready friend in Charles Heath Wilson.

MARY M. HEATON.

EGYPTIAN JOTTINGS.

THERE is now no indiscretion in revealing what has long been known to a few—that Arabi Pasha had been contemplating the improvement of his finances by the sale of the Boolak Museum to some European Government. With this object he obtained some while ago an appraisal of the value of its contents from M. Maspero.

LAST of the archaeological staff at Cairo, Prof. Maspero still remains at Boolak. Herr Emil Brugsch, M. Vassali, and the members of the French Archaeological College at Cairo are all gone; but the brave Director-General of Museums, who has seen military service in his day, refuses to abandon his trust. When last heard from he was living on board his steamer alongside the Boolak Museum, resolved not to quit his post. His position is believed to be one of extreme danger.

DR. SCHWEINFURTH annually devotes several months to the further exploration of Egypt, and the present season, April and May, was spent by him in the valley of the Nile, between Siut and Assuan, or in its immediate vicinity. There was no opportunity, under these circumstances, to make grand discoveries; still, some of the features of the edges of the valley are sufficiently striking to find a place on a map of Egypt drawn on a moderate scale. Deposits of Nile mud were found many feet above the level now attained by the river. Dr. Schweinfurth, although he narrowly escaped being "lifted" by Bedouins, found no reason to complain of the treatment extended to him by the natives of the valley. Europeans still remain to them objects to be venerated, and there was no lack of courtesy or respect. The Fellahs, we are told, are unanimously in favour of Arabi, and very proud of him; and, while never speaking of Ismail Pasha without a curse, are content with the actual state of affairs. This, of course, was written early in June, and opinions may possibly have undergone some change since then.

M. NAVILLE is in London for a few days, en route for Geneva.

THE statue of Mariette-Pasha at his birth-place, Boulogne-sur-Mer, was unveiled on Sunday last, July 16. Mariette himself lies buried in the garden at Boolak. M. Goblet, the Minister of the Interior, and also M. Tissot, the ambassador at the Court of St. James's, were present at the ceremony. The statue, which is said to be a faithful likeness, represents Mariette leaning one elbow upon the goddess Isis. On the pedestal are engraved hieroglyphic characters, a *fautail* of the Institute, and a laurel wreath. The base consists of a pyramid, with sphinxes at the corners. The sculptor was M. Jacquemart.

WE have received a copy of the second edition of Sir Erasmus Wilson's deservedly successful *Egypt of the Past*, of which it may, without undue emphasis, be said that, taken as it stands, it is by far the most readable, comprehensive, and trustworthy history of ancient Egypt yet given to the public. The present edition is in many respects an improvement upon the first. It contains many additional illustrations of great interest and beauty; it appears to have been carefully brought up to the level of the latest historical and archaeological discoveries; and the Index is now so full and complete that it raises the book to the standard of a work of reference.

WE are glad to be able to add that the health of Sir Erasmus Wilson has greatly improved since his arrival at Westgate-on-Sea; and that he is now making rapid progress towards recovery.

NOTES ON ART AND ARCHAEOLOGY.

We understand that the Fine Art Society are preparing for publication Mr. Frederick Wedmore's *Four Masters of Etching*. The issue of this book will necessarily be confined to a small *édition de luxe*, in consequence of its containing four original etchings, apart from any minor illustrations. These etchings have been selected as being among the best obtainable representations of the best modern masters, with the exception of Méryon, on whom Mr. Wedmore has perhaps already delivered himself sufficiently. The masters are Seymour Haden, Whistler, Legros, and Jules Jacquemart, each of whom will be represented by a very characteristic etching.

A SMALL, but choice, collection of water-colour studies by Mr. J. Rollin Tilton, an American artist whose works are too little known in this country, will be on view in the course of a few days at the Burlington Gallery. These sketches are chiefly of scenes in Venice, Egypt, and Spain, and are remarkable for luminous effects of light and colour. It is, however, as a painter in oils that Mr. Tilton is best known in Rome and in the United States, where he is justly famed for his masterly interpretation of atmosphere, distance, and sunlight, and for his pre-eminent gift of colour.

THREE oil-paintings of great interest may now be seen at Colnaghi's if enquired for, though they are not, strictly speaking, on view. They are—a reclining Danaë and a group of Cupids, both by Titian, and a view on the Roman Campagna, by Claude. The latter is remarkable as a close and careful study of nature, entirely free from the master's accustomed mannerisms. The Danaë repeats the attitude of the famous Titian's Venus at Florence, the accessories being heightened with gold. The group of Cupids once formed part of a frieze painted upon canvas by Titian for the decoration of a room in his own palace at Venice. Some morsels of this frieze were lately found *in situ*, the threads of the canvas and the tone of the colour corresponding precisely with the beautiful fragment now at Pall Mall East.

THE *Magazine of Art* for August will contain engravings after Messrs. Alma-Tadema, Briton Rivière, Legros, Leader, Clausen, and Hennessy. The "living artist" is Mr. G. H. Boughton, the notice of whose life and work is illustrated with engravings of his "Heir Presumptive," his "Rose Standish," and his "Dutch Sea-side Resort," the last of which is in the present Academy exhibition.

MR. CARL HAAG has been elected an honorary member of the Society of British Artists; and Messrs. Fred. Barnard, Edward F. Brewtall, John Charlton, A. H. Marsh, John Scott, J. D. Watson, T. J. Watson, and R. C. Woodville, members of the society.

WE have received from the Council of the Art Union of London a set of five engravings by M. Leopold Flameng after Mr. Frith's "Road to Ruin," which form the principal prizes at their annual distribution this year. The series of pictures was, we believe, painted with this very object; and herein, perhaps, lies its chief justification. M. L. Flameng is an artist; and his skill is not entirely lost even on such material. The impressions before us, though they can never be in themselves pleasing, owe at least as much to the engraver as to the painter. They are an additional example of the debatable ground which separates (or fails to separate) line-engraving from etching. We do not understand why they should be dated 1878.

OF a very different order of art are the photographic reproductions of the principal pictures in Hampton Court Palace, of which Messrs. W. A. Mansell and Co. have sent us specimens.

Even if we take the liberty of disregarding some of the attributions, no gallery is richer in historic portraits than that at Hampton Court; and those of the Stuart period have the additional advantage of being mostly genuine. Now, reproduction by photography (of which we are not always ready to approve) happens to be entirely justifiable in the case of portraits, as may be evidenced by Messrs. Sampson Low's *Great Historic Galleries*. We can give these no higher praise than to say that they need not fear comparison with those in that excellent series. The total number of photographs is 104 of the smaller size and 44 of the larger. The difference in price between the two sizes is more than made up for by the difference in grandeur. Of those before us, Lely's "Duchess of Cleveland as Minerva" is one of the finest photographs from a picture that we have ever seen. We trust that it will be permanent. It is only just to mention that the photographer is Mr. L. B. Fleming.

YET a third form of art is represented by the oleographs of M. A. de Neuville's two pictures of the Zulu War—"Saving the Queen's Colours" and "The Last Sleep of the Brave"—which are published by Mr. John G. Murdoch. We are prepared to grant that the colours of the originals have been reproduced with marvellous truth; but still these are not exactly the sort of wall decoration we should like to have always with us.

ON the occasion of the French national fête on July 14, M. Bonnat (painter) and M. Ballu (architect) were promoted to be commanders in the Legion of Honour; M. Vaudremer (architect) and M. Cain (sculptor) to be officers; and MM. Cazin, Gerver, and Pille (painters), MM. Idrac and Lanson (sculptors), M. Duthoit (architect), and MM. Waltner and Laguillermie (engravers) were nominated chevaliers.

Correction.—In Mr. Fisher's letter on Botticelli's "Assumption," in the ACADEMY of last week, for "an eagle grasping a babe," read "bale"—i.e., of wool.

THE STAGE.

STAGE NOTES.

MDME. RISTORI, still inefficiently supported, as we are bound to consider, has continued to appear at Drury Lane. But the bill has been changed, and "Macbeth" has disappeared, with its Thane of Cawdor, who was hardly fitted for the rôle, and its Lady Macbeth, whom we admit to have been of somewhat too mature years. Shakspeare has yielded to Giacometti, who dealt with English history in the play called "Elizabeth Queen of England," which Mdme. Ristori has made famous. It has been said that Giacometti's play is a character-study not altogether unlike the "Louis Onze" of Casimir Delavigne; and there is truth in the remark, and in the comparison suggested. Both these historical plays, and all historical plays, are quite certain to surprise by wide departures from historical accuracy—which departures would be more blameworthy than they are if the first business of the dramatist were to be historically accurate, and his second business to be dramatic and interesting. Giacometti, like Casimir Delavigne, like Sir Walter Scott in his romantic study of the very same hero whom Delavigne has analysed, has the art to engage; and, as no one will deny to Mdme. Ristori the possession of the art to interpret, it will be conceived that the performance at Drury Lane is not an artistic failure. Indeed, into Elizabeth's character, as Giacometti has presented it, and as it is presented in history, Mdme. Ristori has made a profound investigation; and she has enriched each scene, down to the death scene, with illustrative action denoting an artistic

imagination both vivacious and sound. Her by-play is wonderful. All the means that time has left her, and that art has allowed her to acquire, are used in this performance with almost unerring discretion and with great impressiveness. Mdme. Ristori is not announcing these series of appearances as "farewells," but they cannot, we conjecture, be much else than farewells, and the opportunity should not be lost, while still the actress is in command of her high faculties, of seeing the tragedian who was the rival of Rachel. The relation of Ristori to Rachel, we may say, *à propos* of this, recalls, in a degree, the relation of the Kembles to Edmund Kean. Kean had the impetuous genius that exhausts the possessor of it. Kemble had the deliberate and well-weighed method and the staying power. In the present generation, Rachel has had the impetuous and exhausting genius, and she died, of all methods of excitement, before she was middle-aged. Ristori has had the staying power and the more ordered art, and she has long been the survivor.

WE ventured to hold forth, a few weeks ago, on the question of the terms on which the would-be students of the stage might gain admission to that School of Dramatic Art which is now about to be a realised thing. It was advocated by some distinguished persons—who, in their advocacy, could be charged with nothing worse than an excess of *esprit de corps*—that admission should be free to the children of actors, and that they should have the first claim on the good offices of the school. It was said by others, and said with great plainness of words in these columns, that that course would make the institution a commendable charity, rather than a yet more commendable institution which should recruit from many places those qualified persons willing to place themselves under the standard of the stage. A compromise has been arranged: the children of actors are to pay half-price for the instruction they obtain. With this arrangement little fault is to be found, especially if, as is likely, a fair share of the subscriptions will come from actors, though these, of course, will be actors of eminence, and not the persons who individually profit by the instruction afforded.

THE "PHORMIO" AT FORT AUGUSTUS.

ON Tuesday, July 11, the "Phormio" of Terence, as adapted in *usum puerorum* by Card. Newman, was represented by the boys of Fort Augustus College. The manner in which it was placed upon the stage is deserving of high praise. The costumes were handsome and correct, and the view of ancient Athens, which is the scene of the play, was very effective. As to the performance itself: it was interesting to notice how these young actors strove to present accurately to the audience the idea which they had formed, or which had been placed before them, of the various rôles in this amusing comedy. The characteristics of the two lovers, each discontented with his own lot—*Nostris noemet poenitet*—were well brought out. Antipho (McClement) was especially successful in his expression of terror on first hearing the news of his father's return, and in the different attitudes which he assumed; cringing, conciliatory, defiant, and nonchalant when, having plucked up courage for a moment, he enquired from Geta which demeanour it would be best to put on in the coming interview with the angry old man; and Phaedria (Oary Elwes), whose appearance and deportment were thoroughly Greek, was equally good in the scene where, with dejected visage and in a broken voice, he informs his sympathetic friend of the sale of his beloved Pamphila. It is essential to the success of the "Phormio" to have a very good actor in the part of Geta. He is

the wily old family servant who, together with the hero, carries on the plot of the play; he is fond, indeed, of his young master and solicitous about his affairs, but he has a keen eye also to his own interests. His character is clearly influenced by his intercourse with Phormio, whom at first he dislikes, but on better acquaintance admires and imitates, till in the end he almost surpasses his original in impudence and roguery. The part was played throughout with the greatest force and spirit by Murray. If we were to pick out one place in which he particularly excelled it would be the scene with Phormio and Antipho, before his final exit, where he describes how he discovered the secret of Phanium's parentage while listening at a key-hole:

"ad fores
Suspense gradu placide ire perrexi; accessi; astiti;
Animam compressi, aurem admovi . . .
Hoc modo sermonem captavi."

The part of the old man, Demipho, is a very difficult one. He is an Athenian of the old school, with exalted notions of that parental authority which his son has set at naught; but he is an affectionate father withal, and would probably have forgiven Antipho at once if only he had pleaded his own cause:

"Neque mi in conspectum prodit, ut saltem sciam
Quid de hac re dicat, quidve sit sententiae."

He is somewhat of a miser, and has been cheated of a large sum of money; he is a courteous gentleman and a prosperous Athenian citizen, who is so exasperated by the audacious parasite as at times to lose his dignity. It would be surprising if the boy (Breton) who undertook to show the audience how these different phases of the character of Demipho came out in the course of the piece did not sometimes fail. He personated admirably the passionate, avaricious old man; but not so well the dignified Athenian merchant. The Phormio of McDonald was not the drunkard or gourmand which Ambivius once represented before Terence, and whom Donatus advises a good actor to imitate. He was rather the "gentlemanly adventurer, careful of a reputation for shrewdness and tact, but not for honesty," which Mr. Bond considers him. He was attired in the gaily embroidered χιτων and bright-coloured ἐμφύλλιον of a Grecian fop. He was a rogue, but a most captivating one, and a pleasant table companion. The clear enunciation and graceful actions of the boy who sustained this the chief part were most deservedly admired; and in the final scene, when, stepping to the front of the stage, he called out mockingly, in imitation of the public orator at a funeral,

"Exsequias Chremeti quibus est commodum ire,
heum tempus est,"

and then with a defiant gesture,

"Sic dabo: age nunc, Phormionem qui volet
laconisito,
Faxo tali eum mactatum atque hio est infor-
tunulo"

he was repeatedly applauded. The make-up of Massey as Nausistrata was perfect, and his impersonation of the proud matron and injured, shrewish wife was excellent. McKenzie was a capital Chremes, and Baillie very amusing as the old nurse Sophrona. The appearance of the two, when looking back with horror at the house which "encaged" the "uxorem saevam," provoked much laughter.

On the whole, the performance was extremely good and equal, and the students of Fort Augustus are to be congratulated on the introduction into their school of a custom so useful as a means of education and culture as the performance of a Latin play.

ADMIRAL LORD KEITH.

This day is published.

**MEMOIR OF THE HON.

A SCULPTOR, and other Poems.

By E. H. HICKEY.

"The power and beauty exhibited in most of the compositions, of which some are written with an impetuosity that suggests sheer inspiration, and with a fiery vigour that verges upon fierceness—a fierceness quite appropriate to the subject. No theme seems to come amiss to the writer, who appears to be equally at home with the terrible and the gentle, with the wild madman and unbeliever, or with the loving, patient Christian saint and martyr."—*Illustrated London News*.

"There is much in her poems—notably in 'A Dead Worker'—that reminds us, without suggesting imitation, of Mrs. Barrett-Browning."—*Spectator*.

"Any writer might be proud of such a poem as 'Told in the Firelight.' There is genuine pathos of the highest order in 'Davie Carr' and 'A Dead Worker.'"—*Graphic*.

"The author chiefly devotes himself or herself . . . to the telling of brief tragic tales in verse, and these are told with a force and feeling which will almost painfully impress most readers. . . . It is always true music."—*Scotman*.

"There is sweetness as well as power in the versification, and a reserved grace rare in first works."—*Daily Telegraph*.

LONDON: KEGAN PAUL, TRENCH, & CO.,
1, PATERNOSTER SQUARE.

RECORDS OF THE ENGLISH PROVINCE

of the SOCIETY OF JESUS. By HENRY FOLEY, S.J.
VOL. VII. (in TWO PARTS), presenting the entire English Mission and Province to the Year 1773, with Notices of Deceased Members to the Year 1882. Over 800 pages each. To Subscribers, 71s. each Part, who will apply to the EDITOR, 111, Mount-street, London, W., or to Mr. J. STANLEY, Marston Press, Southampton, S.W. To Non-Subscribers, 75s. each, net, of Messrs. BURNS & OATES, Granville Mansions, Orchard-street, London, W.

NEW BOND STREET, W.

LONDON LIBRARY.
12, ST. JAMES'S SQUARE.—Founded in 1841.

PATRON—H.R.H. THE PRINCE OF WALES.

This Library contains 90,000 Volumes of Ancient and Modern Literature in various Languages. Subscription, £3 a year; or £3 with Entrance-fee of £5; Life Membership, £25.

Fifteen Volumes are allowed to Country, and Ten to Town, Members. Reading-room open from Ten to Half-past Six. Prospectus on application. ROBERT HARRISON, Secretary and Librarian.

Now ready, Vol. XII.—EGYPTIAN TEXTS.
RECORDS of the PAST:

Being English Translations of the Assyrian and Egyptian Monuments. Published under the sanction of the Society of Biblical Archaeology.

Edited by S. BUDGE, LL.D.
With an Index to the Contents of the Series. Cloth, 2s. 6d.
London: S. BAGSTER & SONS, 15, PATERNOSTER-ROW.

Second Edition, royal 8vo, price 1s., post-free 1s. 2d., paper covers; cloth gilt, red edges, price 2s. 6d.

AUTHORSHIP and PUBLICATION: a
Concise Guide for Authors in matters relating to Printing and Pub-
lishing, including the Law of Copyright and a Bibliographical Appendix.

*A work which every author, whether experienced or not, should un-
doubtedly possess.—Knowledge.
London: WYMAN & SONS, 74 and 75, Great Queen-street, W.C.

No. XXVIII. Price Six Shillings.

CHURCH QUARTERLY REVIEW

For JULY, 1882.

1. THE EARLY MASTERS of COLOGNE.
2. THE LITURGY and RITUAL of the ANGLO-SAXON CHURCH.
3. PRINCIPAL SHAIKHS'S WRITINGS.
4. DR. CYRILLUS'S ECCLESIASTICAL HISTORY.
5. ON FREACHING.
6. CHARLES DARWIN and EVOLUTION.
7. MODERN PAGAN POETRY.
8. THE WRITINGS and LIFE of SCOTUS ERIGENA.
9. THE PROVINCES of SCEPTICISM and the LIMITS of FREE THOUGHT.
10. WORDSWORTH'S HAMPTON LETTRES.
11. THE RELIGIOUS CENSUS and the NATIONAL CHURCH.

SHORT NOTICES.

London: BROTHERMAN & CO., New-street-square.

**LONDON LIBRARY, 12, St. James's-
square, S.W.**—Just published, price 6s.; to Members, 4s.
SUPPLEMENT to the CATALOGUE, containing the Accessions of six years
(1875-80), with a Classified Index to Subjects. Application to be made to
the Secretary, who will also furnish Rules and Terms of Subscription to the
Library. ROBT. HARRISON, Secretary and Librarian.

THE AUTOTYPE COMPANY,
74, NEW OXFORD STREET, W.C.
(Twenty doors west of Middle's Library.)

AUTOTYPE represents Permanent Photography, with unique power of
artistic expression.
AUTOTYPE is celebrated for its noble Collection of Copies of the OLD
MASTERS, and for numerous fine examples of MODERN ART.

MUSEO DEL PRADO, MADRID.

ISSUE of 307 AUTOTYPE REPRODUCTIONS of PAINTINGS in this
Celebrated Gallery. Catalogue on application.

TURNER'S ETCHINGS

For the "LIBER STUDIUM."
Twenty-five of these Celebrated Etchings, in a Autotype Facsimile, are now
ready, Half-a-Crown each; or the Set can be obtained, elegantly bound in
cloth, at Three Guineas.

WALKER'S CABINET of OLD FANS. Fifty-two Illustrations. A 4v
Copies left. One Guinea each.

The AUTOTYPE COMPANY are producers of BOOK ILLUSTRATIONS
of special photographic excellence and wide application.

To adorn at little cost the walls of Home with Artistic Masterpieces,
visit the AUTOTYPE FINE-ART GALLERY, 74, New Oxford-street, W.C.

THE AUTOTYPE COMPANY,
LONDON.

THE LIBER STUDIUM

OF
J. M. W. TURNER, R.A.

Reproduced in Facsimile by the Autotype Process, and accompanied with
Notices of each Plate by the Rev. STOPFORD BROOK, M.A. Publishing
in Three Volumes, each containing Twenty-four Illustrations, price Four
Guineas per Volume. Volume the First now ready.

Detached Plates of this Edition of the "Liber," with the Commentary
appertaining, are sold at 2s. 6d.

HENRY BROTHERMAN & CO.,
36, Piccadilly, W., and 135, Strand, W.C.

SATURDAY, JULY 29, 1882.

No. 534, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Foray of Queen Meave, and other Legends.
By Aubrey De Vere. (Kegan Paul, Trench & Co.)

SIR SAMUEL FERGUSON and Mr. Aubrey De Vere have followed the only true method of treating the grand and half barbaric period with which they deal, and which, despite its deeds of violence, has bequeathed to us legends full of wild grace and of moral, as distinguished from conventional, refinement. They tell their tales as simply as their measure of power permits, and escape the now too common error of making characters drawn from antiquity mere embodiments of modern thought and views of life, either veiled by a diction bristling with archaisms or enveloped by a smooth and subtle music in their rhythm. Piercing to the true significance of the moral that really underlies these legends, the two poets we have named draw forth the genuine worth that lies at the core of their story; and, by their treatment of it, making its manifestation their first object, they attain a freshness beyond that of many modern writers, while they gain a unity in their work which earlier bards failed to achieve.

The volume now before us takes its name from the longest and last poem in the book—"The Foray of Queen Meave," the Amazon Queen of Connaught, rival of Conor, who is held to have reigned in Ulster about the beginning of the Christian era, and the tale of whose fortune belongs to the first chief cycle of Irish heroic tradition. This, as compared with the legends of the second cycle, offers us, according to Sir Samuel Ferguson, better-defined and more characteristic forms of grandeur, with stronger accompaniments of pity and terror than are to be met with in the later stories. In this tale we read how Meave, driven by envy, declares war against the King of Ulster, who is possessed of a black bull which she is determined to secure. She accepts the aid of a witch-woman in this unlawful war, who casts a spell, the curse of imbecility, over Ulster, from which the hero, Cuchullain, alone escapes. He slays the champions of the Queen in single combat day by day, and after them he destroys the magicians, Caitlen and his sons, then faces the last curse that the witch's incantations had drawn upon the land when

"from ocean's breast there rose
A mist, no larger than a dead man's shroud,
That, slowly widening, spread o'er Uladh's realm
Mantle of darkness, and an erring mind,
And powerlessness and shame."

In his chariot, borne on by his beloved horses, the Gray of Macha and the black Sangland, he drives the cloud before him.

"So slowly, clinging still to brake and rock,
And oft re-settling, vanished from the land
The insane mist. That hurricane of wheels
Not less was heard by men who nothing saw :
On stony plain, in hamlet, and in vale :—
They muttered as in sleep ; 'Deliverance comes.'"

But on the very eve of conquest Cuchullain is, for a time, laid low. His ancient friend, Ferdia, takes arms against him, and their deadly struggle lasts four days. Cuchullain slays his enemy, but himself lies long in the forest, wounded and powerless, yet more through grief for Ferdia than through physical pain. In the meantime, Meave, having marched round Ulster, approaches its chief citadel, Emania, when the people gradually waken from their trance, and the Queen, discomfited, retires. Yet two more battles are fought, and when the second is well-nigh lost Cuchullain wakes; the Queen is driven, defeated, across the Shannon.

Mr. De Vere has worked out this subject with greater vigour and simplicity than he has shown in any former work, and we only wish we had space to quote more largely from it; but we cannot pass over the weird vision of the mystic form of Evil rising at the close of the hero's struggle with the magicians, when, above the trampled ford, there rose a solitary form, "up-towering through the mist of spray" which veiled their strife,

"as when o'er seas storm laid
The watery column reels and draws from heaven
The cloud, and drowns the ship—a single Form
And Head, and Hand, clutching Cuchullain's
crest :
Not wholly sank he. O'er that mist of spray
Glittered his sword. There fell a silence strange :
Slowly that mist dispersed ; and on the sands
That false Enchanter lay with all his sons
Black, bleeding bulks of death."

Again we have a picture of deep pathos when Cuchullain, after his final struggle with his early friend, awakening from his trance, laments

"That I should see that face so great and pale !
To-day face-whitening death is on that face ;
And in my hand my sword :—'tis crimson yet."

Less painful, but quite as tender, is the picture of the horses of Cuchullain. First, the wild Gray of Macha—

"Panting then lay he, on his conqueror's knee
Resting his head ; thenceforth that conqueror's
friend,
His 'Liah Macha.' Gentle-souled is she,
'Sangland,' the wild one's comrade. As the
night
Sank on those huge red-berried woods of Yew
Loch Darvra's girdle, from beneath the wave
She issued, darker still. Softly she paced,
As though with woman's foot, the grassy marge
In violets diapered, and laid her head
Upon Cuchullain's shoulder."

In the poem of "The Sons of Usnach" it may perhaps be said that Mr. De Vere has in some degree missed one point in the opening of the story on which the tragic element in the poem is founded. The doom of the heroine Deirdre was sorrow from her birth; and in her passion for the great harper, Naisi, pure and devoted as it was, she herself works out her mournful fate, in which those of her husband and his race are involved.

But in the next poem "The Children of Lir," we find an exquisitely imaginative

legend, very perfectly treated, of four mystic children who lived on one hope for nine hundred years, and vanquished sorrow through their song. The tale relates how, five centuries before Christ, good King Lir and his azure-eyed Queen reigned in Ireland. Having borne him four children, she dies, and the fate of the four little ones is worked out by the jealous enchantress who becomes their stepmother. She transforms them into swans, and for nine hundred years they are condemned to wander from Cape to Cape, across the ocean and the black sea-strait, till they hear the bell which rings out the coming Apostle of Christ. The children meekly bow beneath her wand, even

"as a band of lilies, white and tall,
Beneath a breeze of morning bend their head,
High held in virgin state majestic."

Touched by their patience, Fate leaves them one gift—the gift of song, and song that shall bring promise of deliverance to all who hear it. Then, dowered with one hope, and with one gift through which this hope may find expression, these children are borne away, since, till their promised Teacher comes, their feet may never touch the land—the waters are their home, the winds their ministers.

"And ever, when the sacred night descended,
While with those ripples on the sandy bars
The sighing woods and winds low murmurs
blended,
Their music fell upon them from the stars,
And they gave utterance to that gift divine
In silver song or anthem crystalline."

"The words of that high music no one knew ;
Yet all men felt there lived a meaning there
Immortal, marvellous, searching, strengthening,
true,
The pledge of some great future, strange and
fair,
When Sin shall lose her might, and cleansing
woe
Shall on the just some starry crown bestow."

For the first three hundred years the swans lingered on the waters of Loch Darvra; then, borne by a northern blast to the Sound of Mull, they make acquaintance with the booming waves

"Rolling to labyrinths dim of red-roofed caves ;

They spake, and sudden thunder shook the
world,
And blackness wrapped the seas, and lightnings
rent."

The children are whirled apart by the storm. The eldest girl, Finola, finds herself alone upon the rock; then her wild cry pierces to the sky, and one by one her lost loves hear the voice and nestle back beneath her wing.

The worst has passed; soon tender ripples play round the deep-scarred cliffs and on their "iron breasts and foreheads hard." In the sublime ocean, now at rest,

"Jewels, not flowers, they found where'er they
floated ;
Emerald and sapphire, opal, amethyst,
Far-kenned through watery depths or magic air,
Or trails of broken rainbows, here and there."

Their second Woe ended, they soar upwards, and are borne to the West coast of Ireland; there, still sustained by one all-conquering hope, they sing

"As though in praise of some great victory won :
Some conqueror more than man ; some heavenly
crown
Slowly o'er all creation settling down."

Their faith is crowned; the sound of the

long-expected bell comes across the water, the spell is broken, and the children's long-imprisoned souls are free.

There is a painting in our National Gallery, by Sandro Botticelli, of the Nativity of Christ, where the subject is treated in a mystic spirit symbolising the effects produced upon the principles of good and evil by the advent of Christ. The artist states that his work was executed during a crisis in his country's history which was the fulfilment of the second Woe of the Apocalypse in the loosing of the devil for three years and a-half. It is as if the reaction of the brain from the evil he witnessed around him had given birth to this vision of purity and love. Is it not under similar conditions that our Irish poet has in the blackest hour of Irish history given forth his people's song of heavenly hope?

MARGARET STOKES.

TWO BOOKS ON ICELAND.

Summer Travelling in Iceland. By John Coles. (Murray.)

By Fell and Fjord. By E. J. Oswald. (Blackwood.)

ALTHOUGH a century ago Iceland was practically unknown, the literature which has sprung up during the last sixty years has been prodigious, and it becomes more and more difficult to write a book of travel on the subject. More than one book a year has been published since the beginning of this century. The work before us is the second record of travel in Iceland which has appeared within three weeks, and the third within three months. Some of these relate mainly to sport, others to exploration, others to geology; but the majority are simply records of travel; and there is necessarily a good deal of sameness in these books.

Of all the records, we are inclined to place first those of Mackenzie, Henderson, and Baring Gould. Mackenzie's lordly quarto, although it was published seventy-one years ago, does not seem out of date. Things change slowly in Iceland; and his descriptions of the people and their mode of life and of the country are true enough to this day; while his capital coloured engravings represent farm-houses, churches, and their surroundings just as we see them now. Henderson's *Journal of a Residence in Iceland in 1814 and 1815* is a book which ought to be read by every intending traveller. Few succeeding writers have known so much of the country as he did, and his descriptions of scenery are often very graphic. Moreover, he knew the people well, and he travelled over the length and breadth of the land. Of more modern books Baring Gould's *Iceland, its Scenes and Sagas* (1863), is undoubtedly the best; its style is admirable, and some vigorous translations of Sagas are introduced at the appropriate time when the traveller is in the very district in which the narrated events occurred a thousand years ago. Moreover, it is strikingly illustrated by some coloured sketches made by the author on the spot.

Mr. Coles admits the magnitude of the traveller's literature; but he says that, with one exception, the many books are of no service to the tourist; and his main object

is to furnish something to supply this deficiency.

His first four chapters are devoted to the Thingvellir, Geysir, and Hekla route, and are preceded by a short Introduction which treats of the country generally, both physically and politically. We must take exception to two statements in the first portion. The Vatna-Jökull is said to have an area equal to that of Cornwall. We have seen various areas assigned to it—from 4,000 square miles to 2,300, usually the larger number. But the area of Cornwall is only 1,365 square miles. Yorkshire is too large (5,983); but we may at least say that the Vatna-Jökull has the area of Lincolnshire (2,776 square miles). Again, it is asserted that "the Jökulls occupy about one-fourth of the whole area of the island;" but this is an over-estimate. One-seventh would be much nearer the mark, or, at the outside, between one-sixth and one-seventh.

The Thingvellir route furnished no new facts. The geysirs were examined, and some soundings and temperatures taken. The latter were lower than those found by Bunsen. We do not agree with the author that there is only one geysir at Haukadalr. The Strokkr is a geysir, and some of the small gushers on the western side of the plain are also true geysirs. The travellers thence started for Hekla. The fording of the big rivers is duly described; the arrival at Hrúni and Thjór-sárholt and at the Galtalókr Farm, the starting-point for Hekla. Mr. Coles says:

"The ascent of Hekla is a mere matter of hard walking, there being no actual climbing to be done; but, owing to the loose sand which has to be traversed before the snow line is reached, it is a really arduous undertaking; if, however, the guide could be persuaded to walk slowly at first, I believe that almost anyone could reach the top; in our case Jonson fairly walked Peek and myself off our legs before we reached the snow, where the easy walking commences."

Thus Mr. Coles did not reach the summit. We quite endorse his opinion that there is no climbing in the Alpine Club sense; but he is scarcely right in asserting that the easy walking commences with the snow. Our own recollection of the ascent of Hekla (with the same guide, in 1878) is that the snow slopes were exceedingly troublesome, and it was then that we really wanted alpenstocks. They were ascended either directly over the snow surface, or more commonly at the edges, where they were terminated by rocky walls, or loose rock masses. Here there would be a surface of bare rock or loose stones, either fallen from above or left uncovered by snow through radiation from the adjacent rock masses. The snow slopes were also difficult to descend quickly; but the easy ascent of the mountain as a whole is well shown by the fact that the writer, who had been riding in waders and clumsy brogues, as it threatened to be very wet, did not find it necessary to take them off for the ascent of the mountain.

With the fifth chapter Mr. Coles commences an account of his journey across the Sprengisand, a difficult and unfrequented route, commencing at Hagaey, the last farm on the south side of the desert (strangely omitted from the author's excellent map). A number of observations were taken in order

to fix the position of the farm; and the width of the Thjórsá was measured with a theodolite, and found to be 543 yards; the compass error was 39° W., and the dip of the needle approximately 80°.

We may pause a moment to remark that one of the best features of our author's summer travelling in Iceland was that he took observations—work of real value to geographical science and to future travellers, and work that will be the more appreciated by those who know how extremely difficult it is to carry instruments over the pathless wastes of Iceland. We can only wish that these observations had been more frequent. Magnetic observations, deviation and inclination, are specially required, and Mr. Coles has fortunately given various results of such observations. All travellers should be provided with a good prismatic compass and dipping needle, and should have some instructions in the use of them before starting; also a compensated pocket aneroid in a case, and two verified thermometers.

The course at first lay along the right bank of the Thjórsá; several of its northern affluents had to be forded, and an encampment was formed at Sóleyjarhöfði, a small oasis (1,884 feet) on the banks of the Thjórsá. The actual journey across the Sprengisand occupied ten hours, without adventure or striking views of nature. The difficulties have been exaggerated, and the game, to our thinking, is scarcely worth the candle. The farm of Ishóll was the first inhabited halting-place on the north side of the desert, and a day's rest was gladly indulged in at Lau-darbrekka, still farther north. The party soon after separated, Mr. Delmar Morgan going off to Askja, first explored by Lieut. Marce and Prof. Johnstrup, and afterwards by Mr. W. G. Lock, while Mr. Coles went to Gaut-lönd, where he occupied himself with taking observations. The minimum temperature was 30° F., maximum 44° F., error of compass, 36° 30' W., and dip as before, 80°.

We do not notice in the account of the great volcano Askja any facts not already stated by Mr. W. G. Lock. Some time was afterwards spent by the travellers in the north-east district—Myvatn Oræfi, Reyk-jahlöf, Krafia, and Ljósavatn—familiar ground enough to many visitors to Iceland. Akureyri was visited, and also the new Moðruvellir training college, and a start was made for Reykjavik across the island. The author was informed at Akureyri that during the winter of 1880-81 the thermometer had stood for some time at 25° below zero of Fahrenheit, and that polar bears were quite common in the neighbourhood. This is a most unusual temperature at Akureyri, but we presume the fact was well authenticated. The ordinary route was followed to Kalmanstunga (unaccountably omitted from the map). It was perhaps on account of the discomforts of camping out on the Grimstungaheiði that the travellers found Kalmanstunga comfortable, and have a good word to say for it. It was almost the only place in Iceland where (in 1879) we were grossly overcharged by a surly and sullen bond, and where we found great discomfort and much filth. And we may remark that the guide who made camping out on Grimstungaheiði a necessity did not know

his business, for with an early start (4 or 5 a.m.) from Haukagil or Grimstúngur, it is quite possible to reach Kalmanstúnga before nightfall. From Kalmanstúnga the usual route was followed to Reykjavik.

The author designates his book on the title-page, "A Narrative of Two Journeys Across the Island by Unfrequented Routes." But which is the second? The Sprengisandr route may indeed be described as "unfrequented," but the route from Akureyri to Reykjavik is the common mail route, traversed in seven or eight days without difficulty or discomfort.

In an Appendix the author has translated three Sagas: the story of *Thorar Hressa*, or The Terror; the well-known *Bandamanna Saga*; and the story of Hrafnkell. The translations are somewhat stilted, but are often by no means devoid of a vigorous diction which simulates the original. In a second Appendix, hints to travellers as to outfit and expenses are given. Approximately, the text occupies nearly two-thirds of the book, and the Appendices somewhat more than one-third. There is a capital map, and a small well-executed plan of the Crater of Askja; also a plan of the Haukadalr Geysir fields and sections of the great Geysir. The author states that the expenses may be taken at £100 a month for each person—a very extravagant estimate for Iceland; indeed, we cannot imagine how he could have spent so much, unless his horses, which sold badly, were bought dearly.

Miss Oswald is a brave Scotch lady who has been to Iceland three times, and has seen more of it than any lady in the land. She understands the language of the country, and genuinely loves its literature, scenery, and people. Her book is partly a record of travel, partly literary and historical. It is cleverly written; the style is nearly uniformly good, and there are some pleasant touches of humour. Miss Oswald does not know what fear is; she is ever ready to ford one of the dangerous southern rivers, to cross a pathless *leið*, or to ascend an almost unknown mountain. Once, while performing the morning ablutions by the side of a cold glacier river, the sponge fell in and floated away, until it was arrested by a rock in mid-stream; the intrepid lady leapt unhesitatingly into the deep waters and rescued it. She only alludes to this incident to remark on the extreme coldness of the glacier rivers. After this we can understand the vigorous tone of the book. Some of the journeys were by well-known routes, other by unfrequented ways; everywhere the traveller was made welcome, and everywhere new scenes of wonder were presented to view. The general result of each and all of the journeys was an increase of health and an addition to the interests of life. "The power of the Asa, or Summer, gods, satisfactorily summed up, I am bound to think," says our authoress, "in the name Asvaldr, or Oswald, is almost always in Norse mythology on the side of right and justice." And after reading her "Scenes and Studies in Iceland," we are glad to express our belief that, if the Asa were to revisit the earth, they would welcome their namesake with open arms as no degenerate representative of their ancient race.

G. F. RODWELL.

The State in Relation to Labour. By W. Stanley Jevons. "Citizen Series." (Macmillan.)

THE end of legislation is defined by Prof. Jevons with more than Bentham's clearness as Greatest Happiness, free from the "metaphysical incubus" of abstract rights and paramount above all laws and customs. Even "the Liberty of the Subject is only the means towards an end; it is not itself the end; hence, when it fails to produce the desired end, it may be set aside," and is set aside by Prof. Jevons in particular cases where the general presumption of good is rebutted by the certainty of evil. In view of the evils of a railway strike, workmen "would be simply ordered by competent authority to continue to work so long as the imperative needs of society continued." In the interest of posterity, it is proposed to restrict the employment in factories of mothers of young children. No doubt it will be difficult to justify such proposals to the class and sex on whom they bear hard. Yet they appear consistent with the received utilitarian doctrine of Liberty. To maintain children, if, as Mill says, fathers may be compelled to work, may not, as Prof. Jevons says, mothers be compelled not to work?

The weak point in utilitarian legislation which we have just hinted at, the difficulty of getting people to agree about what is useful, is fully admitted by Prof. Jevons, and is partly corrected by his matured scheme of Baconian Legislation. For instance, the early closing of shops might be experimentally enforced in particular towns. "We should use general reasoning as sparingly as possible;" or, may it not be said with Mill rather than with Bacon, we should verify it as much as possible by experimentation? The author certainly cannot mean to depreciate general reasoning in a treatise which is itself a most complete store of economical reasonings and historical generalisations.

The economics of the subject, the "mechanics of production," are expressed by Prof. Jevons in his happiest style of mathematical power under literary form. Employer and employed, throwing their respective contributions into "hotchpotch," receive out of the joint product shares which are determined by a complex play of supply and demand. As the total is not a fixed quantity, the gain of one party does not necessitate the loss of the other party. "The supposed conflict of labour with capital is a delusion." This last statement appears a little too wide. When the total to be distributed is "unfixed," varying with the contributions of both parties, then, not indeed *all*, yet *some*, gains of the one involve loss to the other. The interests of the two parties go together up to a certain point, then stand opposed. Therefore, while we agree in the main with the practical conclusions of the Professor, we venture to differ slightly from his theory that, not the employer, but only "the consumer always smarts in the end."

The subject is closely connected with trades-unionism. Prof. Jevons shows that unionists are apt to injure themselves, their fellow-workmen, and the community. His remarks apply to the actual existing cases of partial unions. In the ideal cases of one

great union, or a universal system of small unions, it does not appear, upon his showing, that the working class, one and all, would not gain at the expense of the employing class—that, if the majority gains, the community loses. The general presumption that union is strength is not rebutted so long as, with Prof. Jevons, we calculate only the instantaneous motion of the mechanism, and not, with Prof. Marshall, the accelerations also. For the present, unionists may extort better terms from disunited employers; in the future, if there is a continual diminution of the total product, there will be an ultimate diminution of the workmen's share. But the compressibility of capitalist and entrepreneur is a very intricate subject, impossible to be fully discussed within our author's limits, much more within ours; and of the less practical importance, in that unions of the employed are apt to be confronted with unions of employers. Then ensues a phenomenon, which Prof. Jevons has presented boldly—indeterminateness of bargain, deadlock in contract. The mass, whose particles, while moving freely in the liquid state, worked down to a determinate position of equilibrium, becoming solidified, may stick in an indefinite number of positions. This immobility is no doubt diminished by the smoothing and rounding agency of conciliation. Nor does Prof. Jevons venture to suggest any more definite principle of agreement.

His economical constructions are well supported by the historical part of the work. The amount of information neatly packed up in small room is astonishing; and, when he has told as much as possible, he always tells where to find more. A spirit of usefulness flows from the final purpose through each practical detail. Now he leads us to seek the greatest happiness of the community; now aids our slightest step with the press-mark of a pamphlet in the British Museum.

F. Y. EDGEWORTH.

Notes from the Muniments of Magdalen College, Oxford. By the Rev. W. D. Macray. (Parker.)

THIS little work cannot be expected to appeal to a very wide audience. It sets before us the material of history in all its rawness. Consisting merely of short memoranda made by Mr. Macray while cataloguing the early muniments of Magdalen College, it lacks either introduction or editorial comment to furnish the medley with such connecting links as might attract a few readers besides professed antiquaries; and it is, we regret to add, without a complete index to give it permanent utility as a book of reference for historical students. At times, moreover, the editor has contented himself with printing the bare superscriptions of letters and other papers, where a brief summary of their contents on the plan adopted in the State Paper Calendars would have greatly enhanced the value of the collection, and might possibly have created for it some general interest. In spite, however, of such shortcomings as these and the tantalising brevity of many of the notes, the volume deserves a warm welcome from all who are specially interested

in the development of Oxford. The history of the city and university has as yet been only partially explored. Not the scarcity, but the abundance of the original authorities to be found in the college muniment-rooms has hindered individual students from taking a complete survey of their subject; and the burdensomeness of their task can only be appreciably lightened by publications of the kind before us, where the contents of the college archives are illustrated, or at least fully indicated. All Souls' and Exeter have already endeavoured, in one way or another, to make their documentary stores generally accessible; and it is to be hoped that their example—to which that of Magdalen, at whose expense Mr. Macray's book is published, must now be added—will be followed elsewhere in the university.

The site of Magdalen College has an interesting mediæval history. Lying beyond the old Eastgate, and never included within the city walls, it became, in the twelfth century, the Jewish cemetery of the town. Early in the reign of Henry III. a portion of it was granted to the newly founded Hospital of St. John, established by the Augustinian order, and the whole of the ground, with the buildings upon it, was assigned to the college by royal letters patent on its foundation in 1456 by Waynflete, Bishop of Winchester. Mr. Macray refers frequently to the fortunes of the hospital, and of kindred institutions which became the property of the society at later dates. Their masters' names have been carefully collected. The Oxford Hospital is shown to have had a "great school" attached to it, so that, from an educational as well as from a topographical point of view, it should be treated as the precursor of the college. Late entries relating to the establishment illustrate the degradation into which such charitable foundations sank in the fifteenth century, and the need for the legislative restrictions subsequently placed on religious houses. In 1444 we find a master specially providing in a lease for his own hunting; and in 1457, when the Pope authorised the suppression of the hospital, evidence is adduced of wilful misapplications of the funds, and of the lax life led by the brethren. In connexion with general university history, Mr. Macray has set down the names of some seventy halls mentioned in archives, mainly of the thirteenth century, and all more or less organised, we imagine, for academic purposes. The number of these embryo colleges, whose importance Mr. Anstey has well described in his *Munimenta Academica*, combined with the frequent notice of such academic tradesmen as illuminators, scribes, parchment-makers, and book-binders, enables us to realise in some measure the literary and scholastic activity of Oxford after the twelfth century.

But, besides notes touching the town and university, Mr. Macray has brought together much information capable of throwing light on general mediæval history. How little the rule of celibacy was observed by the English clergy before the thirteenth century he has well illustrated by pointing out the continual occurrence, from 1180 onwards, of persons described as the children of parish priests, chaplains, or even rural deans, upon whom no stain of illegitimacy seems to have

rested. Mr. Macray's notes on serfs are similarly of very high interest. Some thirty instances of the sale or grant of persons taking place in the neighbourhood of Oxford within little more than a century are enumerated here, and the number of such transactions goes far to prove that the villein in gross was always far more than a legal figment. A valuable example of the purchase of the manumission of a serf in Lincolnshire by the president of the college is quoted at so late a date as 1562.

Many other interesting facts on various topics will be found to reward a perusal of the volume by readers of antiquarian tastes. The papers of Sir John Fastolf, the hero of the Battle of the Herrings, many of which Mr. Gairdner has noticed in his well-known edition of the *Paston Letters*, are among the Magdalen College muniments; and to them several new references are here made. It should be mentioned, in conclusion, that Mr. Macray, whose name has long been associated with Oxford antiquities, contributed two articles on these archives to two Reports of the Historical Manuscripts Commission, in which there appeared a history of their accumulation, with many extracts. We cannot help feeling that greater coherency and completeness would have been given to these new notes had it been possible, at the risk of considerably increasing the size of the book, to incorporate with them the editor's earlier contributions on the same subject which may be found in the official Reports. We should have thought the result would have been more satisfactory to the college authorities, as it certainly would have been to the historical student. S. L. LEE.

THE DEVELOPMENT OF THE GERMAN HOUSE.

Das deutsche Haus in seiner historischen Entwicklung. Von Rudolf Henning. (London: Trübner.)

HERR HENNING'S work upon the German house forms one among a very interesting series of studies on early German civilisation which have been publishing during the last eight years under the auspices of Profs. Bernhard ten Brink, Ernst Martin, and Wilhelm Scherer. This book is the largest of the series, and, I think, by far the most important. The author does not, indeed, profess to have contributed any specially new materials for study. Most of the drawings and plans which illustrate his text have been already published. But then, in arranging these older materials, he has been guided by those principles of prehistoric enquiry which are understood now, but were quite unappreciated in former times.

The plan which Herr Henning has adopted in this book is, first, to describe the various types of house architecture which prevail among different races of the Teutonic stock; and, after this has been done, to sum up the results in a final chapter, tracing, as far as may be, the development of the German house from its original form, and the modifications which that form has taken to suit the tastes or requirements of different peoples. We thus pass in succession through the High-

German and Franconian houses; through the Saxon, the Frisian, the Anglo-Danish, with its subdivisions; through the Norse and the East-German. Then follows a chapter on the Aryan house, and we come at last, in the final chapter, to the "History of the German house." I am not at present disposed to accept all the theories of the eighth and ninth chapters of this book. I cannot see clear evidence which points out any one of the various styles of German house-architecture as approaching nearest to the original type, or which allows us to conjecture with reasonable assurance what that original type was. Still less can I admit that we can form a true notion of the primitive Aryan house. On the column of Aurelius the houses of the German barbarians are represented as round, and all the evidence seems to point to the conclusion that this was likewise the usual form of the Celtic house; whereas all the examples of German houses which Henning has collected are square.

There are thus some decided disadvantages attending Herr Henning's method of arrangement. For only at the end of the volume, and, moreover, after we have read through a good deal of theorising which must long remain no more than theory, do we arrive at a system for grouping together the information of the earlier chapters. And yet it would have been quite easy to point out in a preliminary chapter the general principles of architecture which run through the different styles, in virtue of which these styles are brought the nearer to, or removed the farther from, one another.

For example, the essential plan or principle of the building is ascertained so soon as we have discovered the shape and the position in it of the room which contains the great house fire. It is no fanciful metaphor to say that the house fire is the seed out of which the house has grown. Wherefore the room which contains the great fireplace is almost always the principal room in the dwelling; and the fact that it is so shows that the house has not departed very far from the primitive type. This was the case with the hall of the mediæval castle, and it is not less the case with the hall of an old-fashioned farmhouse of to-day. It is the case with almost all the examples of houses given by Herr Henning; and the same truth holds good of the ancient Greek house whose type survived in the later Greek temple. But the shape and position of these halls may differ very widely in different examples. In the Saxon house, for example, the hall ran from an entrance in the middle of the gable end down the whole length of the house, and had stalls for cattle or smaller chambers on either side for the greater part of its length. In the High-German style it has much dwindled in importance. Here, too, it runs across the breadth, not down the length, of the dwelling. In the Scandinavian plan it was often the sole room of the house; and, if more room was wanted, another house was built at the side—the original design was not altered. The East-German house, again, of which the most numerous examples are found in Poland and Pomerania, followed a totally different model.

Perhaps this East-German house will be the most interesting subject of study to a

majority of readers on account of the numerous points of similarity between it and what we may reasonably conjecture to have been the construction of the old Greek dwelling. It would be impossible, even if space allowed, to explain these points. It is enough to say that the East-German house, differing in many essential particulars from other forms of building employed by the Teutons, shows us the great hearth-room, the German equivalent of the *megaron* or *doma*, separated from the entrance by a smaller room or *prodomos*, in which, as in the Greek house, there generally stands a bed—for servants. It shows us the inner chambers and stalls for the cattle lying behind the hearth-room; and the roof in front of the door is supported by little columns so as to form a miniature portico. And it presents this classical structure in the simple materials of wood and thatch.

C. F. KEARY.

NEW NOVELS.

Daisy Beresford. By Catharine Childar. In 3 vols. (Hurst & Blackett.)

Royal Angus. By Lord James Douglas. In 2 vols. (Bentley.)

A Mother's Idol. By Lydia Hope. In 3 vols. (Tinsley Bros.)

Marchcroft Manor. By C. A. Roberts. In 2 vols. (Remington.)

The Jews of Barnow. By Karl Emil Franzos. Translated by M. W. Macdowall. (Blackwood.)

THE story told in the three volumes of *Daisy Beresford* is at once insignificant and triste. It is a variation on the well-worn theme—that "life ain't all beer and skittles;" and I am afraid it is not a taking one nor an ingenious. Daisy Beresford is an Anglo-Indian, educated in England, and having ideas on most matters of importance. She has woerr, but they do not please her, and in due time she falls in love with a middle-aged officer, a certain Captain Mertoun. The two do all but plight their troth, but the stars run counter to their loves. Ere things can be satisfactorily arranged, the Captain, a guileless creature, is informed by Daisy's cousin—a lovely idiot—that Daisy is already a married woman. The fact is that at a picnic on Scottish ground she had assisted her cousin Jim to burlesque the ceremony; and the idiot, having filled her little noddle with bad law on the question, and being, moreover, inclined to wish the marriage real, has become convinced that real it is. Ere the innocent Captain knows what to think he is ordered off to Afghanistan, and there—in due course—he is reported dead. Daisy, who is hard hit, refuses a peer, and swears to wear the willow while she lives. This noble behaviour inspires the rejected nobleman with the idea of going and hunting the missing officer to earth. He does so, and the Captain proves to be not dead, but merely captive to the infidel. On the peer's report he returns to England, and Daisy and he determine to get married. One day, however, Daisy goes out in a boat with her cousin [Jim, now a married man, and her

cousin Jim's wife. They are espied from shore by a sentimental gipsy-woman, who is in love with Jim, and who believes him to be Daisy's husband. An accident happens; Daisy saves a boat-load of shopkeepers from destruction, but upsets her own skiff, and is hurried away over a weir. The gipsy, who is hovering round, all jealousy and vengeance, and who might easily have saved her, allows her to drown, and saves Jim's wife instead. And in this way Miss Childar proves her proposition that life is not all skittles and beer. Of course she puts it more elegantly. "Is it a sad story?" she asks. "Dear reader, have you, then, found the world so gay?" But the effect is the same. Of course, too, the truism is less amusing in three volumes than in half-a-dozen words. But that is no more than was to be expected.

Royal Angus, the hero of Lord James Douglas's novel, is a very wonderful young man. He reminds you a little of Guy Livingstone and Company, a little of the noble creations of Mr. Percy Greg, and a good deal of the hero of a tract for distribution among the upper classes. While yet in his teens he contracts an attachment for a certain Muriel March. His father, who is a kind of Wicked Marquis, dies, however; and the violence of his grief obliges him to betake himself to foreign parts. On his return, at twenty-one, the Boy (as Lord Douglas calls him) finds his Muriel another's. He bears it like a nobleman. He protects a fair young orphan of the opposite sex in a manner that reflects the highest credit on the authors of his moral tone; he makes platonic love to Muriel; he plunges, rides, shoots, gambles, and makes ducks and drakes of his little patrimony as superbly as Ouida herself in her most blue-blooded mood. At last, though, in rescuing his Muriel from death, the Boy gets a bad fall at Melton. Hereupon he turns over a new leaf, sells his stud, stands for the county in the Conservative interest, makes the most eloquent speeches imaginable, is returned triumphantly, goes to Ireland to get up information, and becomes a reformed character generally. His career is virtuous but brief. At twenty-four he saves the lives of Muriel and her husband by cutting himself away into space from them somewhere in the Alps. His friends and relations mourn him still, and his grave—under an oak-tree at home, in whose shade the Boy and Muriel had often sat—is a model of manly simplicity. If I add that, in telling us about the Boy, Lord Douglas contrives to tell us a good deal that is not very new nor very interesting about Goodwood, Ascot, the St. Leger, the Grand National, Melton, Norway, Ireland, the Ring, and the manners and customs of the British aristocracy—whose conversation, I may note, appears to be heroically formal—I shall have said enough.

The third book on my list, *A Mother's Idol*—whose covers are figured with a design that appears to have been conveyed, and spoilt in the process, from the one invented by Chauvet for Prof. Jebb's *Translations*—is the romance of a governess. She is fond of polysyllables and long sentences, and her fluency is ladylike and commanding. Her story, however, is full of good intentions and

proper feeling, is honestly imagined and fairly well told, is of a nice morality, and abounds in pleasing and appropriate reflections. In addition to all this, some of the characters are natural and interesting, the *donnée* is rather fresh than otherwise, one or two scenes are well conceived and cleverly executed, and the whole thing—in spite of the heroine's verbosity and unmitigated right-mindedness—is easily read. The plot is of the simplest. The "mother's idol" is a certain Captain Davenel. He is the only son of a very proud, bitter, and haughty woman, and he falls in love with his niece's governess. She, however, has lost her heart to her pupil's father, the Captain's brother-in-law; and when the Captain, who is consumptive and has a violent temper, offers her his hand, she refuses it. Her refusal makes the Captain ill unto death, and to save his life she yields to his humbled and heartbroken mother's supplications, and promises to marry him. When he is convalescent, his mother and she accompany him to Italy; and at Venice, on the eve of their wedding, he and she are caught in a storm at sea. He is obliged to exert himself to try and save the boat; and, what with his exertions and the wetting he gets (for the boat is capsized and everybody is nearly drowned), he is mortally hurt, and dies. For the stern parent the blow is a heavy one; but in the end she is reconciled to the affliction. Her temper improves; she ceases from tyranny and ill-feeling; she becomes a true Christian; she makes everyone happy, and is herself content; and the curtain falls on a tableau of Home and Beauty, suffused (as with limelight) with the rays of a mild religious optimism.

Marchcroft Manor is only to be described as an Idyll of the Affections. It is a somewhat measured and formal idyll, it is true, and an idyll of modern years: with an aesthetic bar-rister for one of its heroes, and an accomplished and engaging vicar to look on and play chorus. But its sentiment is idyllic, and its savour distinctly Arcadian. The scene is somewhere in the country. The two heroes go down and fall in with the two heroines. They talk much seriousness and stately English together; and they fall in love. There are complications, of course; but these are of an innocent and strictly Arcadian type. Everybody's moral tone is elevated, and everybody is married. What more could the most inexorable novel-reader desire?

In *The Jews of Barnow*, translated from the German of Herr Karl Franzos, we break new ground, and come face to face with new characters, a new code of morals, and a new state of society. The book, in fact, is an account, more or less romantic in treatment, of life and manner among the Podolian Jews. In respect of material, it reminds one, to some extent at least, of the work of Sacher-Masoch. It is less vigorous in conception and treatment, and less passionate in intention and impressive in effect; but its spirit is gentler and more humane, and the taste it leaves in the mouth is a great deal better. Perhaps the most striking story is that one called "The Picture of Christ;" but there is none in the book which is not worth

reading, and none that is not in some sort good and affecting. There is no doubt but Herr Franzos should have many readers.

W. E. HENLEY.

BOOKS OF TRAVEL, ETC.

Holidays in Spain. By F. B. McOlintock. (Stanford.) This is a capital book of its kind, and is none the worse for not professing to be anything more than it really is—viz., an account of what may be seen of Spain by tourists travelling with circular tickets on the railway. It is distinguished from the ordinary run of such works by the pains which the author took to learn Spanish, and by the interest which he evinces in the literature as well as in the mere sight-seeing of the country. By his knowledge of the language he was able, on his second visit to Toledo, to avail himself of the services of an intelligent native guide, and hence to gain a truer knowledge of this pre-eminently Spanish town than the cosmopolitan cicerone can impart. We are the more pleased with the prominence given to Toledo because this town is often unduly neglected by modern tourists. Two chapters are here devoted to it, and a list of the principal objects worth seeing is given in an Appendix. We think our author mistaken in the date he gives to the *Mesquita del Cristo de la Luz*; it must be anterior to the eleventh century. The Mosque of Cordova, with which he compares it, was begun in 788. In addition to the *Tradiciones de Toledo* of Señor Olavarría y Huarte, visitors should read those of Gustave Bequers' legends which relate to this city. There also, as well as in the Basque province, the art of ornamental inlaid metal work has been successfully revived of late. Among other welcome items of information not commonly given is the list of seventy volumes of the "Biblioteca Universal." The volumes of this collection are small enough for the pocket, and the cost (5d.) is so trifling that they may be thrown aside when read if an accumulation of luggage be feared. To the list of other books recommended we should certainly add *The Industrial Arts in Spain*, by J. F. Riaño, in the "South Kensington" series, (1879). An English edition of Baron Davillier's *L'Espagne*, with illustrations by Gustave Doré, was published by Messrs. Sampson Low, in 1876. The letters quoted p. 51 are by M^{me}. d'Aulnoy, not *d'Aunoy*. Mr. McOlintock's advice to use the ear rather than the eye in learning a language, and to commit to memory idioms heard spoken rather than book phrases, is most sound. The reason of the bad oil used by Spaniards is not that they do not know the art of refining it, but because Spaniards really prefer it with a taste, just as English country-people used really to prefer sour ale and rancid bacon to fresh. Spanish servants in foreign houses often beg to be allowed to purchase this oil for themselves, rather than to use the refined but tasteless medium for cooking preferred by their employers. We do not think an ordinary railway tourist in Spain can do better than run over the pages of this book before starting on his journey.

An Engineer's Holiday; or, Notes of a Round Trip from Long. 0° to 0°. By Daniel Pidgeon. In 2 vols. (Kegan Paul, Trench and Co.) We confess that we are not disposed to be very lenient to the "globe trotter" who publishes. Nor were we favourably impressed on first opening this book at that portion of it which treats of India. The author visited only the best-known cities in the North; and nearly all that he has to tell about them and the country generally is at second-hand. And, even so, he cannot be accurate. It is truly painful to find our old friend, Suraj-ood-Dowlah, described as

a Mahratta (!) tyrant. But if anyone should happen to begin where we did we must beg him to follow our example further, and to read backwards. He will get to countries even better known than India—from the traveller's point of view—Japan and the United States; but he will find them described by a very keen and independent observer. Mr. Pidgeon seems to have no prejudices, and very few predilections. He studied men wherever he went (except in India and Egypt); and he gives his results in simple language without any pretension to literary ornateness. His praise of California and his doubts about the future of Japan have specially struck us. On the whole, he would have gained from us an entirely favourable verdict if he had known how to compress his work into a single volume.

Orient Sunbeams. Part II. "From the Porte to the Pyramids, by Way of Palestine." By Samuel S. Cox. (New York: G. P. Putnam's Sons.) Part I. of this work has been already noticed; it was called *Arctic Sunbeams*, and described a journey to the North Cape to see the Midnight Sun, and then on through Russia to Constantinople. Here the second volume begins; and the author finds himself under the influence of "Orient sunbeams," which impart an influence to the continuation of the tour to Ephesus, Damascus, Jerusalem, and Egypt, where it winds up at the Great Pyramid, and amid the mummified Pharaohs who have been lately added to the Boulak Museum at Cairo. Under the auspices of Gen. Wallace, the United States Minister, Mr. Cox was presented to the present Sultan, and the ceremony is very graphically described. The author speaks highly of the Sultan, and seems to have formed a more favourable idea than is generally held regarding him. The character of Abdul Aziz was misunderstood at first; money was being borrowed at the time, and that Sultan was represented as a very superior person. The opposite process may have taken place with Abdul Hamid, and he may turn out to be a man of ability. There must have been considerable changes in the region of the Bosphorus lately, if the author's account of the Turkish ladies is to be relied upon. How they dropped their *yakmashes*, or face-coverings, in his presence, and even shook hands with him, is all told—to one accustomed to the East, this is rather startling. Mrs. Cox was present, hence we are prevented from putting any wrong construction on the proceedings of these "odalisques." Mrs. Cox has sharp eyes, for she discovered on the Romolohissar, or fortress on the European side of the Bosphorus, at the entrance from the Buxine, the monogram of the Sultan Mohammed II., which Prof. Grosvenor, of the American College at that place, had never noticed before. The Americans have long been at work on the antiquities of the Bosphorus. There is a useful book by John P. Brown, who was secretary to the American legation at the Sublime Porte, on *Ancient and Modern Constantinople*, published in 1868. Mr. Cox's friends at the American College also seem to be well up on the subject, and this part of *Orient Sunbeams* is very interesting from the glimpses of the past which the author gives. The explanation of the word "Therapia" as health-giving, from Medea having opened her magic box of drugs and left some of them as she passed on her way with Jason to the Mediterranean, is, of course, based on the assumption that the Argonauts returned by way of the Bosphorus—this is, no doubt, the only reasonable theory, yet it is not what the old writers say on the subject. Apollonius Rhodius makes them sail up the Danube—the "majestic Ister." Others have made them go up the Don, and authorities can be quoted who say that it was by the Phasis that they sailed to the Mediterranean. Gen. Wallace has a theory that the Golden Fleece

had been used for washing the sands for gold. The alchemists had a much prettier theory; according to them, it was a parchment with the secret of the "philosopher's stone" written upon it. Mr. Cox had visited Constantinople thirty years before, and his remarks on the changes since that time are particularly interesting.

Tourists' Guide to Warwickshire. By G. P. Bevan. (Stanford.) Warwickshire is by far the pleasantest county in our land. It is not associated, as are most of the other English counties, with some district of surpassing interest; but its scenery is of a pastoral and tranquil character, with shady lanes, slowly flowing streams, and rich meadows. Leamington is the centre of the Old Country, and around that trim and fashionable watering-place are many representative specimens of the national scenery. With the exception of the narrow strip between Stratford and Coventry, the whole county is left neglected by the tourist; but the day will probably soon arrive when a constant band of pilgrims will wend their ways to the busy little town of Nuneaton to visit the birth-place of George Eliot, just as a motley company of worshippers rest now at the shrine of Shakspeare. Mr. Bevan makes loving mention of the advantages enjoyed by the traveller in South Warwickshire who is content to wander along wooded roads instead of being whirled on a dusty railway. To these aids to enjoyment may now be added the possession, at a small price, of an accurate and painstaking guide-book which supplies in a convenient form the information which is most needed for his happiness. We have noticed in a careful perusal but one omission, and that is the absence of any mention of Walter Savage Landor as a Warwickshire worthy. There may be some critics who would object to the reference to Dr. Parr as a former Vicar of Hatton who was only remarkable for "a passion for bells;" and the stickler for correctness would probably complain of the statement that Mr. Chamberlain is the Secretary of the Board of Trade. If there were greater faults in Mr. Bevan's handbook than these we should still be justified in saying that he has discharged his task with great judgment.

Studies in Nidderdale. By Joseph Lucas. (Elliot Stock.) Books which aim at describing the physical features, fauna, and flora of a district always attract readers, and are indispensable to every student of nature who would advance science by careful generalisations. Here the climate, antiquities, ethnology, and dialect of a retired Yorkshire valley have been indefatigably explored, and the result is a volume of considerable interest, not merely to Yorkshiremen, but to all who dwell within those districts of England which were colonised by the Northmen. The Nidd rises on the eastern slope of Great Whernside, and runs a tortuous course answering to its name (the "turning" or "whirling" river) by Pateley Bridge and Knaresborough, to fall into the united streams of Ure and Swale which together form the Ouse. The dale which fringes its course is mostly formed of limestone, whose vivid green grass generally defines the formation. Mr. Lucas remarks, as clearly as the heather-clad peat does that of the millstone grit which rises high above it into the eminences so characteristic of the Pennine range. A full dialectical glossary is appended. It might have restrained the author from the etymological disquisitions and citations of Anglo-Saxon laws which somewhat crowd his pages and detract from the pleasure of continuous perusal. This fondness for derivation occasionally leads him astray, as in his endeavour to prove that "fomard" (a marten) is a distinct word from "foulmart" (a polecat), coming from *foa* (Old-Norse for fox) and *mærd* (a marten).

We rather demur to be told that "everybody who has written about this name has been mistaken." The fact is "fomart" (or "fummart," as it is more generally pronounced) is throughout the North of England a generic name. It is applied by countrymen to polecat or stoat indiscriminately. The marten is now so rare in England that it too would be called a "fummart" by nine people out of ten. There is no need to seek for etymological refinements in the matter. A scientific book should not be garnished with original poetry. Mr. Lucas greatly tries our patience herein. The legend of Lord de Clifford, for instance, is not much elucidated by such lines as

"For, Annot, methought with meteor flash unguided,

The sharp knife Separation struck our star,"

which tempts us to be gracious to his prayer ten lines farther on—"forgive my ravings!" If the sharp knife of excision were applied to all these verses, and a little more care taken to avoid in another edition the misprints which terribly disfigure the present one, Mr. Lucas's volume would be more grateful to the student. There is much commendable research in it. The old list of sheep-scoring numerals which he gives opens a question of much interest. The curious system of "reine," of which traces may be found in Nidderdale and elsewhere in Yorkshire, transports us at once to primitive community yet privacy of holding, as in the modern Russian "Mir." Many of the superstitions, Christmas customs, and the like of the district are full of instruction, some of them running down, as they do, into Lincolnshire, which is full of Scandinavian settlements. There is nothing very noteworthy in the avi-fauna of Nidderdale, and its botany may be studied more accurately in Messrs. Davis and Lee's *West Yorkshire*; but Mr. Lucas's book contains germs of thought in every page for the lover of nature, ethnology, and folk-lore. It is, in short, so good that it might easily be made better.

The Peak District of Derbyshire and Neighbouring Counties. By M. J. B. Baddeley. With Maps, general and sectional, by Bartholomew. (Dulau.) As the perfect writer of guide-books has yet to come, we must needs be content with those that are. "Murray" still remains the *vade mecum* of the gentleman traveller; for the tourist who wants to do much in little time, "Baedeker" combines accuracy with thoroughness. But there is yet another class who have Mr. Baddeley for their friend and adviser. This is the genuine holiday-maker, parsimonious alike of his hours, his shillings, and his reading, and content to be personally conducted through a famous district. If this were all, Mr. Baddeley's little red books would hardly deserve a serious notice. But he who reads them closely will find that they are marked by certain characteristics common to none of their rivals. If Murray is learned and Baedeker thorough, Mr. Baddeley is pre-eminently practical. It is the man himself, and not the book, that accompanies you. Nothing is described, or even alluded to, that he has not seen with his own eyes, or perchance failed to see. Nothing is secondhand, nothing merely traditional. Whether you are a walker, or whether you are a 'cyclist (for such are the most of holiday-makers), you may trust yourself to Mr. Baddeley's personal conduct, confident that you will never be misled, even if you are not always satisfied. You may think his flippant style of comment scarcely dignified for a B.A.; but you can never afford to doubt his facts. The maps alone are worth the price of the book. With a view to a second edition, we may notice that the "Cat and Fiddle" remains undescribed either on p. 18 or pp. 63, 64.

Philips' Handy Atlas of the Counties of Scot-

land. Constructed by John Bartholomew. With Consulting Index. (George Philip and Son.) This is a sister volume to the little *County Atlas of Ireland*, which we received (and favourably noticed) some little while ago. It must be admitted that Scotland does not so readily yield itself to a similar treatment. The Scotch counties are of excessively arbitrary form, both in respect of configuration and of actual bulk. In several cases two counties have to be combined on a single map, and in more than one case a county has to be looked for in two. Again, though the scale has wisely been varied, the size of the sheet remains the same, so that tiny Peebles looks almost as large as its alphabetical neighbour, big Perth. These slight drawbacks are unavoidable to the scheme. The execution, however, leaves nothing to be desired. In point of both fullness of information and clearness the maps contrast very favourably with the corresponding ones in the *Ordnance Gazetteer of Scotland*. We do not speak confidently, but we think that undue emphasis has been assigned to the subdivision into parishes. Scottish parishes are by no means of the same political importance as Irish baronies. Of the two maps of the environs of Edinburgh and of Glasgow we do not complain, though they do not fall within the professed scheme of the work. Dublin was not thus honoured.

MESSRS. G. W. BACON AND CO. have sent us a *Pictorial Map of the World*, together with a descriptive *Handbook*. The map is in the form of a wall chart, mounted on a roller; it is printed in chromo-lithography, in which process we are informed that no less than twenty-one colours have been used. We are also informed that it is "the most wonderful and beautiful . . . ever produced." That it is very wonderful cannot be disputed; and we recollect to have seen others that were more ugly. But to assert that it is positively "beautiful" is inconsistent with our regard for truth. Utility, however, is a quality not to be despised; and here Mr. Bacon may securely invite criticism. What has struck us as most useful is the dial-plate, showing the time of day in the principal cities of the world when it is noon in London; and also the coins of different countries of the actual size. Such matters well admit of pictorial representation. We have glanced at the handbook that accompanies the map; and we believe it to be not only brimming with information, but also singularly accurate.

NOTES AND NEWS.

LORD CHIEF JUSTICE COLERIDGE has been kind enough to let Dr. Alois Brandl have access, for his new work on Coleridge, to all the letters of Coleridge, Wordsworth, and Southey addressed to the late Sir John Coleridge. The Coleridge letters cover nearly the whole of the poet's career, and begin with the appeal to buy his discharge from the army.

THE appointment of Major J. G. Maurice, R.A., as Deputy - Assistant - Adjutant and Quartermaster-General under his old leader, Sir Garnet Wolseley, in the present expedition to Egypt, will further delay the already too long deferred *Life* of the late Frederick Denison Maurice, of whom Major Maurice is the elder son. One volume of the *Life* is, we believe, printed, and more than half the second is ready for the press. The rest must await Major Maurice's return home.

THIS autumn will appear a new volume of poems by Mrs. Hamilton King, author of *The Disciples* and *Aspromonte*. It will be called *A Book of Dreams*.

WE learn that the whole of the large-paper copies of Shakspeare's works ("Parchment Library") now publishing by Messrs. Kegan

Paul, Trench and Co. were sold on the day of issue. Six copies of the work are also to be printed on vellum, which are all bespoken. Six copies of the *Imitation of Christ*, in the same series, were also printed on vellum, and sold at once; and the publishers are about to issue six copies, also on vellum, of their forthcoming edition of *The Christian Year*, with an etching from Mr. Richmond's well-known portrait.

PROF. G. STEPHENS, of Copenhagen, is spending some time in London.

PROF. KOVALEFSKY, of Moscow, who has just returned from a three months' tour in the United States, has passed through London on his way to his work in Russia. His report on the negro schools and churches and the condition of the coloured population is, on the whole, encouraging, though he still found white men in the South declaring that they would shoot the negroes who attempted to vote against their candidate. His account of the negro preacher's sermon on Joshua and the thesis that "the sun do move" was as amusing as his relation of certain Northern peculiarities which astonished him. The Englishness of Boston and Cambridge was very striking. The political feeling of the South was shown by a lady's answer to a question about Americans: "I am not an American. I am a Virginian." The faith of everyone in the future of the country was very remarkable; and it is a faith which the visitor who sees everywhere evidence of the forward movement of the nation cannot but share.

THE question of the authorship of the once-famous book *The Whole Duty of Man* has long been a biographical cruz. Mr. Edward Solly has investigated the question in an elaborate article which appears in the August number of the *Bibliographer*, and his opinion is adverse to the claim of Lady Pakington. He describes the edition published in 1658, or one year earlier than that which Lowndes erroneously supposed to be the *editio princeps*.

THE next volume in the "Sunbeam" series of sixpenny editions will be Trench's *Realities of Irish Life*.

MR. RICHARD HERNE SHEPHERD has in preparation *The Life, Letters, and Uncollected Writings in Prose and Verse of William Makepeace Thackeray*, in two handsome volumes, uniform with *The Plays and Poems of Charles Dickens* just published by Messrs. W. H. Allen and Co. A limited number of copies will be printed on large paper, uniform with the *édition de luxe* of Thackeray's works. Subscribers' names will be received by the editor at his private address, 5 Bramerton Street, King's Road, Chelsea, S.W.

OF the second edition, revised and enlarged, of Mr. Shepherd's *Bibliography of Dickens*, fifty copies only have been printed separately for private circulation and for the use of collectors. Any person desiring to possess a copy of this limited impression may apply direct to Mr. Shepherd.

THE New Shakspeare Society will next session follow the example of the Browning Society, and give its May evening to a selection of Shakspeare music—glees, madrigals, and songs—in chronological order, under the direction of Mr. Haweis's choir-master, Mr. J. Greenhill. The society's general papers next session will be on Shakspeare's Supremacy, by Dr. P. Bayne; on the play of "Julius Caesar," by Miss E. H. Hickey; on Shakspeare's Sonnets and to whom they were addressed, by Dr. B. Nicholson. The special papers on textual difficulties will be:—"Hamlet," by Miss M. Lilian Rochfort-Smith; Early Comedies, by Mr. Furnivall; "Richard II.," by the Rev. W. A. Harrison;

"All's Well" and "Twelfth Night," by Mr. W. G. Stone; and "Winter's Tale," by Dr. B. Nicholson.

At the last meeting of the Cheltenham Browning Society a paper on "Cleon" was read by Miss Beale, of the Ladies' College.

THE current number (vol. iii., No. 7) of the *Monthly Notes* of the Library Association contains a valuable list of selected books in political economy, which has been compiled, with illustrative notes, by Prof. W. Stanley Jevons. Such lists are common in America; but, so far as we are aware, this is the first that has appeared in this country. We are glad, therefore, to hear that Mr. Ernest C. Thomas, the editor of the *Monthly Notes*, hopes to follow it up with similar lists on other subjects.

MR. W. ANDREWS has compiled a very neat report of the festival held at Hull in honour of the birthday of Shakspeare on April 24, 1882, which is published by Messrs. M. O. Peck and Son, Hull.

FROM the Report of the Trustees of the British Museum for the year ending March 31, 1881, which has been recently issued as a Blue-Book, we learn that the number of distinct works added to the department of printed books was 30,182, of which 2,526 were presented, 9,347 acquired by English and 810 by international copyright, and 17,499 by purchase. The titles for the catalogue of English books before 1640 have been finally reviewed, and are now being prepared for the press. The number of readers was 134,273, being a daily average of 455, who consulted about six volumes per diem each, exclusive of those in the reference library. Many important old books have been added. In the department of MSS. 690 have been acquired, and 31,197 MSS. consulted during the year; the number of special visitors was 2,071. The Oriental department added 112 MSS., and 1,515 MSS. were consulted by 201 readers during the year.

It is proposed to offer a complimentary dinner to Mr. George Jacob Holyoake, on the occasion of his second visit to the United States—this time to report on the subject of emigration. The proposal has already received the support of Sir Thomas Bazley, Mr. Thomas Burt, M.P., Alderman Heywood, of Manchester, and many other well-known Lancashire men. The dinner will take place at Brooklands, near Manchester, on Wednesday, August 16; and those who wish to be present should address themselves to W. E. A. Axon, Esq., Fern Bank, Higher Broughton.

THE report read by the dean, Mr. A. K. Isbister, at the half-yearly general meeting of the College of Preceptors, held on July 22, shows good results. The total number of pupils examined during the year ending at Midsummer was 11,934, of whom 8,172 passed. Both these figures are nearly double those of five years ago. The examination for teachers seems less satisfactory. Only one licentiatehip was awarded, and eight associatehip diplomas. The college now conducts examinations not only on behalf of the Veterinary College and the Pharmaceutical Society, but also to meet the case of students seeking registration by the Medical Council or the Incorporated Law Society.

A NEW newspaper has been started in Manchester. It is a penny evening paper, issued in the interests of the Conservatives, and is evidently based upon a close study of the *Globe*. The *North Times*—such is its name—is intended to circulate in the North of England generally. There is to be a certain amount of non-political matter in the paper, and to this Mr. J. Fox Turner and some others whose politics are not of a Tory tinge are expected to contribute.

WE learn from the *Critic* that the authorised edition of Garfield's papers, including his speeches, legal arguments, and literary essays, will be published in two volumes next November by Messrs. Osgood, of Boston. The editor is President Hinsdale.

It is stated that Messrs. Rees Welsh and Co., of Philadelphia, have taken up the publication of Mr. Walt Whitman's complete works, which was abandoned by Messrs. Osgood, of Boston, on the threat of prosecution from the Attorney-General of Massachusetts.

A COMPLETE edition of the works of William Gilmore Simms, the novelist of the South, who has been placed only just below Cooper and Hawthorne among American writers of fiction, is being issued in ten volumes by Messrs. Armstrong, of New York.

THE "Adelphi" of Terence was performed on June 17 by the students of the University of Michigan. This is said to have been the first Latin play ever given in America. Suggestions as to costumes, &c., had been received from Westminster; and a correspondent of the *Nation* speaks of "the genuine dramatic excellence of the performance."

THE brilliant young professor, Dr. Menendez Pelayo, has been elected to the Academy of History at Madrid. It is expected that the third volume of his work upon the Heretics of Spain will shortly be published. The two former were reviewed in the *ACADEMY* at the time of their appearance.

THE rumour is confirmed by Herr Biedermann in Westermann's *Monatshefte* that several boxes have been found in the royal library at Hanover containing the correspondence of Leibnitz with several learned men of his day, and also other interesting papers.

THE Historical Society of Neuchâtel has just held its annual meeting at Courcelles. The president, A. Bachelin, the well-known painter, gave an account of the Chronicle of the Canons of Neuchâtel, which he described as containing important material for the history of the Burgundian War. The original MS. was burned in the year 1714. The society, at M. Bachelin's request, resolved to print a new edition of Friedrich de Rougemont's copy of the Chronicle. The history of the Burgundian War in the Canons' Chronicle was written by Hugues de Pierre, with the assistance of Henri Purry de Rivé and Jacques Hory, who, like himself, were eye-witnesses of the events described. M. Colin-Vaucher read a monograph on Courcelles and Cormondrèche, which is to be printed in the *Musée neuchâtelois*. Some letters found in the collection of the Pastor of Montmolin, who was famous in his time as a violent adversary of J.-J. Rousseau, were read by M. Fritz Berthoud.

THE University of Göttingen, in Hanover, has 1,083 students, of whom 221 are in the departments of, philology and history.

MR. W. H. WYMAN, of Cincinnati, has sent us a "bibliography of the Bacon-Shakespeare literature," consisting of sixty-three titles. The earliest is in a book by a certain Col. Joseph O. Hart, U.S. consul at Santa Cruz, published by Harpers, of New York, in 1848. This is four years earlier than the article in *Chambers'*—"Who Wrote Shakespeare?" The real beginning of the discussion (if discussion it can be called) was Delia Bacon's paper in *Putnam's Monthly* for January 1856. On the whole, it is gratifying to find that the advocates of the paradox are almost entirely American. They have, however, an ally in Australia.

FRENCH JOTTINGS.

THE last volume of the "édition ne varietur" of the complete works of M. Victor Hugo, which is being published jointly by Hetzel and Quantin, contains the three plays—"Lucrèce Borgia," "Marie Tudor," and "Angelo." In each there are many lines, and even scenes, restored from the original MS.; and in the "Angelo" an entire act, the third, which has never before been either represented on the stage or printed. This edition will consist altogether of about forty-five volumes, at the price of 7 frs. 50 c. each.

A NEW novel by that versatile writer, M. Jules Claretie, was published last week by Dentu. It is entitled *Le Million*; and, like his last, *Monsieur le Ministre* (which is now in its forty-seventh edition), it deals with the social life of to-day.

M. G. GUIZOT, professor at the Collège de France, has added to his translations of Macaulay a selection of his historical and literary essays.

THE Société historique, the formation of which we announced some months ago, recently inaugurated its *cercle* or club at 2 Rue Saint-Simon, Paris. The two honorary presidents are MM. Mignet and Henri Martin, representing the old generation of French historians. The working president and prime mover is M. Gabriel Monod; and the vice-presidents are MM. Lavissee and Albert Sorel. That "history" is not understood in a narrow sense is shown by the list of members, which includes the names of MM. Renan, Taine, Duruy, Fustel de Coulanges, Gaston Paris, Léon Say, Cherbuliez, and de Pressensac.

THE Société bibliographique, after ten years' preparation, has been bold enough to publish a "catalogue des livres choisis à l'usage des gens du monde, contenant les meilleures productions de la littérature contemporaine." The total number of books which thus receive official approval is only 3,000. Some five years ago the American Library Association proposed to compile a similar list, but we believe that the project has been abandoned.

M. GEORGES BENGESCOO has published (Paris: Rouveyre and Blond) the first volume of what is intended to be a final bibliography of Voltaire, superseding that issued by Quérard in 1842. It gives full details of the literary history of each work, with a notification of the place where a copy may be found. The two first volumes will be devoted to Voltaire's own writings, while the third and last will describe translations and literature connected with Voltaire.

THE publishing house of Vieweg, at Paris, have just issued several important books which combine in showing the activity of the French in this department of learning. These are the first volume of Mariette's own description of his discovery of the Serapeum, and the second part of his work entitled *Les Mastaba de l'ancien Empire*, both edited by M. Maspero; and the first volume of *Les principaux monuments du Musée égyptien de Florence*, by M. W. B. Berend. This last treats only of the stelae, bas-reliefs, and frescoes; and it is illustrated with ten plates in héliogravure. It forms the fifty-first volume of the "Bibliothèque de l'école pratique des hautes études," published under the auspices of the Minister of Public Instruction.

THE first report on the Congrès scientifique held at Dax in May last has now appeared in the *Bulletin de la Société de Bordeaux*. The congress and exhibition were devoted chiefly to archaeology. In prehistoric archaeology the existence of Tertiary man was discussed, but considered non-proven. In ecclesiastical archaeology the discovery of a Gallo-Roman mosaic pavement both in the Abbey of Sordes and in

the Park prove that the church is on the site of a Roman villa. Several other cases of the use of Gallo-Roman, Merovingian, and Carolingian material in churches of the date of the tenth to thirteenth centuries in the district were also established. The utility of the telephone in meteorology by transmitting earth-sounds was also exemplified.

RUSSIAN JOTTINGS.

A TOUCHING proof of the popularity of Shakspeare in Russia has just been given us. When the late Prof. Katchanofsky—who was well known in legal circles here—lay dying, the friend and pupil who nursed him heard him reciting "To be, or not to be, that is the question," two hours before his death.

THERE will shortly be published a work relating to the history of the theatre in Russia by Prof. N. Tikhonravov, of Moscow. The title will be *Russian Dramatic Publications, 1672-1725*. This work will contain a selection of original and translated dramatic compositions drawn from various Russian libraries and collections. Notes explanatory of the origin and literary history of each piece will be added, and an elaborate article by the editor will be prefixed, in which the *répertoire* of the Russian theatre during the first fifty years of its existence will be minutely examined.

A NEW edition of the complete works of the Russian poet A. S. Pushkin is about to be published at Moscow. It will be the eighth that has appeared, and will be edited by M. Ephremov. Two editions were issued during the poet's lifetime—the first in 1826, and the second in six volumes during the years 1829-35. In the last year of his life, Pushkin prepared for the press a complete collection of his works, prose and poetical; but, owing to his untimely death, this third issue formed the first posthumous edition, and appeared in eleven volumes during the years 1838-41. M. Annenkov published a fourth edition in 1855-57, and three editions were issued in succession by the publishing house of M. Isakov in 1850, 1870, and 1880 respectively. M. Ephremov states that all the latest texts and, wherever possible, the original MSS. have been collated for the purposes of the present edition. It will be supplemented by an additional volume of correspondence between the poet and some of his relatives and acquaintances. The entire collection will consist of seven volumes, and will cost 10 roubles (£1).

A FOURTH and complete edition is announced of the works of the late Count A. K. Tolstoi, the poet and novelist. This author must not be confounded with his countryman, Count Leo Tolstoi, the distinguished novelist, who still lives. The first edition of Count A. K. Tolstoi's works was published in 1867, the second in 1876, after his death, and the third in 1877. The new edition will consist of four volumes. The first two will contain the lyrical and dramatic poems; the third the dramatic trilogy, *The Death of Ivan the Terrible*, *Fedor Ioannovich*, and *The Tsar Boris*; and the fourth the classic romance entitled *Kniaz Serebrannii*. It is understood that all the writings to which the author himself attributed any importance will be included in this latest edition.

ACKNOWLEDGMENTS.

WE have on our table the following:—*Russians and Germans*, translated from the French of Victor Timot, by Stephen L. Simeon (Remington); *The Invasion of England, told Twenty Years After*, by An Old Soldier (Sampson Low); *A True Story of the Western Pacific in 1879-80*,

by Hugh Hastings Romilly (Longmans); *An Impromptu Ascent of Mont Blanc*, by W. H. Le Mesurier (Elliot Stock); *Common Sense about Women*, by Thomas Wentworth Higginson (Sonnenschein); *The Hair: its Treatment in Health, Weakness, and Disease*, by Dr. J. Pincus (Chatto and Windus); *Science in a Nutshell*, in which Rational Amusement is blended with Instruction, by Alexander Watt (W. and A. K. Johnston); *Persia: an Essay in Greek*, by Launcelot Dowdall (Cambridge: Jones and Piggott); *Conscientia*; or, *Later-day Pilgrims*, by W. Anderson Smith (Paisley: Gardner); *The Mind in the Face: an Introduction to the Study of Physiognomy*, by William McDowall (L. N. Fowler); *The Army and Navy Calendar for 1882-83*: being a Compendium of General Information relating to the Army, Navy, Militia, and Volunteers, and containing maps, plans, tabulated statements, abstracts, &c., compiled from authentic sources (W. H. Allen); *Transactions of the Gaelic Society of Inverness*, Vol. IX. (Edinburgh: MacLachlan and Stewart); *Journal of the American Geographical Society of New York*, Vol. XII.; &c.

AND also the following reprints and second editions:—*The Antiquary: a Magazine devoted to the Study of the Past*, Vol. V., January—June 1882, of which we have noticed the monthly numbers from time to time (Elliot Stock); *Christy Carew: a Novel*, by the Author of "Hon. Miss Ferrard," &c. (Macmillan); *Visits to Remarkable Places*, by William Howitt, the illustrations designed and executed by Samuel Williams (Longmans); *A Manual of the Principles of Government*, as set forth by the Authorities of Ancient and Modern Times, by Hugh Seymour Trevelyan (Kegan Paul, Trench and Co.); *The Garden that Paid the Rent*, by Tom Jerrold (Chatto and Windus); *T Leaves: being a Collection of Pieces written for Public Reading*, by Edward F. Turner (Smith, Elder and Co.); *Stronbury*; or, *Hanks of Highland Yarn*, by the Author of "Tobermory" (Edinburgh: Macniven and Wallace); *Facts about Manitoba*, by W. Fraser Rae, with two maps (Chapman and Hall); *A Short and Simple History of England*, by the Rev. B. G. Johns (Crosby Lockwood); *Matriculation Classics, Questions and Answers*, by the Rev. J. R. Walters (H. K. Lewis); *Elementary Class-Book of Physical Geography*, with Examination Questions, by William Hughes, revised by J. Francon Williams (George Philip and Son); *The History of the Hebrew Nation and its Literature*, by Samuel Sharpe (Williams and Norgate); &c.

MAGAZINES AND REVIEWS.

COL. G. B. MALLESON is contributing to the *Army and Navy Magazine* (W. H. Allen) a series of papers on "The Decisive Battles of India." That in the current number is on Plassey, which he would like to spell (but dare not) as Palási. To call the historic spelling "incorrect" is, we venture to submit, a misuse of language. The word, like countless others, was naturalised at a time when precise transliteration was never thought of. As well say Rome is incorrect for "Roma." But we should not have referred to the matter at all if we had not wished to draw attention to the substance of Col. Malleeson's article, which is undoubtedly the most full, the most accurate, and most picturesque account of the battle that has yet been written. We must, however, enter a mild protest against some of his moral reflections, which are at least out of place. It is much to be hoped that this series may be reprinted in a permanent form.

THE *Palatine Note-book* for August contains a number of letters sent by Col. Charteris to his steward at Hornby Castle, Lancashire, in

the years 1721-23. They are curious examples of unlettered ease, and amply illustrate the truth of Pope's sarcastic assertion that "Chatterbox scarce could write or read." They also show that meanness with which his name is usually associated. The article is contributed by the Rev. T. E. Gibson, of Lydiat. Another paper in the same periodical contains a list of the books of Sir Thomas Holcroft, a Cheshire knight, who in 1616 was the owner of some MSS. from the abbey of Vale Royal.

THE original articles in the July number of *Le Livre*, though not numerous, are decidedly interesting. A fourth article on "Jamet le Jeune" gives that unestimable bibliophile quite as much attention as he deserves. But "Champfleur's" new "Romantique Oublié," Siméon Chaumier, was worth celebration; and a writer whose name or pen-name is new to us, Spire Blondel, begins a series of papers on "Les Outils de l'Écrivain," with a good discourse on "Le Crayon." Chaumier wrote three romances and two volumes of poetry between 1830 and 1840, and, though a stout Republican in 1848, welcomed, unlike most Romantics, the Third Empire. But, as was usual with literary men in that most unliterary time, he met with no response from the authorities, and died in 1860, aged fifty-four. His portrait, reproduced here, is remarkable, and so is the specimen of his *Dithyrambes*. As for the penoil, M. Blondel begins with *Floire et Blancheflor*, and brings the history down to Lamartine, who, it seems, always wrote in pencil. Let it be hoped that no desperate product-of-the-circumstances critic will see an explanation in this of a certain fatal facility which Lamartine's work too often displays.

UNDER the title "A Grand Bard of Nature," Señor Munoz y Manzano, in the *Revista Contemporánea* of July 15, eulogises the poems of J. M. Heredia, a Cuban and Mexican poet, who died in 1839, at the age of thirty-six. In the closing chapter of his "Expedition to Italy in 1849," Gen. F. de Cordova discloses the attempts of Pius IX. and Antonelli to get rid of their two powerful French protectors, and to substitute for them Spanish troops, which they even offered to pay. An excellent article by Suárez Capalleja on the part of imagination in scientific discovery points out that at least the form of the expression of a discovery is due to that faculty, and that without some imagination there can be no clear and simple exposition of it. The "Economic Studies" of Carreras y Gonzalez are really an attempt at a classification of the sciences to determine the place which political economy should hold in them. Some of his *a priori* axioms, however, are by no means indisputable.

AN enlarged number of the *Euskal-Erria* of July 14 is devoted to the first centenary of the death of Sebastian de Mendiburu, a Jesuit missionary, and the chief promoter of the Worship of the Sacred Heart in Spain. For his excellent style, both in Latin and in his native idiom, he was known as the Basque Cicero, and ranks as one of the great Spanish Mystic writers.

SHETLAND NOTES.

Lerwick.

THE town of Lerwick having recently had a grant of arms conferred on it by the Lord Lyon of Scotland, some interest was excited on the question of a suitable motto. Ultimately, the words of Tacitus, from his description of the circumnavigation of Britain by Agricola—"Despecta est Thule"—had the preference to the Virgilian "Robur et æs triplex," which was the other candidate for civic honours.

The new Town Hall of Lerwick, from the designs of Mr. A. Ross, of Inverness, is now fast approaching completion. Much care is being

taken in carrying out an elaborate scheme of historic and heraldic decoration, intended to be commemorative of the whole Norse and Danish period of the history of the Northern Earldom. The Earl of Zetland has presented one of the largest stained glass windows required for the main hall. The Sheriff of the county (Mr. G. H. Thoms) some time ago announced his intention of presenting the companion window. These windows, which are double lancet, are placed in the south gable of the hall. The one will contain full-length figures of King Harold the Fairhaired, and of Cystein, Archbishop of Trondhjem, the metropolitan prelate of the ancient see of Orkney and Shetland, who died 1168; and the other will represent Earl Rognvald of Orkney (the first of the earldom, friend of King Harold, and the ancestor of Queen Victoria through the Dukes of Normandy), and Bishop William the Old, the first bishop of the diocese of Orkney and Shetland, who died 1168. King Harold visited Shetland in 870, after his subjugation of Norway, of which he was the first sole king. There are four windows in the front façade of the hall, and these it has been decided to fill up as follows:—(1) King Harald Hardrada of Norway, who landed in Shetland in 1066, shortly before William the Conqueror's victory at Hastings; and Earl Magnus, to whom the cathedral of Kirkwall is dedicated. (2) King Olaf Trygvason of Norway, who introduced Christianity into the North, and Queen Thyri, his wife. (3) King Hakon Hakonson of Norway, who lay with his fleet in Bressay Sound, Shetland, on his way to Largs, where he was overthrown; and Earl Rognvald, the Crusader. (4) King James III. of Scotland, who, by his marriage with the Princess Margaret, transferred the islands to the Scottish Crown; and the Princess Margaret. In addition, the Morton Lodge of Freemasons is to present a stained glass window for the principal staircase leading to the main hall. Above the main entrance to the hall, within the room, is to be placed a tablet of white marble, bearing the arms of the Morton family—the gift of the present Earl of Morton.

CORRESPONDENCE.

HAMLET'S "TOO TOO SALLIED FLESH."

3 St. George's Square, N.W.: July 23, 1882.

In confirmation of the meaning I put on "sallied," in to-day's ACADEMY, of "assaulted, assailed, set upon," I unaccountably forgot to quote the corresponding passage of Quarto 1, which leaves no doubt on the point:

"O that this too much griev'd and fallied flesh
Would melt to nothing, or that the valuerfall
Globe of heaven would turne al to a Chaos!"

This shows the wisdom of an editor holding to his authorities when they are firm on a reasonable-looking word, even if he cannot explain the term they agree on. The adoption of this course would have saved us no end of sometimes ingenious, sometimes foolish, emendations of Shakspeare. F. J. FURNIVALL.

WHAT IS A "CLEACA"?

London: July 20, 1882.

Among the "Anglo-Saxon" charters exhibited in the King's Library, British Museum, is a grant by Cnut, in the year 1031, to his faithful thegn, named Ætheric, of half a "manea" of land at a place called "Mæwi." The charter is printed by Kemble, vol. iv., p. 35. To the initiated, Mæwi is known to signify Meavy, in Devon; the manor taking its name from a river on the bank of which it lies, according to a practice which was more prevalent in this county than perhaps any other. Thus, in the Domesday for Devon there are four Teigns, eight Clists, three Creedyes, thirteen Otterys, four Darts; the rule being without exception, that the farm called after the river always touches the stream. Mæwi, then, stands on, or at, the Meavy, which is a tributary of the Plym, and joins it at Shaugh Bridge. The boundaries of Cnut's grant are given, and correspond, accurately enough, with the northern and north-eastern parts of the present parish of Meavy. They begin thus:—"Ærest on cleaca"—"first at cleaca," or "the cleaca." Being struck with this phrase, I resolved, some weeks since, to visit the actual north-east corner of Meavy parish, where it meets Walkhampton and Sheepstor, in order, if possible, to ascertain what a "cleaca" really

means. At the spot I found the object of my search, in the shape of a set of stepping-stones, about twelve in number, formed of rough, unhewn granite boulders, the surfaces of which are worn down in the middle by the footsteps of an unknown number of generations. This was, undoubtedly, the "cleaca" of the boundary, but search for the word in English dictionaries proved altogether fruitless. At length a friend directed me to Armstrong's Celtic Dictionary, where "clach" is explained as "a stone, pebble, rock;" and "clachan" as "a pier, landing-place, stepping-stones in water, or on watery ground;" and to O'Reilly's Irish-English Dictionary, where "clachan" is rendered "a ford, stepping-stones." So that the word appears to be a survival, through the Anglo-Saxon or old-English period, from a former age. It may be added that lower down the stream, at Meavy Bridge, is another "cleaca," or set of stepping-stones. Nor are these the only relics of a high antiquity (as we reckon antiquity in this country) remaining in this neighbourhood.

JAMES B. DAVIDSON.

BEROSUS—GENESIS.

London: July 19, 1882.

The fragments of Babylonian history which are attributed to Berossus owe none of their value to the supposed author, "a Chaldaean priest, who under Seleucus Nicator edited in Greek the annals and legends of his country" (Lenormant). "Respecting the personal history of Berossus scarcely anything is known" (Smith's Dict., s. n.); and "some have thought that the history of Babylonia was the work of a Greek who assumed the name of a celebrated Babylonian" (*ibid.*). But when M. Lenormant said "que les Babyloniens possédassent une tradition sur le déluge offrant les plus étroites et les plus curieuses ressemblances avec le récit biblique, c'est ce que l'on savait depuis longtemps par les fragments de Bérosee" (*Le Déluge*, p. 7), why did he not add—which name offers the closest and most striking resemblance to בְּרֵאשִׁית (*Berossus*), the title-word of the Biblical narrative? In fact, ΒΗΡΩΣΣΟΣ δὲ, ἐν τῇ πρώτῃ τῶν Βαβυλωνιακῶν κ.τ.λ. δ' αὐτὸς Ἀλέξανδρος (Cory, p. 21) may be considered equivalent to "בְּרֵאשִׁית, Genesis, in the first of the books, &c., Moses says, &c." All five letters are really identical in the Hebrew and the Greek. Was not, then, the priest of Bel Alexander, the "copious translator"? If Berossus had lived and written, Cyril would surely have cited the passages under that name instead of quoting secondhand against his imperial opponent (*adv. Julian*, vol. ii., p. 561; lib. i., c. B., par. 1604). F. COPE WHITEHOUSE.

CICERO IN TRAVESTY.

98 Boobuck Road, Sheffield: July 26, 1882.

Mr. Quaritch has just issued a prospectus of an edition of *Cicero De Republica*, with a new English translation and notes "by G. G. Hardingham, Esq., Middle Temple, Barrister-at-Law," which is to be published by subscription at 12s. The quality of the translation may be judged of from the first sentence of the "specimen page," which, in the Latin, is as follows:—"Sic omnia nimia, cum vel in tempestate vel in agris vel in corporibus lætior fuerunt, in contraria fere convertuntur." Mr. Hardingham's rendering is:—"Thus, when there has been too great indulgence in tolerating everybody in violence of expression in open-air meetings or personalities, this licence turns to the very opposite intended." The rest of the page does not contain anything quite as ludicrous as this, but the translator has managed to make two or three blunders in every line (*consectans* is rendered "cutting to pieces"), and

to misunderstand the drift of nearly every sentence. Mr. Hardingham will be well advised if he determines to retire from the task which he has rashly imposed on himself.

HENRY BRADLEY.

VERIFY YOUR QUOTATIONS.

Hampstead: July 18, 1882.

May I point out an error in Mr. Hain Friswell's *Familiar Words*? On p. 85, ed. 1880, "clay and clay differ in dignity" is attributed to E. W. Emerson. The passage is "Cymbeline," IV. ii. 4, and could have been used by Emerson only as a saying is used which is too well known to need quotation-marks. There is an error in the quotation—"differ" should be "differs." "Differ" and "differs" are not very far apart, but they are not the same; and it is much to be regretted that we so frequently allow ourselves to quote incorrectly. It is surely inexcusable in cases where a quotation may be so easily verified. Of course, in the inferior Shakesperian texts, the "final s's" have been, for the most part, abolished.

But how many quotations are slightly, if not more than slightly, marred in the giving! To take a rather extreme instance: out of a hundred "cultured" folk, how many put the right words after "Dark with" ("Paradise Lost," iii. 380), and how many put the usual "excess of light"? E. H. HICKEY.

SCIENCE.

WHERRY'S COMMENTARY ON THE QURÁN.

A Comprehensive Commentary on the Qurán. Comprising Sale's Translation and Preliminary Discourse, with Additional Notes and Emendations. Together with a Complete Index to the Text, Preliminary Discourse, and Notes. By the Rev. E. M. Wherry. Vol. I. (Trübner.)

THE first volume of this work, which forms one of Trübner's "Oriental Series," is in the main a reprint of *The Korán*, &c., by Sale, whose Preliminary Discourse occupies no less than 283 out of the 391 pages of the book. Mr. Wherry's "Additional Notes" thereto comprise about 600 lines, five-sixths of which consist of quotations from Muir's *Life of Mahomet*, the remainder being culled from a sprinkling of other English writers. Some few of them may fairly be said to elucidate Sale's text, but others are erroneous and misleading. The foot-note to p. 31 speaks of the "Zaidí family in Southern Yaman." No such dynasty or family ever existed there; the reference is doubtless to the Zaidíyyah, a sect long predominant in that part of Arabia. Again, "the Sultán of Gáara, in Lower Jáfá," is intended, I presume, to indicate the Sultán whose residence is at al-Ghárrah, in Lower Yáfá. The title of "*Afif*" applied to this petty Sovereign, and that of "his principal rival the Sultán of Maár in the district of Abián" (more correctly, Abyan), are names utterly undistinguishable in that guise. Further, the annotator at p. 221 writes:—"The Israelites might make peace with idolaters [*sic*] on condition of their becoming tributaries. The Muslims might not do so on any condition but that of conversion to Islám." This note not only contradicts Sale's text, but is glaringly at variance with the rules laid down in Deut. xx. 10-15, and in Surah ix. of the al-Kur-án.

As regards the transliteration of Arabic words, Mr. Wherry says:—"I have invariably Romanised the original form of the words, except when quoting from living authors, in which case I have felt obliged to retain the spelling peculiar to each writer." Sale being dead, Mr. Wherry felt as free as he deemed himself able to alter his spelling in accordance with "the original form of the words." Let us examine how far this alleged improvement was carried out. Sale invariably uses the circumflex (ˆ) to denote a prolonged vowel; his annotator adopts in its stead the common but vicious system of employing the acute accent (´), thereby diverting the latter from its original purpose, and throwing away an invaluable sign, used in all European languages to indicate where the vowel should be emphasised in the pronunciation of a word. (The reviewer so uses it in this critique.) Why, moreover, should he write "Qurán" for Korán, or, more correctly, al-Kur-án, with the prefixed definite article after the style of the old "Alcoran," seeing that our Q does not express the Arabic *Káf* any better than our K? Mr. Wherry ignores the *ain* altogether, except when he expresses it by the acute—that is, with him, the sign of prolongation, which is inadmissible in that letter. He writes "Ramadhán," after his system, correctly, but "Hadramaut" incorrectly, substituting a *dál* for a *dháá*. He transliterates the name of "Muhammad" aright, as also "Makkah" instead of Sale's "Mecca," and "Madína" for his "Medina," but omits the final *h* in the latter word, and, what is of far greater importance, leaves out the prefix article *al-*, since "Madína" no more represents the city of that name in the al-Hijáz than the word "City" alone indicates that part of London known as "The City." In like manner he writes "Yaman" for "al-Yáman." Again, at p. 76, we have "Abd al Mutallib," and at p. 31 "Abdal Muttalib;" at p. 32 "Wahábis," and at p. 281 "Wahhábis;" at p. 232 "Baqr Íd," or Feast of the Cow, so called in India, instead of Mr. Hughes's more correct "Baqr-i-Íd." Farther on, at p. 287, we read "Surat al Fátihat," with a final *t* instead of *h*, unless the word had been given in the genitive. Again, p. 291, "Surat ul Baqr (the cow)," which signifies the Súrah of the Bovine Genus, whereas the correct title is Súratu-l-Bákarah." These are only a few out of a legion of instances of the same kind which might be quoted; but Mr. Wherry's mis-readings of the Arabic original and his aberrant transliterations come to a climax in his "Romanised" *al-Fátihah*, which is as follows:—

"Bismillá-hi-rahmání-rrahím.
Al-hamdúlilláhi Rabbi'lálumín,
Arrahmání-rrahím;
Málikí yomí-d-dín.
Iyáka Nábúdu, wayáka nastáin.
Ihdína's-siráta al mustakím;
Sirát alazína an náimta alaihim,
Ghairi-l-maghdhúbi alaihim waladháilína."

Adopting Mr. Wherry's own anomalous system, the transliteration of the original should be—

"Bismi-lláhi-r-rahmání-r-rahím.
Al-hamdu li-lláhi rabbi-l-álámína-r-rah-
mání-r-rahímí;
Málikí yaumi-d-dín; Iyyáka nábudu wa-
iyyáka nastáinu;

Ihdína-s-siráta-l-mustakíma; Sirata-llazína
anáimta
álaihim; Ghairi-l-maghdhúbi álaihim wa-la-
'dh-dhállína."

The grammatical and other blunders like those above indicated, occurring as they do throughout the entire volume, force upon one the regrettable conclusion that Mr. Wherry's own knowledge of Arabic is far below that standard which would render it safe for him to assume the position of an independent critic or commentator of the al-Kur-án. He has therefore wisely eschewed any such assumption, and in his glosses on the text, which is that of Sale, has confined himself mainly to reproducing, at second or third hand, the strictures and comments of others. In those he incorporates Sale's notes, after Maracci, from the best Muslim commentators; also comments from "the *Tafsir-i-Raufi*, the *Tafsir-i-Hussaini*, the *Tafsir-i-Fatah-ar-Rahmán*," and "the notes on *Abdul Qádir's Urdú translation of the Qurán*;" also "the *Notes on the Roman Urdú Qurán*." I am not acquainted with the last-mentioned works, but, with the exception of the *Tafsir-i-Hussaini*, which is a Persian commentary, the remainder, judging from the form of their titles, are in the Urdú. These may be looked upon as standard authorities in India, but I much question whether they would be so regarded among the Muslim theologians of other countries. However, as the compiler appears to have had the Muslims of India principally in view, he was fully justified in availing himself of the writings of their recognised schoolmen, in whose language, it is to be hoped, he is more proficient than he is in Arabic. His selection of notes is, on the whole, judicious, and will doubtless be of great use to those who are employed as missionaries to the Muslims, for whom the work seems to be primarily designed. Not that it provides anything approaching a complete repertory of polemics wherewith to encounter well-read Muslim antagonists. The great fault hitherto of our missionaries has been their assumption that, without any adequate claim thereto beyond their knowledge of the Christian Scriptures, they had at hand a stock of unanswerable arguments against Islám. No one has done more to correct this misapprehension than the Rev. T. P. Hughes, B.D., the author of the valuable *Notes on Muhamadanism*, who, in a paper recently read at the Lahore Diocesan Synod, points out the unwisdom of "indiscriminate" attacks on Islám, and lays down rules for the guidance of missionaries in their dealings with Muslims which they will do well to lay to heart. "No qualification," says this earnest writer,

"is more requisite for a Christian evangelist than an ability to place himself in the position of his opponent; and, of all men in the world, the missionary should be free from bigotry, and most capable of appreciating difficulties of belief in other minds than his own."

Again,

"What would devout and pious Christians think if a band of educated foreigners (analogous to the European or American missionaries), with a still larger band of half-educated Englishmen (analogous to the native mission agents), were to stand up daily in the streets of

London, Manchester, Edinburgh, and Dublin, or itinerate from village to village, or enter our cathedrals, chapels, and churches, and speak and preach, and circulate tracts attacking the character of the Lord Jesus, and calling in question passage after passage of God's Holy Word?"

And what, one may ask, if these supposed foreign propagandists could barely stammer in English, and were ignorant of our theology?

As to the matter of Mr. Wherry's appended notes to the different *Sûras*, the first two only of which are contained in this volume, he says, in the Preface, that they were intended

"to call special attention to certain doctrines of the Qurân—e.g., its testimony to the genuineness and credibility of the Christian Scriptures current in the days of Muhammad; the evidence it affords to its own character as a fabrication; its testimony to the imposture of the Arabian Prophet, in his professing to attest the *Former Scriptures*, while denying almost every cardinal doctrine of the cause—in his putting into the mouth of God garbled statements as to Scripture history, prophecy, and doctrine to suit the purposes of his prophetic pretensions—and in his appealing to Divinity to sanction his crimes against morality and decency."

Thus far this programme has been carried out calmly and dispassionately. Many may consider some of the charges brought against Muhammad as "not proven," though all must admit that, as a rule, they are urged without acrimony. Mr. Wherry has unfortunately marred his cause in a few instances by what, for want of a better word, I must call uncharitableness. In a foot-note to p. 299 he writes:—

"The paradise of Islâm is the Garden of Eden inhabited by men and women with carnal appetites of infinite capacity, and with ability and opportunity to indulge them to the full. We strain our eyes in vain to catch a glimpse of a spiritual heaven in the Qurân."

And yet, in the description given of Paradise in the al-Kur-ân (Sur. lvi., 24, 25), we read: "No vain discourse shall be heard there, nor charge of sin, but only the cry, Peace! Peace!"

Again, in a note on p. 376, we have:—

"Apologists for Muhammadans are fond of dilating at great length on the fervour of Muslims in prayers, and 'missionaries and the like' are severely condemned for bringing against Muslim prayers the charge of being 'merely lifeless forms and vain repetitions.' [This quotation is from Stanley Lane-Poole's Introduction to Lane's *Selections from the Koran*.] If fervour in prayer consists in punctilious performance of a prescribed round of bowing and prostration, or the repetition of a formal service of prayer in a foreign tongue, then the fervour and reality of Muslim prayer must be acknowledged. . . . So far as the great mass of Muslims are concerned, the merit of prayer consists in its performance according to the external rite, and not in putting forth heart-desires after God."

Compare the above with Mr. Hughes's remarks on the same subject, made in his Lahore paper already quoted:—

"What vain repetitions! (as vain and as meaningless as the Pater Nosters and Ave Marias of many a Christian). And yet how many a pious Muslim, at the close of his liturgical form, lifts his hands during the *munâjat*, or time of voluntary supplications, and prays for pardon, peace, and light. Shall we despise such aspirations? Will we not rather say, 'Pray on, devout Muslim souls, and

to every such prayer, addressed as it is to the God of all the earth, we will say heartily, 'Amen.' May you be guided into all truth!"

The concluding page of the book is disfigured by the following note to Sur. ii., 286:—

"The Qurân, then, seems to be responsible for the general insensibility to sin, and especially to sinful states of the heart. The doctrine of personal holiness is alike foreign to the Qurân and to the experience of the followers of Islâm."

I meet this unwarrantable assertion by placing it in juxtaposition with another of Mr. Wherry's notes on Sur. ii., 177, given at p. 352:—

"*Righteousness is of him who believeth in God, &c.* This is one of the noblest verses in the Qurân. It clearly distinguishes between a formal and a practical piety. Faith in God and benevolence towards man is [sic] clearly set forth as the essence of religion. It contains a compendium of doctrine to be believed as well as of precepts to be practised in life."

It is only fair to the compiler to state that other notes contained in this volume are conceived in a similar liberal spirit, notably one on p. 306, pointing out the vast moral superiority of Muhammad's teaching with regard to God and man's relation to Him over that of his idolatrous countrymen, and of idolators of any country. Another, on p. 319, shows that the doctrines of faith and works as set forth in the al-Kur-ân are no more inconsistent with each other than in the Bible. Another, on p. 320, indicates the clear recognition by Muhammad of seeking happiness in the life to come. Another, on p. 358, admits that the *Jihâd* against idolators preached by the Arabian Prophet had much in common with similar commands given in the Old Testament. And, lastly, ver. 277 of the second *Sûrah* of the al-Kurân, beginning with "God! there is no God," &c., is admitted to be a magnificent description of the divine majesty and providence; so that, on the whole, Mr. Wherry may be said fairly to have redeemed his pledge given in the Preface:—

"I have endeavoured to remove, as far as known to me, the misapprehensions, and consequent misrepresentations, of the doctrines of the Qurân popular among Christians, believing that every such error strengthens the prejudices of Muhammadans, and thereby aids the cause it seeks to overthrow, while justifying similar misrepresentation from the Muslim side."

GEORGE PERCY BADGER.

M. LENORMANT AND THE BERLIN ACADEMY.

DR. H. ROHL requests us to make known his answer to a letter from M. Lenormant published in the ACADEMY of May 27, which is about to appear, along with a note by Prof. Kirchhoff, in the forthcoming volume of *Hermes* (pp. 460-66). The greater part of this "Answer," however, is occupied with charges with which we have nothing to do. The only portion of it which concerns the letter we published is that relating to the 202 leaden plates found at Styra. As regards these, Dr. Röhl admits that satisfactory evidence has been produced of the genuineness of them all, eighteen only excepted, which are now at Paris, where they are open to the scrutiny of any scholar. Even the inscription of Mopsides is allowed to be authentic.

OBITUARY.

PROF. BALFOUR.

AN accident on the south side of Mont Blanc has deprived Cambridge of one of her most distinguished professors, Mr. Francis Maitland Balfour, of Trinity College, at the early age of thirty-one. It was only in the course of last term that a Chair of Animal Morphology had been founded, in special recognition of Mr. Balfour's signal merits, and of his labours in superintending and instructing for several years a class of students in that subject. He was elected professor on May 31, so that he had held the office for rather less than two months.

Mr. Balfour came up to Trinity College from Harrow School in 1870; obtained a natural science scholarship in 1871; and was placed second in the first class of the Natural Sciences tripos in 1873. He then went to Naples to study at Dr. Dorn's zoological station, where the university had acquired the right to nominate two students. During his stay there he made those discoveries in the development of the Elasmobranch fishes which he subsequently expanded into a volume, published in 1878 by the Syndics of the University Press, under the title of *A Monograph on the Development of Elasmobranch Fishes*. A portion of this volume had been sent by him, in the form of a dissertation, to the examiners for the Trinity College fellowships in 1874, when it was greatly commended by Prof. Huxley, and contributed not a little to its author's unanimous election. In 1876 Mr. Balfour was appointed Lecturer in Natural Science at Trinity College, an office which he held down to his election as professor. He was very successful as a teacher, as shown by the high places which his pupils took in the Natural Sciences tripos, and by the steady increase in their numbers. His class grew from an average of about twelve in each term to between fifty and sixty. Notwithstanding the labour which he devoted to these duties, he found leisure to prepare his *Treatise on Comparative Embryology*, published in two volumes in 1880-81. This is a work of permanent value, not merely as a record of the discoveries of his predecessors and of himself, but as a handbook to a subject which before his time had not been thoroughly worked out. It has been translated into German, and probably by this time into French also. Mr. Balfour became a Fellow of the Royal Society in 1878; and in the course of last year he received the Royal Medal and was made a member of the council. He was perhaps the youngest man who ever held that office. He was also general secretary of the British Association for the Advancement of Science, and President of the Cambridge Philosophical Society.

But it is not merely as a man of science that Mr. Balfour will be remembered at Cambridge. He entered keenly into all the pursuits and interests of the place, and devoted much time to the affairs both of the university and of Trinity College. He took a leading part in the discussions of which the new statutes are the result, and used his influence in favour of a large measure of reform. Few persons have of late years done more to promote Liberal opinions in the university. This, however, did not prevent him from being extremely popular with men of all shades of opinion. He was so thoroughly fair, his nature was so kind and genial, that he could always put himself in the place of others, and realise their point of view. Nor, fond as he was of argument, did he ever enforce his own opinions in a way that could give offence. It was indeed fortunate for natural science that he rose to eminence at the time he did; for without him it would not have been so generally or so cordially accepted. He reconciled discordant elements, disarmed opposition, and encouraged younger men, by example

as well as by precept, to follow out the investigations in which he was interested. No heavier blow could have fallen on the university than his untimely loss; no one could be deplored with more universal or more genuine sorrow. However eminent his successors may be, we have lost in him a friend who can never be replaced.

JOHN WILLIS CLARK.

NOTES OF TRAVEL.

WITH reference to the massacre of M. Crebaux and his party by Toba Indians on the Pilcomayo River, in South America (which recent telegrams no longer give room to doubt), we have received an interesting letter from Mrs. M. G. Mulhall, the courageous lady who herself spent ten years in travelling through the wildest tracts of central South America, and who gave to the public last year some portion of her experiences in *Between the Amazon and the Andes* (Stanford). She writes that the Pilcomayo River has been explored four times—in 1721 by the Jesuit father Patino; in 1735 by Casales; in 1741 by Castañares; and in 1844 by Mr. Thompson, an American. An attempt made in 1873 by Capt. Greenleaf Gilley, of the U.S. Navy, failed after dreadful sufferings. Mrs. Mulhall herself went for some distance up the same river in 1876, and found the Indians very civil and ready to barter. But she only saw from a distance any of the Toba tribe. She thinks that M. Crebaux must have got about 1,500 miles up the Pilcomayo when he met with his death; and she is still of opinion that an English party might successfully explore the sources of this river, provided that they hired Indian guides, not Tobas.

SCIENCE NOTES.

The Coal-field of Natal.—A comprehensive Report by Mr. F. W. North, who inspected this coal-field on behalf the Natal Government, has been issued by the Department of Mines. With the accompanying maps, sections, analyses of coal, and tabulated results of experiments on their economic use, the Report offers a valuable body of information as to the coal-producing capabilities of the colony. So far as at present known, workable seams are confined to Klip River County. The area of the coal-field available for working is 1,360 square miles; and, on the assumption of an average thickness of four feet, it is estimated, after making a liberal allowance for loss, that the field contains 2,073,000,000 tons of coal. The satisfactory character of the fuel is attested by the analyses and experiments of Dr. Frankland in this country and of Dr. Hahn at Cape Town.

PHILOLOGY NOTES.

It has long been known that in out-of-the-way parts of Germany traces might be found of our Saxon ancestors, but the instances usually given have been somewhat vague. Dr. Frederick H. Brandes, of Göttingen, has, however, contributed to the *Antiquary* an article, which appears in the August number, in which he specifies a particular district near the old Prussian fortress of Minden where distinct traces still exist. He gives a curious list of English words used there, among which is *Yea* in place of *Ja* or *Jo*.

Messrs. W. H. ALLEN and Co. have issued a Hindustani translation of the "Arabian Nights," printed in Roman characters on the Janssen system. The translator is, we believe, a native of India; and the transliteration was also done in India under the superintendence of Mr. T. W. H. Tolbort, deputy commissioner of Ambala district, in the Panjab. But the book has been printed in England, and edited by

Mr. Frederic Pincoot. Its full title is *Tarjuma-i-Alif Laila ba-subān-i-Urdū*. The editor states, as one of the advantages of using the Roman character, that

"the lithographed edition of the *Alif Laila*, from which the present text was transliterated, although written in a small hand, with all the words jammed together in scarcely legible lines, yet covers a printing surface equal to . . . half as much again above that found sufficient with the Roman character."

DR. J. H. GALLÉE, whose *Gutiska* was recently noticed in the ACADEMY, has been appointed Professor of Sanskrit and Comparative German Grammar in the University of Utrecht, where he has hitherto held the post of lector in the same subjects.

ON the report of M. Gaston Paris, the Académie des Inscriptions has awarded medals of the value of 500 frs. to the authors of each of the three following works:—*La Tapisserie en France*, by M. Jules Guiffrey; *Cachets d'Oculistes romains*, vol. i., by MM. Héron de Villefosse and Thédenat; and *Etude critique sur le Text de la Vie latine de Sainte-Geneviève de Paris*, by M. Ch. Kohler.

WE have received from M. Vieweg, of Paris, a French translation of the first volume of Prof. Madvig's work on the Roman Constitution, which was reviewed in the ACADEMY of October 29, 1881. The translator is M. Ch. Morel, Professor at the École des Hautes-Études. At one time we had hoped that this work would also have appeared in English, but we believe that arrangements to that end have fallen through.

In noticing Prof. Skeat's *Etymological Dictionary*, the *Nation* says:—

"An unabridged edition of this book has been printed for the American market, of which the price is two dollars and a-half [10s.] and your eyes. It may be questioned whether the publishers have a right to punish a possible readiness to buy a possible American reprint so severely."

FINE ART.

Outlines of Ornament. By W. and G. Audsley. (Sampson Low.)

THIS large, but withal modest, book presents us, in a series of simple but very carefully executed plates, with what may be called "A Grammar of Ornament" in a much truer sense than that in which that term was applied by the late Mr. Owen Jones to his magnificent work. Messrs. Audsley think that the elementary principles of ornament can best be studied in black and white, without the distracting attractions of colour. They also think, and in this again we agree with them, that for educational purposes it is important that the same elements of decoration employed by various nations should be seen side by side, so as to show the primitive workings of the decorative sense in different countries. The plates are divided into "Fret Ornament," "Fret Diaper," "Interlaced," "Powdered," "Diaper," and "Conventional Foliage;" and the examples are taken from Egyptian, Classic, Mediæval, Japanese, Celtic, Russian, Persian, Arabian, Moresque, and modern French models. Some examples of savage ornament (of ancient Peruvian and Mexican, and modern Oceanic and African, say) might perhaps have been added with advantage in illustration of the simpler motives, and some more specimens of the treatment of animals in conventional decoration would not have been unwelcome; but we are not sure that it is not hypercritical

to suggest such additions to a work which is meant to be simple rather than learned, and useful rather than aesthetic. The main object of the work is to enable the student to detect the distinct character of the principal styles of ornament, and for this purpose the examples are well chosen.

The chief complaint we have to make against the preliminary essay is that it is too short; and this, not because of its omissions, but of its interest. It will probably suffice for the student as a guide to the plates, but it is tantalising to the general reader, whose attention is broken off almost as soon as arrested. It is, however, to be hoped that the same authors will not be satisfied with a treatise on what may be called the "accidence" of decoration, but will hereafter tell us something of its "syntax." There is still a great deal to be done in the systematic teaching of ornament; and it would probably have been done before if the powers of artistic analysis and comparison, and the patience necessary for their prolonged and orderly exercise, were not so rare. One of the most interesting fields of enquiry is the influence of material upon pattern. The character of a fret would be, for instance, probably affected by the fact that the designer worked with bricks or mosaic or paint, or with a stick upon soft clay. This point is not lost sight of by our authors, but it is necessarily worked out but imperfectly. The origin of the ingenious interlacings of Celtic ornaments, its twists and spirals, is traced in part to the skill in basket-work which was the speciality of the early inhabitants of Britain; but no explanation is offered of the similarity between the character of Irish decoration and that of Russia. One branch of the subject, more important than ever now that Japanese influence is so strong, is the difference between ornament which pleases by obvious repetitions and that which achieves its balance by less palpable counter-weights. The authors were probably right in thinking such considerations beyond the scope of their work, but this does not prevent us from hoping that they will treat of them hereafter. They may possibly even quarrel with the introduction of such remarks in reference to a book in which they state "they have alone been guided by the desire to introduce nothing but what would prove of every-day value to the designer and practical decorator;" but their aim, though modest, has been more positive than this. They have tried, and succeeded, not only in excluding the impractical, but in giving in a few simple plates examples which cover almost the whole field of elementary decoration. They assert, with a confidence not unjustified, that,

"if the student of ornamental art will only learn all that the plates can teach him, he will not have very much more to master to render him perfectly at home in general matters of form and arrangement, so far as surface decoration is concerned."

The number of designs by the late M. Viollet-le-Duc is not the least useful feature of the book. They prove at least that the mine of decorative invention is not exhausted, and that the decorative sense is not confined to Orientals.

COSMO MONKHOUSE.

EXCAVATIONS AT EPHEBUS.

A MEETING was held at the Mansion House on Monday last, July 24, to promote by public subscription the resumption of the excavations at Ephesus on the site of the Temple of Diana. The Lord Mayor, who presided, made some remarks in approval of the scheme set on foot by Mr. F. T. Wood, under whose superintendence the Government excavations were carried on with such successful results for so many years. Mr. A. J. B. Beresford-Hope, chairman of the committee, who has taken great interest in the present enterprise, and who proved that he was complete master of the subject, advocated the proposed exploration with much eloquence. Mr. Wood, by the aid of a number of interesting drawings and photographs, explained, briefly, how the temple had been discovered by him in 1869, after six years of search; and he demonstrated to the audience what chances there were of discovering many portions of the sculptured frieze and sculptured drums of columns as beautiful as those already rescued from oblivion and deposited in the British Museum. Mr. Wood, who evidently has an unwearied interest in his work, concluded his remarks by declaring himself ready to make any personal sacrifice the committee might call upon him to make in order to proceed with the exploration. Mr. O. T. Newton, Curator of the Greek and Roman Antiquities at the British Museum, addressed the audience at some length. He said he had visited Ephesus from year to year while Mr. Wood was at work, even before the temple was found; and, at the time that Mr. Wood, searching for the temple within the Peribolus wall, had hit upon a Roman building with a number of inscriptions, which was probably the Augusteum, he had advised Mr. Wood to abandon the exploration of this building, and continue his search for the temple. Mr. Newton then alluded to the great work of the Germans at Olympia, and the large sum of money they had spent there, the Emperor himself giving out of his privy purse £4,000; and showed how, by extending the excavation far beyond the actual site of the temple, they had discovered so much beautiful sculpture. The sum required by Mr. Wood was only £5,000, which ought easily to be found in a country so wealthy as ours. Mr. Newton concluded his remarks by proposing the following resolution:—

"That the complete excavation of the Temple of Diana at Ephesus is an object well worthy of support from the nation, which now possesses in the British Museum the only portions of the beautiful sculptures discovered of the temple; and that a subscription list be at once opened."

Prof. Donaldson, of Aberdeen, seconded the resolution with his accustomed energy and enthusiasm. Mr. R. P. Pullan spoke as a brother explorer in Asia Minor, having, under the auspices of the Dilettanti Society, cleared out the Temple of Athene Polias at Priene, and uncovered the remains of Apollo Sminthius in the Troad. He also had seen Mr. Wood at work at Ephesus, and had witnessed the progress of his discovery with great interest. Mr. Pullan testified to Mr. Wood's unwearied labours, and gave it as his opinion that there was great promise of obtaining valuable remains of the Temple of Diana if the excavations were resumed. Prof. T. Roger Smith made a few remarks in favour of continuing the work of exploration at Ephesus.

Letters were read by the hon. secretary, Prof. T. Hayter Lewis, from the Prince of Wales, the Duke of Connaught, the Duke of Albany, and the following members of the Committee—viz., the Archbishop of Canterbury, the Bishop of Durham, Card. Manning, and several others, regretting their inability to attend the meeting;

also one from Sir Frederick Leighton, advocating strongly the resumption of the excavations as a work well worthy of national support.

Subscriptions will be received by Sir John Lubbock, Bart., hon. treasurer, 15 Lombard Street, and Messrs. Herries, Farquhar and Co., 16 St. James's Street.

PROF. MASPERO.

THE perilous position of Prof. Maspero is a source of increasing anxiety to his many friends and his scientific brethren throughout Europe. Miss Amelia B. Edwards sends us the following extract (translated) from a letter to her just received from M. Arthur Rhoné, of the French Archaeological College at Cairo, bearing date from Viroflay (Seine-et-Oise), the 20th inst.:

"Since the 2nd of this month no letters have been received from Prof. Maspero. His latest despatches to the French Government announce his determination to stay at his post till death, if so he can save the Boolak Museum from destruction. For this task he possesses all the necessary *sang-froid*, energy, presence of mind, and self-devotion; but of what avail are these against bomb-shells and hordes of fanatical assassins? It is at least certain that those who break into the museum will pass over his dead body; but this will be a loss as fatal to science as the destruction of Mariette's collection."

M. Rhoné, with his wife and daughter, left Egypt on the 4th inst., only a few days before the massacre. It is feared that M^{me}. Maspero, who is but just recovering from a severe illness, is with her husband on board his steamer at Boolak.

We hear from another source that two young Frenchmen of the Ecole de Oaire determined to remain with M. Maspero to the last, and are with him on board his steamer. Herr Emil Brugsch is safe in Europe.

CORRESPONDENCE.

A NEW TROJAN INSCRIPTION.

Queen's College, Oxford: July 22, 1882.

MR. R. P. GREG is the possessor of a very interesting and important object of antiquity. This is a terra-cotta weight which he purchased from Messrs. Fenton and Sons along with one of those small black "whorls" with which Dr. Schliemann's excavations at Hissarlik have made us familiar. They were both sold last April as part of the collection of Mr. J. G. Goll, together with eleven other whorls and another terra-cotta weight. Messrs. Fenton were told that they had all belonged to Dr. Schliemann, who, however, left them in London, where the person in charge of them failed, and they were subsequently bought by Mr. Goll. The character and ornamentation of the "whorls" show that the statement as to the place from which they came is correct.

Mr. Greg's weight is similar in form to the one given in Schliemann's *Ilios*, No. 479, the only difference being that it has no third hole running transversely to the two holes which Dr. Schliemann compares with eyes. But, like the two terra-cotta weights figured in *Ilios*, p. 582, it is inscribed with characters which belong to what I have termed the Asiatic syllabary. They were hardly noticeable when Mr. Greg bought the object, but on cleaning out the dirt in them he found that they were deeply and clearly cut on both sides of it. They are of considerable size, and are separated from each other by wide spaces. On one side there is a circular inscription running round the edge of the weight. The first character must, I think, be identified with the Kypriote *tu*, though it very closely resembles the *lu* of the leaden plate given by Major di Cesnola in his *Salamina*, p. 66. The next

character I thought at first was the Kypriote *ne*; but further cleaning has brought to light a little stroke which makes it identical with the *a* of the leaden plate. Then comes a character which is not found in the Kypriote syllabary, and for which, therefore, I can suggest no value. Lastly, we have the Kypriote *vo*. Between the two holes or eyes is a short curved line, which seems to indicate the end of the inscription. On the other side of the terra-cotta are only two characters, placed one below the other, one of them being the Kypriote *ve*, the other, a peculiar form of *si*. As a very similar form occurs on the seal given in my Appendix to *Ilios*, p. 693, No. 1519, it is clear that the latter inscription must be read *e-si-re*.

I ought to add that the weight is of a light-red colour, and weighs $5\frac{1}{2}$ oz. As a small fragment of it has been broken off, it must originally have weighed a little more; and it is curious that a weight of exactly the same form and make, but without any inscription, which was discovered in Melos, and is now in Mr. Greg's possession, weighs 6 oz. 1 drachm. Two smaller weights, except in size the counterparts of the two just named, one of them being the terra-cotta from Hissarlik, which I mentioned before, each weigh exactly 3 oz. and half-a-drachm.

A. H. SAYCE.

NOTES ON ART AND ARCHAEOLOGY.

SIR NOEL PATON has just completed designs for a medal commemorative of the twenty-first anniversary of the Volunteer movement. The drawing for the reverse shows a head and bust of her Majesty the Queen, a portrait founded upon a pencil-sketch made by the artist at Windsor in 1863. The obverse bears the motto "Pro Aris et Focis," inscribed above a design symbolical of patriotic and defensive warfare. The figure of St. Michael, the patron-saint of righteous war, occupies the centre of the medal, the head helmeted and haloed, the body clad in complete armour, and the hands holding the sword and shield. Beneath the protection and consecration of his outspread wings are two groups of mortals. To the right appear three spearmen, kneeling in a serried rank behind their shields, their attitudes and expressions indicating intense watchfulness. The waves wash round the island promontory upon which their feet rest; and far off on the water is seen a war galley, suggestive of foreign invasion. To the left is another group of three, a seated mother with a sleeping infant pressed close to her breast, and a child kneeling beside her with hands clasped and head raised in prayer. Behind them springs the foliage and fruited olive branch of peace. There is an excellent and felicitous completeness in the symbolism of the design; the sculptural requirements of medallistic art have been clearly kept in view; and the drawing is distinguished by the admirable sense for form and grace of line which is characteristic of all the artist's works. The medal is to be engraved and published by Mr. Neil Macphail, of Glasgow.

WE understand that a movement is on foot in Aberdeen for the erection of an art gallery and museum in the city. Nearly £11,000 has been subscribed, and among the contributors is her Majesty the Queen.

MR. GRIGGS the younger has made a very successful coloured copy of Shakspeare's bust in Stratford Church for the New Shakspeare Society. Working on a faint platinotype copy of the bust, he has got a very life-like result. All the deadness and coldness of the ordinary photograph which have been so much complained of has disappeared; and there need be no hesitation now in accepting the bust as genuine portrait, always excepting the broken short nose.

MR. MONCURE D. CONWAY is engaged upon a work describing the South Kensington Museum, which will be abundantly illustrated.

WE hear that the little book of original pen-and-ink sketches recently published by Messrs. Wilson and McCormick, of Glasgow, under the title of *From the Clyde to the Hebrides*, is about to pass into a second edition.

THE chapters on "The Elements of Beauty in Ships and Boats," by Mr. Hamerton, which appeared in the *Portfolio* last year, have been translated into French, and will appear shortly in the French nautical journal *Le Yacht*, along with the illustrations which accompanied them.

IN reply to a memorial from the Sunday Society addressed to the Royal Academy, suggesting the admission of the public to the exhibition on one or two Sundays before its close, Mr. Frederick A. Eaton, secretary to the Royal Academy, writes:—

"The president and council have no power to comply with the prayer of the memorial, as the laws and constitution under which the Academy is governed prohibit the admission of anyone (members of the Academy included) to the exhibition on Sundays, and no change in the said laws and constitution can be made without the consent of the general assembly of Academicians and the approval of H.M. the Queen."

THE thirty-seventh annual meeting of the Cambrian Archaeological Association will be held at Llanrwst on Monday, July 31, and the four following days. The president-elect is Mr. H. R. Sandbach, who succeeds Prof. C. C. Babington, of Cambridge. The public meetings will be held in the grammar-school.

ON Sunday last, July 3, a large party of members of the Sunday Society visited Apsley House, by permission of the Duke of Wellington, and were shown the historical paintings in the Waterloo Gallery, the museum, &c.

VANLOO's portrait of Colley Cibber, prefixed to the latter's *Apology*, or Autobiography, has been very well re-etched by C. W. Sherborn for Mr. H. A. Rogers, who made the fine collection of illustrations, &c., of Old London Bridge which is now in the Guildhall Library.

AN exhibition of modern pictures, both in oil and water-colours, will open at Nottingham in the art galleries of the Castle on September 4.

THE seventh part of *American Etchings* has a portrait of Longfellow which is noteworthy on more accounts than one. It is not only a good portrait, but a bold experiment in etching, being an attempt to give the full value of snow-white hair, and to model the flesh with strokes mainly in one direction, and that direction not diagonal, as was the way with the old masters, but perpendicular. Of necessity the ground is very dark and unsuggestive, but the face and hair are, so to speak, "floated" on it with an original and striking effect. The execution is of great delicacy and judgment, and the character strong and noble. Mr. A. F. Bellows contributes the etching for the eighth number, which is a view of "The Shore of Skaneateles Lake, New York." It is full of light and air, but not without spottiness.

THE exhibition of modern paintings, known as the Salon d'Anvers, will open at Antwerp on August 13.

THE wealth of Antwerp in great painters is shown in a striking way by the resolution of the municipal council to commemorate by mural tablets the houses, or sites of the houses, in which no less than twenty were born, lived, or died. The list includes the names of Mateys, Rubens, Vandyck, the two Teniers, the two Breughels, and (in our own time) Henri Jeyes.

THE question of a triennial Salon appears to be decided. The first will be opened next year. These Salons will be organised by the State, and will contain only a small number of pictures, selected from among the best that had been exhibited at the three previous Salons. They are to be held at the Trocadéro, and not in the Palais de l'Industrie, as at first stated.

AT a recent meeting of the Académie des Inscriptions, M. Clermont Ganneau exhibited a bronze statuette recently found at Beyrouth. It is a female figure, entirely naked, and crowned with a crescent. One hand rested upon an object which is now in other hands, but which M. Ganneau had seen and photographed. It was an oar, or perhaps a rudder, with an inscription "to the Sidonians" in Phœnician characters. M. Ganneau believes the figure to represent the goddess Astarte, and to be of the time of the Seleucidae.

ONE of the most striking works in the Salon des Arts décoratifs, now open at Paris, is a design for a group to be placed upon the top of the Arc de Triomphe. The artist is M. Falguière, who took his inspiration from M. Antonin Proust during his short tenure of the Ministry of Art. The design consists of a statue of the Republic, represented as seated in a chariot drawn by four horses. The horses are led by two Victories. Behind are two independent allegorical groups, one representing the departure for the fight, the other the fight itself. The design is highly spoken of, but it is doubted how it would look when on the top of the arch, which is 152 feet high.

A SOMEWHAT sensational picture by Alexandre Falguière, which attracted notice at the last Salon, is given in *L'Art* this week, etched by Abel Lurat. It is called "Fan and Dagger," and represents a determined, evil-looking young woman, who has thrown away her fan and is waiting with a dagger in a dark place, presumably until her lover comes round the corner. M. Muntz is continuing his history of tapestry in *L'Art*, and has now arrived at the consideration of German tapestry.

THE Roumanian Parliament has voted a sum of £40,000 for the erection of a new museum at Bucharest, the old building being unable to hold the large and growing collection of antiquities, chiefly of the Roman period.

MUSIC.

WAGNER'S "PARSIFAL."

I.

ACCORDING to tradition, the spear which pierced the side of Christ and the holy cup which received his blood were brought by Joseph of Arimathea to England. At his death, they were borne away to heaven, but were at length brought back by a company of angels, and delivered into the keeping of solitary hermits. In the opera of "Lohengrin," the elected hero speaks of the vessel of wondrous splendour called the Grail, guarded by his father, Percival, and the chosen Knights in the temple rising from the centre of Monsalvat. Titurel, the first guardian, reigned 490 years there. His son, Frimutelle, proved himself an unworthy successor. Then came Amfortas, "le roy pescheur" of the French Romance, about whom we shall presently speak. The conception of a wonder-working cup or bowl is to be found in Eastern and Western legends; and in the *Mabinogion* we read of a "bloody lance," a symbol the meaning of which is not known, though it does not appear to be immediately connected with the Christian myth. The French metrical romance of *Perceval le Gallois*, written by Chrétien de Troyes and others in the twelfth century, and the celebrated *Parcival*

poem of the German Minnesinger Wolfram von Eschenbach, written early in the thirteenth century, are the two most important works which treat of Perceval or Parsival and the legend of the Holy Grail. Wagner has studied, but not imitated, his predecessors; he has written, not a new poem, but simply the *libretto* of a music-drama, as original as it is daring in conception. A few words must be said about the essentially religious character of Wagner's latest work. The constant reference to the Crucified One as the Redeemer, the Saviour of sinners, and the sacraments of baptism and of the Eucharist exhibited on the stage, and interwoven with the legends of the spear and the Grail, will certainly shock the feelings of many pious persons. The words used, and the stage directions, prevent any explaining away of the great ceremony of the first act, in the sense of a love-feast (*kyrie*), similar to those held by the early Christians. The choice of subject may be regretted; but "Parsifal" as a work of art should be no more affected by religious scruples than Handel's "Messiah" by the objections raised against the writing and performance of oratorios. It must also be carefully noted that Wagner has approached his subject with great earnestness—we might, indeed, say reverence; it is the matter rather than the manner which with many will lay him open to censure.

The orchestral prelude to "Parsifal" is very striking. The three Grail motives, which constitute the sum and substance of the whole drama, are successively presented to us. Two phrases from the prelude suggestive of the Redeemer's grief and suffering receive special treatment, and the concluding strains of this introduction are solemn and dignified.

When the curtain rises, Gurnemanz, an old man, and two Esquires are seen asleep in the sacred wood which surrounds the castle of the Holy Grail. The morning *revellé* is heard; Gurnemanz awakes, and bids the young vassals descend to the lake and see to the King's bath. Kundry now rushes in with long-hanging girdle of snake-skin, and black hair flowing in loose locks; she has brought from Arabia a balsam. King Amfortas next appears, borne on a litter, and attended by Knights and Squires. After exchanging a few words with Gurnemanz, the procession moves on towards the lake, which is seen at the back of the stage. The Esquires now ask questions of Gurnemanz, who is by no means unwilling to tell them all he knows about Kundry and the King. Kundry was found sleeping in the wood when Titurel consecrated the castle. There is some mystery connected with her, of which Gurnemanz is ignorant. The King, Amfortas, the guardian of the Grail, was lured by a maid of "fearful beauty." The holy spear fell into the hands of the great magician, Klingsor, who is always seeking by "infamous magic and charms infernal" to draw away men from high and noble aims into the paths of sensuousness and sin. With this spear, which is still in Klingsor's hold, a wound was inflicted on the unfortunate King—a wound that would never heal, according to an oracular utterance, until the appearance of the "guileless fool." The conversation is interrupted by a strange incident. A swan flies from the lake, and sinks dying to the ground. The culprit (Parsifal) now appears. His manner is strange. He does not know that it was wrong to shoot the swan. He does not know his father's name, or even his own. He speaks of his mother (Heart's Affliction), and Kundry informs him of her death. The words of the oracle come to the remembrance of Gurnemanz, and he invites Parsifal to the holy feast of the Grail. The scene now changes to the great hall of the castle. The shrine enclosing the Grail is set on a table; King Amfortas is brought in

on his litter; the Knights assemble, and the "Lord's Supper" is administered. At the close, Amfortas, who has not partaken, utters a cry of anguish; his wound has broken out afresh. He is removed. Gurnemanz now turns round, and perceives Parsifal, whom he had forgotten. The latter pretends to understand nothing of what he has seen, and Gurnemanz roughly pushes him outside the door, telling him he is "nothing but a fool."

At the opening of the second act, Klingsor is in the tower of his magic castle. He summons Kundry to his presence. She is bound by a spell to obey him. She it was who tempted Amfortas, and she is ordered to waylay Parsifal, who is now about to enter the enchanted grounds. The clash of weapons is heard without; the defenders of the castle fly panic-stricken; Parsifal appears on the wall, and Klingsor sinks slowly with the whole tower. A garden rises, and fills the whole stage. From all sides lovely damsels rush in, and gather round the newcomer, each one in turn making love to him. After a time Kundry's voice is heard calling Parsifal by name. She now appears as a youthful female of exquisite beauty, and talks to him first about his mother and her death, and then about love. The simple youth, strengthened by prayer and meditation, spurns her from him. Klingsor appears, flings the spear at Parsifal, but it remains floating over his head. He grasps it with his hand; immediately, as with an earthquake, the castle falls to ruins, and the garden withers up to a desert. So ends the struggle between the opposing powers of good and evil, of which Parsifal and Klingsor are respectively the types.

The third act opens in the domain of the Grail. Titurel is dead and everything is sad and gloomy. Gurnemanz, now very aged, discovers Kundry cold and stiff in a thicket in the wood. He drags her out, and she awakes as if from a long trance. He next beholds a stranger approaching, "one dressed in gloomy war apparel" (like Peredur in the Welsh tale). Gurnemanz bids him take off his helmet, shield, and spear, for it is Good Friday. The stranger is Parsifal, and he is recognised both by Kundry and Gurnemanz. After much tribulation, he has found his way back to the Grail. He is the chosen one of Heaven, and comes to heal Amfortas' wound by touching him with the recovered spear; to free Kundry from her bondage to Klingsor and from the curse of her former sin, and to show her the path of true love and redemption; to bring life to the desolate band of Knights; and to restore the glory of the Grail, now hid in a clouded shrine.

Next week we shall say something about the wonderful music, and give an account of the first performance of the work, which took place last Wednesday at Baireuth.

J. S. SHEDLOCK.

MUSIC NOTE.

Few lovers of music in this country have yet heard, or heard of, Mdlle. Ameris, a new singer, whose grand contralto voice and highly trained vocalisation have already earned for her a substantial reputation in Continental opera. Mdlle. Ameris is now in London, but has sung only at the private receptions of a few noble patronesses. She has pathos, dramatic fire, great facility, and a voice of remarkable sweetness and compass—in a word, all the qualifications necessary to an operatic *prima donna* of the first class.

Now ready, a THIRD EDITION of

THE TEMPLE:

Sacred Poems and Private Ejaculations.

By Mr. GEORGE HERBERT.

Facsimile Edition, with Introductory Essay by J. HENRY SHORTHOUSE, Author of "John Inglesant."

Small crown, sprinkled sheep, imitation of original binding; or in paper boards, old style, uncut, 5s.

"This charming reprint has a fresh value added to it by the introductory essay of the author of 'John Inglesant.' To all lovers of this typical country parson, a gentleman and a scholar, who could yet sympathise with country proverbs and rustic ethics, this facsimile edition of 'The Temple,' with Mr. Shorthouse's introduction, will be a valued manual."—*Academy*.

TOURISTS' GUIDE TO THE ENGLISH LAKE DISTRICT.

By HENRY IRWIN JENKINSON, F.R.G.S., &c.,
Author of "Practical Guides to the Isle of Wight, Isle of Man, Carlisle," &c.

"Nothing so useful and convenient has been hitherto produced for the exploration of our native land."—*Guardian*.

"Convenient and trustworthy."—*Academy*.

LONDON: EDWARD STANFORD, 55, CHANCING-CROSS, S.W.

With Map, fcap. 8vo, limp cloth, 2s. 6d.; paper cover, 2s. 6d.

SMALLER PRACTICAL GUIDE TO NORTH WALES.

By HENRY IRWIN JENKINSON, F.R.G.S., &c.,

Author of "Practical Guides to the English Lake District, Isle of Wight, Isle of Man," &c.

"This new Guide to North Wales is marked by the same conscientiousness, clearness, and minute detail which have rendered his previous works so valuable to the tourist. . . . As in former guide books by the same author, the directions are so clear as to be unmistakable to the meanest capacity, and whoever goes over the ground in the genial and intelligent company of Mr. Jenkinson will return home, not only a wiser and a stronger man, but will have become master of an experience that will be to him a joy for ever."—*Times*.

FORTUNE'S FOOL. By JULIAN HAWTHORNE, Chapters XXXIII.—XXXVI.

LONDON PLAYGROUNDS. By D. HOLLAND.

"ROMEO and JULIET" at the LYCEUM. By EDWARD R. RUSSELL.

London: MACMILLAN & CO.

Sold by all Booksellers, Newsagents, and at all Railway Stations.

THE NINETEENTH CENTURY

For AUGUST, 1882. Price 2s. 6d.

CONTENTS.

ENGLAND'S INTERVENTION IN EGYPT. By EDWARD DIGHT.

AN AMERICAN VIEW OF IRELAND. By E. L. GODDARD.

A CRY FROM THE INDIAN MAHOMEDANS. By SYED AMER ALI.

LITERATURE and SCIENCE. By MATTHEW ARNOLD.

HOMES OF THE POOR IN LONDON. By Right Hon. Sir E. A. CROSS, M.P.

THE JEW and the EASTERN QUESTION. By LAURENCE OLIPHANT.

THE ROYAL ACADEMY OF MUSIC. By Professor G. A. MACFARLANE.

COMETS. By WILLIAM HUGGINS.

THE LAWS OF WAR.—I. MARITIME CAPTURE. By M. EMILY LAYLETT.

CETHWAYO and ZULULAND. By LADY FLORENCE DIXIE.

PARLIAMENTARY OATHS. By the Right Hon. VISCOUNT SHEERNESS.

London: KEGAN PAUL, TRENCH, & CO.

SATURDAY, AUGUST 5, 1882.

No. 535, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Tristram of Lyonesse, and other Poems. By Algernon Charles Swinburne. (Chatto & Windus.)

WE have been admonished by a writer whose words are worth attending to that the present age ought to be one of criticism rather than of poetry. Yet the actual conditions of our literature contradict this verdict. A poet whom succeeding ages will rank as hardly second to Virgil is still alive and vigorous among us. Another, whose originality of method is so marked as to have long retarded his acceptance, has lately won the popularity his work deserves. A third, who added new graces to English versification, and produced within brief compass masterpieces of the first artistic excellence, passed from the midst of us but a few months since. A fourth, who has laid the stores of Greek, Scandinavian, and mediæval romance under contribution, reviving with singular freshness the art of the rhapsode, may, for aught we know, be destined to enrich our literature with still new monuments of his peculiar skill. A fifth, who has trained the English muse to meditative utterance and chastened melody, gives us from time to time fresh evidences that his vein is not exhausted. With Tennyson, Browning, Rossetti, Morris, and Arnold to lead our singers, and with the school of younger poets who are winning for themselves in several departments fame as yet uncertain, it seems unreasonable to demand abstention from an art to which the age is led instinctively. It is indeed true that much of the poetry of the present time is critical or archaeological. That is to say, our poets, sharing the main tendencies of the epoch, manifest a bias toward the past, toward reproductive and reflective modes of creation, and toward the conscious study of technical perfection. This, however, does not prevent them from being poets. It is, on the contrary, a sign of originality; inasmuch as these qualities have hitherto been somewhat in abeyance in our literature.

These reflections occur naturally to the mind after perusing a new volume from the pen of Mr. Swinburne, who, had he not suggested them, must have been named as the sixth accepted leader of our school. It is in many respects a remarkable volume; for Mr. Swinburne, after winning laurels as a dramatist and lyricist, here breaks new ground as an epic bard, as a writer of sonnets, and as the poet of children.

The poem which gives its name to the book treats anew the old romantic tale of

Tristram and Iseult, the fatality which linked their lives in an unhappy and criminal passion, the maiden-marriage of the hero to another Iseult, and the final tragedy of his death. It is a matter open to debate whether this episode of the Arthurian Cycle is a fit subject for modern verse. Some of its details are too crude for any but a simple and naïf treatment; and the incident of the love-potion, by which alone the passion is justified and rendered tragic, makes too large a demand upon the credulity of a nineteenth-century audience. Everything, therefore, depends upon the poet's method of presentation, upon his power of carrying us back into a bygone sphere of thought and feeling, or upon his successful transference of the romantic legend from its antique soil into the garden of contemporary art. I am bound, for my own part, to confess that, in spite of the forcible reality with which Mr. Swinburne has set forth what is permanently human in this tale of passion, in spite of the pathos of the tragedy and the splendour of the psychological analysis, I feel here the same failure to combine things that differ—mediæval material and modern artistic method—which is discernible to many readers in the "Idylls of the King." Mr. Swinburne has not elected to tell his tale straightforward, as we find it told in the pages of Sir Thomas Mallory. He uses the actual narrative as a thread upon which to hang highly wrought descriptions of emotion and of nature, communicating the details of the story for the most part indirectly or by way of retrospect. He singles out the most important situations for special treatment, amplifying these with abundant dramatic power (as in the canto of "Iseult at Tintagel"), or embroidering them with a rhetorical magnificence which surpasses Ovid's art in the *Heroidum Epistolæ*. In fact, he has chosen to present an epic to us in a series of brilliant pictures and elaborated studies. Those who, like myself, have accustomed themselves to the more direct and rapid method of such poets as Ariosto, will perhaps regret this choice of method.

There are almost insurmountable difficulties for a modern poet in the story of Tristram and Iseult. With some of these Mr. Swinburne seems to us to have dealt successfully, especially in the beautiful and restrained passage which describes Tristram's marriage to Iseult of Brittany. With others his fidelity to the legend renders his treatment less satisfactory. Among these might be mentioned the incident of the love-potion. Mr. Swinburne leads up to it by one of his most admirable descriptive passages—the picture of Tristram rowing against wind and wave. But when the hero asks Iseult for a refreshing drink to cool him after this hard exercise, we are unpleasantly startled by her taking a golden cup containing a strange liquor warm from the bosom of her sleeping handmaid, and inviting him to slake his thirst. However this may have appeared to mediæval folk, it is so contrary to what we should now consider natural or agreeable in the circumstances that we do not feel Iseult's action rightly *motivated*, to use a phrase of Goethe's. Another kind of incongruity meets us in the lines which relate how Lancelot and Guenevere,

sympathising with the lovers Tristram and Iseult, lent them the Castle of Joyous Gard for a season. By his manner of stating their act of courtesy, the poet contrives to remind a modern reader of those great folk who lend their country houses to married couples for the honeymoon. But enough of this. To notice such points would be worse than superfluous were it not necessary for the critic to quote chapter and verse in support of his opinions on a topic of great literary importance in the present day—the possibility, I mean, of adapting antique subjects to modern modes of presentation:

Tristram of Lyonesse is essentially a modern poem. Herein lies its excellence. It is no mere archaic reproduction of a mediæval tale. It is an epic of human passion, viewed in its enduring elements, treated with modern subtlety and a modern sense of the paramount importance of emotion. This is felt throughout the prelude, which several years ago, at Christmas-time, appearing in an obscure annual, startled us with new melodies, and with the radiance of rhetoric sublimed to poetry. That panegyric of Love, as the presiding genius of the world's eternal year, with the procession of the heroines, regents elect by song to rule the several months, strikes the main chord of the poem. An echo in a minor key is found in the exordium on Fate to the last canto. Both passages are highly characteristic of Mr. Swinburne's reflective vein in poetry, and also of his special use of the heroic couplet. But *Tristram of Lyonesse* is not only an epic of love; it is also an epic of the sea. On the voyage from Ireland to Cornwall, at Tintagel, at Joyous Gard, upon the shores of Brittany, the sea is always within sight. And Mr. Swinburne never forgets this neighbourhood. The numerous opportunities afforded by his theme for returning to his favourite element are used by him with loving prodigality. It would be interesting to extract from this one poem all that has been said about the sea in it. Few moods whereof the sea is capable, whether of calm or of tempest, of sullen brooding or of laughing buoyancy, of sympathy with man's spirit in its anguish or its gladness, would be found untouched. Each of these pictures, whether conveyed in a couple of lines or expanded into an elaborate description, is treated with the reality of faithful observation, the fervour of impassioned love. It is impossible within the space of a few paragraphs to do justice by quotation to this gallery of sea studies. I can only refer to the detailed passages on Tristram rowing (p. 36) and on Tristram swimming (p. 142), to the sustained accompaniment of sea music all through Iseult's night vigil (pp. 85–96), and to the sea-shore etchings from Joyous Gard (p. 105).

The versification of *Tristram of Lyonesse* calls for special comment, since Mr. Swinburne in this poem has drawn from the venerable rhymed couplet many effects peculiarly his own. In calling attention to some of these, I may also fulfil the reviewer's duty of quotation. Here, then, are a few lines from the Prelude (p. 10):—

"They have the night, who had like us the day;
We, whom day binds, shall have the night as they.

We, from the fetters of the light unbound,
Healed of our wound of living, shall sleep sound.
All gifts but one the jealous God may keep
From our soul's longing, one he cannot—sleep.
This, though he grudge all other grace to prayer,
This grace his closed hand cannot choose but spare.
This, though his ear be sealed to all that live,
Be it lightly given or lothly, God must give."

Next I take a passage which illustrates a bold use of the triplet (p. 42):—

"Nought else they saw nor heard but what the night
Had left for seal upon their sense and sight,
Sound of fast pulses beating, fire of amorous light.
Enough, and overmuch, and never yet
Enough, though love still hungering feed and fret,
To fill the cup of night which dawn must overset.
For still their eyes were dimmer than with tears
And dizzier from diviner sounds their ears
Than though from choral thunders of the quiring spheres."

With these lines we may profitably compare one triplet containing a singular crescendo from a decasyllabic line through an alexandrine to one of fourteen syllables (p. 82):—

"But all his young blood's yearning toward his bride,
How hard see'er it held his life awake
For passion, and sweet nature's unforbidden sake,
And will that strove unwillingly with will it might not break,
Fell silent as a wind abashed, whose breath
Dies out of heaven."

A very characteristic and successful experiment in rhythm distinguishes the next quotation (p. 55):—

"Here he caught up her lips with his, and made
The wild prayer silent in her heart that prayed,
And strained her to him till all her faint breath sank
And her bright light limbs palpitated and shrank
And rose and fluctuated as flowers in rain
That bends them and they tremble and rise again
And heave and straighten and quiver all through with bliss
And turn afresh their mouths up for a kiss,
Amorous, athirst of that sweet influent love."

By way of contrast I will set beside this passage another, which is remarkable in quite a different manner for its metrical subtlety (p. 89):

"Ah, Lord, Lord,
Shalt thou love as I love him? she that poured
From the alabaster broken at thy feet
An ointment very precious, not so sweet
As that poured likewise forth before thee then
From the rehallowed heart of Magdalen,
From a heart broken, yearning like the dove,
An ointment very precious which is love—
Couldst thou being holy and God, and sinful she
Love her indeed as surely she loved thee?"

Lastly, and this time no less for metrical quality than for beauty both of thought and imagery, I choose a portion of the canto which relates how Tristram rested from his love-despair in Brittany (p. 66):

"Yet as he went fresh courage on him came,
Till dawn too rose within him as a flame,
The heart of the ancient hills and his were one;
The winds took counsel with him, and the sun
Spoke comfort; in his ears the shout of birds
Was as the sound of clear sweet-spirited words,
The noise of streams as laughter from above
Of the old wild lands, and as a cry of love
Spring's trumpet-blast blown over moor and lea:
The skies were red as love is, and the sea
Was as the floor of heaven for love to tread.
So went he as with light about his head,
And in the joyous travail of the year
Grew April-hearted;—"

It is a characteristic of Mr. Swinburne's narrative verse that the finest periods of song—those where the sweep is widest and the

variations most prolonged—are too lengthy to be quoted in a review; I have, therefore, had to close my last extract at a semicolon, leaving the readers of *Tristram of Lyonesse* to follow out its music to the fall.

To criticise the odes on Athens and the Statue of Victor Hugo is hardly necessary. They add nothing distinctive to what the students of Mr. Swinburne's style are well acquainted with. And the same may be said about the many memorial verses, some of them already known, which are scattered through the latter half of the volume. It is, however, important to call attention to the Sonnets, of which there are no fewer than forty-one. Twenty-one of these treat in detail of the so-called Elizabethan dramatists, and have thus a critical as well as a poetic value. It seems to me that Mr. Swinburne has succeeded better in his characterisation of the minor playwrights, especially Ford, Webster, Day, and Massinger, than in his panegyrics of Shakspeare and Marlowe. But the best sonnets in the book may, I venture to think, be found in the miscellaneous collection. Of these, the sonnet on "Hope and Fear" (p. 205) and that on the deaths of Thomas Carlyle and George Eliot (p. 213) are no less beautiful in form than characteristic in thought and expression. To these may be added the cordial and simple verses of affection in which the book itself is dedicated to Mr. Theodore Watts. Mr. Swinburne, it need hardly be remarked, has stamped the sonnet with his own individuality of style. His preference for an opening couplet in the set is a marked, though not an invariable, feature of his manner, allying him as a sonnet-writer rather to the French than the Italian school. On the whole, it would appear that he moves with somewhat less than comfort to himself within the narrow limits of this metrical form; and achieves remarkable success more frequently in sallies and brilliant phrases than in the plastic handling of the whole stanza.

It remains to speak of what is, after all, the most original, or, perhaps, it would be more exact to say, the least-expected, portion of this volume—that is, the portion devoted, in two separate sections, to lyrics about children. We have yearly grown to admire Mr. Swinburne more and more for his generosity and intellectual candour; for his love of things lofty and hatred of things base; for his unsparing recognition of excellence in dead and living men of letters; for the loyalty of his friendship; for the fervour of comradeship which quickens the pulses of his heart and intensifies his mental energy, whether the cause he advocates be fraternity in art or the fraternity of nations linked in brotherhood. Now, in the present volume, he reveals yet another amiable and gentle quality, proclaiming himself the poet of children, the poet on whom, to quote his own words, shines

"the loveliest lamp for earthly feet,
The light of little children, and their love."

In the series entitled "A Dark Month," he devotes thirty-one lyrics, one for each day in May, to the thought of a little absent friend, with a wealth of conceit and a variety of numbers which make the set hardly less

remarkable for literary qualities than they are pure and original in feeling. I do not care to snap the links which look this chain together for the purpose of quotation. Nor from the miscellaneous poems on children can I venture to detach a portion of the fancifully wrought couplets in "Hersa." I must content myself with the two stanzas entitled "What is Death?" This little poem is by no means the most characteristic or original of the child-verses. It is only selected here because it admits of being presented without mutilation. "The Salt of the Earth" offers the same advantages to a reviewer. But I have my own preference for "What is Death?"

"Looking on a page where stood
Graven of old on old-world wood
Death, and by the grave's edge grim,
Pale, the young man facing him,
Asked my well-beloved of me
Once what strange thing this might be,
Gaunt and great of limb.

"Death, I told him: and, surprise
Deepening more his wildwood eyes
(Like some sweet fleet thing's whose breath
Speaks all spring though nought it saith),
Up he turned his rose-bright face
Glorious with its seven years' grace,
Asking—What is death?"

As a last word, I must add that no living English lyricist, with the exception of Mr. Roden Noel in *A Little Child's Monument*, has sung so well and tenderly of children. I do not mean for children. That is quite a different matter. J. A. SYMONDS.

The Mythology of the Aryan Nations. By the Rev. Sir George W. Cox. New and Revised Edition. (Kegan Paul, Trench & Co.)

It is a pleasure to see a new edition of a work which one has been in the habit of consulting for years, and to be assured by the author that no serious modifications have become necessary. This is what Sir George Cox is able to say in the Preface to the second edition of his *Mythology of the Aryan Nations*, a work which was first published in 1870, and which now appears revised, but not remodelled, the best evidence that the principles on which it was founded were sound. "During the twelve years," the author says, "which have passed since the publication of the first edition, a large amount of solid work has been done within the domain of comparative mythology. . . . On the whole, the result has been to strengthen in every way the foundations of the science, and to lay bare more and more clearly the origin and growth of the vast body of Aryan tradition and belief."

One addition, however, had to be made in a new edition—namely, to trace the influence of Semitic theology on the theology and religion of the Greeks. This influence had formerly been much exaggerated; and, as it often happens, had afterwards, on account of these very exaggerations, been too much neglected. Of late, owing chiefly to the discoveries that have been made in Egypt, in Assyria, and in the countries half-way between Assyria and Greece, new and more trustworthy materials have been placed before the comparative mythologist. These could not be passed over, as they help to explain certain features in the

gods and heroes of Greece which remained inexplicable under the action of purely Aryan solvents. "This momentous question," Sir George Cox writes, "I have striven to treat impartially, and for my treatment of it I have to acknowledge my obligations to Mr. Robert Brown's valuable researches in the field of the great Dionysiac myth."

However, in tracing the Semitic influences which have affected the character of Greek mythology, we must carefully distinguish between the importation of ready-made gods and heroes, such as Adonis, Melikertes, and others, and the grafting of Semitic ideas on Aryan standards, as exemplified in many of the legends told of Aphrodite, of Herakles, and, I believe, of Dionysos also. Every god begins his career with his name, and I still hold as firmly as ever to my old principle that no analysis and no comparisons of gods or heroes can ever be quite satisfactory unless their names have first been made to disclose their earliest intentions. Mr. Brown, in his learned work on *The Great Dionysiac Myth* (1877), derives the Greek name of Dionysos from Assyrian. In that language, as Talbot had shown, Daian-nisi is a name of the sun, and means "the Judge of Men." Now, Dionysos is said by no less an authority than Herakleitos to have been the same as Hades; and hence, as Hades also may be called the Judge of the Dead, the descent of the Greek Dionysos from an Assyrian Daian-nisi is supposed to have been established. But is that really so? Was Daian-nisi, Judge of Men, so solemn a name of the sun in Assyria that the Greeks could have adopted it as the proper name of one of their own great solar deities? Secondly, would they have changed that name into Dionysos in order to see in it the meaning of the "Zeus of Nyssa"? In no Greek dialect that I know of would a compound such as Dionysos have conveyed that meaning which Mr. Brown asserts to have been the Hellenic meaning of Dionysos; and if, at a later time, such a meaning was ascribed to it, this could only be through a licence, often claimed, it is true, in the etymological derivation of mythological names, but conceded nowhere else.

Quite apart, however, from the mere name of Dionysos, his widely spread local worship and the intimate relation of that worship with some of the most national manifestations of Greek religion, Greek literature, Greek art, and Greek customs make it extremely doubtful that such a god should have been a mere foreign importation. Nor is there any difficulty about the name and its Aryan character. Mr. Brown (vol. ii., p. 207) gives the following varieties:—Dionysos, Dionyxos, Deunysos, Deonyxos, and Dionūs. A Lesbian form Zonnyxos is no longer recognised. But Conze (*Reise nach Lesbos*, tab. ix., 45) reads Zonnysō (*Corp. I. G.* 2167); and this, together with the other forms, leaves little doubt that Dionysos corresponds to a Sanskrit prototype Dyū-ni-sya, lit. the child of Dyū-ni-se, of Day and Night, or of Heaven and Earth, one of the most natural and intelligible names of the sun. This etymology, which I had put forward as my own in my Hibbert Lectures (p. 278 note), had been published by Benfey in the *Nachrichten der K. G. d. W. zu Göttingen*, 1873, a

fact which, to my mind at least, strongly tends to confirm its truth. (And may I ask, in passing, Why have not Benfey's numerous articles, scattered about in *Journals* and *Transactions* of Academies, the richest thesaurus ever left behind by any Sanskrit scholar, been collected and published so as to remain accessible to future generations?) If, then, we start with the solar name of Dyūni-sya, the later growth of the story of Dionysos in many parts of Greece becomes perfectly intelligible, and equally so the process by which foreign legends were grafted on that original stock. These legends are so rich that it would be impossible to analyse them in a review. Still, a few of the epithets of Dionysos which Mr. Brown has carefully collected may here be pointed out in order to show how well they agree with the solar character of the god, and with his descent from the two parents, or the two mothers, Heaven and Earth, Day and Night. He is called Protoponos, Pyrigenes, Antauges, Chrysokomos, Lampter, Philodaphnos, Brisaïos, Erikapaios, &c. In the epithet Nyktelios we have a mere repetition of the second part of Dio-nyxos; and in Dimeter (Sanskrit dvimātā), Dimorphos, Diphyes we read the story of his double descent and his double character, the bright and the dark, the diurnal and the nocturnal god. The epithet of Hyes shows that from an early date Dionysos represented the sun in his character of rain-bringer, which accounts for his becoming afterwards an Antheus, Karpios, Dendrites, a vivifying and genial god, and, lastly, the representative of that most genial and vivifying beverage with which his name became in the end most intimately connected—the juice of the grape.

What applies to the myth of Dionysos applies, I believe, to several other myths which Mr. Brown, Prof. Ernst Curtius, and others have claimed of late for the Semitic world. Sir G. Cox has perhaps yielded too readily to their pleading. But in these matters it is well to hear both sides, and many readers will be grateful to Sir George for having placed the evidence before them with perfect fairness so as to enable them to form their own judgment. His book will certainly be all the more useful, and will continue to occupy the high place which even those who differ from him have ungrudgingly conceded to this *Manual of Comparative Mythology*.
F. MAX MÜLLER.

Camps in the Rockies: being a Narrative of Life on the Frontier and Sport in the Rocky Mountains; with an Account of the Cattle Ranches of the West. By W. A. Baillie-Grohman. (Sampson Low.)

THE ever-broadening circle who have met Mr. Baillie-Grohman gadding with a primitive people at Passion Plays, or doing *jägerlich* deeds among the Tyrolese, will be pleased to learn his impressions of a widely different part of the world. In reality, though the Alps and the Rocky Mountains are far apart, from a literary point of view, the more easily reached portions of the one are almost as well known as the less beaten paths of the other. Thousands go to Tyrol for one who essays Wyoming. Yet while only the hardest of offenders

venture on a detailed account of their experiences in the autumnal suburb of England, it is the rule rather than the exception for the tourist who has visited the well-worn routes across the American continent to inflict on the world adventures which are novel only to himself. Once on a time—it seems like yesterday to men who repudiate the imputation of middle age—to have "crossed the Rocky Mountains" was regarded as a traveller's feat more worthy of esteem than a visit to Central Africa or a journey through Patagonia is considered now. He risked his scalp a score of times at the hands of Sioux and Crow and Shoshone, and could discourse of trails and camps and blazes, the Snake River or the Tete Jaune Cache, Brown's Hole and Fort Hall, with a familiarity which left no room for the sceptic or the scoffer. What cynic could doubt the exploits of a person who wore fringed breeches in preference to tweed, or could hint that the race of Ananias was extinct in the presence of a long-haired Paladin who talked like Leatherstocking, and affected beaded moccasins as an ordinary article of foot gear? Henceforward he was permitted to swagger in places where travellers most do congregate, and—so the wicked averred—shoot with the long bow to the end of his natural life. The stage coach wrought this race grievous harm; the Pacific Railroad has almost scotched them. With the expenditure of less labour and not much more money than a tour in Central Europe costs, anyone may see the outside of a long stretch of the prairies and the adjoining mountains without being much the wiser for his run. Every year the towns and stations along the trans-continental line are getting more and more like the towns and stations in any other part of the United States. The "bogus trappers," the "Bear-claw Bobs," and "Wild Bills" of the Denver bar-rooms are prepared to "wrustle outfits" to Este Park or the Wonderland, and, if necessary, to provide grizzlies, mountain sheep, buffaloes, and wapiti for them to shoot at, or, at all events, to skin and take home. They go over the same route, camp at the same places, hear the same "Injun," "bar," and "snake stories," and necessarily fill their books with the same occidental apocryphæ. To "trundle tenderfoot outfits"—an "outfit" in Colorado is a waggon, a hunting-party, a frying-pan, or a wife; a "tenderfoot" is to the "old stages" and the "cowboy" an object of as much contempt as "an immigrant" was in Nevada in days when the "forty miners" had all come via the Isthmus—is a trade in the West. The wealthy Englishman provides an "outfit" which costs £10 or £15 a-day, or makes friends through the powers in Washington with the commandants of frontier posts, or, best of all, joins his experience and purse to that of other Britons, and does his sight-seeing and slaughtering in a modest, inexpensive fashion.

Mr. Baillie-Grohman is one of these wise men. At present, he is on his fourth visit to the Rocky Mountains, so that he is long out of his novitiate as a "tenderfoot;" and, though he uses one tour as a convenient peg on which to hang the varied information acquired during his previous journeys, the book may, in

reality, be taken as the condensed narrative of three expeditions. He is rather vague as to his route, though this is not material, for the chapters mainly relate to hunting experiences, and are so systematised as for each to embrace the description of some particular animal, or class of ground. Thus we have camp life and outfit in general discussed. Wapiti, Beaver, and Bighorn have each ample space devoted to them. The timber line, the Teton Basin, and the Canions of the Colorado in like manner form the headings of chapters; while Indian and winter camps, Western Reminiscences, and camps in what, for the sake of "alliteration's artful aid," the author terms "Cowboy Land," or the Ranching region, complete the body of the book. Much of the ground he describes is practically new, and not a little of it is actually novel to the geographer. It is, therefore, to be regretted that Mr. Baillie-Grohman had not been a more scientifically trained traveller before essaying these wilds. At the same time, it is only fair to add that his work will compare very favourably with that of any tourist in the same region. His natural-history notes seem to us admirable, the account of the beaver being one of the best with which we are acquainted—and the reviewer has written one himself; while the Appendix contains such a condensed mass of information on topography, zoology, outfit, and cattle-rearing that it might be very usefully reprinted as a guide-book. The map is for the most part compiled from the Government explorations, but it comprises a considerable amount of original information, which proves the novel character of the trips so modestly narrated in less than four hundred pages. The four illustrations, however, might have been, with much advantage, omitted. They are singularly poor specimens of wood-engravings, and as subjects are woefully hackneyed. Otherwise, the book deserves little but praise. It is full of interesting matter told in an unpretentious way, with no attempt at "making points" or at that ghastly humour which is so often the most depressing feature in volumes of this class. Mr. Baillie-Grohman cannot indeed be complimented on his literary style. He has, indeed, rather deteriorated since he last passed under the Caudine Forks, for the local colouring of Colorado has so infiltrated his speech that, unconsciously, he is slangy to a degree that ceases to be expressive. Moreover, so far as our recollections enable us to judge, the Western vernacular is occasionally overdone, for, since "tenderfoot outfits" have been "trundled" over the country, sham trappers and "Injun fighters" have sprung up not less rankly than teamsters and guides, who found it necessary to preserve the *genius loci* by talking after the conventional ways of the "Western man" of the "dime-novel" order. On the other hand, while not exaggerating the many good qualities of his mountain friends, he rather underrates the law-abiding character of the West by going as much to one extreme as Dr. Russell, to whose descriptions he objects, runs in another. Still, these are trifles which will not hurt the book in the opinion of many readers. It is throughout extremely interesting, and even valuable. It proves how much of the less accessible West is still in

terra incognita. On the other side of the mountains there are vast tracts practically unexplored. Few of the remoter ranges and valleys of Washington territory and British Columbia are known even in outline; and the interior of the wild-wooded, mountainous, river- and lake-intersected Vancouver Island has barely been penetrated since the writer of this notice ceased to go a-field. Even yet it seems impossible to impress stay-at-home naturalists with any conception of the extent of the Farthest West. Continually we see allusions to the "Oregon Territory," the writers being unconscious of the fact that the country vaguely known under that name thirty or forty years ago is now divided into a number of self-governing Territories, Provinces, and States. Plants collected in Northern California are frequently labelled in botanic gardens as from British Columbia, though it would be as reasonable to describe the flora of Ben Lawers in Scotland as that of the Sierra de Guadalupe in Spain. Again, if further proof were necessary of what an unknown land North-west America is to men whose education might have embraced geography, it is supplied by a paper in the current *Proceedings* of a London "learned society" which reaches us while engaged in writing these lines. A botanical professor discusses with needless prolixity, in four pages of print, whether a particular fir is from "Mount Baker" or the "Cascade Mountain," and indulges in impressive speculations over the chances of a particular bract figured being from a "Mount Baker or Cascade Mountain specimen." One might have imagined that before all this much-ado-about-nothing was penned and printed, either the writer, the council of the society, its secretary, or the "referee" to whom it was submitted before being accepted might have ascertained that there is no "Cascade Mountain," and that Mount Baker is only one of the many peaks in the "Cascade Mountains," the most notable of the two ranges which run throughout the northern part of the broad region in question. A few more such admirable works as that of Mr. Baillie-Grohman, and ignorance like this will be as inexcusable as at present it is general.

ROBERT BROWN.

Essays from "The Critic." (Boston, U.S.: Osgood.)

THE first reflections on laying down this book are that the essays are too short and too few, and that essays as a rule are too long and too many. The collection as a whole justifies the opinion of the editors that some, if not all, of them are, despite their brevity, of permanent literary value. The "if not all of them" is a good instance of a saving clause, one or two being clearly not up to the mark of the others, or to be commended wholly. In his paper upon "Historical Criticism of Christ," Mr. Bellows asks a question which no one else would have thought of asking, to obtain an answer which is sufficiently obvious. He has raised his giant, and fought him for mere exercise; and in a thoughtful, but not very precious, criticism of Whitman's *Leaves of Grass*,

which ends the book, an anonymous writer transfers the responsibility of that remarkable poet's shamelessness from the author to his genius. He wrote his disgusting rhapsodies "by order from his genius," says this apologist; but we are not informed by whose command they were published. Luckily, Whitman's genius has been more merciful or grown more decent of recent years; and the two papers he contributes to this volume show that it is a very noble as well as an imperative one. There is so little difference between Whitman's ordinary poetry and extraordinary prose that his utterance on the death of Carlyle may well be classed among the most admirable of his poems. Not unlike Carlyle himself in the pithy strength of its ejaculation, there is a grandeur almost elemental in its diction, which ranges from the most comprehensive of criticism to real sublimity of thought and passion. For him at least the stars do not run their courses in vain; and the passage in which he shows his intimate knowledge and spiritual fellowship with them is of an order very rare in any literature. Its final burst of melodious eloquence we must quote:

"And now that he has gone hence, can it be that Thomas Carlyle, soon to chemically dissolve in ashes and by winds, remains an identity still? In ways perhaps eluding all the statements, lore and speculations of ten thousand years—eluding all possible statements to mortal sense—does he yet exist, a definite, vital being, a spirit, an individual—perhaps now wafted in space among the stellar systems, which, suggestive and limitless as they are, merely edge more limitless, far more suggestive systems? I have no doubt of it. In silence, of a fine night, such questions are answered to the soul, the best answers that can be given. With me, too, when depressed by some specially sad event, or tearing problem, I wait till I go out under the stars for the last voiceless satisfaction."

The fascinating personality of Thoreau affects many, but few could write of it with a sympathy so perfectly in tune as that which vibrates through the few terse pages which Mr. John Burroughs devotes to "Thoreau's Wildness." The very different wildness of William Blake has inspired Mr. E. C. Stedman no less justly. There is, indeed, a lyrical quality about all three of the little essays to which we have called attention, and there is none of them which does not contain some sentence which lingers in the memory on account of the music of its expression or the value of its thought. Mr. Stedman's aphorism that a poet or an artist "cannot be a mere agnostic" is one of the latter kind. Another little paper of a high class is Mr. E. H. Stoddard's friendly, but not blind, recognition of the genius of Frances Hodgson Burnett. It is a careful, if slight, study, and abounds with felicities of phrase. So also does Mr. Gosse's essay on Austin Dobson, which is written in that bright, but comprehensive, style which is his own. Mr. John Burroughs' paper on "Emerson and the Superlative," and Miss Edith M. Thomas' fresh and fragrant "Company of Spring Poets," are perhaps the most notable of the remaining contributions to a volume which says a great deal for the literary quality of the *Critic*.

COSMO MONKHOUSE.

Chronological Tables of Greek History. By Carl Peter. Translated by G. Chawner. (Cambridge: University Press.)

It is with mixed feelings that we regard this English version of Dr. C. Peter's well-known *Tables*. As a handy book of reference for genuine students, or even for learned men who want to lay their hands on an authority for some particular point as quickly as possible, the *Tables* are useful. But for undergraduates, who have to get up their Greek history in a year or two, the book will simply be a temptation to neglect the original authors. Yet the translator tells us in his Preface that he hopes it may supply a want likely to be felt, under the new Cambridge system of examinations, by candidates who will be expected to illustrate and support their statements by reference to the ancient authorities. Dr. Peter's full notes cite, and often quote, authorities, and so

"persist to read,
And Peter will be all the books you need."

But, seriously, the translation of a book of this sort, however valuable in itself, is a doubtful service, at least to candidates. It opens to them yet another place in which they may find done for them the work which they ought honestly to do for themselves. Why should a man go thoughtfully through his Herodotus or Thucydides? why weigh conflicting statements? why take the trouble to mark, combine, and remember important passages, if he can find all the work done ready to his hand? No faculty but memory can be strengthened by giving such help as this to men who have to learn their subject in a limited period. The *Times*, in a recent friendly article on the new Cambridge regulations, remarked that they could hardly fail to breed savants. But savants are not bred upon chronological tables. A man must put his own work together if he is to have any benefit from it or any command over it. The cause of genuine education in Oxford is suffering severely from the excessive facilities put in the way of young men; and we should be very sorry to think that this is either true or going to be made true of Cambridge. The evil is begun, we believe, at school, where the personal exertions of working masters and the innumerable easy school editions with English notes go far towards depriving boys of all power of self-help; but it is completed at Oxford, where more is done every year for the men, and they become every year more incapable of doing a piece of work for themselves. Lectures, aids, and editions are killing study.

It will be seen, then, that our suspicions of the volume before us arise on general grounds, and not from any fault peculiar to it or to its translator. Mr. Chawner seems to have done his work faithfully and well. There are, however, misprints, such as *Κυλικοι ποιηται* (p. 17) and *Atlante* (p. 61); and it will be well to choose between Perioeks (p. 38) and Perioeki (p. 47)—probably in favour of the latter. We wish, too, that Dr. Peter had given some authority for the "rough statement of the comparative numbers in the three classes at the time of Sparta's greatest prosperity—40,000 Spartiatae, 120,000

Perioeki, 200,000 Helots" (p. 16). And what is known of Peisander, a demagogue in the time of Aristophanes? But, as a rule, Dr. Peter has wisely avoided all doubtful matters. He says nothing of the thorny question: When did Achaia become a province? and confines himself generally to facts. The account in Hdt. ix. of the five great contests of the prophet Tisamenos might be added to the list on p. 36 of authorities for the history after the Battle of Mykale.

FRANKLIN T. RICHARDS.

NEW NOVELS.

Bevis: the Story of a Boy. By Richard Jefferies. In 3 vols. (Sampson Low.)

Faustine. By "Rita." In 3 vols. (Tinsley Bros.)

Wild Rose. By John Hull. In 3 vols. (Tinsley Bros.)

Silken Meshes. By Temple Laurence. In 2 vols. (Remington.)

If Mr. Jefferies is about to become a rival to Jules Verne and Mr. W. H. Kingston, he has in *Bevis* made a most admirable beginning. He has not burdened himself with a plot, or sought to enclose the pill of geographical or historical information in the jam of melodramatic narrative. *Bevis* is simply a very intelligent, inquisitive, and imaginative boy. When very young he was an *enfant terrible*, who asked if "God had a pussy;" and, driving over Westminster Bridge for the first time, and seeing the Houses of Parliament, which reminded him of his toy bricks, inquired "if there was anything inside." When he is introduced to us by Mr. Jefferies he is somewhat older, and has his head filled with tales and marvels of adventure, ancient and modern. These three volumes tell us how, with the help of water, a few mechanical appliances, and a vast amount of fancy, *Bevis* and his "chum" Mark realise what they have read, how they descend the Mississippi and the New Nile, struggle with savages, fight a second battle of Pharsalia, explore Central Africa, discover a new Formosa, and, finally, wind up with an Antarctic expedition. Nothing could be better as a long-continued effort of boyish theatricals; and it gives Mr. Jefferies an unrivalled opportunity of revelling in that world of common things which he has invested with the fascinations of an *El Dorado*. *Bevis* is full of humour of the higher and non-assertive sort. The character of the masterful little hero, who "gets everything," and is sometimes painfully in earnest, is carefully distinguished from that of his lieutenant, Mark, who is more imitative, and has less force of character, but whose loyalty is undoubted, in spite of his occasionally lapsing into discontent and rebellion. Although there is no plot, there is much quiet and dainty by-play, as between Frances and Big Jack, whose mutual understanding dovetails very charmingly into their devotion to the boys. There is a bailiff, too, who, with his natural sympathy with what is dull and immovable, looks as if he had stepped out of one of Mr. Hardy's earlier novels. It would be difficult to say whether *Bevis* will be the more enjoyed by intelligent boys or by healthy-minded men.

The author who styles herself "Rita" surely means, by her new venture, to overwhelm with ridicule the school of fiction in which "Ouida" occupies the first, and she herself a very humble, place. *Mlle. de la Ramée* is, on her own showing, a moralist with a high mission; and her pupil's *Faustine*, with its burlesque actresses, its Italian skies and Italian scoundrels, its paltry passions and pompous platitudes, is really a big "No Popery" pamphlet. The central figure in it is a Père Jerome, and a more hideous villain was never drawn in fiction. He lies, forges, steals, murders by proxy, gets the son of an English nobleman disinherited by making insinuations to his father against the fidelity of his mother, and by the same means brings about the violent death of his own married daughter—and all for the glory of the Church of Rome and to secure a cardinal's hat for himself. Not only is the plot of *Faustine* full of the wildest improbabilities, but there is a great deal of unwholesome writing in it. Nothing could well be more odious than the long-sustained efforts of the Parisian actress who bears such a suggestive name to ascertain from her lover whether he thinks she deserves it. There is not a character in it that is well drawn; Vere Danvers and Cecil Calverley are not English gentlemen, but 'Arries endeavouring to pass themselves off as such. Père Jerome is killed at the end of the third volume, but who it really is that performs this necessary work it will puzzle the most careful of readers to discover.

Wild Rose sounds a lower depth, not of vulgarity, but of Bohemianism, than *Faustine*. We are introduced to actresses in "Paphos Street, Belgravia," who swear, smoke, talk about "photos," and call their male acquaintances by their first names; Cesarine and Celestine, of the Quartier Latin, who drink vermouth of a morning, and shudder when they think of the lives they have led; students who worship barmaids, are deep in Mürger and Musset, and "sit up reading Spinoza among the remains of claret-cup, punch, bits of lemon, and tobacco ashes;" and a French Communist and an American doctor who contract to act as guardians to a foundling child "by the Lord in whom they don't believe." The manners, if not the morals, of the characters in this book may be judged from the conduct of "Wild Rose" herself. "Jack," her lover, finds her in the arms of "Alfred." She flees from her home in England, not because she thinks she has treated "Jack" ill, but because she discovers "Alfred" to be in correspondence with "Minnie." She finds her way to "Paphos Street," London, and thence to the Quartier Latin, where the reader may follow her if he wishes to ascertain how she is saved, first from suicide and then from the Jardin Bullier. *Wild Rose* looks like the work of a very young man who is bent on ascertaining how far he can go in defying English conventionalities. He has a fairly quick eye for character, and some "go" as a writer; and it is to be hoped he may live to regret that he ever wrote such a book.

Silken Meshes is a very weak tragedy, being the story of a poor girl who is forced into a marriage by her silly and selfish

mother, and who, when a violent death removes her incumbrance of a husband, telegraphs to her lover that she is "free." She is too late, however; he has been killed on a tiger-hunting expedition before the telegram arrives; and there is nothing left for her but to die also. The characters are vulgar and badly drawn; and the writer's attempts at sarcasm and wit are only irritating. In *Silken Meshes* there is not even a promise of better things. WILLIAM WALLACE.

CURRENT LITERATURE.

Rough Recollections of Military Service and Society. By Col. Balcarres D. Wardlaw Ramsay. In 2 vols. (Blackwood.) Old soldiers are traditionally the best of raconteurs, and we do not know that we have ever taken up a more eminently readable book than this. The gentleman—who is such by birth and by a life-long education—who takes up his pen when no longer young has many advantages over the professional man of letters. Chief of these, his work need not smell of the lamp. From the same cause comes its great charm to the professional critic, who is bored to distraction by the writings of his fellows—or, still worse, of female amateurs. It would not be true to say that Col. Ramsay's life has been a specially memorable one. Of active service he saw practically nothing, though he was three times in India. His social position introduced him to many distinguished persons, and allowed him to gratify his inveterate taste for sight-seeing, both at home and abroad. But the main attraction of his "Recollections" arises from the light they throw upon the character of the man himself—simple, courteous, and cultivated. That he should have settled at Rome gives us to hope that the traditions of Severn and of Sir Vincent Eyre will not be forgotten. The most generally interesting portion of the book is undoubtedly that in which he describes his official work at Calcutta at the time of the outbreak of the Mutiny. He was then brought into very close relations with Sir Colin Campbell; and we venture to say that these few pages give a far more lifelike picture of the old general than the elaborate biography of him published last year. We have only space for one anecdote, referring to a later period of Sir Colin's life, when he was Lord Clyde:—

"Not long before his death, he was living in chambers in the Albany. He called on the secretary, and found fault with him for having given him a woman to look after his rooms who had two or three children. The secretary said that he did not see how the children could interfere with him, as they kept out of the way. 'I will tell you,' said Lord Clyde. 'If the woman is a respectable decent body, and looks after her bairns as she should do, she washes them in the morning; and I object, sir, to my breakfast being served up by a woman who washes children.'"

This, again, though of a very different kind, deserves quotation:—

"Here is a delicious story, told me by an old lady whom I met somewhere, which has cheered me up in my sorrow. When a girl she used to dine with her parents at an annual Christmas-dinner given by Mr. Murray, of Albemarle Street, to his literary friends: D'Israeli the elder, and his family, were always there. After dinner, the children were allowed to play a round game together; but after the first year they all refused to play with Master Ben because he cheated so."

But we should not like to leave the final impression that our author is merely a teller of good stories. His descriptions of his tour through Spain, of his exploration of Corsica, and of his visits to various health-resorts little known to English people—all are excellently

well done, so far as excellence is compatible with the subject-matter and with lightness of touch.

Egypt under its Khedives; or, the Old House of Bondage under New Masters. By Edwin de Leon. With Illustrations. (Sampson Low.) The first edition of this book was published in 1877, and was reviewed in the ACADEMY for September 22 of that year by the late Andrew Wilson, who wrote:—

"It is a first-rate rattling book upon Egypt, touching off, in a vivid manner, and in great part from personal knowledge, the characteristics of four Viceroys; the changes which the country has undergone during their reigns; the characters and appearance of their Ministers and of distinguished Europeans connected with Egypt; its foreign population, its fellaheen, irrigation, education, slavery, finances, resources, judicial tribunals, army, and annexations, together with some pleasing pictures of the Egyptian landscape."

The author, who was consul-general in Egypt for the United States as far back as 1853, has now added a preliminary chapter, tracing the development of the present difficulty and the rise of Arabi Pasha. No better informed or more independent witness could be found; and therefore it may be worth while to quote the following sentence:—

"It was then [April 1879] that the dragon's teeth were sown which subsequently have produced such a harvest of armed men, and led to the military despotism that now overshadows the country."

France in the East. By Frank Ives Soudamora. (W. H. Allen.) Under the above title Mr. Soudamora has reprinted with certain revisions and amplifications five essays, published in *Time*, on the policy of France towards the Ottoman Empire from the earliest days of its existence. The author writes in a discursive, not to say garrulous, style, but he has succeeded in compiling a very readable history of Turkish politics as affected by European factors during the last three centuries. Readers will be struck by the remarkable continuity of French policy as regards Turkey; Louis XIV. faithfully followed in the steps of Francis I., who was the first Christian monarch that the Porte chose to dignify by the title "Padishah," or Sovereign Prince; and Napoleon I. took up and continued the policy of his monarchical predecessors, just as M. Gambetta aspired to be, in his Eastern policy, the successor of the First Consul. And France has always endeavoured to secure some special privilege or privileges for her countrymen who were to be found in Turkey as traders, or in any other capacity. In earlier days, these favours were won by means of coaxing and wheedling; and when the Ottoman Empire was no longer a formidable military power concessions were secured by threats and demonstrations. The instructions delivered by the Directory to Napoleon previous to his departure for Egypt form an interesting commentary on modern history. The leader of the expedition was to make it his care to expel the English from all parts of the Red Sea which he could reach, and to destroy all the English commercial settlements on those shores. Furthermore, he was ordered to pierce the Isthmus of Suez, and to secure for France the exclusive use of the Red Sea. There can be no doubt that the successful execution of one portion of this project by M. de Lesseps was owing to the strenuous support afforded by Napoleon III. in the hope of realising to the full the dreams of the Directory. Strangely enough, Mr. Soudamora terminates his book with the reflection that, while the policy of England has in the Levant been "purely selfish," that of France has been frequently "animated by a great idea;" and in his opinion any future happiness that may be in store for the provinces of Turkey will be caused,

not by the "calculated action of England," but by the generous instincts of France.

My Watch Below; or, Yarns Spun when Off Duty. By A. Seafarer. (Sampson Low.) Whoever did not read these "yarns" when they first appeared in the *Daily Telegraph*—and we cannot all read all the newspapers—is earnestly recommended to make up for lost time. It is an open secret that their writer is none other than Mr. Clark Russell, the most literary of sailors and the most realistic of novelists. We are not acquainted with any other author who possesses an equal power of investing photographic truth with the charm of artistic expression. His pictures are not so much lifelike as life itself. If there was a fault to be found with his novels, it was that they were somewhat too long for so slender a plot. If there is a fault to be found with these "yarns," it is that they are somewhat short for the incidents they describe. They are thirty-six in all, and each contains enough material to make the fortune of a holiday number. We have read them all with interest, but in the case of shipwrecks the interest is almost too painful. The collier, the smack, the lightship, and the hoveller have pleased us best. What a reputation is yet in store for Mr. Clark Russell if he shall ever choose to write down to the level of boys!

The National Budget. By A. J. Wilson. "English Citizen" Series. (Macmillan.) This is an admirable summary of an involved and intricate subject. It takes the front place among the manuals of the kind, and the fact that Mr. Wilson has had the advantage of some excellent guides in certain divisions of his labours detracts but little from its merits. The history of the financial administration of Great Britain cannot afford the student unmixed pleasure; the prospect of the future is not without dark clouds. In the past occur frequent instances of powerful classes in the country transferring the burden of taxation, which they themselves should bear, from their own shoulders to those of others less able to resist the imposition; and the baneful influence of Dr. Price's sinking fund was felt for at least half-a-century. The chief danger of the future lies in the increase of local taxation, on which Mr. Wilson pens many salutary warnings. The only conclusion to which the ordinary reader can come will be this—that the National Debt, like the poor, will be always with us. If possible, it were highly desirable that some of the results of Mr. Wilson's researches and some of his teachings should be sown broadcast throughout the country.

"English Political Leaders." *Lord Palmerston.* By Anthony Trollope. (Isbister.) We do not profess to have followed all the volumes of this series (of which it has recently been announced that there is no editor); nor is any list here given of earlier volumes. But, judging the present book by itself, we cannot feel altogether satisfied with it. For those who know, it is too long; for those who do not know, it is not long enough. Mr. Trollope has the advantage of being in complete sympathy with his subject; but, at the same time, he seems to have found himself hampered by the consciousness that such sympathy is not now widespread. Palmerston was, indeed, a typical Englishman, though not a type of Englishmen in their most attractive guise. The very names of "Don Pacifico" and "the lorcha Arrow" have now a far-away sound; and it is impossible to galvanise into life the incidents they embody. The personal rivalries of Palmerston with Lord John and with Aberdeen seem very unlike the decorous loyalty of modern parties. It is like Gambetta and de Freycinet in France. Nor has Mr. Trollope lavished a single grace of style to make his story more

readable. The personal appearance, the private manners, of Palmerston are barely alluded to; and his many felicitous sayings have been scrupulously excluded. Until we read this book we could not have believed that Mr. Anthony Trollope would have failed so entirely in the first duties of a biographer. Yet a novelist of a younger generation has failed scarcely less completely in his *Life of Goldsmith*. To manipulate character from inside is one thing; to describe it from without is another.

Our Noble Selves; or, Gleanings about Grantham Surnames. By the Author of "Notes on the Months," &c. (Unwin.) One or two good books have been written concerning surnames, and there are a few valuable articles on the subject scattered in the *Transactions* of learned societies; but the study is yet for most persons in the unscientific stage, where almost everything is guessing, and one guess is as good as another, and, if a genealogical flattery be implied, sometimes very much better. People who would laugh if you made any very gross blunder about geology—if, for example, you talked about ammonites in the granite, or doubted the former existence of an ice period—are content to receive as truth any legend which accounts for the origin of their own or their friends' surnames. The silly tales as to the origin of Percy, Turnbull, and Napier still pass current; and almost every Russell is content to trace his line back to a far-away home in Normandy, ignoring the fact that his name may quite reasonably be referred, if guessing be admitted, to some local Rush-hill or Rushwell. The author of the book before us has been content to gather from all sorts of places information, or what passes for such, about the surnames which are in use at Grantham; much that he says may be true, some things are almost demonstrably wrong, and very much belongs to the wide borderland of baseless speculation. Surnames have sometimes been purposely altered through vanity or for the sake of euphony, much more frequently from a false idea as to their meaning or derivation. Among the unlettered or half-lettered classes they are still subject to arbitrary changes. A cattle-dealer told us within the last fortnight that he did not know whether his name was Waterhouse or Waters, but that he spelt it first one way and then another, just as it suited him. There is one matter of considerable importance on which the author gives a decided opinion, in which, contrary to most of the received authorities, we hold that he is undoubtedly in the right. He quotes Mr. Ferguson as saying that the number of English surnames derived from places "has been greatly overrated." Mr. Ferguson estimates them at one-third of the whole; the author of *Grantham Surnames* considers them more than one-half. We have no doubt whatever that he is in the right. It has been the custom of name-interpreters to hunt in gazetteers and directories, and, if these failed them, to conclude that the name was not "local," and straightway to invent some other origin. It is commonly forgotten that almost every field, hill, brook, and lane has its own name, and that any one of these may have given us a patronymic. Lightfoot is an example. Mr. Lower, in his *Patronymica Britannica*, without hesitation, derives it "from agility in running;" but it is a family of the most direct proof that one family of Lightfoot took its name from certain members of the race living in a building called Lightfoot House. The place was so named from a light being burned there to guide wayfarers across a common. The light was not extinguished until the time of the great enclosures, and the little tower in which it was wont to burn existed less than twenty years ago.

A Dictionary of English Law. Containing Definitions of the Technical Terms in Modern Use, and a Concise Statement of the Rules of Law affecting the Principal Subjects, with Historical and Etymological Notes. By Charles Sweet. (Henry Sweet.) This is a big book, and handsomely got up; and, what is more, it is manifestly the result of considerable personal research and much labour in condensation. But we cannot honestly say that we think it a good book. Most previous law dictionaries have been mere glossaries, of varying degrees of merit. Mr. Sweet has attempted a far more difficult task in compiling a work that shall summarise in alphabetical order the existing state of the law for the benefit of the practitioner. Such an attempt, it is evident, must be beyond the reach of any single man, and also beyond the compass of a single volume. Mr. Sweet, we infer, is a chancery barrister, or what used to be called a chancery barrister; for in that department he is not only most full, but also most precise. But in common law, and in matters of general interest, he is often vague, and not infrequently misleading. It is only fair to give a few examples:—"Manslaughter is . . . punishable by penal servitude or a fine" (p. 514), which entirely ignores the very common alternative of imprisonment; "every legacy (except legacies to the . . . descendants of the testator) is liable to a duty" (p. 481)—in the "addenda" this is put right, but only at the expense of quoting the words of the statute; "most of the bishops are also members of the House of Lords . . . every bishop is elected by the dean and chapter of the bishopric on the nomination of the Crown" (p. 100). It remains to add that in his derivations Mr. Sweet has been wise enough to consult Littré and Diez. The etymologies of our early English lawyers are too painful.

The Student's Pocket Law-Lexicon. (Stevens and Sons.) If Mr. Sweet fails through being too ambitious, the anonymous author of this little book may certainly be congratulated on his modesty. He has not attempted anything more than the glossary with which we are already familiar, condensed almost out of recognition. Terms of art in English, Scotch, Roman, and even Indian law are all here, with some sort of explanation. The English terms seem to be fairly well explained, but only fairly well. The Scotch and Indian terms are, as usual, worse confounded. Upon Latin words, however, the author has displayed his worst capacity for blundering. His translations of these are often "canine" to the last degree, and sometimes directly wrong. Here are examples—*ratihabitio mandato comparatur* = ratification is equivalent to command; *res judicata* = a point already settled by authority; Principal and Agent, he who being *sui generis* . . . It is curious that neither of these dictionaries gives that use of "chief-rent" which is so common at Manchester and some other places.

Curiosities of Law and Lawyers. By Croake James. (Sampson Low.) There must, we suppose, be something fascinating to the author in compiling a collection of law stories. It is not more than a month ago since we received a little volume in the "Mayfair Library" of Messrs. Chatto and Windus almost identical in its aim (and, we may add, in its contents) with this. We cannot say that either book is as good as it might have been made. Both compilers have gone only to the most ordinary sources, and have not displayed any particular skill in their arrangement. "Croake James" has, perhaps, made greater use of Campbell's voluminous works, and he has certainly added a better Index. But, on the other hand, he sometimes wanders far away from either law or lawyers. Far be it from us to ask for yet a third book on this subject; but there is room for it.

NOTES AND NEWS.

MR. ALFRED AUSTIN has, we learn, a volume of lyrical poems in the press, which will be published by Messrs. Macmillan and Co. in the course of the autumn, under the title of *Soliloquies in Song*.

WE are very glad to hear that Dr. Aldis Wright is preparing a second edition of the "Cambridge Shakespeare," and we only hope that it will soon make its appearance. It has long been sadly wanted by all Shakspeare students.

PROF. SKEAT has nearly finished his edition of Guest's *English Rhythms*, which has cost him great trouble, especially in the verification of its quotations, whose original vagueness, "Scott," "Pope," &c., necessitated a search not only through Scott's poems, but all his novels, while one "Pope" extract turned out to be from Young's *Satires*.

ANOTHER famous library is to be dispersed. The books and MSS. at Towneley Hall, Lancashire, are to be sold by auction in London. The transcripts made by Christopher Towneley in the seventeenth century have proved a mine of information for the antiquaries and historians of later generations. The Towneley library is, in fact, a memorial of one of the most notable families that Lancashire has produced.

DR. SCRIVENER has in the press a new edition of his *Introduction to the New Testament*, which will contain an account of all fresh additions to the materials for textual criticism down to the present date, including the recent researches of the Dean of Chichester. New information concerning the Egyptian versions will be contributed by the Bishop of Durham; and the chief alterations introduced into the received Greek text by the Revisers of the English New Testament will also be examined in their relation to the critical principles of Drs. Hort and Westcott. The book will be published by Messrs. George Bell and Son.

MR. JOHN MURRAY will shortly publish two books about India which have something in common—at least in their subject. These are *Religious Thought and Life in India*, by Prof. Monier Williams; and *Asiatic Studies, Religious and Social*, by Sir Alfred O. Lyall.

On Duty under a Tropical Sun is the title of a book which Messrs. W. H. Allen and Co. are publishing. This little work has been compiled with a view to offering practical suggestions as to maintenance of health and bodily comfort to those whose duties may temporarily call upon them to "rough it" under conditions where medical aid and the ordinary comforts of life may not be immediately obtainable. Although the suggestions offered refer to tropical countries generally, the fact that one of the compilers has based certain of his remarks on experience of Egypt, gained when on duty in that country in 1868, may be considered as enhancing the value of the little work at the present crisis.

THE new volume in the series of "Foreign Classics for English Readers" will be *Tasso*, by Mr. E. J. Hasell.

MESSRS. CHATTO AND WINDUS are issuing a cheap edition of Mr. Buchanan's *God and the Man*, in which the dedicatory verses are printed under Rossetti's name.

THE Wordsworth Society's publications, Nos. ii. and iii., have just been issued to the members. No. ii. contains an account of the third annual meeting of the society in May last, when the chair was taken by Mr. Robert Browning, and subsequently by Lord Oleridge; a paper by Mr. Hutchinson, of Kimbolton, on "The Structure of the Wordsworth Sonnet;" a letter from Prof. Bonamy Price, of Oxford, on "The Ode

on Immortality;" two notes by Mrs. Owen, of Cheltenham, one on "The Seeming Triviality of some of Wordsworth's Subjects," the other on "Wordsworth's View of Death;" a memorandum by Mr. Rawnsley, on the memorial-stone to be erected at Eriesdale Tarn, at the parting-place of the brothers Wordsworth. No. iii. contains a paper by Prof. E. Dowden, of Dublin, on "Wordsworth's Modernisations from Chaucer;" and one by Prof. Knight, of St. Andrews, on "The Portraits of Wordsworth." Mr. R. H. Hutton's paper, on "Wordsworth's Two Styles," also read to the society in May, has been previously printed and circulated by the author. The next publication will be the society's portrait, or portraits, of Wordsworth.

THE two first volumes of Prof. Knight's annotated edition of Wordsworth have just appeared. They contain etchings by Mr. McWhirter of Cockermouth and Hawkshead. We hope to review them next week.

THE bit of old scandal about Shakspeare's daughter, Susanna Hall, wife of Dr. John Hall, which has been reported lately among Shakspeare students, is that on July 1 or 13, 1613, "about 5 weeks past, the defendant [John Laue] reported that the plaintiff [Susanna Hall] had the runings of the raynes, and had bin naught with Raffe Smith at John Palmers" (Harleian MS. 4064, leaf 189). At the trial in the Consistory Court in Worcester Cathedral the defendant did not appear; and on July 17 he was excommunicated, as the diocesan registry shows, for his slander against the respectable matron of thirty.

IT is announced that Prof. J. S. Blackie, acting on the recommendation of his medical advisers, has resigned the Chair of Greek in the Edinburgh University, which he has held since 1852.

MR. FURNIVALL has sent to press for the Early-English Text Society the first part of his "Earliest English Wills in the Royal Court of Probate," from 1387, copied from the originals in Somerset House. This is to fill up the gap in the society's Original Series for this year, no other text being ready to go out with the autotypes of the *Beowulf* MS., and Prof. Zupitza's transliteration of it.

MR. J. H. HESSELS has taken in hand for the Wyclif Society the copying of the much-contrasted and puzzling unique MS. of Wyclif's *De Actibus Animæ* in Corpus Library, Cambridge.

THE first part of the new *History of Norfolk*, which we announced several months since as in preparation by Mr. R. H. Mason, will be ready in September. It deals exclusively with matters of general county interest down to the end of the sixteenth century, special chapters being devoted to the ancient coinage of East Anglia and to local prices during the middle ages.

MR. JOHN GRAY, the well-known topographical bookseller of Manchester, announces for publication (by subscription) a *History of Old and New Accrington*, by the Rev. J. E. Boyle, of Cottingham, near Hull. Special attention will be given to the rise and progress of every branch of local manufacture.

MR. J. E. BAILEY has printed, for private circulation, the text of the first Charter of Salford, conferred by Ranulf Earl of Chester in the early part of the thirteenth century. He has added an introductory essay and a translation by Mr. T. N. Morton.

A MOVEMENT is on foot for the establishment of a Free Library in Hull. At a meeting held on July 28, the mayor (Alderman Leak) in the chair, supported by Mr. O. H. Wilson, M.P., Dr. A. E. Rolitt, and other leading men,

the matter was taken up with great spirit, and with every indication of a successful issue.

THE Devonshire Association for the Advancement of Science, Literature, and Art has just concluded its twenty-first annual session at Crediton, under the presidency of Mr. J. Brooking Rowe. Reports of committees on scientific memoranda, Devonshire celebrities, verbal provincialisms, barrows, works of art, land tenure, and meteorology were presented. The Rev. Prebendary Smith led off the list of original papers by reading a sketch of the early history of Crediton, and Mr. J. B. Davidson gave some notes on documents relating to Crediton Minster. The other papers were on very varied topics, and included, besides those on geology by the Rev. W. Downes and Mr. Pengelly, several on folk-lore, early history of Devon, fauna, and art. The editor of the *Western Antiquary* treated of Devonian literature and its special want; and an extensive glossary of Devonshire plant-names was submitted by the Rev. Hilderio Friend, concerning which it may be remarked that the English Dialect Society will probably issue a reprint towards the end of the year.

A NEW and enlarged edition of *Punishments in the Olden Time*, by Mr. William Andrews, secretary of the Hull Literary Club, will be issued shortly. Numerous additional illustrations will be included. *Old Scottish Punishments*, by the same author, will be ready for the press at an early date.

MR. GRINDON'S *Country Rambles* has, we are glad to learn, come to a second edition. This is an evidence that the book is fulfilling its purpose as a holiday guide for those who, in the neighbourhood of Manchester, like to add a tincture of science and natural history to their excursions.

DR. WILLIAMS' LIBRARY, in Grafton Street, Gower Street (a free one, with the special advantage of lending out the books), has just had a welcome addition made to its power of usefulness. Mr. Charles Lewes has made a gift to it of the philosophical and scientific books of his late father's collection—about 2,000 volumes—believing that they may here be of value and available to special students. The books are to be set apart under the name of the "George Henry Lewes Library," but no other condition is attached.

THE Council of University College, London, have accepted a fund raised in memory of Miss Ellen Watson, a former student. A memorial scholarship, consisting of the income of this fund, is open to students of either sex who display very marked merit in applied mathematics.

ACCORDING to the returns of the Board of Trade, the export of printed books during the first six months of the current year shows a slight increase, being valued at £505,017, as compared with £478,359 in the corresponding half of 1881. Considering the practical monopoly of the colonial market enjoyed by the English trade, one might have expected these figures to be larger.

AT a meeting of the Asiatic Society of Japan, reported in the *Japan Mail*, Mr. B. H. Chamberlain read a paper upon the political and religious ideas of the early Japanese. He distinguished three centres of primitive legend—Izumo, Yamato, and Kinshai—each probably corresponding to a political division. So far as can be traced, there never was a time when communication did not exist with the mainland, nor is there any evidence for an indigenous civilisation. Authentic history does not go back further than 400 A.D. Shinto is not a religious system properly so-called, but rather a bundle of miscellaneous, and often inconsistent, superstitions.

M. VICTOR HUGO is said to be engaged in revising for the press a play with Mazarin for its hero, the first draft of which was written nearly forty years ago. The name assigned for it is *Les Jumeaux*.

M. JULES VERNE's last book (which, so far as we know, has as yet been published only in French, by Hetzel, of Paris) is entitled *Le Rayon Vert*. The scene is laid entirely on the West coast of Scotland, chiefly in the islands of Iona and Staffa. On the present occasion this imaginative writer is said to have derived his "local colour" from an actual visit.

AT a recent meeting of the Académie des Inscriptions, M. Charles Nisard undertook the task of resuscitating the character of a Dutch scholar of the sixteenth century, Obertus Gifaninus by name, who has hitherto lain under the imputation of plagiarism.

AT the annual public meeting of the Académie des Sciences morales et politiques, held on July 22, the president, M. Caro, delivered a discourse upon the prizes awarded during the past year; and M. Jules Simon read a paper upon the life and works of de Rémusat.

M. MAURICE TOURNEUX has published (Paris: Garnier) the sixteenth and final volume of his *Correspondance littéraire de Grimm, Diderot, &c.* It contains the minor works of Grimm and many letters before unpublished, together with an elaborate Index to the whole.

WE hear from Compostella that Don José Flores Laguna has succeeded in deciphering and arranging the music of the twelfth-century Hymn of the Flemish Pilgrims to Santiago, and that it will be sung for the first time after many centuries at the approaching visit of the French pilgrims. The style is said to be Gregorian.

BARON TAUCHNITZ, of Leipzig, has just published a new edition of the *Corpus Juris Canonici*, in two volumes, by Dr. Friedberg, Professor of Canon Law at Leipzig. The text is based upon that of Richter; but the editor has consulted all the known codices, some of them for the first time, and has added an elaborate apparatus criticus. The work may be obtained in this country from Mr. David Nutt.

PROF. GEORG EBERS complains in the *Magazin für das In- und Ausland* that no less than three of his novels have been dramatised and put upon the stage in various towns of Germany without his consent. The German law on the subject seems to be similar to that of England, but a petition to the Reichstag for its amendment is now being circulated.

PROF. H. STEINER, Rector of the University of Zürich, has published the interesting memorial of the late Ferdinand Hitzig which he delivered as an address at the recent Stiftungsfeier of the university. The famous Old Testament critic served the university for twenty-eight years, from 1833 to 1861, and was twice Rector during that period. Hitzig's fervid love for his German fatherland was not too absorbing to leave room for a remarkable devotion to his new home. He "lived himself into Switzerland," to use Dr. Steiner's expression; and few of the many German scholars who found a refuge in Zürich between the third and twelfth decades of our century more thoroughly understood and valued the peculiar character of the Swiss people. He purposely acquired a detailed acquaintance with the history and politics of his new home, and, after his departure from Zürich, still kept himself in mental and personal rapport with its scholars and people.

A SLIM, daintily printed quarto, entitled *Ballads of the Bench and Bar*; or, Idle Lays of the Parliament House, has just been published in Edinburgh under the editorship of Mr. J. Balfour Paul and Mr. J. J. Reid. It follows the

precedent supplied by a previous volume, *The Court of Session Garland*, issued in 1839, which was popular enough to be reprinted in 1871. The literary contents of the present book prove that the art of writing pungent and vigorous *vers de société* has not expired in Scotland with the Neavees and Outrams of the past. It is enriched by a number of admirable wood-cuts, designed, with two or three exceptions, by Mr. George B. Halkett, a son of the late learned Keeper of the Advocates' Library, whose *Gladstone Gleanings* and other political caricatures were exceedingly popular during the last general election. The illustrations are for the most part portraits, touched with kindly and humorous exaggeration, of various luminaries of the Scottish Bench and Bar. They will have a curious interest in the future, as giving some such a serio-comic rendering of the notable Edinburgh personalities of the present day as was supplied by those of the beginning of the century by the far more voluminous, but less accomplished and artistic, *Etchings* of John Kay. The *Ballads* have been issued, in a somewhat limited edition, for circulation only among members of the Faculty of Advocates.

AMERICAN JOTTINGS.

We learn from the *New York Publishers' Weekly* that the Postmaster-General at Washington has officially directed that Mr. Walt Whitman's *Leaves of Grass* be allowed to pass "unmolested through the mails." This cancels an order for its suppression which had been issued by the postmaster at Boston.

THE American Association for the Advancement of Science holds its meeting this year at Montreal in the last week in August, precisely contemporaneous with our own British Association. The president-elect is Principal J. W. Dawson, of Montreal; but in America the important address of the meeting is that delivered by the retiring president, who on this occasion is Prof. George J. Brush, of New Haven. Among the English visitors who are expected to be present we notice the names of Mr. Herbert Spencer, Dr. W. B. Carpenter, and Dr. Samuel Houghton, of Dublin.

THE American Spelling Reform Association, at its sixth annual meeting recently held at Harvard University, founded a league of persons pledged to use simplified spelling, beginning with such amended words as are given in Worcester's and other dictionaries—*program*, *island*, *southern*, *rime*, *aka*. Prof. W. D. Whitney, of Yale, was the first signer of the league; and Prof. Scott, of Columbia, has been commissioned to draw up a list of such simplified spellings.

THE American Philological Association has also accepted the proposal made to it by our own Philological Society to unite in preparing a list of words in amended spelling, so that the joint scheme may be put forth under the authority of the two chief philological bodies of the English-speaking world. With this object a committee was appointed, consisting of Prof. F. A. March, of Lafayette; Prof. Whitney, of Yale; Prof. F. J. Child, of Harvard; Mr. J. Hammond Trumbull, of Hartford; Prof. T. B. Lounsbury, of Yale; Prof. T. B. Price, of Columbia; and Prof. W. F. Allen, of Wisconsin.

Nor one of the least of the evils arising from the absence of international copyright with America is the publication of books and editions which the author himself has either disowned or superseded. A signal example of this wrong has happened to Dr. Robert Young, of Edinburgh, whose *Analytical Concordance* is being published from "unauthorised and imperfect plates" in competition with his own authorised edition.

The case is made yet harder by the fact that Dr. Young tried in vain to buy up these plates.

MESSRS. HARPER AND BROS., of New York, have issued a valuable help to the study of the Revised New Testament in a volume which gives the English of the Revisers on one side of the page and the Greek of Drs. Westcott and Hort's text on the other. Prefixed is the Introduction by Dr. Philip Schaff to this latter text.

UNDER the title of *In the Saddle*, Messrs. Houghton, Mifflin and Co., of Boston, have issued a handsome little volume containing a collection of poems about what our cousins call "horse-back riding." First comes, as it should, Mr. Browning's "How they brought the Good News from Ghent to Aix." Burns' "Tam o' Shanter," Scott's "Erl-King," the well-known passage from Byron's "Giaour," and Cowper's "John Gilpin" are also included.

MESSRS. JANSEN, MCCLURG AND CO., of Chicago, announce a work, in two volumes, upon the Military Telegraph during the Civil War in the United States, by Mr. W. R. Plum, who was formerly an active member of the telegraph corps.

A HANDSOMELY illustrated book, entitled *England, Picturesque and Descriptive*, by Mr. Joel Cook, the American correspondent of the *Times*, will shortly be published by Messrs. Porter and Coates, of Philadelphia.

ACKNOWLEDGMENTS.

WE have on our table the following pamphlets, &c.:—*The Rise and Progress of the Order of St. John of Jerusalem*, by Elizabeth Surtees-Allnatt (Griffith and Farran); *The New Code of the Education Department*, with Explanatory Notes, &c., edited by Richard Gowing (Grant); *The Position of Sir Rowland Hill Made Plain*, by Patrick Chalmers (Effingham Wilson); *Euphrates Valley Route to India*, in Connexion with the Central Asian and Egyptian Questions, by Sir William Andrew (W. H. Allen); *Old England: a Lecture*, by the Bishop of Carlisle (S. P. C. K.); *The Defences of the Kingdom*, by Major Arthur Parnell (Mitchell); *The Monster Municipality*; or, Gog and Magog Reformed: a Dream, by "Grip" (Sampson Low); *The Channel Tunnel*; or, England in Danger, by Nathan C. Hughes (Sampson Low); *The Cocks of the Wood*, by F. O. B. (Whittingham); *Blasts from Bradlaugh's Own Trumpet*, Versified, Selected, and Sketched by "Ton" (Houlston); *Practical Politics and Moonlight Politics*, by Rory-o'-the-Hills (Tinsley); *Political Cookery: a Satire*, by Charles Richard Panter (Simpkin, Marshall and Co.); *The Irish Question*, from an Independent French Point of View (W. Ridgway); *A Political Programme* (Haughton); *Evidence given before the Committee of the House of Lords on the Irish Land Act*, by George Fottrell, jun. (Dublin: Gill); *The Economics of Fair Trade*, by W. B. Harkless (Glasgow: Wilson and McCormick); *Want: a Vindication of Protection*, by Arthur M. Smith (W. Ridgway); *Affluence, Poverty, and Pauperism*, by John Polson (Elliot Stock); *Our Hereditary Legislators: Six Letters on the House of Lords*, by "Verax" (Manchester: National Reform Union); *Employment of Women in the Public Service*, by Lady John Manners (Blackwood); *Wealth: Definitions by Ruskin and Mill Compared*, by a Member of the Ruskin Society of Glasgow (Glasgow: Wilson and McCormick); *Letters on Highway Legislation*, &c., by the Rev. Edward Higgins (W. Ridgway); *Canada, "Colonists' Handbooks" No. 1* (S. P. C. K.); *Wilkes and Liberty: an Account of the Middlesex Election in 1769*, by Briggs Carlill (Hull: "Eastern Morning News"); *Bacon and Shakespeare on Vivisection*, in Reply to Dean Plumptre (Melbourne: Sands and

McDongall); *The Uselessness of Vivisection upon Animals as a Method of Scientific Research*, by Lawson Tait (Birmingham: "The Herald Press"); *Memorandum of Facts and Considerations relating to the Practice of Scientific Experiments on Living Animals* (issued by the Association for the Advancement of Medicine by Research); *Quack Doctors and their Doings: a Warning to Invalids*, by James S. Garrard (Heywood); *The Life of Charles Darwin*, with British Opinion on Evolution, compiled by G. W. Bacon (Bacon); *A Guide to the Local Examinations in Elementary Musical Knowledge of Trinity College, London*, by Frederic Clark (Hammond); *Hints for Pronunciation in Singing*, with Proposals for a Self-Supporting Academy, by Georgina Weldon (Music and Art Association); &c., &c.

ORIGINAL VERSE.

AUGUST FLOWERS AT THE LAKES.

THE purple flags have drooped on Bratteag's side,
But meadow-sweets their cloudy canopies swing,
And at his feet pale leaves wild-roses fling
To herald August in; while far and wide
From fragrant breathed horns with joy and pride
The honeysuckle blows a welcoming,
And working gold to crown him upland king,
The saxifrage its curious art has plied.
The fox-glove sceptres with their battered stems
Are too far worn for such imperial hands,
But the valerian's silver mass shall yield
Insignia brave, and in the mower's field,
With amethystine boss, the scabious stands,
And ruby facets shine from Burnet stems.

H. D. RAWNSLEY.

OBITUARY.

A WELL-KNOWN member of the Jesuit Order, of Russian birth, Ivan S. Gagarin, died at Paris on July 20. M. Gagarin was born in 1814, and held an appointment for some time in the Russian diplomatic service. He joined the Jesuit Order in 1843. Since then he has devoted a good deal of attention to the differences between the Western and Eastern Churches. As the result of his studies, he published a considerable number of books and brochures in the French language, the best known of these being *Le Clergé russe*, *Les Eglises d'Orient*, *Le Pape*, *L'Eglise russe et les Russes*, and *Les Jésuites en Russie*. He co-operated with some of his countrymen in founding the excellent Slavonic library in Paris known as the "Musée slave," which, since the expulsion of the Jesuits from France in 1880, has been located in the Rue de Sévres.

MAGAZINES AND REVIEWS.

THE *Cornhill Magazine* has two exceptionally good articles. One, by R. L. S., on "Talk and Talkers," is devoted to the consideration of "that kind of talk which is merely luminous and restful, a higher power of silence;" it is full of quiet, graceful humour. The other is by Vernon Lee, who takes the transference of the Botticelli frescoes at the Villa Lermi to the gallery of the Louvre as a starting-point for some fruitful reflections on aesthetic principles. She points out that, in order to assimilate artistic impressions, not only must we be trained to a susceptibility for them, but also they must be presented to us in a manner analogous to that in which we receive other impressions. This leads to a criticism of the modern tendency of isolating art out of life, "the gallery and concert tendency," as the writer calls it. The "Curse of the Catafalques" is one of the class of screaming ghost-stories without a ghost which we hoped had become extinct. The paper on "A San Carlo Superstition" is worth

the attention of those who think that they can gamble successfully according to some mathematical principle, which always omits the two important considerations—that the funds of the gambler are limited, and that the bank imposes a limit on his stake. A. W. W. writes on "The Brethren of Deventer" in a way that shows a laborious attempt to be popular. "From the Heart of the Woods" is a pleasant topographical and archaeological sketch of a ramble in Lincolnshire.

A DOUBLE number of the *Theologische Tijdschrift* (July–September) is mainly concerned with New Testament problems. Can the Epistle to the Colossians be a production of St. Paul's, when we consider the peculiar character of its theology and its polemics? asks Dr. Blom, with the result that, unless we assume a large amount of interpolation, the work must be a literary fiction. Bolder still, Dr. Loman enquires whether Baur did well to admit the genuineness of the "four Pauline Epistles" and, in particular, how this view is reconcilable with the phenomena of the Apocalypse of St. John. Dr. Knappert offers a eulogistic account of the revised German edition of Scholten's *The Pauline Gospel*. A sympathetic view is given by Dr. Cramer of the Anabaptists, comparing the recent works of Ritschl the theologian and Keller the historian. The favourable sides of the Anabaptist movement, especially the sound sense and mutual love of its adherents, their happy applications of the "voluntary principle" in religion and in society, and their wholesome distinction between the spheres of religion and of the world, are attracting more and more attention; and even the historian of culture begins to recognise the importance of this "supplementary reformation." The writer of the review appears to be a Mennonite. Dr. Scholten re-examines with admirable clearness the passage in the received text of Josephus relative to Jesus Christ; and two English books—Milligan on *The Resurrection of our Lord* and Leslie Stephen's *The Science of Ethics*—are, the one pooh-poohed, the other respectfully praised and blamed in the same breath.

THE LATE COL. J. L. CHESTER'S PAPERS.

A FORTNIGHT ago we announced that Col. Chester's unrivalled MS. collections, the result of many years of unwearied and discriminating industry, had been placed in the hands of Mr. G. E. Cockayne, Norroy King of Arms. What may be their ultimate destiny cannot yet be said, but it is very unlikely that they will all be kept together. Meanwhile, they have been divided into nine series, of which we are able to give some particulars which will be read with interest, we venture to think, on both sides of the Atlantic.

1. The splendid collection of extracts from Parish Registers from nearly all the counties in England, consisting of eighty-seven folio volumes, each containing about 400 pages. Of these volumes seventy are full and carefully indexed, the *index nominum* to each being a work of immense labour. Middlesex and London together take up twenty-seven volumes, Oxfordshire with the city of Oxford eight. These extracts contain the entries relating to all the families of note in the parishes dealt with; but they were made, it is believed, with the special view of illustrating such families as emigrated to America. It was in America that Col. Chester always hoped that they would eventually find their home.

2. A complete series of all the Matriculations at the University of Oxford, from the commencement in 1567 down to 1869. These fill seven enormous folios. The first volume, which

covers the period from 1567 to 1580, when the information was very scant, has a separate Index; in the six remaining volumes the names are arranged in strict alphabetical order. The entries number about 95,000 in all. They show for the most part, not only the college and the age and birth-place of the person who matriculated, but also the name and description of his father.

3. A complete list of Entrances at Gray's Inn from 1581 to 1781, arranged chronologically, showing in most instances the name and description of the father of the student. The names of barristers are given from 1657 to 1866. The whole forms one thick quarto.

4. Five folio volumes of Marriage Licences, carefully indexed, from the following offices:—The Bishop of London's office (1521–1828); the Dean and Chapter of Westminster's office (1559–1699); the Faculty office of the Archbishop of Canterbury (1543–1869); Vicar-General's office of the Archbishop of Canterbury (1660–1679).

5. Abstracts of Wills and Administrations, with an Index to names of testators only. Ten volumes in all.

6. Five volumes of Pedigrees, of which two are entitled "Chaos," two are taken from Candler's Suffolk Collection, and one relates to Westminster Abbey.

7. Nine volumes, unindexed, of Pedigrees and miscellaneous matters. One volume is devoted to each of the eight following families:—Adams, Chester, Hutchinson, Rogers, Taylor, Washington, Wentworth, and Whitmore.

8. Tabular Pedigrees, printed and in MS., arranged in boxes under the first letter of the principal pedigree.

9. Four enormous volumes, full of miscellaneous collections as to the family of Rogers.

The first four series of papers are offered for sale—indeed, we believe that portions of some of them have already been sold. For the eighty-seven volumes of Parish Registers, in one lot, the sum of £3,000 is asked, being less than £35 a volume; for the seven volumes of Oxford Matriculations £1,500, Col. Chester having himself valued the six last volumes at £300 each; for the Gray's Inn Entrances £100; for the five volumes of Marriage Licences £500.

With regard to the last five series of papers, we understand that Col. Chester's executor does not propose to part with them—at least at the present time.

SELECTED FOREIGN BOOKS.

GENERAL LITERATURE.

- ADAM, Madame. *La Chanson des nouveaux Epoux*. Paris: Conquet. 100 fr.

CORRESPONDENCE.

A NEW HITTITE INSCRIPTION DISCOVERED AT TYANA BY MR. W. M. RAMSAY.

Queen's College, Oxford: July 29, 1881.

Mr. Ramsay's journey with Sir O. Wilson in Cappadokia this summer has already borne important fruit. This is the discovery of a new Hittite inscription at Bor, the site of the ancient Tyana, called Dana by Xenophon and the Assyrian inscriptions. Unlike all other Hittite texts hitherto known, the new inscription is incised and not in relief, thus removing the last difficulty in the way of connecting together the Hittite and Kypriote characters. It is complete except on the left side, where the beginnings of the lines are gone, and is placed over the figure of a man in relief. Mr. Ramsay was obliged to make but a hurried copy of it, as Sir O. Wilson had gone on ahead, carrying with him the squeeze-paper, and the Greek owners of the stone were all the while making furious attempts to prevent it from being copied. The inscription is of great value, apart from the place where it has been found and the fact that it is incised, since it consists principally of a series of proper names, each preceded by what must be a determinative. It begins with the names of a king and his father, followed by the ideographs of "king" and "country," and these again by the name of the country itself. The second line contains six names placed one after the other, the third line at least four names, and the fourth and last line two. One of these names is the same as one that occurs at Hamath, the only difference being that at Hamath the patronymic suffix *ku* is attached to it. Another begins with the name of the god Sandan. The king to whom the inscription belongs seems to have the same name as the king commemorated in the inscription of Ibreez, of which Mr. Ramsay has succeeded in making a careful and accurate copy after thirty hours' hard work.

This copy of the inscription of Ibreez would of itself entitle Mr. Ramsay to the gratitude of all who are endeavouring to decipher the old records of the Hittites. The most curious fact connected with the text is that the forms of the characters in it resemble those of Hamath more closely than they do those of Carohemish. The principal portion of it is inscribed between the face and arm of the god Sandan, whose figure is sculptured on the rock. I should translate this portion as follows:—"The worshipper of Sandan, the prince, the mighty [P], I am prince, Eu . . . e-taris, offerings of . . . I offer." The word "worshipper," which is written *ku-u-e* at Carohemish, is here simply *ku-e*. The part of the inscription which comes below the sculptures,

and is under the spring level of the river, is, unfortunately, much obliterated. Mr. Ramsay tells me that Mr. E. J. Davis's "drawing is on the whole very accurate, and retains the original character, but he has mistaken some details." He adds that the priest (whose name seems to be contained in the inscription behind him) "wears a cloak fastened over the breast by a curious buckle, very like in shape to the central part of the series of gold ornaments found in a Lydian tumulus three years ago and photographed in the *Bullet. Corresp. Hell.*" I have given an account of the latter in the *ACADEMY*, January 15, 1881, p. 45.

At Iftatun Binar also Mr. Ramsay found a monument which, though much decayed, is distinctly Hittite in character, and shows affinity to those of Ibreez and Boghaz Keui. As regards the monuments both of Iftatun Binar and of Ibreez, he remarks that there can be no doubt about their character:

"In both, over the springs, is placed a representation of thanksgiving to the god who gives fertility to the earth. At Ibreez the god is a husbandman, wearing the very dress that the peasantry still wear, as Sir C. Wilson pointed out. He is marked as giver of corn and wine by his attributes. The gorgeous raiment of the suppliant priest, praying for a blessing upon the country and people, is purposely contrasted with the plain garments of the god."

A. H. SAYOE.

TRÜBNER'S "SIMPLIFIED GRAMMARS."

London: July 20, 1882.

In an account of "Some Dictionaries and Grammars" given in the *ACADEMY* of the 1st inst., the first volume of Trübner's collection, consisting of Grammars of the Hindustani, Persian, and Arabic languages, is briefly noticed. This volume is to be followed by Grammars of many other languages, and Messrs. Trübner's scheme will probably result, as you point out, "in a very useful grammatical cyclopaedia." In the Preface it is remarked that the "writers of Grammars have, for the most part, constructed a framework of rules on the old lines"—that is, those of the Greek and Latin grammars—"and tried to make the language of which they were treating fit into it." This mode of treatment is justly condemned, as the structure of each language ought to be explained in accordance with the "principles which underlie it." The series should have commenced with an English Grammar, as most of the writers on English grammar are among the greatest offenders in this respect. Latin grammar is, in the main at least, treated in accordance with form. Unfortunately, however, the grammar of most other languages is treated, not in accordance with their forms, but in accordance with a fixed order of ideas established by the forms of the Latin grammar. Because Latin has cases, genders, particular moods and tenses, &c., which depend upon special forms for their expression it is presumed that other languages have them also, and the syntactical constructions of other languages are fitted into this framework without any regard to the genius of the language treated of, which cannot be properly explained except by due prominence being given to its own mode of formal expression. It is not a sufficient reason for calling a construction in other languages a case or a tense merely because that would be the way in which we should translate a Latin case or tense.

The present volume, however, to my mind, hardly fulfils all the expectations raised by the Preface. Why, for instance, are the prepositional, or rather postpositional, phrases of the Hindustani and Persian classed as cases? A case is properly a form of the noun. The noun in Hindustani has two cases only, the nomina-

tive derived from the Sanskrit nominative, and that other case, whatever we choose to call it, derived from the Sanskrit genitive. The Persian is absolutely without cases. Why, again, have we a section on gender in Persian, when it does not exist in the language? It is said, "of such words as *pader*, 'father,' *māder*, 'mother,' the gender is self-evident," and so on; but here there is properly no question of gender; the different words used merely point to a distinction of sex. Grammar has no more to do with such distinctions than it has to do with distinctions of colour, or any other distinctions which language makes by the use of entirely different words. In Latin, *pater* does not necessarily belong to one gender and *mater* to another because of any difference in meaning. They might, as is the case with *Fader* and *Moder* in Danish, have been of the same gender. But *pater* is of one gender or class, and *mater* of another, because the adjectives by which they may be accompanied take different terminations. If the same thing is not found in Persian as in Latin, the same name should not be applied to something quite different. We are told, again, there is "no such thing as an adjective" in Persian. Here I think the old framework is wrongly dispensed with. *Khāb*, "good," the instance given, is as much an adjective as *good* in English. It cannot, any more than *good*, stand ordinarily as the subject of a sentence, which is the main distinction between a substantive and an adjective. The participial constructions in Hindustani and Persian should not, I consider, as has here been done, be classed as tenses. A participle, when used attributively, is not called a tense. It ought not any more to be considered a component part of a tense when it is used predicatively with the same syntactical construction as that of an adjective. Examples, for instance, are given of the passive voice in Persian as formed with the auxiliary verb *shudan*. But other auxiliaries, as *āmadan*, *gashtan*, &c., are quite as effectual for forming the so-called passive voice. In fact, if we take meaning only, many other constructions, such as *gham khūrdan*, "to be grieved," might as well be given as instances of the passive voice. I think morphology ought to be more clearly distinguished from syntax than has been the case in these Grammars. Nor, again, ought any regular syntactical constructions to be classed as compounds. Thus, in Hindustani, *karne lagā*, "to begin to do," is not a compound, as here shown, but an instance of a construction with the infinitive. But, independently of the mode of treatment, there are some errors of fact and many serious omissions and marks of undue haste. Thus Hindustani *tañ* is described as a reflexive pronoun "self"; it is a postposition. It is said that *ān*, *e*, &c., are Hindustani forms of the Sanskrit *asmī*, *astī*, &c., Greek *ἐμ*, *ἐς*; and that these forms are affixed for the formation of tenses; but *likhūn*, the example given, is not a compound of the root *likh* and the substantive verb, but comes from the Sanskrit present *likhāmi*, "I write." In the same way all the other persons of this tense are derived from the corresponding persons of the Sanskrit tense. I find nothing said in the account of the Hindustani pronouns how *he* and *she* are expressed, no mention of the forms of the personal pronouns *myhe*, *tujhe*, &c., no mention of the plurals of the demonstrative, interrogative, and relative pronouns. An exhaustive treatment of the syntax is, of course, not to be expected in a Grammar of this size, but surely nothing relating to inflection ought to be omitted. I shall get beyond the limits of a letter, however, if I pursue this kind of criticism any further, though a good deal more of it might be produced. My object, too, was more especially to remark upon the application of the principles adverted to in the Preface. I will merely add that much

more care ought to be taken in revising the proofs. Why, in the words quoted above, *pader* and *māder*, is it *er* instead of *ar*? "Kh" in "likh" several times appears as "kh"; the same vowel sound is written *e*, *é*, and *è*; the *tashdid* is frequently omitted. Errors like these are far too numerous, and, though they appear of small account, are very perplexing to beginners. I should also just refer to the last grammar treated in this volume, the Arabic, which seems very well done, and in accordance with the terms of the Preface. The Arabic having many more relations expressed by inflection, there was less temptation to treat syntactical constructions as part of the morphology.

E. L. BRANDRETH.

"OLEACA."

Guildford: July 31, 1882.

It may interest your correspondent to know that stepping-stones, and also the single plank foot-bridges that have taken their place, are commonly known as "the clappers"—a corruption, no doubt, of the clackers. I believe the term is common to the greater part of England; at any rate, it is frequent in the South.

RALPH NEVILL.

SCIENCE.

A NORWEGIAN PROFESSOR ON POSITIVISM.

Denkrichtungen der neueren Zeit. Eine kritische Rundschau von M. J. Monrad, Professor der Philosophie an der Universität zu Christiania. Deutsche vom Verfasser selbst besorgte Bearbeitung. (Bonn: Eduard Weber.)

THIS volume grew, the author tells us in his Preface, out of a course of lectures on the Positive philosophy of Comte and his school. It seems that Comte has his disciples even in Norway, and Prof. Monrad deemed it well to enlighten the students of the University of Christiania on the nature and tendencies of Positivism.

He looks at Positivism—by which he means the tendency of the present age to respect fact and experience to the neglect of thought—as having its rise in the later Positive philosophy of Schelling. Accordingly, he gives us a full account and criticism of this system. After this he traces the genesis of what he calls the religious or "right" branch of Positivism in Denmark and Sweden. While a religious branch thus grew up in the North, an irreligious or "left" branch developed in the South and the West. A short sketch of the movement in Germany inaugurated by Strauss and Feuerbach prepares the way for the special subject of the book, French Positivism. The doctrine of Comte is set forth fully and clearly, and the exposition is accompanied by that penetrating and subtle kind of criticism in which the Hegelians, with whom we must class the author, are known to excel. In Germany, we are told, Positivism, which in the end is Materialism and the denial of all philosophy, never lost all trace of the philosophic spirit. Even in Büchner, Vogt, and Moleschott we find modes of thought and expression reminding us that the writers belong to "the philosophic country." Not so, however, in France. This country has remained outside the great philosophic movement from Kant to Hegel. It has, indeed, had the start of Germany in political and

social movements; but these changes have been due to special practical conditions, and not to any adequate preparatory philosophic construction. A pair of writers like Maine de Biron and Cousin may have had glimpses of the new light which was breaking on Germany; but the national mind, as a whole, lay in philosophic darkness. In this condition it was fitted to be a fertile soil for crude social theories, such as those of St-Simon and Fourier. The Positive philosophy of Auguste Comte grew out of similar social conditions, and bears throughout the marks of its origin.

It is not necessary to follow our author's exposition of Comte in detail, as both the great Positivist's ideas and many of the author's criticisms on them are sufficiently familiar to English readers. Prof. Monrad appears to be specially interested in Comte's doctrine of three stages, as having an analogy to the trilogy of the Hegelian logic, a fact which proves, he thinks, that the idea of a threefold movement was at the time in the air. Comte is said to be wrong, however, in assuming that the third or positive stage is the final or definitive stage of humanity. From the point of view of Positivism, indeed, which recognises only what is relative to the human mind, the conception of this *état définitif de l'humanité* is a contradiction, for such an idea contains the notion of an absolute. For the rest, the doctrine of three stages is an *a priori* metaphysical one, which Comte does his best to fill up with empirical matter. And what applies to this part of Comte's system applies to his Positivism as a whole. So far as it seeks to be a system it ceases to be Positivism, for Positivism has to do with positive facts only, whereas every system implies some unifying thought. Even the *faits généraux* of his system, in so far as they stand for more than the observed facts—that is, for universal laws—have, strictly speaking, no place in a Positivist doctrine. That Comte laboured so hard to construct a system only shows that he was, after all, a bit of a metaphysician, *à son insu*; and this tendency appears even more plainly in his later social and religious doctrine. This proves that every man is born a theologian and a metaphysician, with an ineradicable impulse to make his thoughts and inclinations converge towards some absolute centre. A man can, in learned or unlearned distraction, forget this deepest need of the spirit, but—*naturam expellas furor; tamen usque recurret*.

After this account of Comte, our author takes a glance at his followers, including Taine and Renan in France and J. S. Mill in England. As might be expected, there is more of the true philosophic spirit to be recognised in the Frenchmen than in the Englishman. England, it appears, still more than France, is the land where one might antecedently expect the Positive direction to appear most nakedly. We are essentially a practical people, with a profound respect for matter of fact. This reflects itself even in our rigid religious orthodoxy, for "the Church of England, with its Thirty-nine Articles, its stiff ceremonial, and its observance of the Sabbath, is essentially a fact, a *de facto* power, which, as such, is respected." And this same

practical tendency has stamped all the scientific activity of the country. Here there had long been everything in Positivism except the name and the system. A critical investigation of Mill's philosophy repeats what has been heard recently from English critics of a kindred way of thinking. Mill has not the little philosophic spirit that belongs to Comte, and his "system" is a tissue of inconsistencies. In his *Logic* he seeks to preserve the shadow of general ideas after he has robbed these of all substantiality. His *Utilitarianism* misses the true problem of ethics, the ideally desirable as distinguished from the actually desired, just as his *Logic* misses the true problem of that science.

It is the characteristic of Positivism to be a little shy with respect to the questions of the ultimate nature and origin of things. In place of these it enquires into the relations of facts, and thus naturally tends to substitute for the problem of the real nature or notion of a thing that of its historical origin. Hence the present fashion of looking at things historically or genetically is a part of the Positivist tendency of the age. In this sense the doctrine of evolution as developed by Mr. Darwin (our author seems to know less of Mr. Spencer) is one phase of the movement of Positivism, and accordingly Prof. Monrad proceeds to examine this doctrine. The capital error of this teaching is, he thinks, the supposition that the explanation of a thing is wholly found in its history. However the present system of organic beings came to be, the fact of their existing logical relations remains, and necessitates a teleological explanation. The evolutionist deceives himself with his idea of gradual change, for each organic type has its limit, and the least transition beyond this, however gradually brought about, is in reality the sudden appearance of an essentially new existence. This error shows itself most palpably in the evolutionist's approximation of man to the lower animals. This tendency has always been a mark of Positivism; and it finds its practical expression in the ethical doctrine of Comte and Mill, that we have duties towards the lower animals similar to those which we have towards our fellow-men.

The author concludes his studies of contemporary ideas by glancing at the condition of the special sciences; the pretensions of men of science as popular guides; the effects of the Positive spirit in the science of jurisprudence, where the idea of right is disappearing in favour of that of expediency; the action of the same Positive spirit in the supremacy of public opinion, rather than that of scientific ideas, in liberal politics; and, finally, the practical manifestation of the same spirit in the pursuit of wealth, and in the burning economical questions of the day, such as the relation of labour to capital, which are intimately connected with this worship of material possessions. In tracing the mutual relations of these various phenomena of the age, our author shows considerable ingenuity. And even where his readers may hold that he takes a narrow and partial view of these intellectual and moral movements, they will be ready to allow that he offers many timely warnings and much food for reflection.

It is plain that Prof. Monrad is not in love with the *Zeitgeist*. To him the Positivism of

the age is the temporary death of philosophy, and the handing over of humanity to all that is debasing. But, unlike some other decriers of the age, he is not without hope. His Hegelianism comes to his aid and shows him a way out of the present intellectual and moral slough. For is it not written that the idea develops itself, both in the wider region of cosmology and in the narrower region of human history, by means of a negative moment, in which it temporarily loses itself? In this way it is allowed us to hope that the present is a moment when "the speculative thought" is only hidden like the seed in the ground, to re-appear hereafter in new life. It is probable that many of Prof. Monrad's readers may be unable to accept this particular solution of the difficulty; but then they may not feel the difficulty to be so serious a one as he feels it. Yet so far as they are thoughtful critics of their age, and not intoxicated with the idea that modern science has settled everything for all time, they may find much to agree with both in the writer's diagnosis of the spiritual disorder of contemporary life and in his proposed method of treatment.

JAMES SULLY.

CURRENT SCIENTIFIC LITERATURE.

Handbook of the Polariscopes. Adapted from the German of H. Landolt. By D. O. Robb and V. H. Veley. (Macmillan.) It is difficult, indeed impossible, to do justice to this excellent treatise within the limits of a brief notice. We may at least say that it is indispensable for all workers with the polariscope, whether they be concerned with its scientific or technological employment. For it is comprehensive, accurate, and clear, shirking no difficulty, omitting no precaution, and frankly owning the imperfections of theory and the gaps of experiment. The illustrations are well-drawn and perfectly intelligible; while the accessory tables of formulae, co-efficients, and constants form a most useful feature of a manual of this character, although, in many instances that can easily be recalled, the reader of similar works has constantly to refer to other authorities, to dictionaries and so forth, for the necessary elements of calculation. Some notion of the contents of this volume, and of the mode adopted of treating the subject, may be gathered from the titles of the seven chapters of the book. These are:—Polarized Light and Polarization; General Aspects of Optical Activity; Physical Laws of Circular Polarization; Specific Rotatory Power; Process of determining Specific Rotation; Practical Applications of Rotatory Power; Rotation Constants. As examples of the careful and complete handling of the subject, we may cite the excellent description of the construction and action of the Nicol prism by the late Mr. D. O. Robb (p. 8), and the precautions to be adopted in taking and calculating specific gravities as given by Landolt (p. 135). The accurate printing of the book is to be commended, but it was a pity to perpetuate throughout a wrong spelling of *analyse* and *analyser*. The editors must be aware that the termination *-ize* in *polarize* has nothing in common with the *-yse* of *analyse*, although they persistently substitute *z* for *s* in the latter word.

Vignettes from Nature. By Grant Allen. (Chatto and Windus.) Mr. Grant Allen here acknowledges the paternity of a series of essays that charmed many readers last year on their first appearance in the *Pall Mall Gazette*, which

leads us to hope that other series may also be collected. We do not now propose to criticise an established favourite, but merely to comment upon one or two points that have struck us. We kick at the use of the word "Euskarian" *passim*, as applied to the dark element that has gone to make up the mixed population of these islands. It implies two links in a chain of argument, neither of which can be proved. First, that this dark element was Iberian; second, that the Iberians have left descendants in the modern Basques. Mr. Allen must be aware that some of those who know the Basques best are of opinion that their genuine type is fair, and not dark, except where modified by a Gipsy intermixture. Again, he seems to us to exaggerate his ingenious position (which is true in the main) that the existing fauna are not smaller in individual bulk than their predecessors in geological time. Surely there is a tendency, caused by human interference, towards the extermination of the larger species, always excepting the case of domestic animals. Not only have the moa, the dodo, and the great auk disappeared altogether; but, among mammals, both species of elephant, the right whale, the aurochs, and the American bison, all threaten to become extinct. The Biscayan whale and the sea cow have already gone.

The Story of Our Museum, by the Rev. H. Housman (S. P. O. K.), is an excellent book to put into the hands of boys. It contains a little of all sorts, and cannot fail to rouse the intelligence of any boy who has a grain of that commodity in his cranium. There is something in it about bird-stuffing, something about eggs, something about fish-preserving, something about butterflies, and something about everything else. At the end of each chapter there is a recommendation to one good book on the subject with which it deals, for those who really wish to specialise; and the books are, for the most part, very well chosen, though we doubt if many young snail collectors would ever get quite so high as Dr. Gwyn Jeffreys' admirable *British Mollusca*. Fossils are not forgotten, nor are antiquities, coins, and postage stamps, the last a most instructive collection for boys, or men either. The only conspicuous failure is in the matter of botany, and here we cannot conceive why Mr. Housman should condemn the boy of the nineteenth century to learn the Linnean classification. This is sheer cruelty, and ineffective too. But the book will do lots of good, and we recommend it heartily as a school prize or a present to an intelligent birds'-nester.

Geology of the Counties of England and of North and South Wales. By W. Jerome Harrison. (Simpkin, Marshall and Co.) This book may be best described as a geographical geology. It differs markedly from other works which have been written on the geology of England and Wales, inasmuch as its arrangement is purely topographical. Instead of taking the several geological formations one after another and tracing their distribution throughout the entire country, Mr. Harrison deals with the counties in alphabetical order, and devotes a separate sketch to the structure of each geographical division. The convenience of such an arrangement is obvious. In whatever part of England the tourist may find himself, he has merely to take this volume out of his portmanteau, and he can turn at once to a concise description of the geological features of the county. Nor is this all. Prefixed to each county-sketch is a list of the more important works and geological papers which deal with local details, especial prominence being given to the publications of the Geological Survey. The value of such references will be best understood by those who have had to grieve over

time wasted in wading through the journals of our learned and local societies. As another aid to our knowledge of topographical geology, Mr. Harrison has thoughtfully added a list of the museums, the natural history societies, and other scientific organisations in each county. While commending the general plan of the work, it may be well to point out that the method of description by counties unfortunately necessitates some amount of repetition. The chalk of Bedfordshire, for example, must be described in much the same general terms as the chalk of Berkshire or of Buckinghamshire. Such overlap is unavoidable, but its disadvantages are counterbalanced by the manifest convenience of a topographical arrangement. It is obvious that a work full of local details and laden with references is of little value unless scrupulously accurate. Can we, then, rely upon Mr. Harrison's volume as a trustworthy guide? To this question we are able to return a very practical answer. It is now several months since the work was published, and during that time we have had frequent occasion to consult its pages, to check its references, and to put its information to the test. It is a pleasure to state that, so far as our investigation has gone, we can unhesitatingly pronounce the book to be in every way a trustworthy compilation.

An Old Chapter of the Geological Record, with a New Interpretation; or, Book-metamorphism, especially the Methylosed Kind, and its Resultant Imitations of Organisms. With an Introduction giving an Annotated History of the Controversy on the so-called Eozoon Canadense, and an Appendix. By Profs. W. King and T. H. Rowney. (Van Voorst.) No one can claim a right to seriously criticise this work unless he happen to possess a rare combination of knowledge—a knowledge, in the first place, of the microscopic structure of minerals, and then of the minute characters of the foraminifera. Any ordinary geologist must feel unequal to so technical a discussion. Compelled to fall back upon those who are the recognised authorities upon the group of the foraminifera, he naturally feels inclined to accept their interpretation of the structure which eozoon presents. But whatever the eozoonists say upon the subject is roundly contradicted by Profs. King and Rowney; and so the bewildered geologist striving after truth is tempted to suspend his judgment on the whole question. Year after year the two professors at Galway have been patiently working upon serpentinous and other rocks with the view of finding mineral structures which simulate the several parts of the reputed fossil. They assert that the tubulated proper wall of the eozoon, and the canal-system which ramifies through the intermediate skeleton, may be paralleled in certain fibrous and branching forms of purely mineral origin. Granting, however, the general resemblance in the two cases, it remains an open question how far the resemblance extends—a question which will probably never be satisfactorily settled until a comparative examination of typical sections of the eozoonal and mineral structures has been made by a committee of competent and unprejudiced microscopists. Apart, however, from the eozoon controversy, there is a good deal of matter well worth reading in Profs. King and Rowney's work, especially with reference to the origin of serpentinous rocks. It is to be regretted, however, that the authors have rather repelled an ordinary reader by their provoking fondness for newly coined and little-used words.

A Catalogue of the Collection of Birds formed by the late Hugh Edwin Strickland, M.A., F.R.S., &c. By Osbert Salvin, Strickland Curator in the University of Cambridge. (Cambridge: University Press.) The value of the collection

of more than 6,000 skins of birds which the widow of the late eminent ornithologist, H. E. Strickland, presented in 1867 to the University of Cambridge is rendered obvious to the outside world by the present work. No better result could have appeared of Miss Strickland's generous endowment of the curatorship which this book proves that Mr. Salvin so deservedly holds. The work is not merely a catalogue of the names of 2,453 species of birds. It shows us Messrs. Solater and Salvin's latest use of their modification of Prof. Huxley's classification of birds applied to species from every part of the globe, and not, as was first done by them (in 1873), to South American birds only. Every genus and species has an accurate reference to the work in which the author of each first founded it, while a selection is made from the ever-increasing details of synonymy such as none but a practical ornithologist could have accomplished. The discriminating notes which Mr. Salvin has here and there introduced make the book indispensable to every worker on what the Americans call "the higher plane" of the science of birds.

NOTES OF TRAVEL.

MR. W. A. FORBES, the Prosecutor of the Zoological Society, has left England on an expedition to the River Niger, which will probably extend over four months.

WITH reference to Mr. James Thomson's expedition next spring to explore the snowy mountains in East Central Africa, under the auspices of the Royal Geographical Society, a proposal has been made that he should be accompanied by a botanist and also by a zoologist, with a view to the adequate investigation of the important phenomena in natural history that must be presented by this region. Mr. Thomson himself is primarily a geologist. We understand that a memorial to raise funds for this object will be brought before the British Association at its approaching meeting at Southampton.

A LETTER has been received from Capt. Allen Young, of the *Nira* search expedition, dated Porsanger Fiord, July 11. He writes that they were on the point of sailing for Kormahule, in Novaya Zemlya, to communicate with the Russians, if any had arrived there, and thence continue the voyage. He adds that the ice is reported very loose. The Austrian expedition had left Tromsø, for a second attempt to land on Jan Mayen Island.

MESSRS. WILLIAM BLACKWOOD AND SONS have in the press *A Tour in Greece*, by Mr. Richard Ridley Farrer, with twenty-seven full-page illustrations by Lord Windsor.

MR. STANFORD has sent us a series of three maps of Egypt which will be of service at the present time. The largest and best is that of Lower Egypt, substantially identical with that of Leake (which, we believe, was based upon a survey made almost eighty years ago), the Suez Canal and the railways alone having been added. The map of Egypt generally will only be useful if the conflagration extends to the peninsula of Sinai, or if we have to pursue the enemy as far south as Assuan. The third gives a sketch-plan of Alexandria, with an inset for Lower Egypt. The former of these is not sufficiently large to include any portion of the actual scene of military operations; and the latter is unnecessary for those who have Leake's large map, mentioned above. The distances by sea marked in the corner are particularly valuable. The style in which these maps have been produced under pressure is creditable to English cartography.

SCIENCE NOTES.

The Origin of Lakes.—Prof. P. M. Duncan has contributed a thoughtfully written paper on this subject to the last number of the *Proceedings of the Geologists' Association*. Its special value lies in the due recognition of the biological aspect of the question—an aspect commonly neglected in geological and physical discussions. Rejecting the hypothesis of glacial erosion as incompetent to account for the origin of most lake-basins, and rejecting likewise the assumption that the hollows are due to marine erosion of an old sea-bottom, Prof. Duncan argues in favour of the original formation of most lake-basins by the action of subaerial denudation, assisted probably in some cases by subterranean movements. The valley having once been formed, partial subsidence took place; the sea gained access to the hollow, and marine forms of life, were thus introduced; finally, communication with the sea was cut off by subterranean disturbance, and the lake was formed. In this way we can understand how it happens that large fresh-water lakes, like Lake Baikal, contain the relics of a marine fauna—crustaceans, fishes, and even seals—the modified descendants of creatures that inhabited the sea with which the lake originally communicated.

We learn from *Nature* that Mr. Eugene Oates, who has been collecting in Pegu for the last fourteen years, is now in England, preparing a revised catalogue of the birds of Burmah; and that Mr. W. Davidson, so well known for his ornithological collections in Tennasserim at the Malay Peninsula, is likewise on a visit to England for his health.

THE first volume of a large work on the Electric Light will shortly be published at the office of *Engineering*, written by several contributors under the general editorship of Mr. James Dredge.

THE annual meeting of the German association of scientific men will be held at Eisenach, in Saxe Weimar, from September 17 to 22. In the programme are lectures by Prof. Haeckel on "The Interpretation of Nature by Darwin, Goethe, and Lamarck;" and by Prof. Behmke on "Physiology and Kantism."

PHILOLOGY NOTES.

PRINCE LOUIS-LUCIEN BONAPARTE will read two papers before the Philological Society next December—(1) "On Initial Mutations in the Celtic, Basque, Sardinian, and Italian Dialects;" (2) "On the Successors of the Latin J." Mr. Henry Sweet will also read two papers before the society—(1) "On the History of English Sounds;" (2) "On Intonation in Spoken English." Prof. Skeat's Celtic derivations in his Dictionary will be criticised, and many condemned, by Mr. Thomas Powell, head of Bootle College, Liverpool; and some of the many shortcomings of Profs. Bosworth and Toller's Anglo-Saxon Lexicon will be pointed out by Mr. James Platt the younger. Mr. A. J. Ellis will have a paper on "The Dialects of the North of England and the Lowlands of Scotland;" Mr. William Jones one "On English Words in the Anglesæ Dialect;" and the Rev. W. S. Lach-Seyrma another "On the Laws affecting the Decay and Death of Languages, as illustrated by the Old Cornish." Prof. Postgate will contribute some more Latin and Greek etymologies; and Dr. Murray will have his usual "Dictionary Evening" in January, and deliver his Presidential Address in May. To the latter, one of the contributors will probably be Prof. Miller, of Moscow, on the language of the Ossetins, a tribe in the Caucasus 200,000 strong, whose language he has specially investigated.

THERE has lately been an exchange of international courtesies among spelling reformers. The English Spelling Reform Association has adopted the "five rules" of the American Association, and Mrs. E. B. Burns, one of the vice-presidents of the American Association, has just issued an essay by Prof. Vaile printed in the "partial corrections" of the English Philological Society. As the "five rules" are substantially contained in the "partial corrections," this indicates a considerable advance towards unity.

AT the last meeting of the Société nationale des Antiquaires de France, M. d'Arbois de Jubainville read some observations upon the etymology of the word "Celt." Gluck has derived it from a root "cel," having the sense of "to raise," found in the Latin *celus*, *excello*, *collis*, and in the Greek *κορυβς*, *κοροφέν*. But this root has not yet been traced in a Celtic language. M. de Jubainville proceeded to quote *clethe*, in the sense of "summit," from an Eulogy of St. Columba written by an Irish clerk who died in 1106; the same word, meaning the roof of a church, from a Life of St. Bridget of the fourteenth century; and the same word again, as an adjective meaning "great," from an Irish Glossary of the sixteenth century. *Clethe* implies an older form *clethios*, which gives "celtos" by metathesis. M. de Jubainville added that this same Eulogy of St. Columba gives the adjective *nertmar*, "great in strength," which is the Irish form of the proper name Nertomarus, found in many Latin inscriptions.

PROF. DE LAGARDE has contributed a paper to the *Nachrichten* of the Royal Society of Sciences at Göttingen upon the origin of the α , or sign for the unknown quantity in an equation used by mathematicians. The old Italian algebraists called this unknown quantity *cosa* or *res*, both being translations of the Arabic *šai*, "a thing," used by the Arabians in Spain. But the Arabians sometimes used only the initial δ ; and it is a general rule in Spanish to express the Arabic δ by the Latin α . Going further back, the Greek mathematician Diophantus used *ἀπὸ τοῦ* for the unknown quantity in an equation; and later, the final σ' (accented) came to be thus used. Now the Greek words for the square (*δύναμις*) and the cube (*κύβος*) of this unknown quantity were both adopted by the Arabians in simple translation; therefore, it is not improbable that they may have also adopted σ' as δ , and afterwards called it *šai*, their name for thing.

MR. MAURICE BLOOMFIELD, of Johns Hopkins University, Baltimore, has reprinted from the *American Journal of Philology* his paper on "Final α before sonants in Sanskrit," which receives an appreciative notice in the *Revue critique* from M. Louis Havet.

Studien zum Avesta. Von K. Geldner. Erstes Heft. (Strassburg: Trübner.) The author of this work is a pupil of Prof. Roth, of Tübingen, the head of the comparative school, and he is in every respect a worthy follower of the master. The first portion consists of contributions to the Zend dictionary. It is not to be expected that all the etymologies should win assent; but, even where they seem to us wrong, they give valuable hints for the explanation of difficult words. We recommend for a careful perusal what Dr. Geldner says about *pešōtanu* and *tanupēretha* and their explanation as "excommunicated." We may also draw attention to the heading "Urvāz und ähnliche," where, however, a reference should have been made to an article published some time ago in Bezzenberger's *Beiträge*. A very suggestive note is that on *aiwisti*, where an etymology is given of "avesta" as *aiwisti* = *aiwi-s-ti*, comparing it with Skr. *abhi + as*, "to repeat, to study." The Avesta would be so called on account of the way in which the texts

were handed down. Then follow a series of translations from the Avesta, giving much that we cannot but consider doubtful; but this Dr. Geldner excuses by quoting from a German professor, "that it is better in these matters to advance doubtful statements than to advance none at all." In the grammatical remarks, which conclude, with some additional matter, this first fasciculus, we find on p. 144 a new explanation of the Ahunavairya formula, the creed of the Mazdayasians. Dr. Geldner translates it as follows:—

"As he [Zarathustra] is the best sovereign, so also is he with perfect justice the best spiritual guide

As the director of the works of the pious in life at the command of Mazda:

The might, however, remains with Ahura, who has given him to the helpless as shepherd."

This gives a satisfactory sense. No alterations in the traditional text are required; and the author takes *yim* in the last verse as a contraction from *yō + im* or *imem*, an irregularity easily accounted for in the text of the Gāthas. We hope that a second instalment of these "Studies" will soon be published, and conclude with our best thanks to the publisher, who cannot expect much profit from such works.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromes, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HINES, 114, Strand, near Waterloo-bridge.

The Journal of Hellenic Studies. Vol. III, No. 1. (Macmillan.)

THE first, and in several respects the most important, article in the new number of this *Journal* is Mr. W. M. Ramsay's "Studies in Asia Minor," founded on his recent expeditions in Phrygia. Of the two great burying-places which he visited, one was discovered by Leake in 1820, and contains the famous tomb of King Midas; the other is now made known for the first time. Mr. Ramsay is certainly to be congratulated on the rich plot which he has thus added to the field of historical antiquities. The curiosity of scholars will be especially excited about the tombs in the new necropolis, which are ornamented with figures of lions bearing a striking general resemblance to those above the gateway of Mycenae. In a second part of his paper Mr. Ramsay deals with the so-called "Niobe" of Mount Sipylus. In the Midas city he had the good fortune to light upon a similar piece of rock-sculpture, which put him at once on the right track. It was an undoubted figure of Cybele, with the attributes of the goddess and a Phrygian inscription—in itself a first-rate discovery—beginning with the words *matar kubile*; and it was so like the figure on Sipylus as to make it clear that the latter also is a representation of the Great Mother. These facts have an important bearing, as Mr. Ramsay proceeds to show, on the course of the earliest Greek civilisation. Sipylus is shown to be an ancient Phrygian settlement, earlier than Sardis, which probably rose into importance with the Heraclid dynasty. It is connected by likeness of style and by hieroglyphic inscriptions with the remains found in Cappadocia. As to this, however, we may hope to learn more from future exploration; and, meanwhile, Mr. Ramsay has nothing to say about "Hittites." On the other hand, Phrygia and Sipylus are connected in several

ways, especially by the legends of Tantalus and Pelops, with the early history of the Peloponnesus; and in this view the filiation of the worships of Cybele and other deities of the same type in Asiatic and European Greece deserves a careful study. Finally, the old local religion of Sipylos survived into historical times, adopted (as elsewhere) by the Greek settlers. The Magnesians worshipped the *Meter Sipylene*, probably (as Mr. Ramsay infers from their coins) in a temple in their city, as well as in the more venerable shrine on Mount Sipylos. The last pages of the paper are occupied by a discussion of the curious question whether the rock-cut figure is the Niobe of Greek literature, as has generally been supposed. The evidence of Pausanias, a native of Magnesia, and of Quintus Smyrnaeus, who also knew the country, is strongly against this identification. The Niobe which they describe must have been some appearance presented by the natural conformation of the mountain.

Prof. Mahaffy's article "On the Site and Antiquity of the Hellenic Ilios" is supplementary to his discussion of the same subject in the Appendix to Schliemann's *Ilios*. His three main points are: (1) that Hissarlik is the site of the Homeric Troy, (2) that Troy was not "totally and finally" destroyed at the end of the Trojan War, and (3) that the claim of the Hellenic Ilios to occupy the site of Troy was generally admitted in historical times. The tone of the paper is somewhat needlessly controversial, since it is only on the last of these points that there is any dispute. Indeed, Prof. Mahaffy's mode of discussing the two others lays him open to the charge of setting up men of straw, whom he does not distinguish carefully enough from his real antagonist. On the third point, where he is opposed to Mr. Jebb, the controversy cannot be said to make much progress. Some of the issues are not well suited for such a debate. It is hard, for instance, to determine at this time of day whether an ancient writer, whose works have perished, was a "malevolent pedant" or not. The most important passage in dispute is one in which Strabo says that "later authorities [*αἱ νεώτεροι*]" admit the destruction of the city; of whom is also Lycurgus the orator." Prof. Mahaffy holds that the *νεώτεροι* are not post-Homeric writers generally, but the party of Demetrius (the "malevolent pedant" who is adverse to the people of Ilios); and he takes the next words to mean that they have with them, among older authorities, the orator Lycurgus. In this last interpretation he is clearly wrong; *ὁ νεώτερος καὶ Λυκούργος* can only mean "one of whom is Lycurgus." And if by *νεώτεροι* Strabo meant only the party of Demetrius, he chose a most unusual and misleading mode of expression. The phrase is a common one (in the scholia, for instance), and denotes post-Homeric authors of every possible kind. Prof. Mahaffy is more successful in pointing out that in some versions of the capture of Troy there were incidents inconsistent with its total destruction. In such matters, however, logical consistency is not to be expected. It is admitted that local belief clung to the notion of a survival of some representatives of Troy; and a story thus suggested might soon find its way

into one of the later epics (the poem of Arctinus is the most obvious), and thence into plays drawn from epic sources.

The three next papers deal with a single chapter of the archaeology of art. Mr. A. H. Smith has made a series of careful researches in order to determine the true restoration of the Hermes of Praxiteles; and Mr. C. Waldstein examines a bronze statuette in the Louvre with the same view. Mr. Waldstein's other paper—on a patera found near Bernay, in France—is also concerned with a Hermes which he regards as Praxitelean. So often, indeed, does the name of Praxiteles occur that the printer has declined at one place (p. 98) to allow "Pasiteles" to appear in the text. Epigraphy is also represented by three papers. That of Prof. Comparetti throws light on the curious subject of the Orphic mysticism of the third century B.C. It gives an account of certain tablets that have been found in Southern Italy, containing verses probably taken from the books which passed under the names of Musaeus, Orpheus, &c. Such fragments have an interest from the obscurity which surrounds these phases of religious belief throughout heathen antiquity. Mr. Ramsay's inscriptions from Naocleia, in Phrygia, are of the Imperial time. They are occasionally of value in reference to Roman administration, and also as records of the local religion. In particular, the Zeus Brontôn which occurs on some of them is the old Phrygian equivalent of the Greek Zeus, Latin Jupiter tonans, &c. Mr. Hicks gives some good illustrations, drawn from inscriptions, of passages in the *Characters* of Theophrastus.

The paper on Pindar, by Mr. Jebb, is the only one that deals with Greek literature proper; but it does so in a manner that will leave every scholar more than satisfied. We feel on reading it that after all the life is more than meat—that scholarship does not consist in knowledge of detail, linguistic or archaeological, essential as accuracy in detail is to it, but in the adequate interpretation of the few great authors. Mr. Jebb interests us first in Pindar's political relations; then in his attitude towards religion and morality. On these points his remarks are fresh and striking, yet without the least taint of paradox. He next takes up Pindar's character and relation to other Greek poets; and thence passes by an easy transition to the central matter—his poetic art. On this subject he gives us a piece of analysis in which scholars will recognise a rare penetration and justness, as well as a faculty of sympathetic imagination which, as Mr. Jebb himself indicates, is the main requisite for an interpreter of Pindar. We may notice especially the observations on Pindar's own consciousness of the new character of his style, and on the intermediate position which he holds between Homer on the one hand and the Attic dramatists on the other. The paper ends with some pages in which Mr. Jebb (by way of atonement for the species of eclipse which archaeology suffers at his hands) discusses the relation of Pindar to the contemporary sculpture.

D. B. MONRO.

THE ALLEGED HERESY IN THE PALMIERI BOTTICELLI.

SINCE much interest has been expressed about the painting known as the Palmieri Botticelli, lately acquired for the nation at the Hamilton sale, we venture to offer a short account of its curious history, as well as of the life of the learned Florentine for whom the work was executed.

Matteo Palmieri was a distinguished citizen in Florence, holding a high position there about the year 1470. He was ambassador from the Florentine Republic to King Alfonso of Naples, also deputy in the name of the Republic to the Fathers of the General Council held under Eugenius IV. The house of his family stood near the *Spezieria delle Rondini*, in Florence; and a shield bearing his arms—a palm-tree between two lions rampant—was inserted in the wall. As an author, Palmieri seems to have been much esteemed. He wrote—(1) *La Vita di Niccolò Acciajuoli*; (2) *Trattato della Vita Civile*; (3) *De Captivitate Pisarum Historia*; (4) *Chronicon seu de Temporibus, Cronica dalla Creazione del Mondo fin all' anno 1449*. In addition to these published works, Matteo held another in reserve, the story of which recalls that of the little book bequeathed by our own George Herbert to "his dear brother Ferrar," with a message telling him that in it he should find "a picture of the many spiritual conflicts" that had passed betwixt God and his soul before he could subject it to his Master's will, and adding that "if he can think it may turn to the advantage of any poor dejected soul, let it be made public; if not, let him burn it." Matteo's work was a poem of three cantos written after the manner of Dante in *terza rima*, and entitled "*La Città di Vita*." It was kept secret while he lived, and laid upon his bosom in the grave. Another copy had been left by Matteo in the Medicean Library under the Proconsul's care, with directions that the codex should be read by anyone during the writer's lifetime. In it the author relates how a Sibyl appears to him in middle life, and, winning his soul by speech of all things beautiful, and showing him a vision of the Elysian fields, she draws him on to follow her through Hell to Heaven. She reads for him the book of Nature and the Past, and declares the order of the stars and planets, and the way of Life.

"Se è mi vien gratia infusa dal Eterno
Per darmi lume da la sanata luce
In Ciel mi guidi, et mostrimi lo inferno;
La gran Città di Vita che conduce
Ciò che creò quel Padre la governa
Quanto col male ben vi si riduce
Et certo facil fiamme, se superna
Virtù mi chiama ad sì degno lavoro
Et senza quella in van convien sì cerna.

"Come mi fu di così fare offerto
Vidi ad gli stremi d' una selva oscura
Grato splendor da Ciel di nuovo aperto
Lavami gli occhi ad quella luce pura.
Et chiari gli affetti nello splendore
Et più non m' era selva sepultura
Parlando quella con divin fervore
La luce dixi tutti vi conduce
Per la via mena, sempre senza errore."

The fate of the poem after publication was not so happy as might have been hoped. Misnamed by some "The Sybil of Palmieri," by others a "Treatise on Angels," the author was condemned by one party for holding the philosophy of Pythagoras, while by others he was accused of Arianism.

Palmieri died in 1475; and the painter Sandro Botticelli was at the zenith of his power in the year 1470, about which time it would appear that he was commissioned by Palmieri to paint the altar-piece for his family chapel in the church of S. Pietro Maggiore, in Florence, the subject of which was to be drawn from the "*Città di Vita*." Such was the origin of this

picture of the Assumption of the Virgin, in which are shown the three circles composed of divine forms of prophets, saints, martyrs, angels, and all the heavenly host, while below, the towns of Florence and Pistoia lie in the calm sunlight, and Matteo and his wife are seen kneeling in the foreground.

Among other accusations of heresy brought against the poem which inspired this work, Richa states that Palmieri followed the condemned opinion of Origen more by poetic licence than from theological sentiment, feigning that our bodies are animated by the angels; by those, that is to say, whom he falsely supposes to have remained neutral when Lucifer fell, and whom the Almighty, willing to prove them once more, compelled to unite themselves to human bodies here below. And, further, his accusers suspected that Palmieri, in displaying, by means of the picture, his erroneous opinions over the most sacred spot in his chapel, had desired to give—or to usurp—the sanction of the Church to those opinions; in fact, to palm off upon the devout his heretical views as consistent with the Canons of the Church. The result was that for many years this great painting of Sandro Botticelli was interdicted and kept covered from view.

Both Palmieri and Botticelli doubtless owed much to the inspiration of Dante. About the year 1481, Botticelli not only commented on Dante, but, with Baldini, executed in the then new art of engraving a series of illustrations of the "Divina Commedia." It is impossible to contemplate the painting in question without recalling Canto xxx. in the "Paradiso," where the Poet enters the Empyrean, and first beholds the Court of Heaven. In these three circles, "which seem as if encompassing the light, but are indeed encompassed by it," those saintly bands are seen "in fashion like a snow-white rose," while angels mingle with the crowd of saints and martyrs "whispering the peace and ardour which they won from that soft winnowing."

Standing before this picture the lines rise to our memory—

"And as a pilgrim when he reads
Within the temple of his vow, looks round
In breathless awe and hopes some time to tell
Of all its goodly state; 'o'er so mine eyes
Condred up and down along the living light,
Now low, and now aloft, and now around,
Visiting every step. Looks I beheld,
Where charity in soft persuasion sat
Smiles from within and radiance from above
And in each gesture, grace and honour high."

M. S.

IN MEMORIAM

FRANÇOIS JOSEPH CHABAS.

AT Versailles, on May 17 of the present year, after a lingering illness of more than six years' duration, died M. François Joseph Chabas, Correspondent of the Institute, Chevalier of the Legion of Honour, and ex-President of the Chamber and Tribunal of Commerce at Chalon-sur-Saône. M. Chabas, like Dr. Schliemann, was brought up to business, spent the working years of his life in business, and yet from boyhood cherished an ardent love for learning. From the time when he left school and entered upon commercial life—that is to say, at thirteen years of age—his leisure moments were devoted to the study of ancient and modern languages; but it was not till 1852, when he retired from active life and settled down at Chalon-sur-Saône, that he turned his attention to Egyptology. Though a late beginner, he soon became a master, and his first pamphlet, entitled *Note sur l'Explication de deux Groupes hiéroglyphiques*, bears date 1856. From this time he began to be a constant contributor to the *Zeitschrift*, the *Revue archéologique*, the *Mémoires* of the

Academy of Inscriptions and Belles-Lettres, the *Mémoires* of the Royal Academy of Sciences of Amsterdam, the *Transactions* of the Biblical Archaeological Society, the *Comptes-rendus des Congrès des Orientalistes*, &c., &c. Thanks to the ardent perseverance, the patience, the enthusiasm, and the admirable insight which he brought to bear upon his Egyptological studies, M. Chabas speedily rose to a position of authority in no wise inferior to that of his former masters, Dr. Birch and the Vicomte E. de Rougé. Living in profound seclusion in a provincial town of Central France, far from the great museums and public libraries of Paris, he accumulated for his own use a complete and costly collection of Egyptological books; and with no other aid, and no encouragement save that which he earned for himself in the teeth of countless difficulties, he gained and kept one of the very foremost places in the ranks of modern science. That his success was at times embittered by the coldness of his contemporaries, and by the neglect which he experienced at the hands of the French Academy, was at no time a secret. Even when he at length was created a Chevalier of the Legion of Honour, the distinction was conferred, not upon the savant, but upon the President of the departmental Chamber of Commerce, and upon the ex-consular magistrate. If, however, his fellow-countrymen grudged him the fame which owed nothing to schools and colleges, his reputation beyond the frontier was of European extent; and in 1874, at the London Congress of Orientalists, M. Chabas was appointed a member of the International Committee for the publication of M. Naville's great forthcoming variorum edition of *The Ritual*.

To M. Eugène Revillout, who pronounced the funeral oration at the grave of this illustrious Egyptologist, belongs the honour of having rendered frank and full justice to his memory. He attributes to M. Chabas "one-third part at least" of our actual knowledge of the language, literature, and social condition of Pharaonic Egypt. "Setting aside only Dr. Birch and M. de Rougé," said M. Revillout,

"all the Egyptologists of Europe were his pupils. There is not literally one among us who has not made his first steps by the aid of M. Chabas; while the most illustrious—including those who, like Brugsch Pasha, have occasionally differed from him in matters of detail—openly acknowledge him for their teacher. It was he who first laid down with certainty the scientific bases of Egyptian metrology; it was he who, with the hand of a master, first indicated the broad connecting lines of history and chronology; it was he who gave us the first, and, till now, the only, materials concerning the criminal law of the epoch of the Pharaohs."

M. Chabas was born on January 2, 1817, at Briançon, in the department of the Hautes-Alpes. He was one of the few great Egyptologists who never visited Egypt. All he learned and all he achieved was by the aid of books, facsimiles, and his own perseverance and genius. His library, numbering 1,080 works, for the most part rare and costly, was sold by M. Maisonneuve about eighteen months ago.

AMELIA B. EDWARDS.

[Owing to an oversight, this notice, which should have appeared in May, has been delayed till the present time.—ED. ACADEMY.]

OBITUARY.

WE have to record the death of Mr. J. C. Wintour, A.R.S.A., which occurred at Edinburgh on July 29. Mr. Wintour was born in 1825, and was educated at the Trustees' Academy under Sir William Allan. His earlier landscapes were distinguished by much brilliancy and precision of execution, and great things were predicted of his future. He, however, scarcely justified

these expectations; his later works are exceedingly formless and indefinite in handling, though to the last they possessed fine qualities of colour.

THE death is announced at Paris of M. Alexandre Deegoffe, at the age of seventy-seven. M. Deegoffe, who was a pupil of Ingres, painted a large number of Italian landscapes and also some historical pieces. In 1868, he executed a series of decorative paintings in the Salle d'Etudes of the Bibliothèque nationale.

NOTES ON ART AND ARCHAEOLOGY.

MISS MARIANNE NORTH sailed for the Cape on Wednesday to resume her task of painting the flora of all parts of the world. After spending some months in South Africa, she proposes to visit Madagascar and the Seychelles Archipelago, both of which present rare and beautiful objects for her pencil. As before, she travels alone and unattended.

THE book on *Lambeth Palace and its Associations*, by the Rev. J. Cave-Browne, which has been so long announced, will be published by Messrs. Blackwood this month. It will have illustrations, and an Introduction by the Archbishop of Canterbury.

WE have received the first number of the *Journal* of the National Society for Preserving the Memorials of the Dead (Norwich: Sayer and Townshend; London: W. Reeves). Besides a full report of the proceedings at the meeting last May, when the society was inaugurated, it gives a number of extracts from reports of local secretaries, which indicate both how great is the need for the society, and also the precise nature of the good it may accomplish. It is only too evident that, in past times, the clergy themselves were the chief offenders. We observe that the monument of Erasmus Darwin is one of those that have suffered.

IT is now some time since we noticed the monthly issues of *English Etchings*, published by Mr. Reeves, of 105 Fleet Street. As it is impossible not to be interested in any endeavour to popularise etching, we have pleasure in being able to testify that the numbers which have accumulated upon our table show a decided advance upon their predecessors. There is still occasional amateurishness of treatment, and even in work otherwise commendable we are now and then irritated by the lack of knowledge, which sometimes shows itself in absence of freedom, sometimes in abuse of it; but there is a general growth of quality, and for many of the etchings we have nothing but praise. We cannot refrain from special mention of a portrait of John Philip, R.A. (part xii.), from the needle of Mr. A. W. Bayes, one of the strongest contributors, which is really masterly. Some of the etchings which appear under the general title "London—the City" will unfortunately soon have an antiquarian as well as an artistic interest.

THE *Magazine of Art* this month offers us, as usual, pleasant and varied fare. Mr. G. H. Boughton is the living artist under notice, and the frontispiece is from his picture of "The Hair Presumptive." For those who prefer the Old Masters there is an excellent article, liberally illustrated, on Van Dyck, reviewing Alfred Michiel's *Van Dyck et ses Elèves*. The Salon is criticised by F. Forbes-Robertson.

L'Art is almost entirely occupied with the Salon at present. It is reproducing with powerful effect many of the artists' studies for their pictures. In the number for July 23, especially, there were some excellent studies of women's heads by Frédéric Uhde for his picture, "Les Couturières," as well as a full-page engraving of a drawing by Max Liebermann

of a Dutch interior. These sketches have been more pleasing than the etchings in the last few numbers.

MESSRS. HARPERS, of New York, already announce for the coming winter a Christmas number somewhat after the fashion of those of the *Illustrated* and *Graphic*. Its sub-title will be "Pictures and Papers by the Tile Club and its Friends." The double-page drawing will be by Mr. Vedder; and among the other artist contributors are Messrs. G. H. Boughton and A. Parsons. The promised writers include Messrs. W. Black, T. Hardy, Oliver Wendell Holmes, and Mark Twain.

We have from time to time given an account of the progress made by M. Bartholdi with his gigantic statue of Liberty, destined to serve as a lighthouse at the entrance of New York harbour. Last week this statue was roughly set up, and a breakfast was given inside it to the chief representatives of the French press. The table was laid for twenty-five guests in one of the thighs of the statue, to which the company had to ascend by a series of ladders. After breakfast, M. Bartholdi and MM. Gaget and Gauthier, the engineers, took the visitors round the workshops, where forty men have been engaged constantly for several years in hammering and fitting the various pieces of which this statue is composed. The head was finished in 1878, when it figured at the French Exhibition; the arm also, which is stretched forth holding a torch, was sent to the Philadelphia Exhibition; and the drapery and legs are now nearly finished. The constructors, indeed, give hopes that this gigantic Liberty, the largest colossus that the modern world at least has ever produced, may be placed on the pedestal America is erecting for it not later than the end of 1883.

THE four busts symbolising the Seasons, of old Rouen *faience*, which were bought by the Louvre at the Hamilton sale, are reckoned an excellent acquisition by French critics. They turn out to be, however, not the work of any of the Levasseurs to whom the Hamilton Catalogue attributed them, but to have been executed by Nicolas Fouquay, a celebrated Rouen *faïencier* of earlier date. At least, in the inventory taken of Fouquay's effects after his death, which took place in 1742, there are mentioned "five large busts, with pedestals of *faience*," seemingly identical with these. The Fouquay manufactory afterwards passed into the hands of the Levasseur family, who continued to work it for many years; but the owner in 1847, being obliged to suspend payment, sold these busts in Paris to a dealer, who afterwards resold them to the late Duke of Hamilton for about £280. Such is the history given of the busts by a writer in the *Chronique*, who brings forward more evidence than we can quote to prove their Fouquay origin. The fifth bust, which would seem to have nothing to do with the Seasons, is now to be seen in the South Kensington Museum, to which it was presented by the Duke of Hamilton.

At a recent meeting of the *Académie des Inscriptions*, M. Lédain exhibited a seal bearing in early Hebrew characters the name of Baalnathan, whom M. Lédain took to be a Jew before the Captivity, who had changed his name from Jonathan—"the gift of Baal," instead of "the gift of Jehovah." In illustration, he quoted Jerubbaal for Gideon.

THE committee of the Institut has awarded the *prix de Rome* for painting as follows:—The "premier prix" to M. Popelin, aged twenty-three years, a pupil of MM. Giraud and Ferrier; the "second grand prix" to M. Pinta, and the "grand prix" to M. Leroy, aged respectively twenty-six and twenty-one, and both pupils of M. Cabanel.

THE STAGE.

WITH the beginning of August the theatrical season closes. Mr. Irving took his benefit on Saturday night, and delivered, in that style of familiar confidence so telling at the theatre, the accustomed address. It was, in reality, frank. For it was conspicuous, among other matter, for the defence of long runs. "Romeo and Juliet" had been played 130 nights in succession—at the cost of an incalculable tax on the mind and soul of Miss Ellen Terry. Such an effort was rare; Mr. Irving was sorry that anybody should be required to make it; but those who live to please must please to live. That was the practical view of the matter; Mr. Irving put it forward, and there is of course much truth in it. But he did not touch—and perhaps, considering the completeness with which "Romeo and Juliet" has been performed from the first night to the last, he did not require to touch—upon the question, not whether the mind and soul of a particular player can stand with impunity the pressure of runs so prolonged, but whether the given character is likely to be as well interpreted on the hundredth night as on the first. Perhaps Mr. Irving considered that the continued excellence of the performance of "Romeo and Juliet" was a practical answer to that question. We should venture to hold, however, that this has been the exception, and that there are very good reasons for its having been the exception. Very long runs are in the main still injurious to theatrical art. They tend, generally, to confirm and exaggerate mannerisms, even where they do not breed carelessness. They deprive the player for the time of his variety and sometimes permanently of his flexibility. They are apt to make of the comedian a comic actor. They encourage the vice of the "specialist," a vice which afflicts all the arts, and is hardly less injurious in the matter of acting than in the matter of painting or of authorship. And, moreover, such necessity as exists for runs of inordinate length—we are at pains to point out that it is not to "Romeo and Juliet" that we are referring—arises chiefly from the modern determination to illustrate with the utmost expensiveness all dramatic work, and would cease when that ceased. There are pieces, of course, which fairly ask expensive illustration; nay, which exist, like the text of a stupid Christmas book, for the sake of the illustration. Such pieces have their right to be, and nobody will be any the better or any the worse when "Babil and Bijou" has run 300 nights; it is a thing of pretty colours and agile dances, and there is nothing whatever in it. The art is on the surface. But a Shakespearian play, or a brilliant eighteenth-century comedy, is aided but slightly by that elaboration of accessory which compels a practical manager to desire for it a long run; and perhaps we should not be far wide of the mark if we said that the art of acting in the greater drama is never submitted to its severest and final test until there is no opportunity for surprise or unmeasured admiration at the art of the scene-painter and of the decorator, and at the knowledge of the antiquary. But such a test we know it is now hopeless to expect to apply. Even at the Théâtre français they have long gone in for the beautiful and attractive accessory. And we must take things as we find them.

HAVING grumbled a little at Mr. Irving's wholesale defence of long runs, we are the more glad to be able to agree with him completely in his defence of "benefits"—an institution that has lately been attacked. Long tradition has sanctioned the "benefit"; there is nothing whatever to find fault with in it unless, as in the case of Mr. Vincent Crummies, it is accompanied by personal touting. Of course,

in ninety-nine cases out of a hundred—in every case in which it is a high-class actor, a lady or a gentleman, that is concerned—the touting is not only unlikely, but impossible. The benefit remains, therefore, only a fitting opportunity for the display of personal regard. The particular actor who takes it knows the interest that he can individually command, and is encouraged at the extent of it. Instead of wishing the system of benefits abolished, we could wish it enlarged. Mr. Sala has reminded the malcontents that, in the old days, dramatic authors—Goldsmith and his fellows, to wit—were wont to take a benefit. Dramatic authors are better paid now than they were in Goldsmith's days, for they are better men of business; but it would still be pleasant and serviceable if the lovers of neat satire could gather together to present a bulky wreath to Mr. F. C. Burnand, and if the admirers of hearty melodrama could encircle with laurels the brow of Mr. Sims. Nor should the critic be forgotten. Unaffected by the appalling bribe of a wing of a chicken, eaten cold at night, once in a twelvemonth, he still ventures to inform the public where to go and where to abstain from going, and is, we venture to submit, on the whole the most deserving of "those for whom no galleries bawl"—the great unbenefted.

We have received the *Plays and Poems of Charles Dickens*, edited by R. H. Shepherd (W. H. Allen), and have scanty sympathy with the publication. The plays are of no genuine value, and the "poems" are such as the world would willingly let die. Everything of Mr. Dickens's that good critics and faithful and attached friends thought worthy of publication has now seen the light, and little service is done to the memory of a great writer by Mr. Shepherd's rakings in forgotten holes and corners. Mr. Shepherd's "Bibliography" which is attached to these volumes is painstaking and serviceable. His remaining labour is, at the least, ill-advised. Does he imagine that an author who is a good judge of writing has not tact enough to know what to suppress, or that it is incumbent upon himself to flood the literary market with the occasional failures of eminent men? Dickens, when he had got over his youth, retained no ambition of a poetaster, and it is in vain that Mr. Shepherd will present him to us as a poet. An author has already sufficient annoyances. At first it is the public that is annoying—it will not read the author. Then perhaps it is the publisher who is annoying—he will not duly pay the author. Then it is perhaps the printer who is annoying—he makes misprints in the middle of excellent passages; then the critic—he praises in the wrong place. At last these annoyances have one after the other gone the way of last year's snows. And the author dies. But Mr. Shepherd survives him. Must that be an annoyance too? We are quite sure that Mr. Shepherd has no wish that it should be.

MUSIC.

WAGNER'S "PARSIFAL."

II.

Bayreuth: July 26, 1882.

THE large theatre at Bayreuth was completely filled by four o'clock on Wednesday, July 26, and amid breathless silence commenced the first performance of Wagner's latest music-drama, "Parsifal." Nearly six years have elapsed since the production here of the "Ring des Nibelungen." During that period the Bayreuth theatre has been closed; but Wagner's reputation has, nevertheless, been spreading throughout Europe and America, and his lofty aims and commanding genius are now all but universally recognised. Never before has any composer during his lifetime received such

homage as Wagner. Looking at him, not as an artist, but as a man, it is pleasant to see how prosperity now smiles on one who in early life suffered privations and misfortunes of every kind, and who for a long time encountered fierce opposition, arising, no doubt, in great part, from a misconception as to his aims and theories and as to the relation which, according to him, music should hold to the sister arts, but also from jealousy and ignorance, singly or combined.

In the new work, "Parsifal," Wagner has again illustrated his subject by means of *Leitmotive* or representative themes. Of these there are between twenty and thirty, many of them striking in character and suggestive. The metamorphoses and combinations of themes are not so elaborate as in "Tristan" and the "Ring." Some of these leading subjects, even as abstract music, are wonderfully impressive—such as those connected with the Grail and with Parsifal, and with the sufferings and death of the Redeemer. The "Good Friday" motive is very characteristic; and the melodies significant of the quiet grandeur of the woods and meadows are two of the most lovely thoughts ever penned by Wagner. Each personage in the drama has his or her own special theme; they are not merely formal phrases to announce the entries of the actors, but represent situations as well as persons. The objective and subjective elements of the drama are thus revealed to us—the former on the stage, the latter in the orchestra; and whatever may be the result of this system of *Leitmotive* in the hands of any other composer, Wagner has always employed it with wonderful ingenuity and power. How well, for example, does he make us feel the mysterious influence of Klingsor over Kundry. When she first appears, the "Kundry" theme is, of course, heard in the orchestra; but when Gurnemanz speaks of her being found by Titurel in the sacred wood, or when Kundry herself says, "The time is come. Slumber—I must," we hear both the "Magic" and "Klingsor" motives. When, again, Parsifal, in the great scene of the second act, speaks of his folly and of his neglect of his mother, the "spear" phrase from the "Grail" theme is heard, as if to remind us of his holy mission. The "Mourning" motive as Parsifal and Gurnemanz approach the Grail castle, the "Grail" phrase at the awakening of Kundry in the third act, and the various and interesting employment of themes in the introduction to the same section of the work—these and many other passages show the extraordinary capabilities of that art-form so clearly suggested by Weber and so fully developed by Wagner.

In "Parsifal" it is not possible for one moment to mistake the composer, for Wagner's name is written in large letters over every page of the music; besides which we have frequent reminiscences of "Tristan," and, indeed, of all the four parts of the "Ring," more particularly "Siegfried" and the "Götterdämmerung." If we merely consider the music, "Parsifal," in spite of its many beauties, is perhaps not equal either to "Tristan" or the "Ring;" but the ideality and general conception of the whole work will give to it a very high place in the estimation of the composer's adherents, and certainly a unique position in the history of musical and dramatic art. In "Tristan," Wagner painted the passions of men and women; in the "Nibelungen" the strifes of gods and goddesses; but in "Parsifal" he takes us into quite another realm, and shows us how he can deal with questions of the highest import, those affecting the moral and spiritual nature of man.

We have already referred to the religious character which pervades the whole work. In our previous notice we could only speak of the reverent spirit in which Wagner has discussed his theme.

But now, having witnessed two performances, we are able to take notice of the effect produced by the work on the stage, and can say that Wagner has fully risen to the height of his great argument. The Church and Stage have never been very good friends, and Wagner's bold attempt to combine the two will offend many. To those who unhesitatingly condemn it, we say nothing; but would remind all reasonable persons that the Wagner building at Bayreuth is not, in the ordinary sense of the word, a theatre. In any discussion as to the expediency of introducing religion on the stage, this fact should certainly be taken into consideration. It is a temple consecrated to art, and who dare say that in such a place it is not right to speak of love and compassion, of purity of life and noble aims, and of the victory of the spirit over that of the flesh? Also, at the first performance of "Parsifal"—and this more especially concerns the English public—so solemn was the celebration of the Lord's Supper at the end of the first act, and so impressive were the funeral scene and ceremony of the Grail at the close of the work, that the vast audience, in the first instance, remained all but silent, and in the second were walking quietly out of the building, as if from a cathedral, until Wagner himself rose up and reminded them that the services of the singers, players, and conductor deserved acknowledgment, and then only did the applause commence. No greater tribute could have been paid to the work, and no more convincing proof could have been given of the power of the Stage as an appeal to the higher feelings of mankind—a power indeed, if only employed in the right way. Devout people will look at a picture of Christ, will listen to his very words sung in an oratorio, and will those same persons refuse to perceive that the true spirit of Christianity embodied in a dramatic work is neither mockery nor profanity, but rather a great means of influencing the public for good? We are not in any way seeking to provoke argument. The religious element in "Parsifal" is sure to be noticed by the English press, and in many cases, no doubt, unfavourably; we therefore wished to say a few words about the matter, and especially to call attention to the reception of the work at Bayreuth, so as to try and disarm prejudice, and to let people understand that Wagner, in his own peculiar way, is endeavouring to do something, not only for art, but for the amelioration of the human race. We have only described the conduct of the audience at the first performance. On Friday the first act was received in *perfect* silence, and there was a moment's pause at the end before the applause. The public performances commenced on Sunday; and it was of course necessary for Wagner's patrons, who have alone attended the first two private performances, to give a "reception" to the composer and to all the artists.

It is impossible to give an idea of the extraordinary effect of the whole work; the closes of the first and third acts are simply overpowering. In the first, Parsifal, "the guileless fool," is admitted by Gurnemanz into the great hall of the castle at Monsalvat to witness the celebration of the "Supper." When the Knights enter in stately procession and gather round the tables; when the unhappy King Amfortas is brought in on his litter and placed before the shrine enclosing the Grail cup; when the sublime service proceeds with the wonderful music and sounds as of angels' voices descending from the very summit of the dome; when the Knights, after having partaken, leave the hall again in solemn procession; and when, in the now deserted hall, voices from the height are heard singing in softest tones "Blessed Believing," Parsifal, gazing on all these mysterious scenes, is lost in wonder and astonishment, and listens with rapt attention

to the heavenly sounds which reach his ears. And so was it with the vast audience assembled at Bayreuth. Wagner's genius, as we said before, here turns the theatre into a temple; and with the marvellous representation of the Hall of the Grail, and the splendid acting, the performance seemed for the time not a show, but a reality.

The music of "Parsifal" is very unequal; and there are passages in the first act and at the beginning and end of the second act, also the dirge music in the last act, which savour of ugliness rather than beauty. It is certainly not right to forget that in Wagner's works music is only one of the factors; but at times he seems so occupied with the dramatic situation as to forget the conditions which must be observed if music is to be considered an art. The first act takes nearly two hours in performance; and, as nearly the whole of the music is in slow time, the strain on the listener's attention is very great. The second only lasts one hour, and the concerted music in Klingsor's enchanted ground when Parsifal is surrounded by the Flower-maidens is most lovely and original; it forms, moreover, a marked and effective contrast to the solemn music of the first and last acts. The third act is intensely interesting; and, in spite of the grand Grail scene in the first, we are disposed to think it the finest of the three. The total effect of the whole work is very great indeed. It is not only interesting and elevating, but full of dramatic power, and in many places musical beauty of a high order.

At the first performance the cast was as follows:—Amfortas, Herr Reichman; Titurel, Herr Kindermann; Gurnemanz, Herr Scaria; Parsifal, Herr Winkelmann; Klingsor, Herr Hill; and Kundry, Frau Materna. The rendering of the work throughout was most magnificent. All the artists deserve very great praise for their acting and singing. Particularly, however, would we mention the splendid impersonation of Kundry by Frau Materna, and the fine declamation of Herr Scaria in the arduous part of Gurnemanz. The orchestra was very fine, and the *mise-en-scène* perfect. The wonderful dioramic representation of the road from the wood to the castle, by means of scenery shifting from left to right, and the great Grail hall, were triumphs of skill. Such marvellous effects could not be produced in any other theatre in Europe; the size and immense depth of the stage, and the mechanical appliances, allow results of a grand and novel description. Neither expense nor labour had been spared to bring about as perfect a presentation as possible.

At the second performance, on Friday, July 28, there were some changes in the cast. Herr Scaria took the part of Gurnemanz, Herr Gudehus that of Parsifal, and Fräulein Brandt that of Kundry. Fräulein Brandt brought the diabolical and supernatural elements of the character of that strange being, Kundry, into greater prominence than Frau Materna; both readings of the part were excellent, though of the two we preferred the latter. The remaining changes of cast were of less importance. The orchestra was very fine indeed. Herr Lewi was the conductor, and deserves the highest praise for the great care and efficiency with which he wielded the baton.

Franz Liszt was present at both performances, and it was interesting to see him sitting beside the composer for whom, in years gone by, he laboured so earnestly and so faithfully. At the close of the second performance, Herr Wagner came forward in answer to loud and enthusiastic applause, and thanked the actors, chorus, conductor, and members of the orchestra, and last, but not least, Herr Fritz Brandt, the machinist, for the hearty and efficient manner in which each and all had worked together for the general good; and he concluded with a few very brief words to the audience, the patrons of the festival.

J. S. SHEDDOCK.

SATURDAY, AUGUST 12, 1882.

No. 536, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Poetical Works of William Wordsworth.
Edited by William Knight, Professor of Moral Philosophy, St. Andrews. Vols. I. and II. (Edinburgh: William Paterson.)

BESIDE editions of Wordsworth's *Poetical Works* following that authorised by the poet in the year before his death, two other editions, each based upon a principle of its own, have a right to exist. One of these should give each poem of Wordsworth in its best state—the date of the text chosen for each poem being affixed; in cases of doubt the final text of 1849–50 should be followed; the arrangement should be made solely with a view to the enjoyment and convenience of the reader. In such an edition it is certain that the poem "To the Cuckoo" must be given in its last state; we must have the "twofold shout"

"At once far off and near."

It is equally certain that some early text of "Louisa" must be chosen, one which shall not rob us of the lovely stanza beginning

"And she has smiles to earth unknown,"

which disappeared from the latest version of that poem. The other edition, which might be named the Student's Wordsworth, must follow the plan of Prof. Knight. Its aim is not simply delight; it rather attempts to supply materials for the historical study of Wordsworth's mind and art, but in the end it enhances the reader's delight, for he loses nothing, if a wise reader, and he gains much that cannot be otherwise gained.

Prof. Knight proposes to print the poems in chronological order, and for such an edition as the present this is undoubtedly the right plan. It has been generally felt that with Wordsworth the chronological study is of peculiar importance; that his poems fall naturally into groups characteristic of his periods of visionary youth, grave-thoughted manhood, and tranquil decline. But we have felt this in a general way, and did not trace out details. Now we shall be able to follow the history of his intellect and his imagination from year to year, sometimes even from day to day. Fortunately, Wordsworth dated many of his poems, and he supplied chronological lists in the editions of 1815 and 1820; these data, together with the Fenwick notes, although Wordsworth's memory was not always to be trusted, supply an excellent basis for attempting a chronology. To these sources Prof. Knight has added one of great importance by his examination of Dorothy Wordsworth's *Grasmere journals* for the

years 1800, 1801, 1802, hitherto known through occasional quotations in Wordsworth's notes and selections made in the *Memoirs* by the Bishop of Lincoln. With the aid of this journal and other sources it has been possible to fix precisely the date of almost every poem of 1802, a very fruitful year.

Prof. Knight prefixes to his text a Chronological Table, in which much work is summed up. It would have been well if he had indicated clearly and invariably what dates are certain and what dates are only approximate or conjectural. In every case of doubt, real or apparent, the evidence ought to have been laid before the reader. Thus "The Whirl-Blast" is dated 1798. Wordsworth's note is given: "Observed in the holly-grove at Alfoxden, where these verses were written in the spring of 1799." This looks perplexing. The reader ought to be informed why Wordsworth's date cannot be accepted. In the spring of 1799 Wordsworth, after his return from Goslar, was, I believe, not at Alfoxden, but with the Hutchinsons at Sockburn-on-Tees. I have not made any close scrutiny of Prof. Knight's table; but unquestionably it must be regarded rather as a very valuable trial-table than as a final result. Thus "Love Lies Bleeding" and "The Cuckoo Clock" are dated 1845, a manifest error, for they were published in the year 1842. Indeed, as to the date of publication, which is given as well as the date of composition, I have noticed several instances where Prof. Knight's 1845 ought to be 1842, and his 1839 ought to be 1838.

To pass from the chronology to the text. Prof. Knight prints the final text of Wordsworth. Here, again, he is certainly right, and sufficient reasons for his decision are stated in the Preface. Some pieces are, however, added to those of the last authorised volumes. In an historical edition such as this, every printed poem of Wordsworth ought to be included. I cannot but regard it as an error that the editor should have omitted "The Convict" of *Lyrical Ballads* (1798), while reproducing "Andrew Jones" from ed. 1800, and should not have given us Wordsworth's earliest printed piece—the sonnet signed Axiologus in the *European Magazine*, 1787. On the other hand, we have to thank him for the "School Exercise" reprinted from the *Memoirs*; for "The Birth of Love," a translation of French stanzas signed Anon. in Wrangham's *Poems* (1795); and more particularly for "Descriptive Sketches" as it exists in the original quarto now unprocurable.

The text, then, is rightly that of 1849–50. But in foot-notes the editor aims at representing, as he says, "the whole previous literary history" of each poem. Students of Wordsworth's poetry know how often and how largely he altered what he had written—sometimes for the better, sometimes for the worse. The present edition is intended to serve as a substitute for the numerous editions which appeared during the poet's lifetime. "Every alteration," says the editor, "whether for the better or for the worse, is here printed in full," only omitting slight changes in spelling, and such alterations as *ye* for *you*. It ought to be possible from the foot-notes to reconstruct the text in every state in which it

is found from 1798 to 1850. Unfortunately, the mode of indicating changes is not wholly satisfactory, and in a good many instances I have not been able to fit the early readings into the text as it stands without a reference to the original editions.

The undertaking was arduous. Absolute accuracy in editorial work is, I believe, unattainable; a margin of error must be allowed. But such an achievement as *The Cambridge Shakespeares* shows to what narrow limits this margin may be reduced. It is hard that for work so nearly mechanical as the collation of various editions, to accomplish which we have simply to transform ourselves into a vigilant eye and a faithful hand, our dull hours will not serve. For such toil our best hours are required; a moment's wavering attention or languor of the eye may bring disastrous consequences. Prof. Knight has given time and toil to this edition. He has correctly recorded hundreds of textual variations. It looks downright ingratitude to be discontented with the gift he brings; yet contented it is impossible to be.

The allowed margin of error is indeed far exceeded, and the errors are not of a single kind. Although much is accurate, we can never feel secure; and, instead of serving as a substitute for the early editions, this new edition, on investigation, proves that they are indispensable. At the risk of wearying the reader I must in some degree make good my assertion. Perhaps the "Song for the Wandering Jew" supplies the most striking example of oversight. Of its seven stanzas two were added after its first publication in 1800, two were transposed, two (including a transposed stanza) were largely altered, and one was slightly altered. None of these changes are noted. In "The Idle Shepherd Boys," stanza 1, add the reading of 1843 (perhaps earlier):

"And, pleased to welcome in the May,
From hill to hill the echoes ring
Their liveliest roundelay."

Stanza 2, add the reading of 1800:

"It seems they have no work to do,
Or that their work is done;"

and that of 1827—

"Boys that have had no work to do,
Or work that now is done."

In the same stanza—text—correct the misprint "rustic hats" to "rusty hats." In stanza 3, correct "depths" to "depth." Add to note 2 on stanza 5 the reading of 1827:

"Cross, if you dare, where I shall cross—
Come on, and in my footsteps tread!"

In note 3, same stanza, for "1832" read "1827." In "Ellen Irwin," stanza 2, add the reading of 1800—"The Gordon." Stanza 3, add the reading 1800:

"But what is Gordon's beauteous face?
And what are Gordon's crosses
To them who sit by Kirtle's Braes
Upon the verdant mosses?"

Stanza 4, add the reading of 1800:

"Proud Gordon cannot bear the thoughts."

Also, l. 3—

"And, starting up, to Bruce's heart."

Also l. 6—

"And stepping forth to meet the same."

Stanza 6, add the reading of 1800 :

"So coming back across the wave,
Without a groan on Ellen's grave."

In "At the Grave of Burns," stanza 6, note the reading of 1842 :

"Well might I mourn that He was gone
Whose light I hailed when first it shone,
When, breaking forth as Nature's own,
It showed my youth."

In "The Complaint of a Forsaken Indian Woman," l. 5, note the earliest reading, 1798 :

"In sleep did I behold the skies."

In the "Anecdote for Fathers" and "Simon Lee," the transposition of stanzas (spoken of by Prof. Knight as important in the case of "Simon Lee") is unnoted. In "Ruth" it is stated that stanza 2 is absent from ed. 1800; but the after-thought was, in fact, stanza 3. In the second poem, "To the Small Celandine," note that the last stanza but one was a late addition to the poem. In note 3, correct "adventurers' skill" to "advent'rous skill;" last stanza, add the reading of 1807 :

"Build who will a pyramid."

It would be possible to go through many poems in like manner. Collating "Peter Bell" with the text of the second edition, 1819 (not mentioned in Prof. Knight's bibliography)—I have not in my possession a copy of the first edition—I find some nineteen omissions or errors; in "The Idiot Boy," collated with ed. 1798, I find ten; in "Hart-Leap Well," collated with ed. 1800, I find nine.

I have dwelt upon what is faulty because Prof. Knight's edition is admirably planned, and because he has been at large cost of time and pains; therefore, it is worth while to test his work strictly. The entire edition will consist of eight volumes. Six remain to be printed. The work in these six may be made as nearly accurate as possible. The first two volumes must be worked carefully over. It would be best if they could be re-issued in a revised form; if this be impossible, the publisher must supply some pages of additions and corrections. Thus it will be possible to make this edition all that Prof. Knight and his fellow-Wordsworthians desire it to be. I fear I am myself responsible for two errors in these volumes, having spoken in a paper on "Wordsworth's Modernisations of Chaucer," from which Prof. Knight quotes, of Tyrwhitt's text of "Troilus and Cryseyde" instead of Urry's; and, again, having spoken in accordance with Wordsworth's old-fashioned view of "The Cuckoo and the Nightingale" as by Chaucer, although aware that the poem is one of those erroneously ascribed to him.

On places and persons connected with Wordsworth's poems Prof. Knight gives notes of much interest. On all that concerns the topography of Wordsworth he is our best authority; he now adds to the obligation conferred on lovers of Wordsworth and of the Lake district by his volume of 1878. Mr. McWhirter's etchings from Cookermouth and Hawkshead appear to me excellent. A portrait of Wordsworth will be given in the last volume. Prof. Knight has been fortunate in obtaining permission from Lord Coleridge to print from a copy of Wordsworth's *Poetical Works* in his possession various MS. readings written by Wordsworth

on the margins. If anyone care to add one more reading, here it is, as scrawled by Wordsworth on a blank fragment of a letter addressed to him, and now lying on my desk: "Descriptive Sketches," (vol. i., p. 41, of Prof. Knight's edition):

"By oholce or doom a gipsy wanders here,
Companionless, or hand in hand with fear;
Lo, where she sits beneath yon shaggy rock,
A cowering shape half seen through curling smoke."

EDWARD DOWDEN.

Memoir of Daniel Macmillan. By Thomas Hughes, Q.C. (Macmillan.)

LATE as this book is in appearing—Daniel Macmillan died in 1857—and written as it is by an Oxford man who knew only his late career, instead of a Cambridge one who knew his life there, or, better still, by his brother, who knew him through his whole career, this *Memoir* will be welcome to all folk who care for the record of a thoughtful, able, and earnest man's life and success even in spite of feeble health and many adverse circumstances. Specially welcome is the book to those Cambridge men who, like myself, can recollect Daniel Macmillan's first coming to his first Trinity Street bookshop in 1843, and who owe him the best of such teaching as they got at the university. For many of us our tutors did nothing but give us a little mathematical and classical cram. The man who taught us to think, to read the books that made us think, and opened our boating minds, was Daniel Macmillan, along with our college friends. As long as his health lasted, and he was able to stir up undergraduates—and graduates—by his talk, he was a real power in the university. The impression he made on me was so strong that, when I took my degree in 1846, I wrote to my father, begging for a few thousand pounds to go into partnership with the Macmillans instead of to the Bar; and grievously was I disappointed when the money was refused, and I sent up to London to grind at conveyancing precedents. Yet I'm sure I should have done the firm much good, and prevented its getting so rich as it has become.

A bare-footed boy in the West Highlands, Daniel Macmillan was in 1824 bound apprentice, at the age of eleven, to a bookseller and binder of Irvine for 1s. 6d. a-week for the first year, and a rise of 1s. a-week for each of the following six years. One day his master accused him of taking something in the shop. The boy resented this. His master struck him, and Daniel seized his cap, shied the day-book at Mr. Dick's head, and bolted. That was Daniel Macmillan all over. The steam was in him still in 1843-46, when I saw most of him. In 1831 he went to Atkinson's shop in Glasgow, there did too much, and broke down. Then he came to Johnson's second-hand and new bookshop in Cambridge from 1833 to 1837, and learnt much about books. Thence he migrated to Seeley's, in Fleet Street, and while there—through the well-known *Guesses at Truth*—made the acquaintance of the man who in turn made him, or rather his success in life, Archdeacon Hare. In February 1843, he started a small business

in Aldersgate Street, which his brother Alick managed, and on August 28, 1843, Archdeacon Hare and his naval brother, Marcus, lent Daniel Macmillan £500, with which he bought Newby's business in Trinity Street, Cambridge, and started in the October term. We soon found that a man had come among us, and from that time the success of the firm was assured, for its head had brains, aims, principles, shrewdness, judgment, and the right ground to use them all in; and though his health at once began to break, yet the loyal help and affection of his brother carried the work on; no chance was left untried; the right men were picked; the tide was taken at its flow, and led on to fortune. We used to say, in my time at Cambridge, that Archdeacon Hare never laid out a better £500 in his life for himself and his friend Maurice, or the university, than when he sent Daniel Macmillan to Cambridge.

The pluck of the man was tremendous. He was always so ill that he would have been quite justified in turning invalid, lying on his back and doing nothing; but he fought and worked, married happily, and had children, planned and directed, till he had used up every atom of force that his strong will could gather, and then, after saying, "I am so tired, tired," and a few more words, on June 27, 1857, ceased to be. Daniel Macmillan, like his brother, owed most of his character to his mother. His father died when he was ten. Brought up a narrow Scotch Calvinist, getting "religion" among the Baptists at Cambridge, to whom his employer Johnson belonged, he opened out into Broad Churchism at Seeley's under the influence of Hare's *Guesses at Truth*, Maurice's *Kingdom of Christ*, and Alexander J. Scott's *Lectures*. In that belief he continued and died. He was a strongly religious man, looking Death in the face almost weekly for the last twelve years of his life. No young fellow who came under his influence is likely to forget him. I can see the dark Scotch face with its deep-set eyes and prominent lips, and can hear the hearty laugh and the catch of the asthmatic breath, as plainly now as any time in the years 1843-46, when their owner was holding forth or chatting in any of the three Cambridge shops which he successively held.

Mr. Hughes's book has a kind of stranger's, far-off touch to me, as if he had never known Daniel Macmillan well. Their natures are not much akin. But the *Memoir* lets the man tell his own story by his letters, and the reader gets a view of one more man who in his day did a good stroke of work, and left the world better than he found it.

F. J. FURNIVALL.

History of Rome. By Wilhelm Ihne. English Edition. Vols. IV. and V. (Longmans.)

These volumes complete the author's translation of his *History of Rome*, originally published in German. Dr. Ihne has done ample justice to his own work. His English style is admirably clear and forcible. We heartily welcome a book which presents the familiar narrative with all the accuracy and

impartiality that could be desired, and is likewise remarkably rich in independent suggestions and criticisms. The first three volumes, together with the same writer's short account of Early Rome in the "Epoch" series, are widely known and highly valued, particularly for the light which they throw on the early phases of the Roman Constitution. Dr. Ihne's extreme scepticism with regard to the traditional history did not prevent him from attempting to divine the real course of political events from the one-sided version of the Roman historian; and he has contributed not a little to the reconstruction which Niebuhr initiated. It was to be expected that a writer who had dealt so ably with the politics of the early Republic would exhibit equal insight into the circumstances of its decline and fall. The volumes before us embrace the period from the end of the Punic Wars to the close of Sulla's dictatorship. Dr. Ihne rightly regards this as the practical termination of the Republic and the beginning of the Monarchy. As for the Dictator's abdication, he explains the apparent mystery by showing that such a step was only consistent with his peculiar position. He could not be a perpetual Dictator, because his object was aristocratic, not monarchical rule; while at the same time it was impossible for him to resume the place of a simple Senator. He therefore sensibly retired to watch and test the working of the reformed Constitution.

The fourth volume is especially interesting as a study of the political forces which constituted the Republican or Senatorial régime. No historian of Rome has more lucidly analysed this unique combination of popular sovereignty with aristocratic direction, where the people exercised a real controlling power, extending even to the military administration; while the Senate, notwithstanding, maintained its place as the executive during the critical era of conquest till it broke down under the burden of Empire. Dr. Ihne finds the chief secret of this harmony in the preponderance wisely secured to the rural vote. This was generally sufficient to give a conservative spirit even to the Comitia Tributa and the Tribunes themselves, so long as Roman statesmen adhered to the rule of excluding freedmen and other new voters of the poorer class from all except the city tribes. As regards the legal relation between the Senate and the Comitia, Dr. Ihne notices the various fatal infractions of the Senate's right of initiative, ending with the systematic violation of the established precedent by the Gracchi. He ventures the conjecture that, when the Senate restored the old usage after the fall of C. Gracchus, they must have obtained for it the force of law, since Marius, when Tribune, instead of dispensing with a *Senatus-consultum*, had to extort it by threats of violence. Regarding the more complicated question of the relations between the two popular Comitia, Dr. Ihne adopts the well-known theory that the number of centuries in each class was equalised, so as to deprive the rich of their predominance, and at the same time to adapt the number of the classes to that of the tribes; but he holds that this change (like the classification ascribed to Servius Tullius) was not effected at any one time, but was

brought about gradually by the Censors, whose right of making citizens and classifying them seems to have been quite absolute. He differs from Mommsen respecting the extent to which Sulla curtailed the tribunicial power, accepting Livy's statement—which is certainly explicit—that the Tribunes were unconditionally prohibited from proposing laws.

No less valuable is Dr. Ihne's account of the external history, which culminates in the Social War. The hardships of the allies must have been the more intolerable if, as he maintains in spite of Livy, equal alliances had previously existed in almost every quarter, except where the land had been confiscated and colonised. He lays much stress on the commercial isolation of the Italian communities, which contributed, along with the competition of slave-labour and of foreign corn, to ruin the farmers. He doubts whether the Agrarian Commission, though it survived its founder, C. Gracchus, really succeeded in establishing any considerable number of new proprietors. Mommsen connects with its labours the extraordinary increase of citizens during the six years B.C. 131–125; but how (as Dr. Ihne asks) could the Commission create citizens? He follows the high authority of Lange in supposing that some partial extensions of the citizenship must have been made, though the plebiscita are not on record. But the crucial grievance of the allies was the liability to eviction, which was brought nearer by the democratic agitation for new colonies. M. de Coulanges, indeed, assures us that "the principle of all the agrarian laws was that neither the subject nor the ally could own the soil; for them property had no existence; the law admitted the complete right of property only within the limits of the *ager Romanus*." Dr. Ihne regards the danger as resulting simply from the scarcity of unoccupied land. The agrarian reformer, M. Livius Drusus, declared that "he had left nothing to give away except the sky and mud" (*coelum et coenum*).

The Social War must be attributed to the "overbearing pride and self-sufficiency" of the Roman citizens, and to the obstinate conservatism or "legalism" so strongly rooted in the Roman character. The spirit of concession was arrested just at the critical moment when Rome had won complete dominion over Italy, and consequently her steadfast allies were left outside the pale of the Constitution. The impolicy of the Senate hastened the inevitable revolution, which Dr. Ihne describes somewhat metaphysically as the "restoration of equilibrium," through the gravitation of power to the masses of the provincials, but which was much more due to the inherent necessity for a strongly centralised military government to defend the empire.

GEORGE C. WARR.

The Last Punic War: Tunis, Past and Present. By A. M. Broadley. (Blackwood.)

ALTHOUGH since the recital of M. Roustan the Tunisian question has passed its acute stage, the political situation in Egypt and the continued ferment among the Arabs of North Africa give a fresh interest to the

subject of these volumes. Mr. Broadley, as correspondent of the *Times* during the French expedition, enjoyed excellent opportunities of criticising the preparations made for that enterprise, and of arriving at a sound judgment of its political and military success. Several vexed questions discussed by him are of so purely political a character as to be beyond the scope of the ACADEMY. Indeed, the chief and most absorbing interest of this work is political; for the introductory *résumé* of the history of Tunis cannot be seriously regarded as a literary achievement, being merely a bald chronicle of events in which the Spanish occupation under Charles V. alone receives anything like adequate treatment, and which, besides showing too evident signs of hasty compilation, is marred by errors that might easily have been obviated by a thorough revision. This is the more to be regretted because a succinct and critical review of the history of Tunis anterior to 1830 would have formed a welcome prelude to Mr. Broadley's interesting and valuable account of his personal experiences. A special correspondent of a newspaper, particularly when at the seat of war, is necessarily often obliged to write with extreme haste; but it is inexplicable that, when he has resolved upon publishing the important and well-digested information of a year's practical experience, he should appear indifferent to the literary form it should take. It is both surprising and annoying to observe that, by the exercise of even ordinary care, these volumes might have been rendered far more readable. The omission of digressions that are often wholly irrelevant, and the absence of errors that are clearly the result of inattention, would have endowed Mr. Broadley's narrative with a coherency and stability of structure it does not now possess.

The advent of this book seems to have much exercised the minds of people in Tunis, and to have been anticipated, by M. de Grilleau at least, in a sanguine spirit which he will not find justified on perusal. In a recent letter that breathes a patriotic belief in the future of Tunis and in the reality of the policy of reform inaugurated by M. Roustan's successor, M. Cambon, the French correspondent speaks of Mr. Broadley, who was, "during the campaign, the soul of the English opposition," as having been recently completely converted to the French cause, and alludes to the present publication as about to appear under the title of the "Fourth Punic War." The *amour propre*, however, of all concerned in the expedition to Tunis will now receive a rude blow, for Mr. Broadley exhibits no signs of any such conversion, and his attitude is as honourably consistent as might have been expected. His narrative of the incidents that led to M. Roustan's melodramatic rise and fall, and his history of the whole campaign of last summer, form a scathing *exposé* of the Roustan-Musalli intrigues, and of the lamentable deficiency of ordinary forethought on the part of the commissariat and ambulance service in the French army of occupation. He has nothing but praise for the brave and noble spirit of endurance displayed under the most exasperating circumstances by the young French soldiers, but at

the same time he does not spare the trickery of French diplomacy. His account of the conduct of the war and of the events that led to the enforced treaty with the Bey make complete the unsavoury revelations of the Rochefort trial; and there need be no difficulty, even for M. de Grilleau, in appreciating the irony of the title of this work—"The Last Punic War."

Considerable light is thrown by Mr. Broadley upon the somewhat mysterious raids of the Khamirs into the province of Constantine, but the true origin of the disturbances that afforded the French the pretext for invading Tunis still lies enshrouded in obscurity. A fortnight spent among the Khamirs convinced him that these mountaineers are not the savages they were represented to be by the Algerian *Akhbar* and certain French journals, but agriculturists and cattle-breeders addicted to Rob Roy's practice of the good old rule and simple plan. In an animated chapter Mr. Broadley testifies that nothing could be easier for those interested than to foment disturbances and then magnify the gravity of their result to the authorities in France. The occupation of Kef, the bombardment of Tabarka, and the advance of Gen. Forgemol into the Khamir mountains were incidents of such swift sequence that they effectually deprived the Bey of time to consider his position. The control of the telegraph was an immense advantage to M. Roustan and his friends; Mr. Broadley's remarks on this subject, and his chronicle of the events of the spring of 1881, possess the merit of thoroughly elucidating a dark diplomatic chapter in Tunisian history. The bombardment of Sfax, the autumn campaign, and the quadruple military promenade to Kairwán occupy the greater part of the second volume, and are described with much picturesque power. The author's illustrated account of the Holy City is, however, of greater and more permanent interest. Previous to the French occupation, Kairwán was almost unknown to Europeans, and had scarcely ever been leisurely inspected by traveller or archaeologist. Dr. Shaw barely refers to the city in his remarkable *Travels*; and Mr. Rae's notice of it, and his plan of its streets and walls, formed, indeed, the only monograph of authority we possessed. Mr. Broadley's description of Kairwán and its great mosque is deeply interesting, and is accompanied by some useful illustrations. He enjoyed the good fortune of being the first European who visited the interior of the tomb of a personal friend of the Prophet, Abdullah Ben Wádib el Belawi, a sanctuary not even second in reputation to the great Mosque of Okhbar itself. His detailed account of this building shows it to be of marvellous architectural beauty and archaeological interest, even when compared with the many other striking monuments of Arab art in Kairwán.

J. ARTHUR BLAINE.

Reminiscences of my Irish Journey in 1849.
By Thomas Carlyle. (Sampson Low.)

MR. FROUDE, who has edited these *Reminiscences*, as well as the two volumes published last year, tells us in his Preface that in

Carlyle's journal for 1849 the two following entries occur:—

"May 17, 1849.—Am thinking of a tour in Ireland; unhappily, have no call of *desire* that way, or any way, but am driven out somewhat (just now) as by the point of bayonets at my back. Ireland really is my problem; the breaking point of the huge supposition which all British and all European society now is. Set down in Ireland, one might at least feel, *Here is thy problem*: In God's name, what wilt thou do with it?"

And what, in God's name, did he do with it? Alas! This is what he wrote when he came back:—

"Nov. 11, 1849.—Went to Ireland as foreshadowed in the last entry; wandered about there all through July: have half forcibly recalled my remembrances, and thrown them down on paper since my return. Ugly spectacle: sad health: sad humour, a thing unjoyful to look back upon. The whole country figures in my mind like a ragged coat; one huge beggar's gaberdine, not patched or patchable any longer: far from a joyful or beautiful spectacle."

Far from it, indeed, to see a great teacher and philosopher, the author of *Sartor Resartus* and the *French Revolution*, doing no more with the problem which he owns was given him to consider than weakly railing at it. This Irish journal is, as Carlyle himself would say, if he were reading it in sane mind and health, the pitifullest of human utterances. Vain bemoanings at his own state of health, ill-natured remarks about everything and everybody, and grumbings at little personal discomforts make up the greater part of it. Only once, so far as I can remember, does he utter any expression of thankfulness, and then it is for a "beautiful big old English bed, in which, begirt with mere silence, I slept and again slept a heavy sleep still remembered with thankfulness." Well for him if he could have remembered more with thankfulness. He seems to have had what any ordinary mortal would have deemed a very delightful tour in Ireland. He found plenty of friends there, who gave him a warm Irish welcome without attempting to lionise him. He was not bored by any great banquets, but was passed on by easy stages from one country house to another, being everywhere received with the greatest kindness and hospitality. But a disorganised stomach spoilt all, and turned the fair green isle of Erin into a boggy waste.

Like so many Englishmen, he regards Irish evils as arising entirely from the national character. "Remedy for Ireland," he exclaims—"to cease generally from following the devil; no other remedy that I know of." He suggests no means whereby the kingdom of God may be promoted, and oppression and wrong done away with. This is what all true workers for Ireland are now trying to effect, but it is to be feared they would not have Carlyle's sympathy. If the problem were given him to solve, it is terrible to think that he should have made no effort to understand it. Happily, Mr. Gladstone never says, "Eheu! to bed, and leave it to the gods."

Thus the truth has to be stated, even by a devoted disciple of Carlyle. These Irish reminiscences, like the former volumes, reveal

a very weak, discontented mortal, instead of the strong, terribly earnest, scathing prophet whom we behold in his works. Indeed, the most pleasant glimpse we have had of Carlyle lately has been in Caroline Fox's delightful journal. Even his melancholy could not resist the influence of her bright, active spirit. Yet in spite of this revelation of weakness and ill-temper, the great torn heart of the man is plainly visible. A preacher who denounces the evils of his time is apt to let his voice grow harsh with perpetual remonstrance. Jeremiah had not a smooth tongue, and probably Isaiah frequently made himself unpleasant to his friends. When these miserable reminiscences are forgotten, Carlyle's influence will again be felt, and he will then be more gratefully remembered by an age that owes much to his teaching.

MARY M. HEATON.

A COLLECTION OF SPANISH SONGS.

Chants populaires Espagnols: Quatrains et Séguidilles, avec accompagnement pour piano. Dessins de Santiago de Arcos, par Achille Fouquier. (Paris: Librairie des Bibliophiles.)

M. ACHILLE FOUQUIER is known to the public by his sketches of travel and sport in the Pyrenees, in the East, and in Tunis, and to his friends for his MS. collections of Basque and Spanish songs. He has here published an *édition de luxe* of the most popular Spanish seguidillas and coplas, with the originals and French translations side by side, arranged according to their subjects. The majority of these verses are of Andalusian origin, but sufficient are given from other parts of Spain to make the book fairly representative of all that is really Spanish, excluding the Catalan, Galician, Asturian, and Basque songs. The short introductions to each section are admirably done. Without wearying the reader with irrelevant or too learned disquisitions, just enough is said to direct the attention to what follows, and to form a slight break in what might otherwise prove the monotony of these endless quatrains. Not that these trifles are altogether without instruction. There are traits in the Spanish character that can be read better in these verses than in any deeper study. The passionate ardour of Southern love, with its depth and intensity in some cases, and its mere hasty flash and fiery sparkle in others, is here abundantly portrayed. The true religious feeling, as well as the superstition, which sways so many Spaniards finds frequent expression here. That sad melancholy and weariness of life—the effect, perhaps, of want of vitality in a warm climate which makes Dolores and Lágrimas sometimes so appropriate names to Spanish girls—is also fully represented. It is curious to remark the concentration of thought and terseness of expression of these *coplas* in a people whose oratory and writings so often sin by wordy vagueness and diffuseness. Here and there one meets with coincidences of thought and expression common to far different poets. In Mrs. Browning's "Sonnets from the Portuguese," she tells of her husband's first

kiss, and of her own gift of a lock of hair, keeping

"pure from all those years
The kiss my mother left there when she died."
With greater passion some unknown Spaniard
sings:

"Dos besos hay en el mundo Que no se apartan de mí, El ultimo de mi madre Y el primero que te di."	"There are two kisses in the world Which shall never depart from me, The last which my mother gave And the first which I gave to thee."
---	--

Goldsmith's touching lines in the *Vicar of Wakefield* are almost exceeded in pathos by the following:—

"Por tí me olvidé de Dios, Por tí la gloria perdí, Y ahora me voy á quedar Sin Dios, sin gloria y sin tí."	"For thee I forgot my God, I lost my honour for thee, And now I shall ever remain Without God, without honour, and thee."
---	--

Could passionate love be better expressed than in the two following? Notice the diminutive "*malito*" in the first; the dear one is only a little ill, yet his frenzied "*novia*" says:—

"Me han dicho que estás malito, Y á Dios le pido llorando Que á mí me quite salud Y á tí te le vaya dando."	"They tell me that you are unwell, And with tears I beg it of God, That from me he should take my health And bestow it all upon thee."
--	---

"Te quiero mas que al viver, Mas que á mi padre y mi madre, Y si no fuero pecado Mas que á la Virgen del Carmen."	"I love thee more than the life, Than father and mother more, And if it were not a sin, Than the Virgin del Carmen more."
--	--

Here is one which may fit some of our own fair coquettes who are fond of exhibiting a cross from their necks:—

"Donde matan á un cristiano Suelen poner una cruz. ¡Por eso con hilo de oro Al cuello la llevas tú?"	"Wherever murder is done A cross is wont to be set. Is this why with chain-let of gold You wear one about your neck?"
---	--

For the wit take this:

"Cuando uno quiere á una, Y esa no lo quiere, Es lo mismo que encontrarse Un calvo en la calle un peine."	"When one loves another, And that other loves not one, It is as if a bald man In the street should find a comb."
--	---

Our last shall be for the folk-lore mythologist. It is written by one who knows nothing of Tithonus, yet a whole legend might easily be evolved from it.

"Cuando sale la Aurora Sale llorando; ¡Pobrecita, qué noche Habrá pasado!"	"When Aurora rises Forth in tears she goes. Poor little one! what a night (Of sorrow) she must have passed!"
---	---

The illustrations of Gutierrez Arcos are worthy of the text; we admire especially the last, the conversation at the prison bars. An Appendix of music completes a volume which must be welcome to all lovers of Spanish literature and song.

WENTWORTH WEBSTER.

TWO BOOKS ON SCOTTISH SPORT.

On the Grampian Hills. By F. F. Whitehurst. (Tinsley Bros.)

Benderloch; or, Notes from the West Highlands. By W. A. Smith. (Paisley: Gardner.)

THE thread of sport which alone connects these books is sufficiently slender. Mr. Whitehurst shot grouse and ptarmigan; while sport in *Benderloch* means for the most part sweeping Loochs Etive and Creran with a dredge. It is worth while noticing them, because anything relating to sport is of great interest to the multitudes which will shortly flock in pursuit of it to Scotch lodges and country houses. Perhaps the best mode of characterising these books would be to call one sport without natural history, the other natural history without sport. Mr. Whitehurst brings together some thirty articles which originally appeared in the *Daily Telegraph*, and prattles artlessly in the style which is dear to the readers of that paper on the plumage of a ptarmigan or the changing colours of the Scottish hare. Less than a third of the book treats of sport proper on the Grampians; and, although the second title promises grouse and ptarmigan shooting, deer stalking, salmon and trout fishing, the few lines devoted to these latter subjects are of the most commonplace character. Hackneyed topics may be rendered interesting by novel treatment, but neither instruction nor amusement could be gained from Mr. Whitehurst's narratives of grouse and ptarmigan shooting. His attitude is that of a Londoner who pays a visit to Scotland, greatly enjoys the luxury of the new saloon carriage and sleeping accommodation on his way north, and the many good things which a Scotch country house contains for its guests, but who has neither sufficient experience in shooting and fishing, nor sufficient literary skill if he had to render his essays useful to sportsmen, in the sense that St. John's and Colquhoun's books are useful. He compares himself to Mr. Winkle when he went rook-shooting, and as far as his claims to treat of Scottish sport are concerned, we are content to acquiesce in the simile.

The bulk of the book is made up of articles written in the ordinary sporting style of the day on runs with different packs of hounds. Jeune as this kind of literary fare is in the weekly sporting papers, it becomes intolerable to most readers a season or two after date. He must be a keen hunter who cares in fancy to run with the Brighton Harriers, when the scent is very cold indeed, after a year or two have elapsed. All such accounts of hunting inevitably proceed on the same lines. A "vulpine quadruped" is first found. Many pages may be filled with a skilful enumeration of his running from thisholt to that spinney, by Lord's A.'s park, up Sir Peter B.'s avenue, and the like. It is then time to kill "the quarry;" and this allows a grand opportunity of introducing the names and horses of those who were up at the finish. Of course the lovely daughters of the M. F. H. himself will be particularised, the Hon. Henry C. (on a gallant gray), Captain D., Major E. (on a shapely chestnut), Viscount F., and the cheery form of Squire G. So ends

"a regular clinker of a run." Those who like this style of writing will find as much of it as the most ardent fox-hunter can desire in *On the Grampian Hills*.

Benderloch is written in the form of a journal kept by a country-lover of the various rustic sights and sounds which succeeded one another during the last two years in the district of Appin, in the Western Highlands. A pleasing and poetic appreciation of bird, flower, and insect causes the book to resemble the writings of Milner and the author of *The Gamekeeper at Home*. The scent of heather is wafted on the fresh Atlantic breezes through its pages. With much observation Mr. Smith has little or no sense of humour, and thus misses much that is enjoyable in the lives of the lower animals, and many opportunities of enlivening his pages; but the book is a faithful transcript from day to day and week to week of the natural changes in animal and vegetable life where the ordinary sternness of a Scottish climate, especially in winter, is mitigated by the vicinity of the Gulf Stream. We are surprised at the many objects of interest on the shores of Looch Etive, or in his walks among the fir plantations, which Mr. Smith could find even in the month of December. The landscape in the different seasons is carefully described, and the ever-changing beauty of hills and sea lovingly dwelt upon. When wind and weather admitted, Mr. Smith swept the seabottom with his dredge, and generally managed to find some mollusc, serpula, or seaweed, which forms the subject of a pleasant examination. At other times he lands, and either shoots or rambles over brae and glen with the hungry eyes of a naturalist, not disdaining a chat with the natives, and every now and then inserting a scrap of folk-lore. Thus we learn that to see a colt with its back towards you on starting for a journey is the worst of luck, only to be exceeded, perhaps, should you chance to hear a cuckoo before breakfast. The comparatively recent arrivals of the rabbit, squirrel, and starling in the Western Highlands are duly commented on. Mr. Smith, in gipsy-fashion, experimented upon a dinner off a squirrel, and, by soaking the creature in running water, managed to wash out the strong flavour of turpentine which it naturally possesses, and enjoyed a good meal. It will be long, however, we opine, before squirrels will be generally eaten. *Benderloch* is in many respects a charming book, filled with a keen appreciation of natural beauty and penetrated with love for all the creatures which so greatly endear themselves to lovers of the country. It contains a solecism here and there; and occasionally the author, after the manner of his nation, indulges himself in a mild metaphysical speculation, but speedily returns to Looch Linnhe and the scented pine-woods of his pleasant home. We cannot fancy a book which would prove more useful and interesting to every poet-naturalist who uses his eyes and ears. It ought to be found on the table of every Highland lodge this summer. Observations occur in it on very many of the objects contained in the fauna and flora of Western Scotland. The merganser, the guillemot, and the different gulls of the Western sea-board are evidently dear to this

akilful observer. We thank Mr. Smith for a delightful addition to the natural history of the Highlands, and that we do so heartily may be proved from the fact of the book possessing no index. That neither table of contents nor index are to be found is the great blemish of *Benderloch*. The addition of an index would at once give unity and usefulness to what at present are but careful though disjointed studies of the life and habits of many interesting and some rare creatures.

M. G. WATKINS.

SOME ANTIQUARIAN BOOKS.

A Digest of the Domesday of Bedfordshire. By William Airy, M.A., late Vicar of Keysoe, Bedfordshire, Rector of Swynahed, and Rural Dean. With Preliminary Note by his son, Basil Reginald Airy. From Mr. Basil Airy's Preliminary Note, we learn that this work was completed by his father only a few months before his death in 1874. The bulk of it was compiled from eight to ten years ago. The present publication is due to Mr. D. G. Cary Elwes. The MS. was submitted to members of the Archaeological Institute when they met at Bedford in 1881; and, at their suggestion, Mr. Elwes set to work, and succeeded in getting together the requisite number of subscriptions. The late Mr. Airy, being connected with Bedfordshire, was led to undertake an extension and translation of Domesday for the county, as a sequel to the issue of Sir H. James' photo-sineographic facsimile, which took place somewhere in the sixties. Having accomplished this task, he found himself dissatisfied with it.

"I became convinced," he says, "that a bald translation of Domesday is of no value whatever: the difficulty of reference is as great as with the original: and the sameness of character in the entries is more palpable, and becomes more wearying when repeated over and over again in English words at full, than when the eye catches up the meaning in a rapid glance over the Latin contractions."

Accordingly, he prepared a Digest of the entries which make up the record—an arrangement which, for this county, is more necessary and appropriate than for some others. In Bedfordshire, a manor, now a parish, bearing one name, was often divided among a number of owners. Thus *Alricessei*, with variations of name, occurs four times over. The Bishop of Durham held land in it; so did William de Ow; so did Nigel de Albini; and so did Ulei, a "King's prebendary" and burgess of Bedford. These scattered entries are all brought together under one heading, that heading being the modern name of the manor or parish (in this instance *Arlsey*). These modern names are arranged alphabetically, the Domesday names being added, as it were, parenthetically. This arrangement is open to two defects, which, to a stranger, are at once apparent. First, there is no index of Domesday names. Thus, if you hit upon *Wadehelle*, there is no index to tell you where any account of it is to be found. Mr. Cary Elwes has appended a valuable Index, in which, however, names of persons and places are both massed together, whereas they should have been indexed separately. But to find *Wadehelle*, the reader must turn over the leaves at hasard, until he happens to light upon the modern name *Odell*, under which the place he is in search of is to be found. Next, the Digest, being of the same size and appearance as the Ordnance Survey facsimile, is, nevertheless, published separately from it, and has no other references to the original than the paging of the photo-sineograph. So that a reader who happens to possess only Sir H. Ellis' edition has no clue to the whereabouts of names what-

ever. The notation, which all the literary world recognises, of 215 (a, b) or 216 (1, 2, 3, 4), and so on, is neglected altogether. These are serious drawbacks. Mr. Airy, however, has done more than arrange the items alphabetically according to manors or parishes. He gives a summary of the record for each item, which is only a translation, slightly re-arranged; and, in the margin, he has given the comparative values of each piece of land under three headings—D, O, and E. D stands for 1086, the date of the survey; O for 1086, the date of the Conquest; E for "the reign of King Edward" to fix which Mr. Airy takes the arbitrary date 1046, or twenty years before King Edward's death. For this latter assumption we venture to think there is no authority. The Latin is, taking *Fliteuicche* for example, fol. 216 (2), "Valet .l. solidos; quando receipt .lx. solidos; T. B. E. viii. libras." Mr. Airy renders "D. £2 10s.; O. £3; E. £8." But T. B. E., unquestionably throughout the counties for which the *Exeter Domesday* exists, always means "ea die qua rex E. fuit uiuus et mortuus," or, as the Winton cartulary has it, "on ðam timan ðe Eadwerd cing wes cucu and deað." If this rule be the same all England over, the entry for *Flitwick* means that on the 5th of January 1066 it was worth £8; that when the Norman owner, William Lovet, received it it was worth £3; and that in 1086 it was worth £2 10s. This serious depreciation in value of the Bedfordshire manors affords a melancholy insight into the devastation which the events of 1066 caused in this part of England; and it would be a curious enquiry to trace by the scale of depreciation the path of armies through the county, as has been done for the West of England by the Rev. J. A. Bennett, of South Cadbury. Mr. Airy appears to have done good service in correcting the errors of the Messrs. Lysons; and he has been so far successful in the matter of identification as to leave, if we understand, only one place unassigned. He has also given brief biographical notices of the tenants *in capite*. The Introduction is interesting, but, it must be confessed, not very original, nor very profound. Mr. Airy has the usual things to say about the measurement of land, the virgate, the carucate, &c.; but what he has said is not the last that has been said on these subjects, and must be considered as, to a great extent, of the past. He calls attention to a singular tenure of a piece of land by a priest in frank almoign, on condition of his saying a mass every Monday for the souls of the King and Queen, the former being living, the latter at this time dead. There is a passage of which further elucidation would be welcome, fol. 218 (3): "Dnas uirgas uero et dimidium occupauit, unde nec liberatorem nec aduocatum inuenit." Mr. Airy ingeniously, perhaps correctly, renders—"Two and a-half virgates he has taken possession of, for which he produces neither livery nor voucher." We should gladly have heard something more of the ideas of the translator with regard to the "livery and voucher"—so also with respect to the "King's prebendaries" and other matters. But the reader, while he enjoys the author's pleasant companionship and safe guidance over the level country, must not, perhaps, complain that he has to climb the hills alone.

Members of Parliament, Scotland, 1857-1880. (Privately Printed; Aylesbury: Hazell.) This work, which is reprinted from Mr. Foster's *Collectanea Genealogica*, is the first that has been completed of the elaborate lists which he is issuing in that new periodical. It is also the first of the "Members of Parliament" series, and is to be followed by volumes dealing respectively with the English and with the Irish members. The need of such a work has undoubtedly been

felt, and it will prove, we believe, a very welcome addition to our existing books of reference. Mr. Foster, in this case, frankly disclaims all pretensions to original research, and warns us that his list is avowedly a compilation. As a compilation, therefore, it must be criticised; and, as such, we do not hesitate to say that it reflects the highest credit on the industry of Mr. Foster and of the students who have volunteered him their assistance. The labour involved has been very great, and dreary at the best, and it would be ungracious to search for the minute errors which must always be inseparable from works dealing with many thousands of facts. But Mr. Foster has not confined himself to re-arranging and annotating the official list. He does not hesitate to correct it in many instances; and so numerous are the errors which, with the assistance of Mr. Bevan, he has detected that a revised edition of the Irish return is said to be now in contemplation. He has also incorporated the names from Willis' *Notitia Parliamentaria*, a valuable addition to the official return. It is but just to add that such a work as this can afford little scope for that critical acumen which has distinguished Mr. Foster as a genealogist, and the hostile reception of which, in a certain quarter, has enabled him signally to vindicate himself. He has published and circulated with the present volume a "Reply to the Remarks of the Lyon Clerk Depute" on his biographical notices of the Scotch members. Mr. Foster had, it seems, been taken to task for his incredulity about a peerage pedigree "proved and registered" at the Lyon office a few years ago. In this remarkable paper, which is a masterpiece of genealogical criticism, he ruthlessly demolishes this precious production, and displays, in the course of his minute analysis, a singularly exhaustive knowledge of records beyond the Tweed. We fear that this onslaught of the audacious Southron must have left the Lyon "stantant affronté," and his Clerk Depute "at gaze!"

Index of Norfolk Topography. By Walter Rye. (Longmans.) We have in this volume a fresh proof of Mr. Rye's indefatigable industry, and of the thorough mastery of the antiquities of Norfolk which, by incessant labour, he has attained. It is due chiefly to such antiquaries as himself that the standard of topographical excellence has been rapidly rising, and that the "impudent" plagiarisms which he justly denounces are being now widely supplanted by works of original research. There is also a marked tendency among recent local historians to restrict the areas with which they deal—a sure consequence of the closer study now demanded in these matters. Mr. Anderson's work seems only to have shown how much even of printed material there was yet left to be catalogued, but the peculiar value of Mr. Rye's arduous undertaking lies in his indexing of those MS. collections with which he is so well qualified to deal. He has done so much, and done it so well, that we cannot but regret his abandonment of his original intention to include the valuable calendars of Domestic State Papers (p. 8), his reason being that they are "well indexed in themselves." As he rightly praises the Index to the admirable Calendar of Bodleian Charters, and yet incorporates its references in his work, the reason seems hardly consistent, especially as an Index to the Norfolk references in all the volumes of the State Papers would have saved infinitely more labour for future searchers than one to the single volume of Bodleian charters, and to save labour by making every index as comprehensive as possible should be the primary object of the Index Society. The calendars of Chancery suits under Elizabeth might also, perhaps, have been laid under contribution. The Index will possess

great interest for students of local nomenclature, this division of the subject having been worked up very carefully. If Mr. Rye occasionally hesitates needlessly in identifying a place-name, he errs, if at all, on the right side, and does wisely in leaving it an open question. We venture to think that, in indexing, under Norwich, "the Dutch Church" and "the French or Walloon congregation" separately, he has ignored, by what seems to be a common error, the fact that the Walloons who immigrated into the Eastern counties under Elizabeth were then known as "Dutch," and were, of course, quite distinct from the French immigrants of a century later. We are glad to learn that Mr. Rye contemplates a Life of Peter le Neve in recognition of his eminent services in the cause of antiquarian research.

The History and Antiquities of Colchester Castle. (Colchester: Benham.) This unpretending little work, in its neat cover, stands aloof from the run of local publications. As a critical and exhaustive monograph on this "vastest of Norman donjons" it is a valuable contribution, not only to the local, but to the general, history of England. We regret, therefore, that, in the praiseworthy attempt to interest as many readers as possible in his subject, the author has avowedly given "a popular form" to the book. The incessant foot-notes to which "the dry bones" are relegated teem with concise information, but the device is not a convenient one. The true "history" of Colchester Castle is singularly uneventful, the chief points of interest in the fortress being its size, its early date, its materials, and the part it played in the events of the years 1214-18. These three last are thoroughly discussed from an independent standpoint, and the results obtained are original and interesting. A remarkable resemblance to the Tower of London is discovered in some of the leading features, and the conclusions of previous archaeologists are vigorously assailed. The author assigns to the keep an earlier date than is generally admitted, and on this subject makes a telling point (p. 148). The struggle for the fortress at the period of the Charter is well worked out, and some slight errors of Canon Stubbs are corrected, as also are some of Mr. Freeman's assumptions. Mr. Markham's account of the siege of Colchester is somewhat sharply criticised. There is a useful introductory chapter on ancient Colchester, and that on the "Demesnes of the Castle" treats of a subject of which little is known. Traces, it is suggested, are found among them of the long-sought common lands of a Hundred. There is a good view of the noble gateway of the Keep—an early twelfth-century addition.

A Description of the Monument and Effigies in Porlock Church, Somerset. By Maria Halliday. (Torquay Directory Company.) The dual church of Dunster stands out as one of the glories of Somerset and one of the curiosities of ecclesiastical architecture in England. The exterior of the neighbouring church of Porlock is not likely to arrest the attention of the stranger—until two years ago it had not even attracted the notice of Mrs. Halliday, though she has long been resident a few miles away—but within it stands a monument of great interest. Hitherto some mystery has shrouded the names of the mighty personages of the past whose memory this elaborate altar-tomb was intended to keep alive; and the object of this handsome volume is to prove that it was erected in honour of the fourth Baron Harington, Lord of Porlock, and of his wife, Lady Elizabeth Courtenay, the founders of a chantry in the church of Porlock. These are great names to be connected with an obscure parish in Somerset, familiar now to none but an occasional tourist or the hunter of the red deer,

and they naturally draw Mrs. Halliday into some detail of the family history of the Haringtons. The work is beautifully illustrated by Mr. Roscoe Gibbs, who seems to have devoted an immensity of careful attention to his various representations of the monument, and to have travelled over extensive districts of England with the object of beholding any similar remnants of antiquity that might have been left by the destroyer or the restorer. Mrs. Halliday's volume will call to mind many other works of a similar character, and it will not suffer from the comparison. It will add another charm to the numerous specimens of ecclesiastical architecture that delight the heart of stranger and native in the pleasant meadows of Somerset.

Archæologia Aeliana. Published by the Society of Antiquaries of Newcastle-upon-Tyne. Part 25. Vol. IX. New Series. (Newcastle: Reid.) The Newcastle Society of Antiquaries is itself an antiquity. It has had enrolled among its fellows many of the most illustrious names of the North of England and the Scottish Border. John Hodgson, the historian of Northumberland, was at one time its secretary, and Dr. Raine, the historian of North Durham, filled the post at another. It has always taken a prominent part in the higher questions of archaeology, and never consented, like so many similar provincial bodies, to narrow its vision to a single district or kingdom. The part before us is an instance of this. A large portion of it is taken up by a learned and well-illustrated paper on the Pfahlgraben, or boundary of the Roman Empire between the Danube and the Rhine. Mr. Thomas Hodgkin, the writer, has a competent acquaintance with Roman archaeology, and he has personally inspected this vast earthwork at many points. Mr. Ralph Carr Ellison contributes a paper on the Saxon names of certain Roman roads, and Mr. Clayton two others on Roman Centurial Stones. Whether we agree with him or not, the facts and speculations of the latter gentleman are worth careful study.

Transactions of the Cumberland and Westmoreland Antiquarian and Archaeological Society. Part I., Vol. VI. Edited by R. S. Ferguson. (Kendal: Wilson.) The inhabitants of our Northern counties are noted for their love of local history. The hand of the destroyer has been at work there as elsewhere. Reformers, Puritans, churchwardens, and church-restorers have each of them done their works of destruction according to their lights. The great landowners have pulled down castles to build stables, and dug away prehistoric earthworks to mend highways, even as the same classes of persons have done elsewhere; but in the North deeds of wantonness which violate the historic sense seldom pass without rebuke. A curious instance, though not a very fatal one, is commemorated by Mr. R. S. Ferguson in the first paper before us. It appears that in 1835 the members of the reformed corporation of Carlisle, in their hot zeal for things modern, determined on having a new coat of arms. It is true they had a very beautiful old one that had come down to them from the middle ages, but then this had suffered abuse by the acts of their unreformed predecessors. So a new one was determined on, which, nobody having the knowledge required for designing something quite "out of the rough," they priggled from the margin of one of Speed's maps. The matter is a very trivial one, but we have seldom met with an instance of greater municipal stupidity than that which Mr. Ferguson has chronicled. One would like to ask if the mayor under whose auspices this folly was committed was the same city magnate who, having a quasi-royal person coming to luncheon with him,

gave it out as his intention that he should sell his old pictures and buy new ones to do honour to the "auspicious event." These Cumbrian *Transactions* are commonly a feast of good things, and this number is not an exception. The paper on the mediæval defences of the English border should be studied by all who wish to understand the wars between England and Scotland; that on traditional names of places on Edenside is important. The names of fields, stones, tarns, trees, and other minor objects have only of late days attracted the attention they deserve. That they furnish very important evidence as to the early settlers of Britain is now well known. Not a few of them occur in duplicate in the Eastern counties. One, "Julian Bower," is very singular. Does it signify that a maze was formerly there? If not, what is its meaning? We are grateful to Mr. Goodchild for the labour and care he has bestowed on this interesting catalogue, but wish he had left out his attempt at phonetic spelling. Mr. G. T. Clark is the greatest living authority on what Jonathan Oldbuck and the antiquaries of his time called *castramentation*. He has given us a paper on the castles of Brougham and Brough which will richly repay perusal.

Transactions of the Essex Archaeological Society. Vol. II., Part III., New Series. (Colchester: W. Wiles.) All persons interested in the history of art or ritual are glad to have ecclesiastical inventories of any date previous to the seventeenth century. The local societies are doing good work in printing the confiscation list of the days of Edward VI. for the several counties. We may hope some time or other that they will all be gathered together, properly annotated, and indexed. Mr. H. W. King has carefully edited those of some of the Essex parishes. The notes identifying the persons mentioned in the text are well done. The paper on the history of Hatfield Forest is worth reading. It might, however, have been made much more exhaustive had record evidence been used to a greater extent. The notes on the sons of the clergy admitted to Colchester Grammar School are excellent. They are evidently the work of an accomplished genealogist.

NOTES AND NEWS.

MR. SAINTSBURY'S *Short History of French Literature* (pp. xii. and 591, crown octavo) will be published in September by the Clarendon Press. The author aims at presenting a complete but succinct history, with full biographical and historical details, of the whole course of French literature, compiled from an examination of that literature itself, and not merely from previous accounts of it. Illustrative specimens are given only in book i., which deals with mediæval literature; the illustration by extract of the later literature, from Villon to Hugo, being reserved for a separate volume, which is now in preparation.

MR. BOSWORTH SMITH is well advanced with his *Life of Lord Lawrence*, which many of us are anxiously awaiting. The first chapter has already gone to the printers, but the complete work will probably not be published until the February of next year.

THE next volume in the series of "Philosophical Classics for English Readers" will be *Sir William Hamilton*, by Prof. John Veitch, of Glasgow.

MR. J. SMALL, the librarian of the University of Edinburgh, will complete the new edition of Lyndesay's *Monarchie*, and the full edition of Lyndesay's Works which Mr. Herrtage has been unable to do for the Early-English Text Society owing to his whole time being taken up by his work at Cassell's *Encyclopædic Dic-*

honary, of which he has another volume now ready for the printer, besides the one in the press.

MR. BROWNING is taking his holiday in the South of France, where he was last year, in the neighbourhood of the Grande Chartreuse.

LORD ASHBURNHAM has kindly placed his Wyclif MS., which contains three unique tracts, besides duplicates of others, at the disposal of the Wyclif Society.

WE believe that Dr. Georg Bühler, of Vienna, will translate the Laws of Mann for the series of "Sacred Books of the East" edited by Prof. Max Müller.

THE first volume of the Rev. C. J. Robinson's annotated *Registers of Merchant Taylors' School* has been printed off, and its publication may be expected immediately. It covers the period from 1562 to 1699.

MESSRS. MACMILLAN AND Co. will publish in the autumn a work on English grammar, by the Rev. W. G. Wrightson, of Cambridge, which will carry the logical and grammatical analysis of the language farther than has yet been attempted in books of this kind.

M. ERNEST GLASSON has issued the third volume of his elaborate work, to which we have before called attention, entitled *Histoire du Droit et des Institutions politiques, civiles, et judiciaires de l'Angleterre* (Paris: Pedone-Lauriel). This instalment treats of Magna Charta, and the fusion of the two races of English and Normans.

MISS NICHOLSON has just published (W. Swan Sonnenschein and Co.) a short History of German Literature, based mainly upon the works of Kurz, Vilmar, and Roquette. It forms one of "Sonnenschein's Student's Handbooks," to which Mr. Alfred Milnes is about to contribute a volume on Political Economy.

THE next volume of M. Leroux's "Bibliothèque orientale elzévirienne" will be a critical study of the Koran by Mr. Stanley Lane-Poole. Its object will be to show what the Koran really contains, and how little of modern Islam is to be found there. The subject will be treated in the chronological order already explained in the same author's *Speeches and Table-Talk of the Prophet Mohammad*, and in an article contributed to the *Edinburgh Review* of last October, upon which the French volume is mainly founded.

MR. LANE-POOLE is also engaged on the Egyptian division of the illustrated work which Messrs. Virtue and Co. are issuing under the title of *Picturesque Palestine and Egypt*, chiefly compiled by members of the Palestine Exploration Fund.

A VALUABLE contribution to our knowledge of an important period of history has been published by the Belgian Royal Historical Commission. This is a "calendar" of State papers, entitled *Relations politiques des Pays-Bas et de l'Angleterre sous le Règne de Philippe II.*, edited by Baron Kervyn de Lettenhove (Brussels: Hayez). It covers the four years from the abdication of Charles V. in October 1555 to the departure of Philip II. from the Netherlands in October 1559. The total number of documents entered is 413, of which the most important are reproduced textually, the others only analysed. They are taken from the archives at Brussels, from our own Record Office and British Museum, from Simancas, and from Vienna. There are despatches from John Mason and Thomas Chaloner, English envoys to the Netherlands; but the most interesting to English readers are those of Philip's ambassadors in England, Christophe d'Assonleville and the Count de Feria. The latter writes to his master a detailed account of an interview with Elizabeth at Hatfield on Novem-

ber 10, 1558, only seven days before the death of Queen Mary. Elizabeth is described even thus early as seeking to imitate her father, and as boasting of the affection of the people towards herself.

PROF. KOVALEFSKY, of Moscow, is still here working daily from nine to seven at the Record Office and British Museum at a set of documents, unknown in Russia, that he has found concerning the relations of England and Russia in Peter the Great's time. These papers include King William's answer to Peter's application for the appointment of a consul, the establishment of free trade between the two countries, and many other subjects of great importance. In Spain, Prof. Kovalefsky found the Spanish ambassador's reports of the reception of Peter at the English Court, and they make the Emperor a greater barbarian than he is generally supposed to have been. At the Escorial Prof. Kovalefsky also found some reports from the Spaniards who were over here with Philip in Queen Mary's reign, describing the strong feeling of the English against the Spanish alliance, and saying how short a time Philip's influence would last.

No European work of modern times has enjoyed so much popularity in Russia as Mr. Marvin's recent book on Central Asia, *The Russian Advance Towards India*. This is due mainly to its description of the home surroundings and opinions of Gen. Skobelev, translated successively in the *Novoe Vremya* and *Moscow Gazette*. Mr. Marvin's account of his conversation with Skobelev was afterwards inserted in the special number of the Panславист journal *Russ* devoted to the obituary of the dead hero, and particular attention was drawn to it by a notice from the pen of Aksakoff. Mr. Marvin was present at the burial of Skobelev at Spasskoe Selo, in the province of Riagan. He is now preparing to bring out the history of Skobelev's siege of Geok Tepe, on which he has been engaged for eighteen months.

DR. J. A. LANGFORD, of Birmingham, will soon have ready *The Bright Birthday Book*: selected and arranged from the Speeches and Letters of the Right Hon. John Bright, M.P. It is proposed to issue this book as a souvenir of the commemoration of Mr. Bright's twenty-five years' connexion with Birmingham.

WE learn that the *Hull Review*, a weekly journal, has been discontinued.

MR. A. HEWITSON, editor of the *Preston Chronicle*, and author of several local historical works, will soon have ready for the press a *Popular History of Preston*. The volume will be profusely illustrated. It will include lists of all the mayors (ordinary and guild), members of the old and new corporation, parliamentary representatives, &c., from the earliest recorded period to the present time; and at the end will be inserted a chronological table of all the chief local events from 705 to 1882. The author will also furnish a concise account of the forthcoming guild celebration, together with the names of those taking the principal parts therein. This celebration will take place at Preston in the first week of September. The Queen has consented to be patron, and the Duke and Duchess of Albany will both be present.

M. EDMOND SCHÉERER has just published (Paris: Calmann Lévy) the seventh volume of his *Études sur la Littérature contemporaine*. He treats of, among others, Littré, Renan, Paul de Saint-Victor, M^{me}. de Rémusat, and Zola.

M. TURGHENTIEV, who has been seriously unwell during the past four months, writes to the *St. Petersburg Strana*, under date July 22, explaining that the disease from which he suffers is angina pectoris. "I feel," he says, "a constant racking pain in my breast, which

increases at night to that degree that it deprives me of sleep. I can neither stand nor walk without mechanical aid, and it is next to impossible for me to take a drive out. My appetite, meanwhile, is good, and I have no fever; but I am virtually chained to the spot, and it is impossible to foresee when it may end. This is specially trying to me just now, as I had intended, and there was an urgent necessity for my, visiting Russia this year."

LOVERS of folk-lore will be glad to know that Dr. Hugo Gering, of Halle, has just brought out the first volume of his *Islandsk Eventyri: Folk-Tales and Legends from Mediaeval Icelandic sources*. It comprises a critical text of 101 tales, practically the whole that survive. No less than nineteen MSS. have been consulted. There are four tales which are for some reason, or by oversight, omitted—they should be inserted in the second volume, for which reason we mention them here:—the story of Hroi the Fool, and the tale in Helgi and Ulf's story, both in *Flateyar-bók*; the Fridolin-story in the eleventh volume of *Fornmanna Sögur*; and a folk-tale in the Heidar-viga MS. of the poor boy that became an abbot.

DR. GUSTAF CEDERSCHÖLD, of Lund, has also, in the *Ny Svenska Tidskrift*, given the first instalment of his forthcoming Swedish version of Northern mediaeval folk-tales, which promises to be a charming book. In this edition of the two stories which represent Grimm's Godfather Death and the Master-thief, the Swedish philologist shows that he possesses the rare gift of being able to tell a simple story well. He will certainly interest the children, and older folk will not be sorry to hear once more from a skilled raconteur the old tales that somehow never grow old.

THE *Real Academia de la Historia* of Madrid have resolved to publish the whole of the Codex Calixtinus of Compostella, as a supplementary volume to tomo XX. of the collection entitled "España Sagrada." Padre F. Fita will be the editor of this new volume.

THE *Literary World* states that Congress has again postponed action with regard to the proposed new building for the National Library at Washington.

ACCORDING to the *Nation*, the Washington and Lee University conferred, at its Commencement last June, the degree of Ph.D. for the first time on the basis of definite study and the passing of an examination. The post-graduate course required covered two years, and the subject was the English language.

WALT WHITMAN's works are to be published in future by Messrs. Rees Welsh and Co., of Philadelphia, who will have *Leaves of Grass* ready in a few days, and will follow it up in the fall with a volume of prose entitled *Specimen Days and Collected*. This will be divided into two parts—the first being autobiographical, and containing reminiscences of the boyhood and youth of the poet and recollections of the war; and the second part consisting of a collection of the essays which the poet has contributed to the *New York Critic*, *North American Review*, and other periodicals, together with some new matter.

In a series of historical essays entitled *America and France*, a Mr. Rosenthal discusses the relations of the two countries between 1776 and 1794. He comes to the conclusion that during 1776 and 1787 America influenced France so powerfully by examples, doctrines, men, and enthusiasm of discussion that the American Revolution may be safely called the proximate cause of the French; but he is of opinion that as the revolutionary movement in France gained strength the influence of America decreased, until it became imperceptible when the climax had been reached.

PRESIDENT GILMAN, of Johns Hopkins University, will write a Life of Albert Gallatin for the "American Statesmen" series.

THE *Nation* notices the first number of a Canadian weekly political and literary paper, called the *Dominion Review* (Montreal). It is said to be a "respectable and serious enterprise."

THE *Literary World* for July 15 has a contribution by Mr. W. S. Kennedy, entitled *An Emerson Concordance: being a Partial Index to Familiar Passages in his Poems*.

LAST week took place at the Sorbonne the award of prizes after a competition among all the lycées of Paris—an educational event to which we have no parallel in this country. There are three prix d'honneur, of which that for philosophy was won by the lycée Louis-le-Grand, that for mathematics by the lycée de Versailles, that for rhetoric by the lycée Charlemagne. The first-mentioned school came out also at the head of the general examination, with twenty-two prizes and fifty-four accessits.

THE *Memoirs* of the Baron de Vitrolles, of which a few chapters have already appeared in the *Nouvelle Revue*, will be shortly issued by Charpentier, and will, it is said, furnish valuable material to the student of the later years of the First Empire. The book is likely to afford details of interest concerning the policy of Metternich; but, judging from the specimen to hand, it will prove rather heavy reading.

M. JULES VALLÈS is continuing his semi-autobiographical details and bitter railings against society as now constituted, which were originally embodied in *Jacques Vingtras*, and continued in *Le Bachelier*. The sequel to these books will be found in *L'Insurgé*, of which the first part has appeared.

WE are informed that the *Allpreussische Monatschrift* of Königsberg is publishing a fragment of a work by Kant never before printed, entitled "Uebergang von den metaphysischen Anfangsgründen der Naturwissenschaft zur Physik."

UNDER the title of *Le Salon de Madame Necker* (Paris: Calmann Lévy) the vicomte d'Haussonville has just published a work of the first importance for the right understanding of an interesting period of French history as well as of French society. Through his connexion with the family, the writer has had access to the large collection of papers still preserved at Coppet, many of which have never been published.

THE Librairie des Bibliophiles at Paris has begun the publication of a critical edition of the *Théâtre de Molière*, in eight volumes, with notes. The price of each volume is three francs.

THE historical *Review* which was founded by M. Dide under the title of *La Révolution française* has just completed one year of existence.

HERE WEBER, of Leipzig, has issued the first volume of a History of Printing, by Dr. C. B. Lorek, which covers the period from 1450 to 1750. Prefixed is a bibliography of the subject.

A HISTORY of the Order of Odd-Fellows, by Herr Andreas, has been published by Grimm, of Leipzig.

THE countrymen of Esteban de Mendiburu, who has been called the Basque Cicero, have lately celebrated the first centenary of his death. Mendiburu, who was a Jesuit and a mystic, wrote both Latin and Spanish with great elegance.

PROF. TIKHOURAHOV, of Moscow, is about to publish a History of the Russian Stage between 1672 and 1725. The book will include a

selection of dramas, native and adapted, and every piece will be accompanied by annotations on its origin and history. The history of Russian dramatic literature during the first fifty years of its existence will be treated of in his Introduction.

NOT long since a printing-press was founded in Constantinople under the patronage of Osman Bey, Second Chamberlain to the Sultan, for the purpose of reproducing the chief works of Musulman historians and theologians at a price that would render them accessible to the great mass of the followers of Islam. The first instalment of this series has been already issued by the press, and is appropriately a copy of the Koran.

Correction.—The word "Brattia" appears as "Bratteag" in Mr. Rawnsley's "August Flowers at the Lakes," published in the ACADEMY of August 5.

MAGAZINES AND REVIEWS.

THE first article in *Blackwood*, on "Machine-made Soldiers," is evidently written by some one entitled to have his opinion. Yet, as he appeals to the public, one of the public may presume to criticise it. In the first place, it is noteworthy that the writer, after experience in the field, expresses entire approval of the modified system of short service, as now administered—and this altogether apart from the necessity of short service as the only means of creating a reserve. But here his commendation stops. The rest of the article is devoted to an attack, in no measured language, upon the "scientific school," who are accused of a series of indirect attempts to undermine the regimental system. Now, we are well aware that the writer here represents the view of the great majority of officers; but we feel no less certain that he will fail to convince non-professional readers. The lesson of the Franco-German War has sunk deep into the mind of the English public. It is indisputable that the Germans won because their army was a machine, directed by a scientific staff. We do not mean to argue that everything German is therefore good, and ought to be adopted in this country regardless of other circumstances. But we do urge that the sneer implied in the words "machine-made soldiers" and "scientific school" is thus deprived of its point. Above all, the public is resolved that the present system shall have a fair trial; and no criticisms will have much weight with it which are either purely negative, or which involve an addition of ten millions sterling (or just one-half) to the military budget. We must not omit to notice another paper, on "Sport in a German Forest Country," written with that light touch of which *Blackwood* alone seems to have the secret.

IN the August number of the *Army and Navy Magazine* (W. H. Allen) Col. G. B. Maleson continues his series of "The Decisive Battles of India" with a description of the engagement at Condore and the storm of Masulipatam, by which Forde, the ablest lieutenant of Olive, won the Northern Circars for the British and established their predominant influence for a generation at the Court of Hyderabad. We have no objection to writing "Kondur" for Condore, but there are many to whom Masulipatam will only be concealed under "Maohhliptanam." The former is no worse a barbarism than Leghorn for "Livorno."

THE *Transactions* of the Gaelic Society of Inverness, vol. ix. (Inverness: Gaelic Society), contain, among other papers, one by Mr. William Mackay, on the Strathglass Witches of 1662. At this time a colony of Macleans

had settled on the estate of The Chisholm. Some of them being suspected of witchcraft, he received a commission to try them, and there was every chance of their condemnation, for Paterson "the Pricker" had already tested them, and declared their guilt. In their extremity the intended victims appealed to Sir Allan Maclean of Duart, as the chief of their clan. It is a strong proof of the depth and reality of the tie between the chief and his clansmen that, although these Macleans had been for a century or two on the land of the Chisholms, Sir Alexander at once interested himself in their case, and by a petition to the Privy Council of Scotland caused the commission to be cancelled, and the trial removed to Edinburgh. The allegations of torture were examined at Inverness, and held to be disproved. Some of the accused died in prison; but the remainder appear to have escaped the fate intended for them, as there is no record of any renewal of the commission. The "clannish" spirit was, perhaps, never better shown than in the protection it thus afforded to these sufferers from superstition. "The Pricker" on whose testimony they were imprisoned, turned out to be a woman in disguise.

IN the *Revista Contemporanea* of July 30, Gen. de Cordova completes his "Spanish Expedition to Italy in 1849." It was the last time, he observes, that Spain was listened to in the councils of Europe, and he deplores her hasty and undignified retreat. An Ateneo Lecture by Laureano Calderon treats of "What is Matter?" and, after a review of ancient and modern theories, determines that it is "the activity of nature, as far as this activity is permanent and fixed in any point." González Janer, in a paper on the "Necessity of Religion," asserts that Spain is really materialistic, through a reaction against fanaticism; to which he would not return, but suggests instead the practice of the ethics and religion of the New Testament. The most highly educated nations are also the most religious. "El Fuero Universitario," by Mariano Vallejo, in the form of a novelette relates the story of the origin of university self-government, granted by Ferdinand and Isabella. "La Juventud Dorada," by A. Mentaberry, illustrates the reign of Charles V., and shows how thoroughly corrupt and hypocritical were the manners of that age, which some would represent as one of purity and faith.

IN the *Archivio Storico italiano* Sig. Cantù publishes a few *relazioni* of Tassoni, an ambassador at the Court of Tuscany from 1803 to 1807, which give a picture of the state of things in that troubled period. Sig. Carutti contributes a study on the beginnings of the history of Piedmont in the eleventh century. Sig. Gelli writes an elaborate survey of the facts concerning the exile of Cosimo de' Medici, and announces the publication of new documents on the point.

THE *Archivio Storico per le Provincie napoletane* contains an exhaustive paper on "Robert Duke of Calabria," third son of Charles II. of Naples, by Sig. Minieri Riccio. This is the last work of its author, who died in the May of this year after a long life devoted to the study of the House of Anjou in Naples, which he has amply illustrated from the Neapolitan archives. Another posthumous article is by Sig. Liroy on "The Abolition of the Homage of the Chinese." The *China* was a white horse annually presented by the King of Naples to the Pope as a token of homage. Sig. Liroy has collected the diplomatic documents relative to its abolition under Pius VI. in 1776. Sig. Faraglia writes a destructive criticism on the memoirs of early Neapolitan art; he has no difficult task in showing their untrustworthiness. Sig. Daniele does good service by his article on "The Death

of Giacomo Piccinino" in 1465. He shows that the death of the last of the great *condottieri* was due to the jealousy felt by the Sovereigns of Italy against one who threatened to overshadow them.

We have received the *Nueva Revista de Buenos Aires* (London: Trübner) from February to June of the present year. As in the parts previously noticed, international law occupies much space. Thus in one number we have a discussion of "Chile y el derecho internacional" from a Peruvian standpoint, while in another the relations of Uruguay and Brazil are elaborately stated. J. O. Rojas writes of epic poetry in Latin America; J. M. Garro describes the expulsion of the Jesuits from the American possessions of Spain. The editor, Vicente G. Quesada, sketches the history of the National Library at Rio de Janeiro. S. Romero discusses the literature of Brazil in its relations to "neo-realismo." B. Mitre has an interesting study on the "History" of Bernal Diaz. E. Olivera gives the result of agricultural journeys and studies in England and Scotland. The poems of Adolfo Mitre and Gregorio Gutiérrez Gonzalez are the subjects of eulogistic notices. Various other articles might be named, but sufficient has been said to show the range of topics. The treatment, as a rule, is sober and satisfactory.

MR. LYALL'S ARABIC TRANSLATIONS.

Translations from the Hamdseh. By C. J. Lyall, C.S. (Reprinted from the *Journal of the Asiatic Society of Bengal*, 1881.) Mr. Lyall has established his position as the best translator of the earliest Arabic poetry, and it is always pleasant to receive a fresh instalment of his renderings of a too little-known literature. His present *brochure* contains twenty-two songs from the *Hamdseh*, the most delightful of Arab song-books; and in each case the Arabic text is given as well as the metrical version, and explanatory and critical notes are appended as in the author's previous selection from the *Hamdseh* and the *Kitāb el-Aghāni*. The new series will only add to Mr. Lyall's reputation as a translator of poetry the most difficult in the world to translate. Just as Prof. Palmer has an inimitable power of rendering the later poetry which flourished at the Khalifa's Court at Baghdad, so Mr. Lyall is entirely unrivalled in his instinct for the ancient poetry of the desert. What his power consists in it is difficult to say, just as it is to discover how he lights upon the peculiarly apposite old-fashioned words which fit so exactly into the spirit of the original. Whatever the method, the result is certain; no other writer has ever been able so perfectly to reproduce the tone of the early Arab poets.

The poems in the new selection are of various dates, but most of them are of the earliest period. The first, for example, is by the son of a hero of the famous War of Basūs, one of the great ante-Islamic struggles among the Arab tribes, and a centre round which Arab song delighted to gather; and the War of Basūs was at the end of the fifth century A.D. The second is by a singer of 'Abs in the War of Dāhis, in the sixth century. The fifth and sixth are by a poet of celebrity in Mohammed's youth; and the author of the seventh was but little junior. Some are doubtful of date, and others belong to early Islamic times. But, as a whole, the collection is ancient, and breathes the true spirit of desert poetry before Islam destroyed it. We find here a wonderful picture of old Arab life in many of its most characteristic aspects. The earlier selection was chiefly rich in songs of war and rapine; these are not altogether wanting in the present collection, but its main feature is love poetry, and that of

a singularly pure and tender kind. We know of nothing in Arab poetry more touching than this lament of Muweylik el-Mazmūm for his wife Umm-el-'Alā, though it is not of the earliest period:

"Take thou thy way by the grave wherein thy dear one lies—
Umm-el-'Alā,—and lift up thy voice: ah, if she could hear!

"How art thou come—for very fearful was thou—to dwell
in a land where not the most vallant goes but with quaking heart?

"God's love be thine and His mercy, O thou dear lost one!
not meet for thee is the place of shadow and loneliness.

"And a little one hast thou left behind,—God's ruth on her!
she knows not what to bewail thee means, yet weeps for thee.

"For she misses those sweet ways of thine that thou hadst with her,
and the long night walls, and we strive to hush her to sleep in vain.

"When her crying smites at night upon my sleepless ears,
straightway mine eyes brim-full are filled from the well of tears."

Another short lament records a tale of love which is very characteristic of the Arab. Taubeh loved his cousin Leyla from childhood, but her father would not consent to their union. He went away and died in the wars of the early Muslim conquests. Leyla lived on, but never forgot her first love. She was once travelling with her husband, and chanced upon the grave of Taubeh.

"Leyla, who was travelling in a litter, cried, 'By God! I will not depart hence till I greet Taubeh.' Her husband endeavoured to dissuade her, but she would not hearken; so at last he allowed her. And she went up the mound on which the tomb was, and said, 'Peace be to thee, O Taubeh!' Then she turned her face to the people, and said, 'I never knew him to speak falsely until this day.' 'What meanest thou?' said they. 'Was it not he,' she answered, 'who said—

"Ah, if but Leyla once would send me a greeting down
of grace, though before us lay the dust and the flags of stone,

"My greeting of joy should spring in answer, or there should cry
toward her an owl, ill-bird that shrieks in the gloom of graves"?

Nay, but I have greeted him, and he hath not answered me as he said.' Now there was a she-owl crouching in the gloom by the side of the grave; and when it saw the litter and the crowd of people, it was frightened, and flew in the face of the camel. And the camel was startled, and cast Leyla down headlong on the ground; and she died that hour, and was buried by the side of Taubeh."

The old Arab belief that the souls of the dead appeared as owls, which Islam could not eradicate, is expressed again in the following passionate lines of an unknown poet:—

"O God, if I die, and Thou give not to mine owl to drink
of Leyla, I die, no grave lies thirstier than my grave.

"And if I forget my pain, though Leyla be not for me,
my comforter is Despair: no comfort does Patience bring.

"And if I suffice myself without her, seem strong and stern—
ah, many the strength of soul that lies near to lacking sore!"

The song of Dureyd, a famous knight-errant of the time just preceding Islam—he died heroically in the eighth year of the Hijrah—

gives a fine picture of the Arab ideal of manliness:—

"But know ye, if 'Abdallāh be gone, and his place a void,
no weakling unsure of hand, and no holder-back was he!

"Alert, keen, his loins well-girt, his leg to the middle bare,
unblemished and clean of limb, a climber to all things high.

"No waller before ill-luck; one mindful in all he did
to think how his work to-day would live in to-morrow's tale;

"Content to bear hunger's pain, though meat lay beneath his hand;
to labour in ragged shirt, that those whom he served might rest.

"If Death laid her hand on him, and Famine devoured his store,
he gave but the gladlier what little to him they spared.

"He dealt as a youth with Youth, until, when his head grew hoar
and age gathered o'er his brow, to Lightness he said—Begone!

"Yea, somewhat it soothes my soul that never I said to him
'Thou liest,' nor grudged him aught of mine that he sought of me."

This is in the true Arab spirit, and describes the old desert hero better, perhaps, than any other single poem. Moreover, it is written in the royal chaunt of Arabia, the Tawil metre, which is more capable of being reproduced in English than any other. Indeed, we have the metre already naturalised, for instance, in Mr. Browning's "Abt Vogler," where

"Existent behind all laws that made them, and, lo, they are,"

is pure Tawil. Mr. Lyall is never so happy as when he is rendering a poem in this measure; and we are inclined to think that he is seldom perfectly successful in any other, except the Besit. He reproduces the Kāmil metre—as in the lament of Muweylik, here quoted—with infinite skill; but the effect is not nearly so satisfying to the ear as his renderings of the Tawil, such as the Mo'allakah of Zuheyr, or the poem of Dureyd or of 'Abd-el-Melik. The Hezej reads jerkily in its English form, and we do not quite like the representations of the Waḡir. The Tawil and Besit both sound well in English, and it seems a question whether it would not be best to confine the translations to these beautiful measures, even when the original is not written in them. It must be admitted that Mr. Lyall's successful reproduction of the Arabic measure helps more than anything else in the preservation of the tone and spirit of the original, and gives his translations that peculiar ring of old Arab song which no other versions have preserved. How different is the effect produced by the substitution of a common English metre may be seen from one of the few instances in which Mr. Lyall has allowed himself to depart from his usual system of translating in the original measure. This is a Tawil poem put into a measure after Mr. Swinburne:—

"By Him who brings weeping and laughter
Who deals Death and Life as He wills—
She left me to envy the wild deer
That graze twain and twain without fear!
O Love of her, heighten my heart's pain,
And strengthen the pang every night!
O comfort that days bring—forgetting—
The last of all days be thy tryst!
I marvelled how swiftly the time sped
Between us the moment we met;
But when that brief moment was ended,
How wearily dragged he his feet!"

This is pretty enough, but common and modern. Mr. Lyall is at his best in the original metres; and if he will only continue his valuable services

by a rendering in Tawil of the whole of the Mo'allakât, and then give us some more of the Hamaseh, and—shall we add—the songs of the Hudhalis, he will forward the study of the finest and truest Arab poetry as no one else can forward it, and will lay lovers of poetry even more than Orientalists under a heavy debt of gratitude. His work is so unique and so admirable that we can only ask for more.

SCIENCE.

A NEW INTERPRETATION OF THE "YI KING."

The Sacred Books of China. "The Texts of Confucianism." Translated by James Legge. Part II.—*The Yi King.* (Oxford: Clarendon Press.)

THE present work, which forms the sixteenth volume of "The Sacred Books of the East," is a translation by Prof. Legge of the Yih King, or Book of Changes, in the sense in which it is understood and interpreted by certain scholars in China. For more than two thousand years the date, authorship, and meaning of this work have been the battle-fields of contending schools. Only on one point are they all agreed to accept the current tradition—and it is nothing but a tradition—about its origin. The belief that the Emperor Fuh-he (B.C. 2852-2737) designed the original eight diagrams upon which the work is said to be based is universal. From this point all agreement ceases. Who multiplied the diagrams until they reached their present number of sixty-four is as keenly disputed as the authorship of the Letters of Junius. Four schools of weight and authority have pronounced as many opinions. Wang Foose (A.D. 226-49), who was one of the most brilliant critics of the Han Dynasty, held the belief, in which he has been largely followed, that Fuh-he himself made sixty-four out of the original eight diagrams; by Ching Kang-ching (A.D. 127-200) and his disciples it was considered that this was the work of the Emperor Shing-nung (B.C. 2737-2697), the successor of Fuh-he; while the Emperor Yu (B.C. 2205-2197) and King Wän (B.C. 1231-1135) have been likewise credited with the honour. Independent skirmishers in the field of literature have added further elements of disagreement on this point, but with them we need not concern ourselves.

So much for the diagrams, one of which stands at the head of every chapter in the book. And now to turn to the text. Following each diagram occur a few characters, varying in number from two to thirty, intermingled with which are invariably such as mean "lucky," "unlucky," or words of similar import. Appended to these characters are in each case six sentences. These two sets of characters, arranged under each of the sixty-four diagrams, make up the text. The remainder of the work consists of Appendixes of a later date, which are quite distinct from the text, although in most editions of the work they appear as though they formed part of it. We are glad that Prof. Legge has marked the distinction plainly by printing them separately.

Before speaking of the nature of the text, we will consider the very vexed point of its authorship. Prof. Legge is of opinion that King Wän and his son, the Duke of Chow, were the authors, but his reasons for so thinking, so far as he gives them, are not convincing; and when he says that "the text is ascribed, without dissentient voice, to King Wän . . . and his son Tan, better known as the Duke of Käu" (Chow), we are disposed to imagine that the sentence must have slipped from his pen. As a matter of fact, very few critics of the first

rank have pronounced positively on the question. This becomes apparent when a few lines farther on Prof. Legge quotes the two authorities upon which he would appear to base his opinion as to King Wän's share in the authorship. Curiously enough, however, neither of these references bear on the point which he seeks to establish. "As regards the portion ascribed to King Wän," he writes, "the evidence of the third of the Appendixes and the statement of Sze-ma Khien are as positive as could be desired." But if we turn to the paragraph in the Appendix which he selects as the most "definite" we find it is this:

"Was it not in the last age of the Yin (Dynasty) when the virtue of Käu (Chow) had reached its highest point, and during the troubles between King Wän and (the tyrant) Käu, that (the study of) the Yi began to flourish? On this account the explanations (in the book) express (a feeling of) anxious apprehension, (and teach) how peril may be turned into security, and easy carelessness is sure to meet with overthrow."

It will be observed that there is not a word here about the authorship of the text; and would it not be as reasonable to describe the Bible as a sixteenth-century book because it, or the study of it, began to flourish at the time of the Reformation as to say that, because the Yih, or "the study of the Yih, began to flourish" in the time of King Wän, the text must have been written at that period? The passage to which Prof. Legge refers in Sze-ma Ts'een's history is even still more vague: "When he was confined in Yü-li, Wän increased the eight trigrams to sixty-four hexagrams." This is all Sze-ma Ts'een says; and, again, there is not a word about the text. This silence of the most ancient authorities is more eloquent than the assertions of some later writers, who appear to be so captivated by the notion of connecting the names of the four most conspicuous sages of antiquity, Fuh-he, King Wän, the Duke of Chow, and Confucius, with the authorship of this most mysterious book, that they never tire of repeating the formulae, "Fuh-he drew the diagrams, King Wän and the Duke of Chow wrote the text, and Confucius wrote the 'ten wings.'" But such assertions, unsupported by any evidence, are worth little. Prof. Legge dismisses the last portion as untrustworthy; and there is nothing in the two other statements which entitle them to any greater credit. In the text itself there is nothing to support the opinion that it was the work of King Wän and Chow kung. Indeed, it is difficult to believe that these two sages, who were conspicuous for wisdom and intellectual ability, could have ever deliberately written anything which would bear the meaning put upon the thirtieth chapter, for instance, by the native critics who attribute it to them. The chapter is headed by the Le (Li) Hexagram, and runs thus:—

"It indicates that (in regard to what it denotes) it will be advantageous to be firm and correct, and that thus there will be free course and success. Let (its subject) also nourish (a docility like that of) the cow, and there will be good fortune."

"The first line, undivided, shows one ready to move with confused steps. But he treads at

the same time reverently, and there will be no mistake.

"The second line, divided, shows its subject in his place in yellow. There will be great good fortune.

"The third line, undivided, shows its subject in a position like that of the declining sun. Instead of playing on his instrument of earthenware, and singing to it, he utters the groans of an old man of eighty. There will be evil.

"The fourth line, undivided, shows the manner of its subject's coming. How abrupt it is, as with fire, with death, to be rejected (by all)!

"The fifth line, divided, shows its subject as one with tears flowing in torrents, and groaning in sorrow. There will be good fortune.

"The topmost line, undivided, shows the king employing its subject in his punitive expeditions. Achieving admirable (merit), he breaks (only) the chiefs (of the rebels). Where his prisoners were not their associates he does not punish. There will be no error."

When we read chapter after chapter like this we feel that there must be some mistake; that the clue to the text must be lost; and that we must look for some meaning in it which has been hidden from the commentators. Fortunately, to the discerning eye of M. Terrien de La Couperie the secret, after much study, has become apparent; and the sentences of the text which yield such strange results when interpreted by the commentators now stand revealed—some as vocabularies, some as ephemerides, some as geographical or ethnological enumerations, &c. But if this be so we must believe that the text was far older than the time of King Wán, to whom we must assume that it was as unintelligible as it was to Confucius; and a passage quoted by Prof. Legge from "The Official Book of the Chow Dynasty" tends to confirm this belief. In this passage it is said that "the great diviner had charge of the rules of the three Yih, called the Lien-shan, the Kwei-tsang, and the Chow Yih. That in each of them the primary lineal figures were eight, which were multiplied in each till they mounted to sixty-four." We are elsewhere told that the Lien-shan was the Yih current during the Hea Dynasty, and the Kwei-tsang that current during the Yin Dynasty. Here, then, we have mention in the Official Book of the Chow Dynasty of two Books of Changes before the time of King Wán. Looking at the question, then, from every aspect, it seems more than probable that the sixty-four diagrams, with the original text, consisting of vocabularies, &c., existed before the time of King Wán; that that sage amused himself while in prison by devising a system of divination from the text which he failed to understand, and that he added the expressions "lucky," or "unlucky," in accordance with his scheme.

This opinion is, I have discovered within the last few days, not a new one, but is plainly stated by Lo Pe, the well-known historian, in his *Zoo shu*. He there says:

"Fuh-he himself multiplied the eight diagrams, and himself discoursed upon them and distributed them for use, but this text has no place in literature. The Lien-shan, Kwei-tsang, the upper and lower divisions of the Yih, and the illustrations of the hexagrams were, however, all complete. But in that age they were not deeply studied. Coming down to the time of King Wán, however, while imprisoned at Yiu-li, he used them for the purpose of divination. He

added and subreptitiously introduced the foretelling words. . . . From that time the text began to be discoursed upon."

It will be observed that Lo Pe says that before the time of King Wán Fuh-he's book was neglected; and it can be easily imagined that the growth of dialects, and the changes introduced into the language, might well have made a text written at a very early date unintelligible many hundred years afterwards. The writer, however, of the fifth Appendix, whoever he may have been, seems to have had some idea of the original nature of the text, as is shown by his enumeration of the meanings of the eight original diagrams. Speaking of the diagram Le, already quoted, this writer says it

"suggests the emblem of fire, of the sun, of lightning, of the second daughter, of buff coat and helmet, of spear and sword. Referred to men, it suggests the large belly. It is the trigram of dryness. It suggests the emblem of a turtle, of a crab, of a spiral univalve, of the mussel, and of the tortoise. Referred to trees, it suggests one which is hollow and rotten above."

Here is plainly the idea of a vocabulary of the word Le, irrespective of the written character; and if later commentators had taken this hint, they would have sought out the different meanings of the words heading the chapters in the various dialects, instead of attempting a work which would be equivalent to making connected sentences out of the lists of meanings in Johnson's Dictionary. Let us imagine the difficulty of combining in a sentence the words under the heading "Dry" in that work. "Dry," we are told, means "arid," "not wet," "not rainy," "not succulent," "being without tears," "thirsty," "jejune," "barren," "plain," "without pathos," "unembellished," "without flowers," "hard," "severe." Such was the task the commentators of the text undertook; and we will close this notice by giving a translation of the Le chapter in the sense we attribute to it, a comparison of which, with the extract from Prof. Legge's translation given above, will illustrate the difference between our views on the text and his.

Le, then, is the character which the author desires to explain; and to do so he gives a list of its meanings, which, as will be seen below, are (with the exception of the first) still preserved in modern characters, all compounded with this same character Le, and all are pronounced Le at the present day. Ignoring, then, the "foretelling characters" added and subreptitiously introduced into the text by Wán Wang, the first equivalent of the character Le is given as

1. Oh'ah p'in nia = A domestic cow. Compare the statement in the *Tao chuen* that the character Le at the head of the chapter means a cow.
2. Le = A shoe. Compare the character Le = To bind shoes.
3. Ts'o = Confused wrong. Compare the character Le = Deceitful language.
4. Jan = To burn. Compare the character Le = Flames of fire.
5. King ohe = Attentive. Compare the character Le = To look at continuously.
6. Hwang Le = The Yellow Le bird. Compare the character Le = The Mango bird.
7. Jih teeh che Le = The departure of the afternoon sun. Compare the character Le = Brightness, glorious.

8. Puh koo fow wih ko = It is not to beat on an earthenware vessel and sing (?). Compare the character Le = To play on the Kin.

9. Tsh' to tsh' che oh'a = But it is the fault of very old men. Compare the character Le = Perpetual chatter.

10. Tuh joo = Rushing against-like. Compare the character Le = To oppose.

11. Ke lai joo = His meeting one coming-like. Compare the character Le = To meet.

12. Fan joo = Burning-like. Compare the character Le = A fire in a tent.

13. Sze joo = Dying-like. Compare the character Le = To depart from.

14. K'e joo = Throwing off-like. Compare the character Le = To disperse; to scatter.

15. Chah t'e t'o joh = Coming out like falling tears. Compare the character Le = To diffuse by drops.

16. Ts'ih tale joh = As the sound of the axe. Compare the character Le = To split wood.

17. Wang yung chuh ching = The king uses it when going out to war. Compare the character Le = Lucky omen.

18. Yiu kea = To have something happy, especially a marriage. Compare the character Le = Conjugal union.

19. Choh show = To cleave the head. Compare the character Le = To cut in two.

20. Hwoh = A kind of wild beast. Compare the character Le = A ravenous beast.

21. Fei = A square bamboo basket. Compare the character Le = A small basket.

22. Ke = A sieve, or winnowing basket. Compare the character Le = A small basket; a skimmer.

23. Oh'ow = Abominable; ugly. Compare the character Le = A weird beast; a bogie.

Every word in the chapter is here translated with the exception of the "foretelling words," such as "lucky," "unlucky," "prosperous," "no mistake," &c. The chapter was chosen at random; and before long it is hoped that it will be possible to show that every other chapter in the book will yield equally satisfactory results. ROBERT K. DOUGLAS.

SOME BOOKS ON BOTANY.

Vegetable Technology. By B. D. JACKSON. (Index Society.) The Index Society has followed up the publication of Mr. JACKSON'S *Guide to the Literature of Botany* with the *Literature of Vegetable Technology*, by the same author. A complete bibliography of economic botany is yet a work of the future; but Mr. JACKSON has done good service to students and to future editors by the present compilation from the most accessible and most trustworthy of existing sources of information. The work is divided into two parts: the first contains the titles of separate works and of papers on economic and applied botany, arranged under the names of the authors, and supplemented with a catalogue of anonymous publications; the second is a copious subject-index.

Dictionary of Economic Plants. By JOHN SMITH, A.L.S. (Macmillan.) The industrious ex-Curator of the Royal Botanic Gardens at Kew has compiled a "Dictionary of Popular Names of the Plants which furnish the Natural and Acquired Wants of Man in all Matters of Domestic and General Economy: their History, Products, and Uses." There is nothing novel in the plan or scope of the book; and, as in the case of works of reference generally, a practical use of it in connexion with some branch of special study is the only mode of testing its superiority to the compilations of the same kind already in existence. As far as we have been able to examine it, while some omissions have struck us on turning over the leaves, the errors or inaccuracies we have been able to detect have been unimportant and chiefly clerical.

Die Algen im weitesten Sinne. Von P. Falkenberg. (Breslau: Trewendt.) The *Encyclopaedia der Naturwissenschaften*, edited by Prof. Jäger and a number of collaborators, is designed to include treatises on all branches of natural science. The botanical department is under the special control of Prof. Sihenik; and the eighth section of this, or twenty-third of the whole work, consists of a valuable handbook to the Algae by Prof. Falkenberg. The general classification adopted by the author is open to criticism. Of his four principal classes—Florideae, Algae, Diatomaceae, and Schizophyceae—it is doubtful whether the third is at all entitled to rank on the same footing as the others, considering the close relationship between the diatoms and the desmids; while the use of the term algae (in the narrower sense) for the second class, which includes the Melanophyceae and the Chlorophyceae, is at least confusing. The inclusion also of the Characeae among Algae is opposed to the view of the best systematists. Lucidity of arrangement is not, however, the strong point of German naturalists, so much as accuracy of descriptive detail; and in this point Prof. Falkenberg's handbook is no exception to the general rule. The illustrations are comparatively few, but are good and well-chosen; the letterpress descriptions excellent, and fully up to the most recent researches. The book is indeed an indispensable companion to the algologist; and the student of any particular branch will find a useful bibliography attached to each section.

Die Pflanze: Vorträge aus dem Gebiete der Botanik. Von Dr. F. Cohn. (Breslau.) A collection of popular lectures delivered at various places in Germany between the years 1852 and 1881. Their purpose and tenor are naturally somewhat unequal. Some of them are intended simply to draw the attention of a popular audience to the more obvious and less recondite facts of natural history; and in glancing over these a thought that rises to one's mind is the advantage possessed by the German popular lecturer on natural history in having a poet like Goethe always at hand from whom to borrow a quotation apposite in almost any possible connexion. In the lectures on insectivorous plants and on Bacteria, Prof. Cohn is on ground which he has specially worked himself; and these are, perhaps, the best in the volume.

Lectures on the Vegetable Kingdom, with Special Reference to the Flora of Australia. By William Woolls. (Sydney.) The patron of the Cumberland Mutual Improvement Society (Paramatta) publishes a series of lectures delivered on various occasions before the society. Those relating to the special features of Australian vegetation are interesting and instructive. The lecturer is not more fortunate or logical than others when he enters the lists as an opponent of the theory of evolution, his pseudo-religious point of view involving the curious obliquity of vision which seems almost inseparable from it.

THE DANISH ARCTIC EXPEDITION.

LIEUT. HOVGAARD has published, in pamphlet form, with map (Dulan), a detailed statement of the reasons which led to the despatch of the expedition now on its way northward under his command. Briefly stated, Lieut. Hovgaard's theory is that two large continents or groups of islands extend from Franz-Josef Land across the North Pole in the direction of Wrangell Land, and that they are separated by one or more straits which connect the Siberian and Palaeocretaceous seas, the principal opening being probably between Cape Ohelyuskin and the New Siberian Islands. Opinions will, no doubt, differ widely as to the soundness of the reasoning from

which this hypothetical distribution of land and water has been deduced, several difficult questions being disposed of in a somewhat off-hand manner. Still there is much that is bold and ingenious about the theory as a whole, and it would be ungracious to insist on the weak points of such a spirited conception at the moment when it is about to be put to a practical test. The principal objects of the expedition, as stated in the pamphlet, are to ascertain whether Franz-Josef Land really extends to the neighbourhood of Cape Ohelyuskin, whether the conditions of current and ice are such that a base for further exploration can be there reached without incurring too great a risk, and, finally, whether the coast of Franz-Josef Land trends northward at that point to form the western side of the great opening already alluded to. But, if these points cannot be cleared up, and the ship is obliged to go into winter quarters near Cape Ohelyuskin, observations will be taken throughout the winter in accordance with the scheme of the International Polar Commission. There is something of the old ring about this programme, something of that genuine spirit of adventure which has prompted so many hardy seamen to undertake voyages "for the discovery of regions, dominions, islands, and places unknown," and which has so often led to results whose importance it would be difficult now to estimate. Whether the expedition succeeds in its main objects or not, it will at least form a valuable link in the chain of scientific stations now being drawn round the Pole, and we may cordially join in the hearty good wishes which cheered the explorers on their departure from Copenhagen on July 18.

It is a pity that the translation of Lieut. Hovgaard's really interesting pamphlet was not revised, or at least corrected, before it was published in this country, for, as it stands, it is neither Danish nor English, but a combination of both these languages; while the first twelve pages would have been all the better for a little judicious pruning. GEORGE T. TEMPLE.

SCIENCE NOTES.

The Andamanese.—The August number of the *Journal of the Anthropological Institute* contains, with other interesting papers, one of great value on "The Aboriginal Inhabitants of the Andaman Islands." The author, Mr. E. H. Man, has spent eleven years in the islands, and from his official position has enjoyed exceptional opportunities of observation. Using as his guide the well-known volume of *Notes and Queries* issued some years ago by a committee of the British Association, he has as far as possible followed the instructions in this work, and his observations have consequently been judiciously and systematically directed. In his philological work the author has had the great advantage of Mr. A. J. Ellis's co-operation. During the last session of the Institute, three evenings were devoted to the reading and discussion of Mr. Man's memoir. Only the first part appears in the current number of the *Journal*; the second part will be published in November; and the concluding portion, with copious Appendices, will follow in due course. Mr. Man has returned to the Andaman Islands, and the proofs have consequently to be transmitted to and fro. We believe that a small number of copies of the complete series will be published as a separate monograph. There can be no doubt that, from the exhaustive and trustworthy character of the Memoir, it will come to be regarded as the standard work of reference on the Andamanese.

Report of Observations on Injurious Insects during the Year 1881. By Eleanor A. Ormerod.

(Sonnenechein.) The past year has been especially noticeable for the destruction caused by the "turnip fly," the loss from which is estimated to have been a million sterling. Miss Ormerod has therefore wisely devoted a large part of the present report to matter respecting this mischievous insect. Eighty contributors have aided her with notes on this subject. The pamphlet may be safely recommended to all alike for its scientific and for its "practical" interest.

THE Finnish newspapers record a striking instance of the extent to which the land on the shores of the Gulf of Bothnia is being gradually upheaved. It appears that on June 25, 1755, a land-surveyor named Erik Klingius, residing in the parish of Bergö, between the towns of Nikolaistadt and Kaskö, made an excavation in the smooth rock at an elevation of two inches above the level of the sea. On being lately measured, the present height was found, after the lapse of 127 years, to be six feet five inches above the sea-level.

THE latest forestry bulletins (November 15 and 16) of the United States Census Bureau show the pine and spruce supply of Maine, and the spruce supply of New Hampshire and Vermont. In Maine the virgin forest is now reduced to a petty area about the head waters of the St. John River, while the hemlock is confined to the eastern portion of the State. The other map is remarkable as showing an extensive devastation of white pine. We learn that the American Forestry Congress, presided over by Commissioner Loring, of the United States Department of Agriculture, will hold its first session at Montreal on August 21 and 22, two days before the assembling of the American Association for the Advancement of Science in the same city.

A HISTORY of the *Jeannette* Arctic expedition is being prepared under the care of Mr. Raymond L. Newcomb, the naturalist who superintended the explorations. The book will be illustrated.

PHILOLOGY NOTES.

DR. GWYTHER, who has lately returned from a journey through Northern Syria, has succeeded in taking a squeeze of the Hittite inscription discovered a short time ago by an American missionary at Marash. The inscription is upon one of two archaic lions now built into the wall of the citadel. In style and character they remind us of the archaic lions of Western Asia Minor.

LAST year Mr. Julius Löytved, the Danish consul at Beyrût, discovered the fragment of a sculptured slab of black basalt in the village of Barin, on the slope of the mountains westward of Hamah or Hamath. Barin stands on the site of the ancient Rephanee (Seleucia Pieria). The sculptures seem to be Hittite in origin, and consist of a strange-looking animal and a human figure, turned head to head against one another and separated by a ring. The figure, which is clothed in a pointed cap, and wears a long robe reaching to the ancles and fastened round the waist by a girdle, has the two arms uplifted in the air.

THE Report of the fifty-ninth anniversary meeting of the Royal Asiatic Society forms a substantial volume of 160 pages. Putting aside formal matter, it consists of a general review of Oriental studies during the year by the secretary, Mr. W. S. W. Vaux. To cover such an enormous field must be beyond the powers of any single man, but Mr. Vaux knows when and where to ask for assistance. None the less is the credit due to him of having produced an invaluable, though informal, bibliography of the year's work. Those who have themselves

tried to keep abreast of the ever-increasing number of scattered papers in this department of learning will best appreciate the labour involved. As usual, the obituary notices are especially full.

FASCIICULUS II. of the seventh volume of Lane's Arabic-English Lexicon, edited by S. Lane-Poole, will be published in a few weeks.

MR. WILLIAM GOONETILLEKE, who is favourably known by his contributions to grammatical literature, invites subscriptions for an edition of Pāṇini, with an English translation. From his specimen number we see that he takes the text of the Sūtras and the Vṛtti, as first published by the Oulouta Pandits and afterwards by Dr. Boehtlingk; and that he adds a commentary founded principally on the Mahābhāṣya, the Bhāṣyapradīpa, the Kāśikā, and the Siddhānta-Kaumudī. The work is well done, but we doubt whether it will quite satisfy students of Pāṇini in Europe. They want both more and less than is offered by Mr. Goonetilleke. They hardly want a translation of the Sūtras and of such extracts from the commentaries as are given in the old editions of Pāṇini, but they would appreciate a complete translation of the Mahābhāṣya as it is now being edited by Prof. Kielhorn, with extracts from Kaiyāṣa. However, we wish Mr. Goonetilleke all success. The transliteration of Sanskrit is unobjectionable, except his representing the palatal and lingual *s* by *ś* and *ṣ*. Why not keep to *s* and *sh*?

M. HALÉVY is reading a series of papers before the Académie des Inscriptions in support of a proposition, which he has already maintained in the ACADEMY (June 24), that the languages called by Assyriologists Accadian and Sumerian are not actual languages at all, but only a conventional mode of ideographic writing adopted for religious reasons by the Semitic Assyrians. His remarks chiefly have reference to the monuments, &c., recently brought back from Chaldaea by M. de Sarsac, which M. Oppert has interpreted as being the memorials of a king called Gudea. In reply to the argument that Sumerian has a syntax of its own, M. Halévy urges that Arabic or Roman numerals likewise have a construction of their own quite distinct from that of numbers when spelt out. He also alleges that the Talmud shows that the Rabbis used a similar artificial language—"une sorte d'argot scolastique"—of which traces may be found even in the Old Testament.

PROF. TRAUTMANN, of Bonn, is in Paris, working at his book on speech-sounds.

PROF. P. DE LAGARDE has published in the *Nachrichten* of the Göttingen Royal Academy of Sciences a note upon the etymology of "Sixtus," the name of so many Popes. It is not another form of *sextus*, as might be rashly conjectured. It is derived from the Latin *xystrós*, Greek *xystrós* = "a portico," which is itself so-called from its smooth and polished floor (*ἔσω*). In Italian, *xystrós* naturally became *sisto*, which was again Latinised as *Sixtus*.

M. A. PAVET DE COURTEILLE has published the *Mirāj-Nāmah*, with notes and a French translation (Paris: Leroux). This work is only known from the codex in the Wigur language (of the Mongolian family) in the Bibliothèque nationale.

THE *Revue critique* for July 31 has an elaborate and highly commendatory review by M. A. Barth of Dr. Hoernle's *Comparative Grammar of the Gaurian Languages*, which has recently received the prix Volney from the Académie des Inscriptions.

FINE ART.

Oriental Carpets. By Vincent Robinson. (Sotheran.)

In the matter of decoration generally, the East is undoubtedly our master; but Western rivalry seems in no case so absolutely hopeless as in carpets. Some carpets of fine quality and Oriental in style have indeed been made in Europe, but these were probably the work of Orientals, or men taught by them, in Italy, Spain, and Poland. Mr. Vincent Robinson has done well to include two specimens of European make in his beautiful book. One of these is a Polish carpet of subdued but rich colour, the fine effect of which is enhanced by gold and silver threads introduced with great art; and the other is supposed to be Spanish, and bears a European coat-of-arms which contrasts rather strangely with the Oriental character of the rest of the design. This is the nearest approach to incongruity in the very beautiful and varied collection, although absolute purity of design is rare in this kind of decorative art. Under the comprehensive title of "Oriental," Mr. Robinson includes carpets of Mongolian, Indian, Arabian, Persian, and Afghan origin; but hardly one is "pure." Nomadic habits, conquest, pilgrimages, and other causes which are explained by Mr. Robinson and Sir George Birdwood in their interesting letterpress have combined to mixture of style; but it seems a singular property of Oriental carpets that this interfusion is unattended with that destruction of artistic consistency which is so painful in most kinds of art. The graceful flow of the Persian line gains stateliness without much loss of beauty when it is employed in decorating the stiff *cartouches* of the Mongol, and Iranian flowers seem to grow with little less than natural freedom in and out of the geometric trellises of the Arab. The different motives, instead of contending in discordant strife, seem to agree to a harmonious compromise; and Tartar and Turk, Indian and Afghan, appear to put their hands and heads together to work out a system of co-operative ornament. Some of the most beautiful of the carpets so faithfully drawn by Miss Julia Robinson, and so admirably chromo-lithographed by Mr. Griggs, are very "mixed." In Mr. Vincent Robinson's Baghdad and Shiraz carpets of the sixteenth century we see Persian, Mongolian, and Arabian motives blended together with charming results.

It is quite time that we had a book on this subject, and, though the history of Oriental carpets has yet to be written, the descriptions of Mr. Vincent Robinson and the learned Preface of Sir George Birdwood supply enough interesting information on the subject to satisfy most present enquirers. More especially valuable are the notes on the different hairs and wools employed. The Tartars seem to be specially favoured with their yellow goats and Argalis and Bactrian camels. Altogether, the impression, after reading the volume, is that Europeans are very severely handicapped by nature in this contest, and that if we employed our wealth to propagate "kermes" (the insect which has been supplanted in commerce by cochineal), to cultivate "ipreck," and to import the softest

wools and hairs of all the wild goats and sheep and camels in the world, we should be as far as ever from being able to compete with a poor weaver of Kurdistan. Fortunately, if we cannot rival, we can admire and preserve and study, these beautiful things, and, let us hope, do something to promote their production. This, however, is a matter of serious difficulty. With no lack of appreciation of individuality, of character, and beauty of design and colour, our wealthy connoisseurs seem only able to buy up the products of the past without influencing the manufactures of the present; and Oriental carpets in their full beauty are, or were, the result of needs and tastes and civilisations so different from ours that we seem fated to stand by and watch sadly while the sources of their beauty dry slowly up for ever. Probably Mr. Vincent Robinson could not have adopted a better method for promoting interest in this subject than in publishing this volume, the illustrations to which represent in a very remarkable manner both the colour and the texture of the carpets. To Mr. Griggs's skill in chromo-lithography the ACADEMY recently drew attention in connexion with his admirable plates of some of the treasures of the South Kensington Museum published under the title of *Portfolios of Russian, Persian, Italian, Spanish, &c., Art*. Not only Mr. Griggs, but Miss Julia Robinson and the owners of the carpets she has drawn so beautifully are to be congratulated at the success of his facsimiles. Should, as we hope, a second edition be called for, Sir George Birdwood will have an opportunity of reconciling his opinions as to primary and secondary colours with those now generally received. Sir George seems to think that the employment of secondary and tertiary colours is a "degradation," but he calls "green" a secondary colour, and "blue and yellow" primary ones. It should be mentioned that six of the carpets figured in this volume are from the collection of Mr. Robinson, and the others belong to Earl Somers, Sir George Birdwood, Sig. Alessandro Castellani, and Messrs. W. Spottiswoode, Alfred Morrison, and Arthur Wagg.

COSMO MONKHOUSE.

DRAWINGS BY VICTOR HUGO.

A FRESH addition to the curiosities of art has just been issued from the "Ateliers des Reproductions artistiques" at Paris. This is an album of designs by M. Victor Hugo in illustration of his *Travailleurs de la Mer*. They have been reproduced by engravings on wood by M. Méaulle, the friend of the great poet, which are evidently very faithful to the original sketches, some of which appear to have been dashed off on the margin of his MS., and others hastily washed in on separate pieces of paper. Most of them are impetuous in execution, as if produced under the stress of imagination, and are interesting as showing how the scenes and situations so graphically described by Hugo's pen presented themselves to his mental vision. In a few creations of his grotesque fancy, such as "Le Nain de la Nuit" and "Le Démon de la Mer," he has drawn some very palpable impersonations of the superstitious terrors of the peasant; and his "pieuvre" is a very devil of a fish with a terrible human semblance. It is, however, in his blottings of sea and sky that the strength of his imaginative vision is most

shown. In some of these, especially in "La Vague," with its vast, cruel clutch, there is a truly dreadful suggestiveness. In others, especially where he has attempted to portray his human characters, his want of technical skill is somewhat painfully apparent; but this detracts little from the interest of a portfolio which shows rather what an artist he might have been than what an artist he is, and brings us into a relation with his visionary faculty more intimate perhaps than that we gain from his writings. Most of the drawings are stamped with the rash vigour of his fearless fancy and the intensity of his feeling for the more terrible aspects of Nature. Their highest praise is that they are characteristic of Victor Hugo. It is intended to publish an edition of *Les Travailleurs de la Mer* illustrated with these cuts, of which 100 copies have been printed separately on *velin du marais* and issued without text. We understand that a few of the albums are "to be found" at Messrs. Sampson Low's on Ludgate Hill.

ROYAL ARCHAEOLOGICAL INSTITUTE.

CARLISLE MEETING.

TUESDAY, August 1.—It is many years since the Archaeological Institute met at Carlisle. To most of the members much of the Western border was a new world. Business began by a formal reception in one of the assize courts. The city was then perambulated, and its few fragments of old buildings examined. The castle has been so sadly mutilated in recent times that it requires an antiquary with highly constructive faculties to be able to reconstruct it, even in imagination. The keep is a massive square building of rather late Norman, though some portions of it may, perhaps, be as old as the time of William II. A large portion of the city wall remains. Its age is very uncertain, for Carlisle has so often stood sieges that its fortifications must have been constantly undergoing repair. The Mayor, Mr. R. S. Ferguson, F.S.A., who is a most accomplished archaeologist, held a conversation in the evening, during which Mr. E. A. Freeman read a remarkably powerful paper on "The Position of Carlisle in History."

Wednesday.—An excursion was made to visit Long Meg and her daughters. Long Meg is a huge monolith. Her daughters consist of smaller stones arranged in a circle. Few of the stones seem to have been destroyed, and the group forms one of the finest stone-circles in the North of England. Prof. Stephens, of Copenhagen, took up a station near Long Meg, and told what is known about her to the assembled tourists. Yanwath Hall was visited next. It is a fine Border residence, now used as a farm-house. The peel-tower, which is the earliest part of the building, is as perfect as when it was built in the Edwardian time, though some of its windows are later insertions. The ruins of Brougham Castle were visited next. The keep, though shattered, is in a fair state of preservation. The style is late Norman. The gate-house, of later date, is a large and remarkably strong building. The drive from thence took the party past Brougham Hall. Its external appearance has much of the character of an old Border house, but we believe it to be a creation of modern days. Some of the party visited a little chapel in the grounds. This building contains some interesting carving and various other odds and ends of antiquity. A modern heraldic roof was much admired by some; others thought the shields far too large. Mayborough is a circular enclosure with a large monolith in the middle. The whole of the bank of this enclosure seems to be made of small boulders.

Thursday.—The cathedral was inspected under the guidance of Mr. E. A. Freeman, who spoke

in strong terms of reprobation of the insertion of a highly ornate and large doorway in the south transept. Undoubtedly this has been a most unfortunate alteration. The church belonged to the Austin Canons, and there was originally a little door here leading to the refectory. This has been done away with to make room for a thing which was not wanted, and has no historical significance whatever. The Mayor of Carlisle described the old stained glass in the east window, and the Rev. J. T. Fowler the sculpture on the capitals of the choir. Mr. Micklethwaite made some remarks on the conventual buildings, and defended the alteration of the doorway which Mr. Freeman had censured, on the ground, as we understood, that it was right to adapt ancient buildings to modern convenience. In the afternoon Dalston, an old Border manor-house, and Rose Castle, the palace of the Bishops of Carlisle, were visited.

Friday.—The Roman camp at Birdswald on the Roman wall was examined under the guidance of Dr. Bruce. It is very large, more than five acres, we were told, and seems to be remarkably perfect. It is one of the finest of those military posts which stand on the south of the wall and run across the whole of the island. Lanercost Priory, part of which is still used as a parish church, was explained by Mr. O. J. Ferguson. It is a noble remain of Early-English of the best character, almost wholly devoid of ornament, but very graceful and effective. Naworth Castle was thrown open to the party. As one of the grandest castles in the North, it attracted much interest. So much of it is modern, owing to the fire which desolated it about a quarter-of-a-century ago, that it requires time and study to distinguish the old from the new.

Saturday.—Hexham was visited by a long railway journey. This grand Border church is still interesting, though it has suffered much at the hands of restorers in modern times. The nave is one of the grandest pieces of Early-English work in existence, though spoiled by the insertion of a new east end, copied, we were told, from some Yorkshire abbey. The transepts and porch form a complete museum of Roman and mediæval antiquities which have been found in the neighbourhood; the lettering on some of the thirteenth-century tomb-stones is very bold and effective, showing a decided Scotch feeling. In the choir is a brass to one of the Ogles, whose mother was a Bertram; the arms of Ogle and Bertram have been on the tomb. Ogle has become effaced, but Bertram is in its place. It attracted attention as being identical in form (the tinctures may have differed) with those of the royal house of Balliol. These Bertrams were one of the great Northern houses; the family is commemorated by the well-known ballad of "Bartram's Dirge;" the last of them who dwelt in the North seems to have been George, whose estates were confiscated by the Long Parliament.

NOTES ON ART AND ARCHAEOLOGY.

On the proposition of the French Director-General of Fine Arts, the Minister of Public Instruction and Fine Arts has conferred upon Mr. Hamerton the university decoration of an *Officier d'Académie* in recognition of his writings on art.

MR. SAMUEL LAWRENCE, the well-known portrait painter, has on view at his studio, 6 Wells Street, Oxford Street, an interesting large three-quarter-length portrait of Thackeray, which he has painted for the Reform Club. A half-length of Mr. Browning hangs near it, while in another room is a chalk drawing of Charles Dickens in his early, dandyish days, very bright and lifelike. Many

of Mr. Lawrence's drawings of deceased literary celebrities have lately been reproduced by the Autotype Company.

THE South Kensington Museum will contribute largely to an exhibition which is now being organised by the Union centrale in the Palais de l'Industrie.

THE Fine Art Society will shortly have ready an engraving by Mr. S. Cousins after Mr. Millais' "Pomona."

THE *prix de Rome* for sculpture has, after some indecision, been thus awarded by the committee of the Institut:—The grand *prix* to M. Ferrari; the second to M. Pepin; the third to M. Lombard. All three are pupils of M. Cabanel. The grand *prix de Rome* for engraving was withheld altogether; but a second prize was given to M. Sulpis, a pupil of M. Dupont; and a third to M. Barbotin, a pupil of MM. Bouguereau and Annetouche.

THE August number of *Men of Mark* (Sampson Low) gives, with others, a portrait of Mr. Richard Ansdell, R.A., which is one of the most successful photographs we have ever seen.

THE "Practical Notes on Etching" by Mr. R. S. Chattock, which have been appearing in the *Etcher*, will shortly be reprinted, with additions and alterations, as a volume, which will be illustrated with etchings.

MESSRS. F. S. NICHOLS AND Co., of Borough High Street, have in contemplation a series of "Etchings of Old Southwark." The first subject will be "The Old White Hart Inn Yard," which has been undertaken by Mr. Percy Thomas, who had an etching of "Sir Paul Pindar's House" in the Academy this year. The White Hart Inn dates back some five centuries, and was the head-quarters of Jack Cade in 1450. It is often mentioned by Shakespeare, and it has gained a fresh place through being chosen by Dickens as the scene of the capture of the runaway couple and of Mr. Pickwick's first meeting with Sam Weller. The series will probably be continued with etchings of the George Inn and of St. Saviour's Church.

A PLEASANT etching of the river-side at Chelsea, with some old boats in strong light and shade in the foreground, forms the frontispiece of the *Portfolio* this month. A pen-and-ink drawing by Sir John Gilbert, called "A Council of War," is reproduced by A. Dawson's process, which does not seem so successful as that of Amand Durand, to which the *Portfolio* has for so long accustomed us. Mr. Hamerton's description of the cathedral at Autun is extremely interesting. This cathedral affords quite a history of mediæval architecture in itself, so many were the changes of fashion in building during its construction. Mr. Hamerton is somewhat severe on the Gothic architects for their want of reverence for those who had preceded them, but one is inclined to forgive them considering the delightful results their incongruities produced. Would our English cathedrals, for example, be half as interesting had they all been finished in one age and upon one type? It is this same incongruity that forms one of the chief charms of Autun, and we cannot help feeling thankful that M. Viollet-le-Duc was restrained by public opinion from accomplishing a thorough Romanesque restoration of such an interesting specimen of the various types of Gothic.

THE question of creating a museum of decorative art after the fashion of South Kensington is still being warmly agitated in France. The Government have just authorised a lottery of fourteen million francs for the purpose of constructing a building for it. A commission, composed of engineers and architects, has also been formed for the purpose of examining the ruins of the Palais de la Cour des Comptes, and

they have reported that the greater part of the walls are solid enough to be incorporated in a new building. It is therefore proposed that the new Musée des Arts décoratifs shall utilise these ruins and be established on the Quai d'Orsay.

A STUDY of Japanese art by Théodore Duret is begun this month in the *Gazette des Beaux-Arts*, and promises to be interesting. The first article treats of the illustrated books of Japan, and more especially of the clever designer Hokusai, who was also celebrated recently in the *American Art Review* by Mr. Edward S. Morse. A general summary of the Salon is given by M. Antonin Proust in a somewhat discursive article, which deals more with recent legislation in regard to art in France than with the Salon proper. He considers it a hopeful sign that the Salon of 1882 shows us "toute une pléiade d'observateurs qui, pour la plupart très jeunes, font un effort visible dans le sens de cette recherche plus sincère de la vérité." In sculpture, especially, he notes great progress. M. Ephrussi reviews the works of M. Paul Baudry at present exhibiting in the Orangery of the Tuileries; M. Bonaffé continues his notes on the Richelieu Collections; M. Paul Lefort gives a ninth article on Velasquez; and the publication of the "Journal de Voyage du Cavalier Bernin" is again resumed. The illustration of the number does not call for remark.

At a recent meeting of the department of fine arts of the Académie royale de Belgique, M. Alphonse Wauters read the second part of a paper upon "Certain Painters of the End of the Fifteenth Century." He treated specially of the illuminated MS. known as the *Missal Grimani*, which has been reproduced by photography. In it he traces the work of Memling, of Gérard Vander Meire, of Liévin Van Lathem, and of Hugues Vander Goes. The missal itself he believes to have been made for John of Burgundy, Bishop of Cambrai, a natural son of Jean Sans Peur, Duke of Burgundy, whose life is not a very creditable one, and who died at Brussels in 1480, when all these Flemish painters were flourishing.

MUSIC.

SOME MUSICAL PUBLICATIONS.

Purcell's Music to the Masque in "Timon of Athens." (Novello, Ewer and Co.) It is more than six years since the Purcell Society was founded for the purpose of doing justice to the memory of the greatest of English composers. In 1878 the "Yorkshire Feast Song" was issued, and now we have to notice the publication of a much earlier work. The "Feast Song" was composed in 1689, but the "Masque" music had already appeared in 1678, when Purcell was in his twentieth year. It was the first work which he wrote after resigning the post of copyist at Westminster Abbey in order to have more time for study and composition. In the latter part of the seventeenth century, Shakspeare's "Timon of Athens" was, to quote the words of the adapter, Thomas Shadwell, "made into a play," and Purcell wrote the music for the Masque added to act I. at Timon's banquet. Though it contains much that is quaint and charming, it is not one of the composer's most striking efforts; but every note written by Purcell is of interest to musicians, and of importance to students of English musical art. The work is beautifully engraved and printed, and the score has been originally edited by the Rev. Sir F. A. Gore Ouseley, who has carefully examined many valuable MSS., and also compared them with a MS. copy in his own library made by John Travers

Euryanthe: a Romantic Opera. By O. M. von Weber. Edited by Berthold Tours. The English Translation by William Thornthwaite. (Novello, Ewer and Co.) The revival of "Euryanthe" at Drury Lane last June called the attention of the musical public to an opera which has met with undeserved neglect in this country. "Der Freischütz" is always spoken of as Weber's masterpiece; but "Euryanthe," if not a greater work, possesses more than ordinary interest, for it must certainly be considered as one of the chief means toward the development of Wagner's genius. In this opera, Weber's aim was that which has since been so steadily pursued by Wagner—the combination of the arts of poetry, painting, and music. "Euryanthe" contains some of the most lovely and original music ever written by Weber. For example, the exquisite romance and *cavatina* of the first act, the pleasing duet between Euryanthe and Adolar in the second, and the grand *scena* and spirited Hunting Chorus of the last act. This new edition of the opera has been prepared with the greatest care by Mr. Berthold Tours, and has both German and English words. *Euryanthe* is a work that ought to be in the library of all musicians. It is not necessary to commend it to the notice of vocalists, for most of the songs have long been favourites both in the concert- and drawing-room.

The Organist's Quarterly Journal. Part 54. (Novello, Ewer and Co.) The title of the first piece, by W. Conradi, organist at Schwerin, Mecklenburg, is somewhat curious. He calls it a motive-fantasy. The writing is exceedingly good; but there is more of "motive" than of "fantasy" in it. An *Andante* and *Passacaglia*, two posthumous pieces by J. C. Tiley, are smoothly written, but decidedly lack character. The first is the more pleasing of the two. *Seven Variations* on Smart's tune "Lancashire" by J. Matthews show both taste and skill. The volume includes also a graceful *Andante* by J. L. Gregory, and a neatly written *Prelude* by J. Katterfeldt.

Six Two-Part Songs. For Ladies' or Boys' Voices. By H. Walmsley Little, M.B. (Novello, Ewer and Co.) These songs are written expressly for use in vocal classes; they are short, simple, and pleasing.

Three Trios, for Female Voices, by A. H. Behrend (Novello, Ewer and Co.), are graceful and flowing. "Haymakers" contains a peculiar, but not unpleasant, modulation.

Kevin's Choice: Operetta in Two Acts. Adapted from a Sketch by F. Hazlewood. Music by T. A. Wallworth. (Metzler and Co.) The libretto is not a strong one, but the music is light and lively. The duet "Spin the Slender Thread," the trio "Father, I'm Young," and the trio "Hark, the Clock," are the best numbers of the work.

The Child's Pianoforte Book. By H. Keatley Moore. (Swan Sonnenschein and Co.) This little book professes to provide a first year's course at the pianoforte. It is, however, really a music book for the head rather than the fingers. The author has taught the pianoforte at the Croydon Kindergarten School on the system here set forth; and, having been successful himself, he hopes, by publishing his method of instruction based on Pestalozzian principles, to be of assistance to other teachers. He earnestly requests them always to prepare the lessons, and not to use the exact words of the book. Songs, tales, and pictures are employed to attract children, and we think that few can doubt their efficacy as a valuable means of education. The pictures please the eye, the tunes the ear, and the tales the mind of little girls and boys. One of the principles on which the system of instruction is founded is the

avoidance—or at least the attempted avoidance—of anything dry and uninteresting. There is no doubt a pleasant and an unpleasant method of teaching names and values of notes, time, accent, and the elements of harmony; but the dry five-finger exercises and the dreadful scales must be learnt, and we cannot approve the author's advice to teachers not to commence them until "the child feels the need of lissomeness to carry out the conception of the composer's work." We fear the training of the fingers would in many cases be unduly delayed, if not altogether neglected. The suggestions about short practices—and, if possible, in the presence of some older person—are excellent. Mendelssohn's mother taught him and his sister Fanny music beginning with lessons five minutes long, and she was always with them when they practised. The plan of making children write down tunes from letters and afterwards play them is decidedly a good one; it is based on Fröbel's sound principle that knowledge, to be really gained, must be reproduced. There seems at times far too much detail for a first year's instruction, and, from a remark in the Preface, the author seems aware of the fact. The note on p. 57 is somewhat confusing, one of the accompaniments to be played by the child containing a chord beyond the compass of an octave.

J. S. SHEDLOCK.

OBITUARY.

MR. W. H. CALCOTT.

THE death is announced of Mr. William Hutchins Calcott, the musical composer. He was the younger son (his elder brother, John Hutchins Calcott, died unmarried in 1851) of Dr. Calcott, whose glees and other compositions enjoy a world-wide reputation, and the nephew of the distinguished painter and Royal Academician, Sir Augustus Wall Calcott.

Mr. W. H. Calcott was born at Kensington, with which suburb his family had been long connected, in the year 1807; and after his father's death he pursued his musical studies under the instruction of his brother-in-law, William Horsley, and with all the advantages of artistic intercourse which his numerous connexions both with music and with painting procured for him. Much of his subsequent professional life was occupied, like that of most musicians, with teaching; but he also filled various positions as organist. He was, moreover, the author of several well-known compositions of high merit, such as the famous *scena* of "The Last Man," the words by Campbell the poet, with whom he was intimately acquainted. His anthems—"Give Peace in our Time, O Lord," and "In My Father's House are Many Mansions"—are admirable specimens of part-writing, full of deep feeling and refined musical treatment, and are likely to continue favourite works with all church choirs. Mr. Calcott was a most skilful arranger for the pianoforte, and devoted much of his time to popularising, as it were, the works of classical masters, by placing before the amateur public skilful arrangements of important compositions, both sacred and secular, such as his series entitled "The Holy Family" and "Half-hours with the Best Composers."

In the latter years of his life, Mr. Calcott lived on terms of intimate friendship with many distinguished men, among whom may be named Dean Alford and Charles Kingsley. In his intercourse with them, he found the truest sympathy with his own deeply religious nature and complete purity of life. His health, never good, failed entirely about four years ago, and from that time until his death, which occurred late on the night of August 4, he had to endure constant suffering, which was borne with the most exemplary patience and Christian fortitude.

LITERATURE.

Memoir of the Hon. George Keith Elphinstone, K.B., Viscount Keith, and Admiral of the Red. By Alexander Allardyce. (Blackwood.)

As the events of the great war between England and France and England and Napoleon enter more and more into the domain of history, and the survivors of the struggle die off one by one, popular opinion with regard to the military and naval transactions of the war seems to have undergone a great change. At the time, Nelson was considered a greater hero than Wellington, and the navy was the more popular service among all classes; every detail of every naval engagement was eagerly read, and many an action between single ships, like Capt. Cooke's in the *Sybil* and Capt. Brenton's in the *Spartan*, which are now forgotten, then created a universal glow throughout the whole nation. At the present time, whether owing to the change in naval armaments, to the great modern European wars, to the spread of military education, or most probably to Napier's great work, Englishmen study far more, and know far more about, the Peninsular War and its battles than they do of the naval war which preceded it and made England mistress of the seas. There are, indeed, besides the continuous naval Histories of England, two naval Histories of this especial period by Mr. James and Capt. Brenton, but though each went through three or four editions in the quarter-of-a-century which succeeded the war, and each has some merit in itself, neither has been able to catch that hold of the public attention which Napier's genius commanded for his work. This change of public opinion is hardly deserved; and the naval history of this period deserves a record which should serve as a complement to Napier's History of the Peninsular War. Up to the Battle of Trafalgar England's prowess had been chiefly displayed on the sea; to march with the victories of the 1st of June, of St. Vincent, of Camperdown, of the Nile, of Copenhagen, and of Trafalgar itself, there could be only placed to the record of the army Abercromby's success in Egypt and the failures in Flanders, at the Helder, and at Buenos Ayres. After Trafalgar, England's efforts were directed to her army, chiefly owing to the tenacity of such different men as Castlereagh and Windham; and though the navy could boast of some brilliant actions, like Sir W. Hoste's off Lissa, it was Wellington's army that contained the concentrated impulse of Eng-

land's power. It may fairly be hoped that a naval History of the glorious period of the English navy may soon be written; and, when it is, it will be most necessary for its author to form some clear conception of the life and character of George Lord Keith, whom he will meet at every turn, not, indeed, in the great battles, but in important commands at critical moments.

Whatever is popularly known about the naval war is centred round the life and career of Nelson. His Life has been written by innumerable authors, and his despatches have been published at great length; and, whenever the name of any other admiral occurs, he is generally thought of as an admiral under whom Nelson served, whom he despised, or whom he honoured as his friend. This popular opinion is hardly fair, and it would be well for anyone who regards Nelson as the only great sailor of his time to study this account of the more varied services of one he disliked, Lord Keith. Nelson was not the unique naval commander ill-judged admirers have striven to prove him. He developed as regularly from Hawke and Rodney as Trowbridge and Hoste developed from him. He owed as much to influence as any of his contemporaries; he was a post-captain at twenty-one, through the influence of Adm. Suckling, his uncle, and Controller of the Navy; he was a connexion of the Walpoles, was never without a ship, and was at one time nearly standing for Ipswich to force his interests by his vote in the House of Commons. This question of parliamentary influence as the only means of obtaining professional advancement or opportunities for distinction deserves a more thorough examination than it has received. It is often overlooked how entirely the great war with France was a war waged by the English aristocracy and plutocracy against the French democracy and then against Napoleon. This is not the place to examine the disinclination of the people of England towards the war. The avowed sympathies of the popular societies for revolutionised France, the necessity of impressing seamen and of taking soldiers by a rough description of the worst characters in every village, and the bread and peace riots can be but alluded to; but the disinclination of the people can be easily accounted for. Commands and all lucrative appointments in both services were only to be obtained by parliamentary influence; the working officers of the army and navy were turned adrift after years of service on a half-pay which meant genteel starvation; while the common soldiers and sailors, if not turned off absolutely penniless, were mulcted of most of their pensions by innumerable clerks, pay agents, and boards till but a very small sum reached the men themselves. Lord Keith's biographer admits that his hero entered Parliament in 1780 for Dumbartonshire, and afterwards sat for Stirlingshire, without any very defined political views, but merely to assist his personal advancement. Such was the regular practice of any captain in the navy who had made a little prize-money and was ambitious, just as it was of any lawyer who desired the prizes of his profession. Of the thirteen English admirals who obtained English peerages for their services, nine had sat for a

greater or less period in the House of Commons—Lords Howe, Hood, Bridport, St. Vincent, Keith, Barham, Gardner, Gambier, and Exmouth; and, of the remaining four, Nelson and Collingwood could not well have been passed over, though the former's dying wish was disregarded, and the latter's desire to perpetuate his title refused. Duncan owed his command to his relationship to Dundas, and Saumarez had to wait for seventeen years after the peace, and then owed his peerage rather to his good fortune in outliving his compeers than anything else. Beside the leading admirals, all the best employed captains of the time had seats in the House of Commons; Duckworth, for instance, sat for New Romney, Warren for Nottingham, Popham for Yarmouth and Shaftesbury, Sidney Smith for Colchester, Neale and Martin for Lymington, and Lord Cochrane for Honiton and Westminster.

But now, leaving the question of the state of the navy and the means of naval promotion, let us look at the life of this Lord Keith, who, like everyone else, owed his advancement to his seat in Parliament. He was the son of a poor Scotch lord; and the description of the life at Elphinstone Tower reminds one vividly of the young Murrays of Scone and the young Erskines of Buchan. Keith himself took to the sea, as a cadet of each of the other noble families had taken to the law, not as an amusement, but to gain his livelihood. But, poor as he might be, he found when he came south that his prefix of Honourable was as useful to him as it was to Murray and Erskine, for in 1765, at the age of twenty-eight, he was made a post-captain in the royal navy. He had served his apprenticeship to the sea as a midshipman in the *Gosport*, commanded by Capt. Jervis, who can claim the credit of having formed him. Lord St. Vincent, as Sir John Jervis became after his great victory, fills a place midway between Howe and Nelson in any classification of English admirals. Howe belonged to the old tactical school of English sailors, and, if not timid, was certainly extremely cautious, as his rapid retreat after his victory of the 1st of June sufficiently proves; while Nelson, on the other hand, was the founder of a new or dashing school, who dared everything, cared for no odds, and whose only eagerness was that none of the enemy's ships should escape. St. Vincent stood midway between these two extremes; though daring, he was never rash, and he could not only fight a battle, but could fight it just when a victory was wanted, and never failed to get the greatest advantage out of his success. Young Elphinstone proved himself worthy of his captain, and distinguished himself both on sea and land in the American War. On the breaking out of the war with France, Capt. Elphinstone sailed to the Mediterranean in command of the *Robust*, and when Lord Hood occupied Toulon Elphinstone was at first made governor of the town, and, after Lord Mulgrave's arrival, governor of Fort la Malgue and commandant of the sailors ashore. His military doings are fairly described by Mr. Allardyce, but the account of the skirmish at Ollioules is jejune by the side of the vivid description published by Capt. Delavoye in

his Life of Lord Lynedoch from the general's own papers. Mr. Graham served as volunteer aide-de-camp first to Capt. Elphinstone and then to Lord Mulgrave; and Mr. Allardyce might have noted at least that "at first Lord Hood thought Elphinstone had acted rather rashly, but has since expressed his approbation in most decided terms" (Delavoye's *Lord Lynedoch*, p. 49). Capt. Elphinstone's services won for him the Order of the Bath; and on returning to England he, as was natural in a naval officer desiring a command, separated himself from the Whig party, with which he had chiefly acted, and joined the war party which Pitt had formed out of his old adherents and the recruits Burke had brought. On getting his flag rank, Sir George Elphinstone was sent out to seize Cape Colony in conjunction with troops from India; and, after some anxious waiting for this reinforcement, he was completely successful, as he was also in seizing, without firing a shot, a Dutch fleet sent to relieve the Cape in Saldanha Bay. For these services he was raised to the Irish peerage as Baron Keith, and was sent to the Mediterranean as second in command to Lord St. Vincent. On his old captain's return to England he succeeded to the chief command, much to the mortification of Nelson, who at once returned to England and left Keith the credit of any further operations in that sea. These, omitting the painful transaction of the Convention of El-Arish, in which Sir Sidney Smith had exceeded his powers and deserves the whole blame, resolve themselves into the capture of Malta, the blockade of Genoa, and the landing at Aboukir. With the first he had little to do; by the second he was instrumental in reducing Genoa, which, however, was immediately abandoned by the Austrians after Napoleon's victory at Marengo; but the landing in Egypt was his greatest achievement. In these days, when we are reading of another English army being landed in Egypt, it is interesting to examine the proceedings of Abercromby's army and Keith's fleet. To begin with, Keith never dreamt of bombarding Alexandria; ships in those days could not stand the fire of forts; he preferred landing the army at Aboukir Bay, an operation of great difficulty, as the French were in force on the sea-shore. After landing, the army had to fight their way to Alexandria with the loss of their leader, and had then to pen the French into the two cities of Cairo and Alexandria. The Indian contingent under Baird only arrived after the fall of Cairo, having suffered great losses in a toilsome march across the desert and a long passage down the Nile. On the successful termination of the military operations, Lord Keith shipped the French survivors off to France, as had been agreed, and on his return to England received a peerage of the United Kingdom under the same designation. After the rupture of the Peace of Amiens, Lord Keith received the command in the North Sea, with orders to watch Napoleon's preparations at Boulogne for invading England, and showed great administrative powers in his disposition and management of the numerous gunboats and cutters under his orders. When the danger of invasion was over, Lord Keith hauled down his flag and proceeded to London,

where he married Queenie, the daughter of Dr. Johnson's old friends, the Thrales. He held towards the end of the war the command at Plymouth, and in that capacity had to communicate to Napoleon the decision of the English Ministry that he was to go to St. Helena. This episode, and the whole sojourn of Napoleon on board the *Bellerophon*, are fully and well described by Mr. Allardyce from Lord Keith's own memoranda. After 1815 Viscount Keith, as he had been created in 1814, retired to Tulliallan Castle, one of his seats in Scotland, where he died in 1822, leaving an only daughter, the Comtesse de Flahault. Besides Tulliallan Castle, the poor Scotch cadet died owner of Banheath in Dumbartonshire, Purbrook Park in Hampshire, and Stonehaven Marischal, the old seat of the Keiths, Earls Marischal, from whom he took his title. All these estates he had purchased out of his prize-money, which must have been something enormous, for, although he received no such single sum as Lord Gambier's £175,000 from the capture of Copenhagen, or Adm. Bertie's £210,000 from the conquest of the Mauritius, his Cape expedition was very lucrative; and when Commander-in-Chief on the Mediterranean and North Sea stations he had a right to one twenty-fourth of the prize-money out of every ship within his districts. He was always fortunate, likewise; more so than poor Collingwood, for instance; and in the very first days of the war was one of the five captains who received £20,000 each after the capture of the *St. Jago*, when the first squadron was on the way to Toulon.

Mr. Allardyce has succeeded in making a very interesting volume out of his materials; but such a biography, written years after the hero's death, necessarily does not possess the vivid interest of Ross's Life of Lord de Saumarez and Brenton's Life of Lord St. Vincent, penned by friends and contemporaries. There is also at least one important blemish to be noted—namely, the confusion, both in the Index and the text, between the two Lords Melville, father and son. Henry Dundas, Pitt's right hand and Secretary for War and the Colonies, was not created Lord Melville till 1802; but Mr. Allardyce twice speaks of him as Lord Melville in the year 1800 on p. 247, and mentions his returning to the Admiralty in 1804, whereas he had never been at the Admiralty before. Again, on p. 353, Mr. Allardyce speaks of "Lord Melville, with whom Lord Keith had still remained in close and friendly communication," as if the Lord Melville of 1812–1814 was the old Henry Dundas, and not his son, who was at that time First Lord of the Admiralty. It were to be wished also that the author had consulted Delavoye's Life of Lord Lynedoch when writing his description of the operations at Toulon. On the whole, the volume is a valuable contribution to our stock of naval biography; and it is to be hoped that Mr. Allardyce's example will be followed, and that other memoirs of this type, drawn from equally authentic sources, may be published. For instance, a Life of Lord Gardner, of Sir J. Duckworth, and of that fine all-round seaman Sir John Borlase Warren, would repay the labour of a biographer.

H. MORSE STEPHENS.

An Introduction to the Study of Poetry. By H. B. Cotterill. (Kegan Paul, Trench & Co.)

THE first impression caused by a perusal of Mr. Cotterill's volume is one of astonishment at the wide range of reading, and of experiences, mental and physical, which it exhibits. Plato and Dante, Vasari and Champollion, art, philology, history and metaphysics, the galleries of Dresden, and the writer's own strange experiences of life among African savages—all these jostle one another "in most admired disorder." The next impression is one naturally consequent upon such an excess of material. It is impossible—at least, I have found it so—to discover in it any definite concentration upon the subject of Poetry. If an "Introduction" aims at doing anything, it should surely aim at "introducing" us—at facilitating in some manner, and by some general critical limitations, the study of inventive literature. It speaks well for Mr. Cotterill's audiences, at Dresden and elsewhere, that they were able to follow the earlier and more abstract lectures (pp. 1–146) "with sympathy and indulgence" (Pref., p. v.). I own I should have expected them to be thoroughly puzzled. Mr. Cotterill apprehends that these lectures may appear "crude, superficial, and incoherent." They are assuredly neither crude nor (until they come to deal critically with actual poets, such as Keats and Byron) superficial. But "incoherent," ill-compacted, and hard to follow they not less assuredly are.

So far, however, as a central purpose is discoverable in the earlier lectures, it seems to be that of persuading both hearers and readers that art, poetic and other, is productive and creative, not merely reproductive and re-creative; that there is ideal truth as well as "fact-truth," and that this ideal truth, and not Pleasure (however inseparable Pleasure may be from its contemplation) should be the aim of the artist. To this thesis the author returns with an iteration quite disproportionate to the chance of its impugment. Indeed, he is partly conscious of this defect, and apprehends (Pref., p. vi.) that he may have "insisted rather too urgently and repeatedly on elementary truths in respect of which a reader prefers to be credited with at least as much discernment as the author." But it is not to save the *amour propre* of the reader that one objects to the repetition of such widely accepted truths; it is because such repetition throws the whole subject out of perspective, making the contrary opinion appear a formidable and prevalent error. If there be any persons among those to whom Mr. Cotterill's book could possibly appeal who think that "Hamlet" and "Faust" are not *true* because they are not historical, or that the Dresden Madonna, where it outshines Raphael's model, differs from it for the worse, such persons cannot be convinced by any affirmation or repetition. Study and thought, not demonstration, are the remedy for the cecity against which Mr. Cotterill laboriously contends. "Be patient," Mr. Browning pithily says—

"Be patient, mark and mend!
Had you the making of your skull?"

Had less labour been spent on such superfluous

persuasion, time might have been found to get the lectures into more literary shape, and to expunge certain *obiter dicta* which are scarcely worthy of Mr. Cotterill, and are likely to mislead his audience. For instance (p. 98), Aeschylus is described as representing Prometheus as "bound to a naked rock, doomed to an eternity of solitude and anguish, while vultures claw and mangle him." This is to forget the plot, and to diminish the dignity, of the drama. It is not for an eternity, but for a period which Prometheus knows will come to an end. There are no vultures, many or few, but "the winged hound of Zeus, the dark brown eagle." Again (p. 139) we are told of Shakspeare that "he had nothing to do with *Destiny* or deep questionings." O injured shades of Hamlet, Lear, and Caesar! Neither is there any visible reason why (p. 61), in the description of Hercules' agony, the attendant Lichas should be called "the priest Lachas." It is essential in lectures, where so much depends on illustrations and colloquial criticisms, that the illustrations should be exact and the criticisms such as sober reflection can enforce.

The second half of the book consists of detailed and partly biographical lectures on five great poets who adorned our literature at the beginning of this century—Coleridge, Wordsworth, Keats, Byron, and Shelley. The first of these lectures—that on Coleridge—will be read with interest, partly for the lucid and succinct account of the "poetic philosopher," his life and works, his success and failure; and partly also for the extremely ingenious—and, to the present writer, convincing—interpretation of the riddle of "Christabel." Mr. Cotterill modestly says that his solution may "seem all nonsense to others" (p. 202), and that when he next reads "Christabel" he shall try to forget his guess, and "look upon the poem as a reality and not as an allegory." I do not think that readers will forget his guess, however; nor do I see why the poem should not be a reality, even if it be also an allegory.

But in this, and still more in the following lectures, the necessity of satisfying the prejudices of an audience has made Mr. Cotterill fall below the true and independent level of a critic. It is difficult to understand how, except by stooping too much to his audience, he can have persuaded himself (p. 142) that the effect produced by George Eliot's works "is enervating and distinctly unhealthy." Still harder is it to accept his statement (p. 308) that Shelley, late in life, "saw the beauty of true Christianity and accepted the gospel of Christ as the one true gospel." I do not deny that a change of tone towards Christianity is visible in "Prometheus Unbound" and "Hellas" as compared with "Queen Mab." But Mr. Cotterill's statement can scarcely fail to produce an image of a returning prodigal prostrate at the feet of Pope or Primate. Such a tableau may be acceptable to an orthodox audience, but it is unhistorical. Shelley—for right or wrong—knew himself better than this; his

"spirit's bark is driven
Far from the shore, far from the trembling throng,
Whose sails were never to the tempest given."
But it is on the subject of Byron that Mr. Cotterill swims in the fullest current of

Philistinism. The poet's irregular moral life—(I may remind Mr. Cotterill that it too was beautified, like Shelley's, by acts of great charity, liberality, and unselfishness, independently of its conspicuous and glorious end)—causes the writer to turn Byron's very merits to faults. Byron had "an intense egotism, subjectivity, self-consciousness" (p. 276). Granted. He had also a wondrous power of identifying himself with nature, with storms and tempests, waves and mountains and torrents (pp. 279, 280). Granted. Will it be believed that Mr. Cotterill actually strives to identify these qualities, and depreciates the second for its affinity to the first? Take the criticism on "Cain" (p. 288). We are told that "Cain" is a "fierce, but somewhat futile, assault on the religious world. The poet takes for granted that the God of the Christian is a God of blood. But in reality He is not so; and Byron's sword passes innocuous through the phantom that he has raised." It is amusing, yet painful, to remember that this is exactly the kind of criticism which Byron foresaw when, with a rueful humour, he avowed that it "was difficult to make Lucifer talk like a clergyman on the same subjects." But that a drama which was the admiration of such persons as Sir Walter Scott, as Kingsley and Maurice, should be put aside with this rather *bourgeois* reprobation, does seem to indicate that Mr. Cotterill has been misled by ethical feeling into a literary paradox. Nothing in the whole of the lecture on Byron strikes me as new, and not much as true, except the charge of self-consciousness (which, after all, is less culpable than the intense self-esteem and admiration of "The Excursion") and that of uncritical discernment, which led him to prefer Pope to Shakspeare and Milton. I doubt, too, if there be very much evidence for the statement (p. 311) that Byron feared the poetic rivalry of Shelley.

E. D. A. MORSHEAD.

The Gypsies. By Charles G. Leland. (Trübner.)

"HE knows nothing, but then he has such a pretty way of putting it," said a Cambridge don of Kingsley's Cambridge Lectures. Mr. Leland's way of putting it is very pretty, and his knowledge of Gypsies is quite the reverse of nothing; still, this his last work is often tantalising. Three or four of its chapters—those, too, that promise most—bring us no further than we were before; not seldom its statements are very will-o'-the-wisps. That there are Gypsies in Egypt and Gypsy musicians in Hungary has long been known; but that, according to Seetzen and "Newboldt," the Gypsies of Egypt use very few Rómani words, and that Liszt supposes the Gypsies when they arrived in Hungary to have had no music of their own, are "bold assumptions" certainly, but assumptions not of Liszt's or Newbold's making. As a matter of fact, the Abbé devotes many chapters to showing that Hungary owes its music to the Gypsies; and Newbold's Ghagar vocabulary, short though it is, contains at least forty words intelligible to every European Gypsy—*páni* (water), *lón* (salt), *bál* (hair), *maas* (flesh), *chabo* (boy), *káló* (black), *bhút* (much), *ja*

(go), &c., &c. Seetzen's vocabulary, on the other hand, is professedly one of Syrian, not Egyptian, Gypsies; and the question always remains whether it and von Kremer's (Petermann's *Geogr. Mittheil.*, 1862) have really more claim to rank as true Rómani dialects than has the "Language of the Community of Gypsies" appended to the Life of Bamfylde Moore Carew.

Five chapters on "American Gypsies" possess real value, as opening up an all-but virgin soil, scarce glanced at in Simon's *History of the Gypsies* (New York, 1865). The fifth exemplifies the adage that "truth is stranger than fiction;" beside it, *Zelda's Fortune* and *Dark but Comely* are tame, for it gives "a letter in the Gypsy language, with translation[,] by a lady." The comma is indispensable, since translator and letter-writer are one and the self-same lady—Miss Britannia Lee, of Philadelphia. A Gypsy she—and withal a student of Dante; her mother-tongue Rómanes; Italian, French, Latin her "extras;" half-sick of Gentiles, she tells us; overjoyed to fall in with Gypsies; driving in carriage and pair from an aristocratic breakfast; anon taking pot-luck with new-found Rómani friends—here is a Sphinx whose riddle is hard of solution. The four other chapters are good, but this one is worth them all—is worth, indeed, a whole cartload of books about Gypsies.

Chapters there are too on "Russian Gypsies," "The Origin of the Gypsies," "Shelta, the Tinkers' Talk," "Welsh Gypsies," "Gypsy Names," &c., the three first of which have made their appearance before. To notice all in detail were impossible, so I merely jot down a few points on which I differ from Mr. Leland. *Kisaiya* seems to be simply *Keziah* writ fine, as *Sacki* certainly is short for *Zachariah*; while *Catseye* surely is always a nickname only, rendered in Rómanes by *mátekeskór*. *Pugasah*, monkey, I still believe to be a hybrid—the English *pug*, disguised by the suffix *-asár*. *Shelta*, the Tinkers' Talk, demands for its critic a Celtic philologist; but some of its words, other than those so marked, are nothing probably but common cant—e.g., *crack*, *mush-faker*, *monkery*, *bozers*, *tusheroon*, and *dingle-fakir*. *Néd askan* suggests "in a *doss-ken*" (sleeping-house); and *lárkin* is rather the diminutive of *lady* (cf. cant *tifni-lákin*, meretrix) than a cognate of the Hindustani *larki*. Of "Six Gypsy Stories in Romany" we are not told by whom or where or when they were composed, which greatly detracts from their possible value. Thus *jivdes*, she lived, is one out of many strange forms, and *güber*, grumble, one out of many strange words; but till one learns where form and word are used—in Wales, the Midlands, or elsewhere—the bare knowledge of their existence is of no value. Every Gypologist has his own pet method of spelling; still, it is hard to see why *sossi*, *sási*, *sā sī*, and *sási* should figure side by side, *pelashta* and *plächta*, *kamava* and *kāmāva*, and so on.

The "Origin of the Gypsies" is the least satisfactory chapter. It is impossible to gather from it what Mr. Leland deems the approximate date of the Gypsies' arrival in Europe, and to what Indian dialect, ancient

or modern, he considers Rómanes to be most akin. Many writers, from Capt. Richardson (1803) to Babu Mitra (1870), have already demonstrated the existence in India of nomade tribes that closely resemble our European Gypsies. From a Mohammedan Hindu of Calcutta, who wandered in youth with a tribe of Indian "Gypsies," Mr. Leland has learnt that these Gypsies called themselves *Rom*, and by people in India were called Trablūs or Syrians, and that in their "peculiar language, consisting of terms which were not generally intelligible," the term for "bread" was *manro*—the same as in European Rómanes. This is not much, and even its value is lessened when one remembers that five or six years ago Mr. Leland himself informed us that "there exist in India several kinds of outcasts, identical in all respects with the Gypsies, and that prominent among them are the Doms, whose name, it is probable, is identical with that of Rom" (*cf.*, too, Dardu *dom*, musician, *rom*, tribe). Yet this, with a new derivation of *Zingan*, is practically all that this author here adds to the subject; while he repeats such oft-repeated figments as that the primitive Gypsies "were without religion," and "ate without scruple animals which had died a natural death, being especially fond of the pig, which, when it has been thus 'butchered by God,' is still regarded even by prosperous Gypsies in England as a delicacy." It is not, nor ever was, as I believe; but on this point I should like Miss Lee's opinion. Braxy they do eat, and *múlo báulo* too, but the latter only as did Cagliostro.

Do I speak hardly of Mr. Leland's book? If so, it is only that from him I expected more. Some day I look for the answer to our Egyptian Question; I looked in this book for it, and found it not. But the book itself is always delightful reading—two chapters for instance, one on "Walking and Visiting," and the other on "Cobham Fair." These seem to recall to me walks that I must have taken, scenes that I must have looked on, and talks that I must have held, with vanished friends. Their charm is that they tell no novelty. And though the whole book taught nothing, what of that? Not always with Gypsies who have most to teach does one pass the pleasantest days, but rather with those who can laugh a right jolly laugh, tell a good tale, and troll forth a rollicking song. This can "Hans Breitmann," if ever mortal could. FRANCIS HINDES GROOMER.

Logic and Life, with other Sermons. By the Rev. H. S. Holland. (Rivingtons.)

THIS volume contains several sermons of more than ordinary interest. For thoughtful men who are brought face to face with the religious perplexities of our own time, there will be no need for the apology for the publication offered in the Preface. "We clergy," writes Mr. Holland,

"cannot be quiet while we slowly accumulate the materials for a book. We, of necessity, find ourselves preaching; and naturally we speak of what is uppermost in our minds; and so we tell our secrets, we announce ourselves as we move. If we happen to be following out certain directions of theological thought,

then just as the mole-hills tell the lines of the burrowing mole, so we throw out in sermons the manifest tokens of our path."

The sermons, however, he adds,

"are printed for the purpose with which books are written rather than that with which sermons are preached. They are offered not as hortative addresses, so much as for the sake of laying before the minds of many who now find themselves astray, or in peril, amid the tangle of life, some such interpretation of the natural and spiritual worlds as may possibly assist them in detecting their coherence with the truth as it is in Christ Jesus."

The characteristic note of these sermons is the union of a singularly comprehensive intellectual outlook with an earnestness of spiritual ardour. And in this they contrast very favourably with the narrow, carping, or entirely futile attacks from university pulpits that are too often meant to pass for Christian apologetics. Mr. Holland has not set himself to hide away from the influences of the world in which he lives. There is no doubt a certain intensity, not without its value, gained by the concentration of an intellectual asceticism; but vastly more potent with the world is the manifestation of a power that can receive the full shock of the prevailing currents of thought, and, gathering to itself the strength and enrichment which they bring, stand steadfast and secure. The volume is throughout the work of one who has entered thoroughly into university life, is sensitive to the numerous influences, interlacing or antagonistic, of its thought and feeling, is sympathetic with young Oxford, and understands it even when he refuses to yield to it, or to run with narrowness although it claim to be "scientific" and "modern."

The first three sermons are engaged with the consideration of "some of the conditions under which the *intellectual* approaches to a creed must be made;" and their main drift, exhibited with much force and copious elaboration, is to lead the reader to feel that *conviction* in things spiritual is reached not by mere abstract reasonings, but by reason operating in actual personal contact with the problems of which the *credenda* of religion offer the solutions. It is shown at the same time that this is no feature peculiar to the spiritual sphere.

Mr. Holland's writing does not readily yield extracts which are not seriously injured by being dislocated from their original surroundings; and it is with some diffidence that the following passage is cited:—

"After all has been argued out, men throw over the argument; for behind the intellectual battle lies the region of conviction—that mental condition, which cannot be gainsayed, cannot be upset or discomfited by any momentary difficulty—that mental atmosphere which admits one impression and repels another by some instinctive method of its own—that mental structure which the long years have laboriously built, and which nothing but the long years will ever unmake or refashion. What is the need of struggling over this or that logical detail? At the end of it all, the man under attack will pass all argument by with a wave of his hand; miracle, for instance, he will say, cannot offer itself in any conceivable shape to my imagination; it is no good proving to me that it ought to appear perfectly probable; as

a fact, its improbability increases every time I look at it.

"Such is the state of things—it exists as well for us as for those who differ from us; we have the same sense as they of hollowness and insufficiency and remoteness as we listen to old abstract argumentation, while it deals with the living things of spirit and of God. True we may still believe that that high metaphysic has its place, has its office, has its reality; but yet we seem to be standing for the time on some different levels to it; and on these lower levels we hardly know what to say to it, or where to rely upon it; we feel hazy and uncomfortable as it delivers its decrees; we seem to have so little grip upon its method; the words may sound strong as ever, yet the tale has but little meaning for us; it fails to make its entry good within the substance and fibres of our real life."

Now this is a truthful and vivid description of facts. The passage must be taken as only an ordinary specimen of Mr. Holland's skill in psychological portraiture. There may not be always a marked facility of execution in Mr. Holland's work of this kind, nor always a perfect sureness of touch, and in some instances there seems to me over-much elaboration of details; yet the effect in the end may be fairly said to be in general broad, harmonious, and truthful. They are what we so rarely meet with—life-like studies from the life. In further confirmation of this remark it would be easy to cite many passages; but we must content ourselves with a reference to the admirable pictures of the spiritual features of student-life at Oxford given in the sermon entitled "The Breaking of Dreams," and, from a slightly different point of view, in that entitled "The Cost of Moral Movement."

Polemical, in the ordinary application of the word, these sermons are not; no opponent is exposed, after the fashion of apologists, as weak, illogical, irrational, or perverse; but there is something reassuring to wavering hearts in the growing sense that a powerful mind has reviewed the whole situation, and is not cast down. The stately progress of the argument serves rather as a "demonstration in force" than as an assault upon the enemy's lines, but it nevertheless fulfils a valuable purpose; it is, after a manner, a measuring of strength, and quietness and confidence are the result.

Attention may be drawn to the manner in which the development of life through struggle and the survival of the fittest is brought to play a part in the argument of sermon v. Theology, it seems to me, has yet scarcely realised the bearings on religious speculation of the doctrine of evolution. It is well worthy of consideration whether it has not been justly observed that "by regarding man as the last and highest product of nature the theory of evolution easily lends support to the idea that all things exist or have existed for the sake of our race. *This seems indeed to be an essential element in any rationally evolved universe*" (see Mr. J. Sully's article "Evolution" in the new edition of the *Encyclopædia Britannica*).

The occasional sermons preached by Mr. Holland in St. Paul's Cathedral and elsewhere, though not without merits of their own, belong to a different order of discourse, and need not be considered here.

JOHN DOWDEN.

Dunster and its Lords, 1066-1881. By H. C. Maxwell Lyte. (Privately printed; Exeter: Pollard.)

HISTORIC families and historic demesnes present to a capable annalist a field of peculiar value. There is much to be learnt from their records which we can learn in no other way, and which is necessary to a right understanding of that social side of our history till recently so much neglected. On the other hand, there are few materials which have greater need of judicious editing if they are to afford not only their *maximum* of grain but also their *minimum* of chaff. Dunster is happy in its chronicler. Mr. Lyte in his instructive monograph has spared no labour that could increase its value, and has carefully abstained from overweighting his work with matters of merely family interest, or indeed of no interest at all. It is to be regretted, however, that some of the Appendices are to be found in the middle of the book, the confusion being increased by the absence not only of an Index, but even of a Table of Contents.

The lordship of Dunster is best known by the preservation of its castle to our own day as the noble residence of a family of commoners whose ancestors acquired it by purchase, five centuries ago, from the representatives of its Domesday holder. In this respect its fate is in all probability unique. Mr. Lyte has unfortunately failed to avail himself, when issuing his papers in a collected form, of Mr. Eyton's learned labours, which would have enabled him to include an important feature of the Tor—its antiquity, namely, as the *caput* of a pre-Conquestual franchise, for which its position clearly marked it, and of which the evidence is to be found in the lenient hidation of the twin hundreds which formed its chatellany. The date selected as Mr. Lyte's starting-point is also unluckily chosen. The mention of 1066 tends to perpetuate the "vulgar error" that England was conquered in that year, whereas these districts were still unconquered as late as the beginning of 1068. Hence it is certain that even at that date the Mohuns were not yet in possession. On the other hand, it is certain from the *Inquisicio gheldi* that they were in possession by 1084. The latter date is the earliest evidence, and should, therefore, have appeared as the starting-point. It is strange to find Domesday described as "the survey of 1085" (p. 3); and it is surely time that Aluricus should be englished as Ælfrie, and not as the meaningless "Aluric." The curious tradition of Joan de Mohun (p. 19) reminds Mr. Lyte "partly of Dido and partly of Godiva," but should rather be compared with the similar legend of Lady Tieborne and her famous "crawls." In "a certain Humphrey Colles, gentleman" (p. 75) we may recognise the founder of Colles of Barton, a wealthy Somersetshire house; and Mr. Lyte seems unaware that he was connected by marriage with the Luttrells.

Among the numerous illustrations to be found in the volume is an excellent sketch of a very curious picture preserved at Dunster Castle. It is dated 1550, and represents Sir John Luttrell emerging from a stormy sea. Mr. Lyte, while rejecting what M. Clermont-

Ganneau would term *le mythe iconologique*—evidently derived from a misunderstanding of the theme—is unable to explain the meaning of the composition. Sir John is seen escaping alone from "a man-of-war in the background, struck by lightning," its crew being all overwhelmed. This obviously commemorates his marvellous escape the year before, when, with the sole exception of himself, the entire garrison of Broughty (called Bouticraig by Mr. Lyte) had been put to the sword. We here see this Somerset Odysseus returning in safety to his Ithaca, his lady's scarf around his arm, and his protecting goddesses descending from the clouds. The initials S. I. L. beneath the lines on the rock in the foreground "may be those of the author," Mr. Lyte thinks, but are merely those of Sir John himself (who doubtless composed them); and the head of "a young man," introduced by a later hand, may well be that of the hapless nephew whose gratitude moved him to "renovate" the picture in 1591. If the signature be indeed that of Lucas de Heere, we have here distinct evidence of his being in England some while earlier than is supposed. Mr. Lyte's suggestion that it was painted in France is inadmissible, for Sir John was imprisoned in Scotland (p. 77). De Heere must therefore have paid a flying visit to England before or during his French period. He was only sixteen in 1550, but the work is almost certainly his, its subtle symbolism, primary and secondary, being worthy of the author of *The Orchard of Poesie*.

In the genealogical and heraldic portion of his subject Mr. Lyte is thoroughly at home. The tabular pedigrees are the result of laborious research, though their value is greatly impaired by the intermixture of successive generations. Col. Chester's *magnum opus* would have enabled him to add a fact or two on p. 145, and the order of Alice Paganel's husbands in the pedigree contradicts the order in the text. But the chief point to notice is Mr. Lyte's assumption that William de Moion, "Earl of Somerset," and founder of Bruton Priory, was son of the William who fought at Senlac. The tendency of genealogists to skip a generation in the obscure century which followed the Conquest appears ineradicable. Mr. Lyte, however, has so conclusively corrected one such omission at a later period (p. 32) that he might have detected the *prima facie* improbability of a man who was old enough, though a simple *seigneur*, to be a leader of importance in 1066—and, indeed, to be described by Wace as

"Le Viel Willame de Moion
Ont avec li malint compaignon"

—having a son young enough in 1138 "to roam . . . as with a whirlwind" over England (*Gesta Stephani*). Nor is the doubt lessened by a deed which Mr. Lyte has printed, and in which William, the assumed father, mentions his brother and his two sons, but not his supposed son and heir William. Mr. Lyte, by-the-way, dates this deed 1090-1100 on the ground that John (de Villala) of Tours "was Bishop of Bath from 1090;" but he was consecrated, as it happens, Bishop of Somerset in July 1088 (*Historiola*, 21), and obtained the Abbey of Bath the same year by charter from William Rufus. The true date,

therefore, is 1088-1100. The essays on the heraldry of Mohun and of Luttrell deserve unqualified praise. Well written and well illustrated, they will prove most valuable to the student, specially as touching the accessories of the shield and what may be termed the evolutionist theory of supporters. We are not, however, informed on what ground the family now in possession "have maintained the claim . . . of using supporters," they being neither the heirs male nor the representatives in blood of the Luttrell who first adopted them. J. H. ROUND.

La Mythologie des Plantes ; ou, les Légendes du Règne végétal. Par Angelo de Gubernatis. Tome premier, 1878; Tome second, 1882. (Paris: Reinwald.)

THE author reminds us in the Conclusion to the second volume of this valuable work that some four years have elapsed since the first part appeared. This long period has not, however, passed unimproved. One grave fault was found by the critics and reviewers of the first volume; and it is interesting to note how the author has availed himself of the suggestions offered in the preparation of the part just to hand. M. de Gubernatis showed a strong tendency to refer everything peculiar in the history and mythology of plants and plant-names to some solar, phallic, or *anthropogonique* source, the consequence being that a theory, good enough in itself, was pressed into service where its aid for the interpretation of a myth or legend was not in the least required. This weakness the author has betrayed to a far less degree in his later work, and we are thankful. One other fault the captious critic might be inclined to find, unless, indeed, he took the pains to read the Conclusion first. It might be asked, if the volume treats of the myths and legends relating to plants, trees, and flowers, why, under certain headings, have we only the names of certain plants, revealing, it is true, to one who may be familiar with the languages of the Continent and of the East the fact that something interesting lies beneath the names, but at the same time supported by no actual recital of a myth, legend, or peculiar usage attaching to the plant in question. Under "C'ampaka" (*Michelia champaka*), for example, anyone familiar with the East would naturally expect to find reference to the fact that this beautiful plant is regarded by the Hindûs as sacred to Vishnu; while the Brahmins have a legend respecting a blue variety which grows only in Paradise. But the only piece of information we glean respecting the flower, save that it has a number of designations which allude to its delicate form, its sweet perfume, and its rich golden colour, is from the *Nalodaya*, attributed to Kâlidâsa, where we read "que le *c'ampaka* est, en partie, responsable de la séparation des deux amoureux, des deux époux Nala et Damayanti." But, if we feel disappointment occasionally on turning for information respecting a popular plant, we must, in justice to the author, bear in mind his own apology. He says:

"Je suis bien loin maintenant de croire que dans mon livre j'ai recueilli toutes les notices que se rapportent à la vie merveilleuse des

plantes; ce que je n'ai pas recueilli dépasse certainement de beaucoup ce que j'ai pu rassembler. Il reste donc beaucoup à ajouter à ce livre; et chaque lecteur pourra aisément, en parcourant ce volume, devenir mon savant collaborateur" (ii. 372).

One conclusion to be drawn from the study of plant mythology is becoming more and more clear every day—that the essential myths, those which form the groundwork and foundation of the vast system, are exceedingly few; while by the application of genius it is possible to revive and extend them without limit. This will account for two facts in the system of mythology which clusters around the vegetable kingdom—the exact similarity between legends attaching to different plants in widely different localities, and the constant re-appearance of fundamental resemblances where the details differ widely. Let us take an illustration. At Berry Pomeroy, in South Devon, one finds a variety of legends respecting the place itself, and the particular objects of note in the neighbourhood. I was recently gravely informed that the place received its name from the fact that one *Pomeroy* in bygone days brought a *Berry* and planted it in the grounds. This berry grew till it became a beautiful tree, and is still pointed out to the visitor as the Wishing-tree. Mrs. Whitcombe has already remarked that "the prettiest superstition of the place is [that which relates to] the 'Wishing-tree,' a lofty, wide-spreading beech; if you whisper your wish softly against its trunk, it will be sure to come true"—i.e., your wish will be gratified. I visited this tree on August 10 last for the purpose of inspecting its peculiarities. It is a magnificent tree, both in respect of girth and height. To obtain one's wish it is necessary to walk round it backwards three times—a very difficult task, as the tree stands on the edge of a steep declivity. A peculiar excrescence on one side of the tree has exactly the shape and appearance of the human ear, magnified a dozen times. Now, though we have many "wishing-stones" and "wishing-wells" in England, "wishing-trees" seem to be few and far between. But, if we will take the pains to trace out the matter, we soon find that what seems to be an anomaly in English mythology is but a link in a vast chain which nearly encircles the globe. Take, for example, the *Kalpadruma*, of which we read in the *Daçakumāracharita* (see Müller's *Chrestomathy*), and we at once meet the tree which fulfilled all wishes. Major-Gen. Cunningham gives us a figure of this tree in one of the volumes of the *Archæological Survey of India* (vol. x., pl. xv.), and tells us that the common people give this name to a large forest tree with smooth, silvery bark; but the *Kalpadruma* is not the only tree found in India which "remplit tous les désirs" (Gubernatis, i. 195 *et seqq.*), for Vincenzo Maria da Santa Caterina, who visited that country in the seventeenth century, tells us of a tree called *Colparaquin*, "di tanta grandezza che niuno dei mortali la puote misurare, la quale dicono che dia o ognuno quanto vuole e sa desiderare, per cibo e delizia." Here we may recognise the Sanskrit *Kalpavriksha*, as in the *Campanganghi* of Pigafetta, another traveller, we find the *Kamopāṅgin*, "un

albero grandissimo," growing in the Gulf of China, and fulfilling all one's desires. From India we turn our face westward, and we soon find other links in the chain. In East Prussia, for example, the dog-wood tree takes the place of the Devonshire beech and the Hindû *Kalpadruma*; and, if the sap of that tree be absorbed in a handkerchief on St. John's night, it will fulfil all wishes. Everyone will call to mind the "wishing-rod" formerly so largely in request for divining. In Old High German this rod was called *Wunscligerta*; and there are traces of a wishing-thorn in the mythology of the Teutonic races, among whom the thorn was employed for the manufacture of the divining-rod. "And the magic wand, by whose impact treasures are acquired, was a wishing-rod; confer Parz. 235, 22, 'wurzel unde ris des wunsches,' root and spray of wish." The hazel has been largely employed for making the wishing-rod, and would therefore enter the list of wishing-trees. Nor must we omit to mention the magic fern-seed, than which no more potent charm has ever been found, either at home or abroad, for the acquisition of desired objects. In Suabia the fern-seed can only be acquired at midnight on Christmas Eve. In Russia, where the plant (sometimes said to be *Aspidium filix-mas*, at other times *Polypodium vulgare* or *Osmunda regalis*) is called *Paporotnik* (in ii. 145, *poporotnik* is a printer's error), it is still a belief among the peasantry that the fern flowers on St. John's night "et que le mortel heureux qui peut assister à cette floraison verra s'accomplir tous ses souhaits."

If Mr. Moncreux Conway has given any attention to the study of plant-lore since he wrote his valuable articles on mystic trees and flowers, he will probably have seen cause to withdraw one statement he there made. "Except a few names, given with humour rather than malevolence [he says], as Devil's apron and Devil's leaf, there are few which ever suggested diabolism." The fact is, as M. de Gubernatis has shown us, that the Devil is as largely associated with the names of plants and plant legends as with those relating to places. We have Devil's milk as a name for *Euphorbia*, and Devil's bit for the scabious. In Germany the name of Devil's eye is applied to the henbane, and the snapdragon and toad-flax are known as Devil's band. Such names as *Teufels-darm* and *Teufels-dreck* tell their own tale, and will suggest to the student of English plant-names a number of synonyms in connexion with such plants as dodder, bindweed, and assafoetida. Indigo is called *Teufels-farbe*, while even the virgin's bower (*Clematis Vitalba*, L.) is not safe against the intrusions of the evil one, who claims the rambling stems under the name of Devil's thread. Perhaps the name of Old Man's beard may be a euphemism for Devil's beard, as applied to this plant. In Devonshire the tall flower-heads of the tritoma (*Uvaria grandiflora*) are popularly known as the Devil's poker, and in Sumatra the *Rafflesia Arnoldi* is called the Devil's siri box (the siri being the betel so largely employed throughout the East).

The limited space at our disposal prevents our touching upon other subjects. The learned author has taken India as his principal field

of study, India particularly as set before us in those old Sanskrit writings which have supplied us of late years with such vast stores of material for the study of every branch of mythology as well as of philology; and his position as Professor of Sanskrit at the institute for the higher branches of learning at Florence, together with his familiarity with the mythology of Europe, as exhibited in earlier works, guarantee the fidelity and soundness of his scholarship and labours. The alphabetical arrangement which has been carried out in both parts of the work affords wonderful facility for reference, and constitutes it quite a dictionary of plant-mythology. In the first volume we find many quotations from English works, indicative of thoroughness of reading; although the reading for the press was imperfectly performed, the result being a number of blemishes which continually offend the eye of the reader. Some of the most interesting illustrations of the subject come from the Flowery Empire; and, as the flower-lore of China has been but imperfectly studied and worked out, I should be strongly tempted to call attention to some of the most popular facts but that I hope to treat the subject fully in a work on Oriental plant-lore now in course of preparation. It is sufficient to say that no student of this important and charming subject can afford to be without the volumes under review; and, if care be taken not to accept all the author's theories as facts, a rich harvest may be gleaned from *La Mythologie des Plantes*.

HILDERIC FRIEND.

RECENT VERSE.

Paphus, and other Poems. By E. S. Youngs. (Kegan Paul, Trench and Co.) The celebrated "Saxon" substitute for impenetrability, "ungothroughsomeness," expresses in a slightly altered sense a quality which is not, we think, anywhere to be found so eminently present as in a certain kind of minor poetry. It is not bad, it is not absurd, it is simply ungothroughsome. It does not exactly weary the reader, or disgust him, or shock him; it simply resists with an incomparable *vis inertiae* his efforts to read it. Miss Youngs' verse possesses this quality in unusual perfection, as perhaps a stanza taken almost at random will best show.

"The Sun spirit speaks to the sea spirit:
Take me, sweet spirit, to thy cool deep breast
And lay foam hands
On these red brows that tingle with the weight
Of burning splendours and the day's unrest
Of many lands.
Take the spent fever of my heart, and tend
These paroled eyes that bend
Over thy shaded glances dim with white
Sequestered light.
Lit at some moony taper green subdued
In some sea-mood,"

&c., &c., &c. All of us have read much worse verse than this, and most of us have written verse much worse. But it is ungothroughsome.

Songs of a Lost World. By A. New Hand. (W. H. Allen and Co.) It is impossible that anybody should be so wicked as to laugh at Mr. Lewis Morris, or else the title of this volume might seem to imply some such nefarious intention on the part of its author. However, the reader has no sooner opened it than he ceases to think the author likely to be guilty of ribaldry in any form. He is simply one of the good people who will persist in handling classical subjects without possessing

the least tincture of the classical languages. Thus he makes "Achelus" rhyme, not once, but repeatedly, to "carouse" and "brows;" he shortens the *e* of *Coresus* and lengthens the *o* of *Callirhoe*. Throughout a whole poem he always spells *Cronos* with an *h*, and he makes *Dionysus* the end of two successive iambic decasyllables, thereby introducing the season into English. We have spoken often enough about the idiotic folly which makes these blunders so common now. For the present we have nothing to say, except that we only wish Landor, from whom the new hand with his new ear seems to have taken "*Coresus* and *Callirhoe*," were alive to express his opinion of his imitator.

Venta, and other Poems. By the Author of "*Pericula Urbis*." (Nutt.) This small volume contains four poems of some length—"Venta," "*Ishmael*," "*Nicias*," and "*Elijah*," all of which have a certain community of character. That character can only be described (without any intention of sarcasm or disparagement) as prize-poetry. They are very good prize poems all of them, especially the first and longest, which gives a capital study of Winchester School. The few sonnets and translations which follow are also good in their way, though they have, like the longer pieces, a certain lack of spontaneity, and an air as of one who should say, "Go to; let us write some verse."

Herman Waldgrave. By the Author of "*Ginevra*." (Kegan Paul, Trench and Co.) The author of *Ginevra* steadily pursues his or her apparent design of writing the largest number of the longest verse plays on record. The present example has 270 pages, the average contents of each being twenty-five lines. We do not pretend to have done more than read certain scenes of it, from which it appears to be characterised by the same fatal fluency as its author's former works. This remark applies as well to the lyrics interspersed as to the blank verse. It is a pity that some real command of versification and poetical expression should be thus lost and drowned in a shoreless ocean of improvisation.

Dramatic Pieces. By Martin F. Tupper. (W. H. Allen and Co.) In a beautiful volume, with the Tupper arms on the back and a curious portraiture of his three chief heroes—King Alfred, Raleigh, and Washington—in front, with, to all appearances, wreaths of the weed which Raleigh imported surrounding them, Mr. Tupper has printed three dramatic pieces of some length and twelve shorter ones. For the latter he quotes his authorities conscientiously but oddly, as thus: "*Alexander at Lampsacus*, a true dramatic incident of old times according to *Lemprière*, *Abbott's Life of Alexander*, and *Rollin's Ancient History*." With such-like Bardolphian security of testimony does Mr. Tupper prelude most of his sketches. We have nothing to say against the pieces themselves. If Mr. Tupper is not the wisest of men he has so long been the stock butt of critics that he deserves immunity in the exercise of what is, after all, a very harmless fancy.

Poems, Lyrics, and Sonnets. By L. S. Bevington. (Elliot Stock.) Miss Bevington by her volume of *Keynotes* put in a strong claim to be acknowledged the Poetess Laureate of spiritual indigestion. This second volume will go far, we should think, to establish her in that position. Dyspepsia is a very terrible disease, whether it be dyspepsia of the body or dyspepsia of the soul, but it has nothing more terrible about it than *quod ridiculos facit*. We are inclined to think that the purely spiritual dyspeptic is an object harder to regard with decent sympathy than his humbler brother, who merely has to struggle with an authentic stomach and liver in a state of derangement. At any rate, the latter seldom writes himself down what he is. It

may possibly be that we are hopeless Philistines, but we shall ask, or take, leave to consider stuff like the following as "stuff" and nothing else:—

"When the patience of law universal
Shall issue in mastery of law,
When the freedom that grows of the 'Must Be'
Shall reign in its infinite awe,

"When virtue is lost in its issue,
When sweetly has blossomed the rod,
The fruit of Totality's travail,
The ultimate rest, shall be God.

Aballiboozabandganoribo! is the only comment which is suitable and adequate to such flatulent trash as this. Here is another extract which Mr. Traill or Mr. Calverley might be defied to better in their most ingenious and most audacious moments of burlesque:—

"When the great universe hung nebulous
Between the unprevented and the need,
Was it foreseen that you and I should be,
Was it decreed?

"While time leaned onward through eternities,
Unrippled by a breath and undistraught,
Lay there at leisure Will that we should breathe?
Waited a Thought?

"When the warm swirl of chaos elements
Fashioned the chance that woke to sentient
Life,
Did there a Longing seek and hasten on
Our mutual life?

It would probably be impossible for any rational human being, unless restrained by a benevolent desire to avoid damping the spirit of Miss Bevington's poetical conversation, to avoid calling out "Fudge" at each of these preposterous stanzas. We shall quote no more of them, though a poem in which somebody "knew all Being changed into a Flaw," and in which Miss Bevington shortly afterwards rhymes "lads" to "maids," apparently thinking that the latter word follows the licence of "plaid," is tempting. Briefly and fairly described, Miss Bevington's poetry is an attempt to turn the jargon of a certain school of nonorthodox theologians into verse, and her chief poetical instrument for the purpose is the use of capital letters. If these delights of matter and manner can move anybody, let him read her, but if not, not.

Leelyn, and other Verses. By Herbert Gardner. (Remingtons.) A fly-leaf in Mr. Gardner's volume informs us that one of his critics formerly discovered in him a remarkable resemblance to Cyril Tournour, chequered by a certain strain of the late Mr. O'Shaughnessy. As we do not remember the volume in question, it is impossible to say that this critic was simply using words and names at random; but we certainly see no resemblance to either poet here. In this volume Mr. Gardner displays himself as possessing a fair gift of verse, but no especial one of poetry.

Life's Pathway, and other Poems. By Thomas Leech. (Satchell.) Mr. Leech is, it seems, a constable in the Metropolitan Police, and we believe him to be an Irishman. His verse wants critical polish, but shows something of the command over certain lyric metres which Irish poets have more commonly possessed than East Britons.

Priest and Poet, and other Poems. By J. D. Lynch. (Dublin: Duffy.) Mr. Lynch's little book of poems is remarkably different from most of the books of Irish poetry which fall into our hands. The anapaest, the sultana queen of the metrical loves of most Hibernian bards, is here absent; the thoughts are far from commonplace; and the expression, instead of being superficially neat, is laboured and occasionally halting. Mr. Lynch has much to learn, and few of his pieces are free from some quite unnecessary fault of phraseology or rhythm; but, compared with his fellows, he has some-

thing to say for himself. It should be observed that a tone of depression and melancholy pervades the book. It is monotonous to a fault, but this does not seem to be an affectation.

Poems. By Louis Porri. (Simpkin, Marshall and Co.) Mr. Porri pleads youth, imperfect education, and so forth for this little volume. It is not worse than a great many other volumes whose authors could plead no such excuses. But a critic can only say for the thousandth time that verse which may be written without any blame—which is indeed a natural product of the human imagination at certain times and under certain circumstances—is not on that account worth printing.

Through Dark to Light. (Remingtons.) This is a curious book, better worth reading than most reflective poetry of the minor kind. Its second title is "*A Day at the Sea*." It is a wet day, and the author reflects on the riddles of the painful earth. His child wants to go out and play, but can't, and it is unable to answer his queries. His dog sleeps, and is thus also scarcely available as a partner in argument. His parrot behaves like a parrot, and looks at him with the mysterious sarcasm usually characteristic of that unfathomable bird. He sees a fat clergyman, and thinks him unsaintly; a thin and ascetic one, and declines to acknowledge him as a suitable exponent of a religion of good tidings. Then the rain leaves off, and the sun comes out, and the streets dry up, and the dog wakes, the child goes out to play, and the man's wife comes in, looking pretty, and he cheers up again, and dismisses the riddles of the painful earth like a sensible person. There is nothing extraordinary in this story, but it is better done than usual, and the verse, though pedestrian, is far from ineffective.

Konrad Wallenrod. Translated from the Polish of Adam Mickiewicz by Maude Ashurst Biggs. (Trübner.) Of the faithfulness to its original of this little volume of translation we are not competent to judge; but in itself it is a pleasant and readable piece of verse.

Schiller's "Mary Stuart." Translated by Leedham White. (Kegan Paul, Trench and Co.) This book will be useful to students of German, because Mr. White has printed the original and the version on opposite pages. He has thus given an apparent guarantee, and a fair test of literalness. We cannot say that he is absolutely literal, but at the same time he is very close, and the line for line order of the original, as well as its rhythmical flow, is very fairly maintained.

NOTES AND NEWS.

MR. JAMES COLLIER, so long associated with Mr. Herbert Spencer in the preparation of his sociological works, will sail for New Zealand before the close of the present month.

The Stories from Browning, by Mr. F. May Holland, with Mr. Sutherland Orr's Introduction, will be published by Messrs. George Bell and Sons early in October.

MR. E. CHESTER WATERS is about to issue a revised and enlarged edition of his book on Parish Registers, which was printed for private circulation only in 1870.

A NEW and enlarged edition of Mr. W. Carew Hazlitt's *Collection of Proverbs* is nearly ready. It will be issued by Messrs. Reeves and Turner.

A VOLUME of Spinoza Essays by Profs. Land, van Vloten, and Kuno Fischer, translated from the Dutch by Mr. Menzies, of Abernethy, and from the German by Miss F. Schmidt, and edited by Prof. Knight, St. Andrews, will shortly be published by Messrs. Williams and Norgate.

MR. H. T. MACKENZIE BELL will publish in the autumn, through Mr. Elliot Stock, a volume entitled *Verses of Varied Life*. The book will contain a number of poems of travel, chiefly descriptive of Spanish scenery, and also a body of sonnets and lyrical pieces. Mr. Bell is the author of a volume entitled *The Keeping of the Vow*, published some years back.

THE richness of the indirect endowment of the Chair of Greek in Edinburgh University which Prof. Blackie has just resigned is attracting some of the most eminent Hellenists in the kingdom as candidates. The appointment is vested in the university curators. An impression prevails in Edinburgh that their choice will fall on Dr. Donaldson, till lately rector of the High School, and who now holds the Chair of Humanity in Aberdeen, from which Prof. Blackie himself proceeded to Edinburgh.

MR. DAVID DOUGLAS, of Edinburgh, is bringing out a new edition, in three volumes, of *Horas Subsecivae*, which was, we believe, corrected for the press by Dr. John Brown just before his death. The immortal "Rab and his Friends" heads the second volume, which has just appeared. The first volume will be published last. It will contain the papers on Locke and Sydenham, with a portrait of the author.

MR. DOUGLAS is also publishing, with the author's sanction, an edition of Mr. W. D. Howells's novels in one-shilling volumes.

A NEW Commentary on the Gospel of St. Matthew, from the pen of the Rev. M. F. Sadler, of Honiton, will shortly be published by Messrs. Bell and Sons. It will be a practical exposition, adapted for private reading as well as for the use of the clergy, and will be supplemented by critical notes, in which the suggestions of modern scholars, including the Revisers of 1881, will be duly commented on. A similar commentary on the Gospel of St. John is also in preparation.

THE Rev. R. Hunter and Mr. Sidney J. Hertridge have completed another volume of the *Encyclopaedic Dictionary* (from cable to conarium), which will shortly be published by Messrs. Cassell, Petter, Galpin and Co. A further volume, carrying the work into the letter D, is in the press.

Norway in June is the title of a book of travel by Olivia M. Stone which will be published this autumn by Messrs. Marous Ward and Co. The illustrations—made from photographs taken during the tour by Mr. J. Harris Stone—have been drawn by Mr. W. H. J. Boot, Mr. H. W. Petherick, Mr. B. Kent Thomas, and others.

The Fern World, by Mr. Francis George Heath, author of *Autumnal Leaves*, has just reached its seventh edition.

MR. BROWNING's spirited poem, "Hervé Riel" has at last had justice done to it in France. Dr. James Darmesteter, the well-known Zend scholar and editor of "Macbeth," one of the vice-presidents of the New Shakspeare Society, has, in *Le Parlement* of August 15, given an article of over four columns to an account of Mr. Browning and the Browning Society, a translation of "Hervé Riel," a statement of the historical facts on which Mr. Browning founded his poem, and a feeling appreciation of the generous spirit in which the English poet came forward, at the time of France's greatest despondency after the German War, to show her, what she had forgotten, the heroism and true nobility of the poor Breton pilot who, in 1692, saved the remnant of her fleet from England's grasp; to remind her that in her workers, not in her emperors, lay her future strength; and to hold out a helping hand to feed her poor distressed. The *Parlement* article is written with the

grace and distinction of style that characterise all Dr. Darmesteter's work. He calls on his countrymen to set up a statue of Hervé Riel on the banks of the Rance, in front of the tower of Solidor, not only to remind France of the Croisic pilot's own noble unselfish act, but also of her thousands like him who have suffered and died, and who suffer and die, without word said.

MR. KARL BLIND's "Personal Recollections about Garibaldi" will be concluded in the September number of *Fraser*; and the first part of an essay by him on "The Radical and Revolutionary Parties of Europe" will appear in the *Contemporary Review*.

THE weekly and monthly magazine for children, *Our Darlings*, until now published by Messrs. Haughton and Co., will in future be brought out by Messrs. John F. Shaw and Co.

THE Philosophical Society of Berlin, which was founded in 1842, proposes to issue, under the title of "Philosophische Vorläge," a series of little books intended to be popular and to discuss matters of general interest. One of the first of the series will be an account of the philosophical system of Mr. Herbert Spencer, by Herr Michelet.

DR. YAVORSKI, the Russian physician who attended the late Amir Shere Ali, is about to publish an account of his journey in Central Asia.

ACCORDING to the *Moscow Russian Courier*, the ecclesiastical censor has interdicted the further publication of the series of sketches by Count L. N. Tolstoi which were appearing in the *Russkaya Mysl*; those already in print have been handed over to the police and entirely destroyed. The sketches in question were intended to portray different phases of religious life in Russia.

A WRITER in the *Indian Spectator* says:—"I went to a book-stall at Bombay, kept by a native, to ask for a volume of the Hibbert Lectures. He put into my hands *The Mysteries of the Court of London*! I begged to be excused, when he proffered me Guiccioli Byron, with a strange light in those melting eyes of his and a quivering whisper saying, 'Will give cheaply.' I replied I had no money except for the lectures. He then brought out Blair's *Sermons* and an illustrated Bible."

WE have received the Supplement for 1881-82 to Meyer's *Konversations-Lexikon* (Leipzig). It is a stout and closely printed octavo of 1,060 pages, and is illustrated with several maps, plans, and a quantity of wood-cuts interspersed throughout the text. So far as we can judge, the articles in this Supplement are as comprehensive as can be expected in a popular cyclopaedia; but it is evident that the chief energies of its compilers have been given to the current politics and commercial movements of the world. Science, literature, and art have not been altogether neglected; and the summaries of German, English, French, and Italian literature for 1880-81 will repay perusal. We notice that the article on England is from the pen of Herr Eugen Oswald.

THE Prussian Ministry of Education has issued a new regulation for the conduct of leaving examinations from the gymnasia. For the examination in writing the subjects are—German and Latin, five hours each; Latin essay, two hours; Greek translation, three hours; mathematics, five hours. Latin-German and Greek-German dictionaries, as well as a table of logarithms, are allowed. The *viva voce* examination comprehends religious instruction, Greek, Latin, French, history, geography, and mathematics. Optional subjects are Hebrew and Polish. Boys who have been taught at home and not at school must take in, as additional subjects, a Greek and a French essay,

German literature, and physics. Among subordinate points in the new regulation, Church history is placed on an equality with dogmatic theology; special attention is given to the knowledge of metres in Latin composition; and French is relegated from the written to the oral examination.

THE students at the German University of Dorpat have published (Leipzig: Brockhaus) a vehement protest against Slavophile tendencies in Livonia, and especially against the proposal to de-Germanise their ancient university.

THE sixth part has appeared (Berlin: Weidmann) of Herr W. Scherer's *History of German Literature*. It contains two chapters, entitled "The Beginnings of Modern Literature—The Theatre" and "The Age of Frederick the Great."

THE Belgian Royal Historical Commission has just published the fourth and last volume of the *Collection des Voyages des Souverains des Pays-Bas*, edited by M. Charles Piot. It includes an account of the voyages of Philip II, from 1554 to 1569, written by Jean de Vandenesse, which is followed by 373 letters and other documents relating to the marriage of Philip with our Queen Mary. M. Piot's Introduction is chiefly concerned with the political importance of this marriage.

A DICTIONARY of Belgian authors, including a complete bibliography of their works, is in course of publication at Brussels under the title *Bibliographie nationale: Dictionnaire des Ecrivains belges et Catalogue de leurs Publications*. The first number has already appeared.

Two new books on the Massacre of St. Bartholomew have lately appeared—*Ludwig Pfyffer und seine Zeit*, by Herr Segesser, and *Der Bartholomäusnacht*, by Herr Baumgarten. Both authors reject the theory of M. de Colombes propounded in his recently published pamphlet *L'Entrevue de Bayonne, 1565*, as to the massacre having been the result of a carefully preconcerted plan between Catherine de Medicis and Philip II.

WE have received the sixth yearly issue of M. Frederici's admirable *Bibliotheca Orientalis*—a list of all books, pamphlets, articles, &c., bearing on Eastern subjects published during the year 1881. It is as well done as ever, and no higher praise can be given.

Correction.—The etchings in Prof. Knight's edition of *Wordsworth* spoken of in our review as by Mr. McWhirter are by O. O. Murray from drawings by Mr. McWhirter.

FRENCH JOTTINGS.

M. ZOLA is about to contribute a novel to the pages of *Gil Blas*. The scene will be laid in a milliner's shop, and the device of this establishment, "Au Bonheur des Dames," is to give the story its title. Judging from the advertisement, it seems likely that the publication of this work will mark a fresh departure in the author's literary career, and the rise of a new school of French fiction. The tale will deal with the fortunes of a young and innocent girl, who, placed amid great temptations, triumphs over those temptations by her innate purity and guilelessness, and finally conquers an honourable position in society. It is added that as M. Zola has exhibited vice leading to the gutter, so he will endeavour to show that virtue will bring to a woman fortune and happiness. Cynical critics insinuate that M. Zola, who is a shrewd man of business, has perceived signs of exhaustion in the vein so profitably worked in *L'Assommoir*, *Nana*, and *Pot-Bouille*.

THE recollections of M. Arsène Houssaye will be published this autumn, and are likely to furnish a complete history of literary and artistic activity in France during the last thirty years. The work will fill several volumes, each instalment containing many facsimiles of autographs and drawings selected from the author's portfolios. Curiously enough, it was at M. Houssaye's birthplace that the memoirs received their last touches.

M. FLAMMERMONT is about to publish the *Réminiscences* of the Parlement de Paris during the eighteenth century. The entire collection will fill three volumes, and is to form part of the *Documents inédits sur l'Histoire de France*.

AN Index will shortly appear to the first five years of the *Revue historique*.

M. SCHMIDT, of Strasburg, is engaged upon a work dealing with the mediæval libraries of his native town, and with the history of its first printing-presses.

THE tomb erected in memory of Michelet in Père-Lachaise Cemetery was unveiled on July 13. The historian is represented as reposing on a couch, while in his right hand he grasps a pen. At Michelet's side stands a tall and draped female figure, typical of his inspiring genius—the genius of history, who points to the sentence, "L'histoire est une résurrection." Another legend engraved on the couch has been borrowed from the historian's will, and reads, "Que Dieu reçoive mon âme reconnaissante." This monument is the work of M. Antonin Mercié.

Le Livre states that MM. Scheffer and H. Cordier are preparing for publication a collection of travels and other materials for the history of early geographical discovery. The period illustrated will include the thirteenth to the sixteenth century.

M. RUELLÉ has issued the second part of his *Bibliographie générale des Gaules*.

M. ROUSSEAU's Report to the Minister of the Interior on the present condition of the departmental record offices has been published in the *Journal officiel*. The inspectors are diligently searching the various municipal and prefectural archives for documents that should properly be preserved in the central record offices. Last year an important discovery was made in the Indre-et-Loire, where M. Grandmaison found in a municipal register portions of 500 charters, one-half of which date as far back as the tenth century. Many of these documents are of great historic interest.

M. J. B. MISPOULET, advocate before the appeal court, has just published (Paris: Pedone-Lauriel) the first volume of an elaborate work upon the political institutions of ancient Rome, treated from the historical point of view. This volume is entitled "La Constitution," and is divided into four parts, dealing with the regal period, the republic, the early and the late empire.

THE Académie des Sciences morales et politiques has awarded a prize of 3,000 fra. (£120) to Prof. Achille Luchaire, of Bordeaux, for his *Histoire du Pouvoir royal et des Institutions françaises sous les premiers Capétiens jusqu'à Philippe-Auguste*.

ACCORDING to *Le Livre*, the mean number of novels and tales published annually in Paris, including those which appear in the daily and other papers, is 300; fifty-seven writers are required to produce this mass of printed matter. Between 1832 and 1848, Paris produced only twenty-five novels a-year, the work of fifteen authors, including Honoré de Balzac and Paul de Kock.

THE last addition to the "Bibliothèque d'Éducation moderne" (Paris: Charavay) is

the *Morceaux choisis de Mirabeau*, edited, with a Preface and Notes, by M. E. D. Milliet. The book is divided into two parts—"Œuvres diverses" and "Discours politiques." It ends with a description of Mirabeau's last moments, and the judgments on his character pronounced by Thiers, Louis Blanc, Michelet, Lamartine, and Victor Hugo.

OBITUARY.

It is with the deepest regret that we notice the death of Prof. Stanley Jevons, who was drowned on Sunday, August 13, while bathing near Bexhill, in Sussex. We hope to give some estimate of his work in our next number.

THE TRIESTE EXHIBITION.

Trieste: Aug. 2, 1892.

LAMMAS DAY saw the opening of the Trieste Exhibition, whose full official title is "Esposizione Industriale-Agricola Austro-Ungarica." The time of year was peculiarly ill-chosen, besides being historically a blunder. August cumulates the summer heat, and at the Vice-Queen of the Adriatic the eighth month is at once the most uncomfortable and the most unwholesome—Alexandria after a spell of Iceland. The popular rhyme (a very poor one, by-the-by) says:

"Prima pioggia d'Agosto
Rinfresca mar e bosco"

(August's first shower refreshes sea and wood), but generally this pleasant break is not expected before August 20. The year is the fifth centenary of Trieste's last wedding, when she passed into the arms of the Duke of Austria—Leopold III. the Hapsburg. But the event took place on September 30, when the climate is charming for two months after a ferocious winter, no spring, and a quasi-tropical summer. These memories give the *fête* a manner of political significance, and the "Italianmost" party looks very glum.

I ran across France *summa diligentia*. The sensible Parisians had evacuated a politically disturbed Paris, leaving only a few million nobodies; anything more dowdy than the toilettes, or unimperial than the equipages, can scarcely be imagined. Some of the learned still lingered. Cameron spoke at the Société de Géographie commerciale, and Count Pietro di Brazza brought down the house. My fellow-traveller will return to address the older body; at least, if its president, M. F. de Lesseps, weary of his eternal poses and phrases, will graciously permit any theme, even gold mines, to compete with the interesting Canals of Suez, of Panama, and of Corinth.

The Ligue du Midi, between Paris and the sub-Alpine districts about Modane, has greatly improved during the last decade. The wretched *coupés* have been supplanted by the comfortable *wagons et lits*; the berths would make even a week of railway travelling tolerable, and the most delicate need not fear the twenty-two continuous hours. Turin was as empty as Paris; and, apparently, the Britisher and the Yankee have still to learn that Venice, with her Lido-baths, is rather a summering than a wintering place. In addition to the steamer-and-tug nuisance, the model crannog, or "lake-village," suffers from an eruption of Aymerican flag: you can hardly turn a corner without coming upon the "oysters and gridiron." A truly aggressive nationality, *ferax juvenia*!

Lammas Day broke clear and cool. Here, as elsewhere, 1881-82, the land has had no winter, and is having very little summer. The 8 a.m. train brought from Vienna "His Imperial and Royal Highness the Most Serene Herr Archduke" (in newspaper language) Carl Ludwig,

who was received at the station by the authorities, ecclesiastical and civil, military and naval, by the Podestà (mayor) and his Municipal Council, and by the president and executive committee of the exhibition—the crowd applauding lustily. H.I.H. drove at once to the "Palace of Industry," where a pretty little pavilion bears the imperial arms; there, after hearing with exemplary patience, and replying to, a lengthy address, he formally declared the exhibition open. A royal salute was fired by the ironclad *Albrecht*, supported by two old wooden-wallers; and sundry items of the Lloyd's fine fleet, dressed in colours from truck to deck, added to the charms of the charming view.

The site of the exhibition-buildings has been admirably chosen, and Trieste deserves high praise for the energy and activity displayed during the last ten months. Deserving especial mention are Cav. Reinelt, president; Dr. Bergatti, secretary-general of the exhibition; and Baron Marco Morpengo, president of the Austro-Hungarian Lloyd's, who does everything *en prince*. Passing the Campo Mazzio, traditionally the old Roman parade-ground, and the huge Villa Murat, which crowns its crest, you exchange Trieste Bay for Muggia Bay (Vallone di Muggia). It was the fault of classical days, the days of the Celts and the Romans, that the latter was not preferred for the site of "Tugeste;" it is sheltered from the depressing Scirocco (south-south-easter), and is almost defended from the angry Bora (north-north-easter). The promenade is known as Sant' Andrea, and somewhat resembles the corner of Patras, where the Patron of Thistle-land won the crown of martyrdom. When I left the "Pearl of the Adriatic" in November 1881, this favourite drive consisted of a high level and a low level, which split at the Campo Mazzio, and re-united at a *rond point*, the site of the Stabilimento Tecnico Iron-works, a few hundred yards to the east. The avenues of plane-trees then sheltered only a few nurses and promenaders, who came there to enjoy sun and sea-breeze. Now the low level has been fenced off, the sea-face has been thrust forward, and the slope between the high and low levels, duly connected by ramps and zigzags, has been converted into a foundation for a group of buildings. The area, 68,000 square metres, contains the Imperial Pavilion, a triad of large *hangars*, Nos. I., II., and III.; an aquarium (270 square metres); various pavilions, especially the Croatian; various offices for post, telegraph, and police; a corps de garde; a Osarda, or fancy Hungarian cottage, where *consommations* are to be had, and where a Gypsy band in Moody and Sankey attire discourses civilised music; a restaurant, sundry cafés, and the inevitable "beereries." Smoking is *strengstens verboten*, except in the *tabagies*.

The prospect is perfect. In front, beyond the sea of lapis lazuli, patiné gold and silver, and dotted with dozens of white sails—such a contrast with the mottled brown-greens of the British Channel!—the long land-tongue, whose tip sinks into the waves, is crowned by old Muggia (*Muggia vicentia*), in proto-historic times a castelliore or Celtic village; then a town, and, lastly, a church, the lineaments having transferred themselves to the water-level. South-westward, and behind it, stretches the point of Pirano town, with its lighthouse and its buttressed fane, not unlike that of St. Francis Assisi. To the south-east lies the riant valley of Rivano, azure with distance; its right jaw is, or rather was, defended by the ruined castle of S. Servolo, backed by the twin passes of Slavnik, the "Mount of Glory." This is part of the great limestone-block, the Carsi, which separates the head of the Adriatic from the Danube-valley about Vienna. And the splendid spectacle is domed over by a glorious vault, all blue and gold, without a stain of

vapour, and yet kept cool by the pleasant sea-breeze.

Return we to the minor exhibition. After declaring the *esposizione* open, H.L.H. walked through a hedge of spectators, who welcomed him with a waving of hats and handkerchiefs and with the multilingual cries of this polyglot land—Hoch! Viva! Urrah! Zivio! (Slav), and Eljen! (Hungarian). Followed by two younger Archdukes, the authorities, and the committee, he entered No. II., the temporary wooden building to the east. Here arose the first mishap. An outer barrier should have guarded the entrance; there was none; and so the mob of gentlemen and gentlewomen struggled with the guardians of the gate—those excluded would have to wait outside in the heat till the end of the Imperial inspection. The second unpleasantness arose in the afternoon when the deputations were received. The time fixed was between 2 and 3 p.m., whereas sundry were kept waiting, in close little rooms like bomb-proofs, till 5.30 p.m. The mortification might easily have been spared. On such occasions an experienced chamberlain should be sent down from the capital personally to superintend all the arrangements. The etiquette of Courts is necessarily unfamiliar to the *bonne bourgeoisie* class from which local authorities are generally drawn; and the result of such mismanagement is bad blood on occasions where all should be good-temper.

Archduke Carl Ludwig made himself very popular, and did his duty conscientiously, walking all round the long toy shop and addressing kind words to the exhibitors. The president and his Hungarian committee, habited in that obsolete and over-picturesque garb which, in these days, suggests only a *décor de théâtre*, received him at the entrance of their section. This court, to the last of the Austrian, is marked internally by the epigraphs "Ungaria," "Magyarország," "Ungarn;" and externally by four Hungarian flags at the corners. Litter abounded, and many of the cases were unpacked; but "*semper non paratus*" seems to be the rule of exhibitions in general, not excepting those of Great Britain and the United States. After breakfasting, H.L.H. visited the Croatian pavilion (Hravatski Paviljon) and the Bosnia-Herzegovinian section, where a third and a fourth address were delivered and acknowledged.

We followed the suite, and had the pleasure of shaking hands with our excellent friend Baron Pasic, now Minister of Commerce. He was Luogotenente (Governor) of Trieste for three years, and he left many regrets; we deeply lamented the departure of a justly popular ruler. Holding in hand the excellent guide-book (*catalogo ufficiale*), a portly volume of 596 pages in octavo, compiled by the committee and edited by Prof. Augusto Vierthaler, we had no difficulty in finding the objects of the highest interest. As usual with such *Ausstellungen*, everything is there between a pin and a steam-plough. For facility of cataloguing, the heterogeneous mass has been reduced to five groups—mining and metallurgical (A); forestal and agricultural; industrial; maritime and additional, chiefly artistic (E). The plan appended to the catalogue shows their several positions.

I prefer to lead the reader round the several buildings, beginning with the beginning. No. I., lying close to the sea and west of the main feature, contains two compartments. The western is maritime; Austria boasts 7,829 sailers and 106 steamers. Here we find all the required material—cables, chains, shackles, and anchors; nautical instruments; and models and sections of lighthouses and of ships, including those of the ironclads. The fisheries are well represented, and there are life-sized figures of the

pisces population, male and female. Charts, maps, plans, and photos cover the walls. Lastly, there is a collection of natural history—algae, stuffed specimens, and shells, especially the tree-oysters of Zoule, ending with tinned fish and fish sauces. The coming work of my colleague, Mr. Consul Faber, of Fiume, will throw a flood of light upon the little-known fisheries at the head of the Adriatic. The eastern compartment—Bosnia and Herzegovina—shows Turkey in Europe. We note the scimitars, yataghans, and knives of Albanian shape, with ornaments of blue silver, and inscribed with Moslem mottoes in gold; the flagree and silver work; the embroideries; the rude leatherwork, saddles and slippers; the rugs and carpets; the agricultural implements; the cereals and the different kinds of tobaccoes, mostly in leaf of golden hue, which pass in Western Europe for "Turkish." There are models of Trajan's Bridge and the Great Mosque, with its candlestick minaret, both at Mostar; and nine figures, life-size, illustrate the country costumes, with their rich embroideries.

Building No. II., to the east of No. I., with its tall portico opening west and its huge barrel-roof, is evidently temporary. Here are represented mining, agriculture, and manufacturing industry. As may be expected, it is exceedingly mixed—a chaos of wax fruits and artificial flowers; provisions, sausages, bonbons, and "goodies;" worked tobaccoes, a Government monopoly; the delicate maraschino of Zara (Luxardo's), which you never drink pure in London; mineral water and pyramids of bottles; harness, leathers, and wax-cloth; hosiery, broad cloths, and long cloths; cutlery and agricultural implements; metal stoves and plates; lamps and lanterns; heaps of candles, which Austria makes better than England; musical instruments, pianos, harmoniums, and the material for a brass band; clocks, horologerie, and Vienna jewellery, better than the Parisian. Glass and porcelain appear in every collection. The marbles and porphyries from the Tyrol, with a single statue and sundry busts, are worth notice; so are the ornamental iron works of Archduke Albrecht and Moravia. The most crowded part is to the north-west, where twelve open rooms show the most modern furniture. The Hungarian court begins, as we might expect from "the man on horseback," with harness; here the open iron-work and the photographs are much admired—I prefer those of Madeira. In the transept to the north-east are the timbers for which the Empire is celebrated, and good specimens of cooperage and carpentry.

Building No. III. (technological, artistic, and oriental), the uppermost building entered from the high-level road and containing an area of 120 square metres, is intended to be permanent. The central hall shows the usual fine collection of glass, plate, and porcelain; to the west, the Oriental Museum, Vienna, adorned with dwarf palms and plantains, exhibits Indian shawls; Turkish pipes, brass platters, and coffee-cups; Tunis stuffs and slippers; Chinese curiosities and a large gathering from Japan—Japanese art seems to have taken Europe by storm. To the east is a room full of laces much admired by connoisseurs. West of the building, and detached, lies the sugar pavilion, an industry of ever-increasing importance. In the early part of the present century Trieste had a colony of English merchants who lived sumptuously by saccharines; they even kept a pack of hounds, although how they hunted the "Carso" is still a mystery to me. But they were presently "eaten up" by a younger generation of Triestines; and of these almost-forgotten worthies not one is left to take the place.

I am unwilling to occupy your space with further details about the aquarium, the Croatian pavilion, and other minor items. Allow me to express a hope that many of your readers will

come and judge for themselves, especially those proceeding India-wards, next September. There is, we know, a monotony about exhibitions; they resemble one another like a flock of sheep. But each has its peculiarities and marking-points; and the *esposizione* of Trieste will occupy a place of honour and live long in memory on account of the beautiful setting of its scenery.

CORRESPONDENCE.

THE ETYMOLOGY OF DIONYSOS.

Friestgate House, Barton-on-Humber: Aug. 7, 1882.

Permit me a word in reply to Prof. Max Müller's observations, in the ACADEMY of August 5, on my view of the derivation of the name "Dionysos." That the root-concept of a god is directly connected with his name is a principle which I hold as firmly as any mythologist can, and have always endeavoured to illustrate. But what is the original name of the god? There is a possible "Sanskrit prototype Dyuni-ya," and a possible Assyrian prototype Dian-nisi. The "child of Day and Night" or "of Heaven and Earth," is doubtless, in the abstract, an appropriate name for the sun; but

the great star is, I think, not so called in the Vedic Hymns, and (Prof. Müller will correct me if I am wrong) the notion of an earth-produced sun seems to be foreign to their line of thought. The absence of Dionysos from the Hymns is vastly significant, just as his presence there would have been conclusive of his Aryan character. But with respect to the Assyrian theory, Prof. Müller asks, Would the Greeks have adopted the name Dian-nisi "as the proper name of one of their own great solar deities"? But it is not suggested that they did. The question is whether or not they added Dionysos to their solar divinities. He continues:—"Secondly, would they have changed that name [Dian-nisi] into Dionysos in order to see in it the meaning of the 'Zeus of Nysa'?" Of course not. It is the province of later ages to supply etymologies more or less fanciful. I merely suppose they clothed a "barbarian" word with a Greek form. When Melgarth became Melikertes, those who made the change were not influenced by etymological considerations. If Molekh re-appear as Melichios, a late age may consider that the latter form signifies the "Mild," and a still later age may regard the epithet as ironical.

Again, exceptional forms of a name have an ambiguous bearing on such a question, as it is quite possible that they are not archaic, but comparatively late, and embody a translation or supposed equivalent. Prof. Müller says, "A Lesbian form Zonnyxos is no longer recognised. But Conze reads Zonnysō (*Corp. I. G. 2167*). What is the date of the inscription, and are we to regard "Zonnysō" as a more archaic form than "Dionysos"? I think not. The local myth, as usual, deserves attention. Makar (= Melgarth), a son of Helios, fled to Lesbos, which after him was called Makaria. His daughter Issa, beloved by Apollōn, gave her name also to the island. Here the local colouring is evidently Semitic as well as Dionysiac, and Zonnysō may well be "the Zeus (Zan) of Nysa" or "of Issa." The Issa beloved by Apollōn strongly resembles the Nysa sought by Dionysos (*vide Strabo, IX. ii. 14, on the forms Isos and Nissa*). But Prof. Müller says, "In no Greek dialect that I know of would a compound such as Dionysos have conveyed that meaning which Mr. Brown asserts to have been the Hellenic meaning of Dionysos"—i.e., "the Zeus of Nysa." The best answer to this statement is to quote the "dialect" of Diodoros, who, having said that the infant Bakchos was taken to an Arabian Nysa, observes: "Ἐπειδὴ δ' ἔνδ' ὑμῶν τραπεζῇ τὴν παῖδα προσεπορεύθη μὲν ἀπὸ τοῦ πατρὸς καὶ τοῦ τέττονος Διόνυσον (iii. 64). Thus Diodoros had no difficulty in understanding Dionysos as meaning "the Zeus of Nysa," and I do not doubt that the writer of the *Pseudo-Orphic Hymn* xlv. understood the name in the same way.

Stesimbrotos of Thasos, B.C. 450, uses the form "Dionyxos," but is it archaic? "Dyunisya = Διόνυσος," an unknown form, and the *Etymologicum Magnum* gives a curious reason for the use of Διόνυσος. Οἱ μὲν Διόνυσον ["Zeuspriker"] ἀπὸ τοῦ δριμύτους, ὅτι οὐκ κέρασι ἐνύχε τὴν αἰὶς μύρον, ὡς Στρεσίμβροτος. Unfortunately, we do not possess the statement of Stesimbrotos; and in the absence of any direct evidence of the archaic character of the form, it is not unreasonable to suppose that it arose subsequently to the formation of the birth-legend. Dionysos—nay, rather Dionyxos. "Dionysos" is probably the earlier form, whether we connect it with Dyu-nis-ya or Dian-nisi.

The general question of the "widely spread local worship" of Dionysos, and the relation of that worship with Greek religion, literature, art, and customs, I have considered at length in *The Great Dionysiac Myth*, to which I would refer any reader who may be interested in the

matter; and, with respect to the still more general question—What was the influence exercised by the non-Aryan East upon Hellas?—I think that every year shows more clearly the greatness and widespread character of this influence; and that even Prof. Müller (to whom every student of mythology owes so much) may be compelled at length to surrender—I will not say Dionysos, but—Aphroditē, to the non-Aryan group.

ROBT. BROWN, JUNR.

EARLY ITALIAN CASTING.

Dates: July 11, 1882.

I have been interested by some remarks relative to early Italian casting in the *ACADEMY* of February 4, 1882, and especially by the expression of doubt whether it would be possible to use finely powdered charcoal as a material for the matrix. I have in my possession two matrices of which the principal, if not the only, material is powdered charcoal. They came into my hands in consequence of the trial and conviction of a gang of coiners when I was magistrate of the district of Nor-rakhalee, in Eastern Bengal. Each mould consists of a pair of circular metal trays, which contain the charcoal. One pair is of copper, an inch and a-half in diameter, with three knobs standing out from the edge of each. From the knobs of one piece stand up small fixed rivets, which fit into corresponding holes drilled in the knobs of the other piece, the molten metal being admitted through a hole formed by a notch on the edge of each tray. The charcoal in this mould has lost all trace of the impression of the rupee, but in the second one, both obverse and reverse are crisp and clear. In the second the trays containing the charcoal are of iron, two inches and three-quarters in diameter, and are fitted together by three pins and corresponding holes within the circumference. How the charcoal is prepared, whether alone or with any other material, by simple pressure or by the use of any muddle, I am unable to say; but from its appearance I should say that no earth, or any similar substance, was mixed with it.

E. VESEY WESTMACOTT.

VERIFY YOUR QUOTATIONS.

York: Aug. 14, 1882.

Miss E. H. Hickey gives excellent advice; so I turn to "Paradise Lost," book iii., and find the passage indicated is as follows:—

"Dark with excessive bright thy skirts appear,
Yet dazzle Heav'n"

There is no usual "excess of light" in Milton. Probably Miss Hickey had in mind the passage from Gray's "Progress of Poesy":—

"the sapphire blaze
Where angels tremble while they gaze,
He saw; but, blasted with excess of light,
Closed his eyes in endless night;"

but omitted to verify her quotation.

I am reminded of a very common misquotation from Milton—that of the last line from "Lycidas." Milton's words,

"To-morrow to fresh woods and pastures new,"
more frequently than not appear as

"To-morrow to fresh fields and pastures new."

W. L. NEWMAN.

SCIENCE.

The Water Supply of England and Wales: its Geology, Underground Circulation, Surface Distribution, and Statistics. By Charles E. De Rance. (Stanford.)

THIS book deals with a wide subject, and contains a large amount of information of the deepest interest. As we all drink water—at least, in some disguise—we all have an interest in getting pure water. The rain which falls on these islands is thirty-fold in quantity beyond what is necessary to give every individual a copious supply, and yet this great and abundant rainfall is, for the most part, wasted or spoiled for use.

On the surface of England south of the Thames, and also west of a line drawn from Tynemouth in Northumberland to Reading in Berkshire, the average quantity of rain that falls is in excess of twenty-five inches per annum. The triangle of country between this line and the east coast north of the Thames has a rainfall which may be taken at twenty-three inches per annum. In the highlands of Cumberland, Wales, and Devon, the amount reaches, indeed, seventy-five inches or more in the year. Since a single inch of rainfall amounts to more than 22,000 gallons upon an acre, it is plain that above half-a-million gallons of water per annum falls on every acre of Britain south of the Tweed. The extent of this district may be taken at thirty-seven millions of acres, with a population of twenty-six million souls; and it may fairly be assumed that thirty gallons daily to each person is a sufficient supply of water for all private purposes, a quantity which is approximately half-an-inch of rain per acre annually. The relation of population to acres being 1·4 per acre, it follows that seventenths of an inch of rainfall represents the whole quantity of water required by our present population. This is, roughly, less than one-thirtieth part of the average annual rainfall.

When rain falls on the earth, one part is absorbed and used by vegetation, a portion is dried up by evaporation and at once returned to the air, and the remainder flows off the surface to feed rivers and lakes, or disappears by percolation and, for a while, passes out of reach.

In mountain districts, where rainfall is copious, population scanty, and land of little value for crops, the readiest method of supplying a town with water is to impound it in reservoirs, unless a natural lake is already in existence. Water thus stored can be delivered by gravitation, but an arrangement of this character is only possible in a few favoured localities. For since dry seasons are to be expected and must be provided for, reservoirs of great capacity are necessary; in a time of drought, for example, the supply falls short and the consumption increases, and also a great loss by surface evaporation takes place. In general, more than 100 days' supply must be kept in stock, and in particular districts considerably more. The use, moreover, for water storage of many thousands of acres of land, otherwise available for tillage and pasture, would be a serious loss to the producing power of the country, and be an unwise method of dealing with this question.

The other ways of obtaining water open to us are to use river water or to dig wells; but, unhappily, both these methods are surrounded with difficulties innumerable. Rivers, being the natural drainage system, are wantonly defiled and converted into sewers, or, at any rate, lie under the suspicion of being thus polluted. In the past this evil was probably much greater than at present; but we are still far from doing all we ought to keep our rivers in a pure condition. It has been stated on the high authority of the Rivers Pollution Commissioners that no river-water which has received sewage can afterwards become fit for drinking. Fortunately, this view is beyond the truth; and the experience of London alone, which derives so large a portion of its drinking water from the Thames (which in its upper course is by no means free from suspicion), is sufficient to establish the fact of the purification of a river by natural causes. With watchful and conscientious carefulness, rivers may be safely used for water supply.

But the best, as also the worst, water is obtained from wells. Our forefathers discovered the ease with which water could be got in a gravelly soil by making a hole a few feet deep. They also found out that a hole not quite so deep was an excellent soak-away for drainage of all kinds. The well and cess-pit are correlative institutions, and the constituents of many shallow well waters reveal how intimate is the relationship. Nevertheless, we know that enormous underground supplies of beautiful pure water exist. The fissures and pores of rocks retain water which makes its way downwards by percolation, and finds an outlet ultimately in perennial springs. This pure and great supply may be reached by deep wells, and is in all respects unexceptionable. Free from any suspicion of pollution, and agreeably uniform in temperature, it is retained in subterranean reservoirs, and requires no sacrifice of land needed for cultivation.

Mr. De Rance has brought together information on all these matters which, in its original form, is widely scattered in the maps of the Geological Survey, in parliamentary reports, and other documents; and his book cannot fail to be interesting and useful to all urban and rural sanitary authorities. For many reasons we regret that references to the original sources of his statistics and tables are not given, and we venture to express a hope that some attempt to remedy this defect will be made in a future edition.

W. W. FISHER.

SOME RECENT LINGUISTIC WORKS.

AN extra number of the *Journal* of the Asiatic Society of Bengal is entirely devoted to Mr. Longworth Dames' Grammar and Vocabulary of the Northern Balochi Language. By "Northern Balochi" is meant the dialect current chiefly among the Rind Baloches on the North-eastern and Eastern frontiers towards Afghanistan and British India. It differs in many respects from the Southern or Makrani dialect, from which it is separated towards the east by the totally distinct Brahui of the Sarawan and Jahlawān provinces. Of the Makrani, we already possessed a tolerably good account in Major Mookler's Grammar; and the copious phraseologies in Mr. Floyer's *Unexplored Baluchistan*, recently noticed in the

ACADEMY, also afford a useful aid to the study of that variety. But our knowledge of Northern Balochi has hitherto been restricted to the scanty notices by Leech in the *Journal* of the Bengal Asiatic Society for 1840; by Lassen in the *Zeitschrift für die Kunde des Morgenlandes* for 1841; and to Gladstone's and Bruce's Balochi Manuals (Lahore, 1869 and 1873). Hence Oriental philologists will be glad to have this much more ample treatment of a peculiarly interesting member of the Eastern Iranian family, in collecting the materials for which the author spent over four years among the Maris, Bugtis, Lagharis, Boddars, and other Rind Balochi tribes about Sibi, Kaohi, the Southern Suleiman Hills and the Derajat frontier. The Balochi cannot be said to be a written language, for, although possessing a certain oral literature, the natives have hitherto chiefly used Persian or Pashto in their correspondence, and for other literary purposes. It was, therefore, optional to employ either the Perso-Arabic or the European characters in reducing it to literary form. Unfortunately, Mr. Dames hesitates between the two, using the European in the grammatical portion and in the select specimens of the national poetry and legends, while he adopts the Arabic for the Vocabulary. Worse still, the Arabic is treated according to a sort of Pitman's phonetic system, so that, unless we happen to be familiar with the corrupt local pronunciation, it is impossible to find in the Vocabulary any of the numerous Arabic and Persian words current in Balochi. Thus *قيل* becomes *خبر* for *هير*; *شار* stands for *شعر*; and so on. On the other hand *کاغذ* is given correctly, although corruptly pronounced *Kāghadh*, because *z* is conventionally used to represent a sound answering to the English soft *th*. The confusion resulting from all this will supply an additional argument to those who have long argued for the adoption of the European system in transliterating all uncultivated Eastern languages. The value of the work is also diminished by the numerous misprints, some of which are of a peculiarly irritating character. To the long list of *errata* many others might be added; while some of the *errata* themselves require correcting. Apart from these shortcomings, the author will receive the hearty thanks of Eastern students for the great labour he has evidently bestowed on this first comprehensive treatise on the Northern Balochi tongue. In a revised edition it might be well to supplement the grammatical portion with a few complete paradigms of typical nouns and verbs.

ANOTHER recent number of the *Journal* of the Bengal Asiatic Society is occupied with a very full grammar of the Maithili language, current in North Bihār and in the Nepal Tarai. The ingenious method adopted by the author, Mr. George A. Grierson, to construct this grammar deserves to be recorded for the benefit of others working in similar linguistic fields. He issued printed paradigms of all the Sanskrit and Hindi nominal and verbal inflections, circulating them widely amongst the native schoolmasters, Pandits, and educated gentlemen, with directions to give the exact corresponding form in the local dialect. The returns thus obtained, consisting of some fifty more or less complete books of forms from all parts of the country, were then carefully compared, sifted, and checked by the writer's own knowledge, and the result is this excellent grammar of a most interesting neo-Sanskritic language, hitherto almost unknown to philologists. For Maithili, which is spoken by nearly eight and a-half millions of people in Bihār, and probably by 500,000 in Nepal, is not a mere variety of Hindi or Bengali, but holds a somewhat intermediate position between the two, as an independent daughter of Sanskrit through the

North-eastern Prakrits. Being little used for literary purposes, there has hitherto been no recognised standard of composition. Hence the author has done wisely to select for the present treatise the central Madhubani dialect, which holds a middle position between the Western Champaran and Eastern Bhāgalpūr varieties inclining towards Hindi and Bengali respectively. It is written indifferently in the cursive Kayathi, the Maithili, which differs little from the ordinary Bengali, and the Dayanāgari, which is here adopted as most widely known to Oriental students. Its interest to philologists lies mainly in the extremely analytical stage which it has reached in the course of its downward evolution from Sanskrit. Thus a clean sweep has been made of the original Aryan declension, for which postpositions have been substituted in all cases except the instrumental, ending in a nasal *e*. An apparent inflection is also presented by the possessive in *k*, as in *pānī* = water; *pānī-k* = of water. But this *k*, answering to the Urdu *ka*, *ke*, *ki*, is shown by the older form *ker* to be the Sanskrit *kṛita* through the Prakrit *keraka*, as already pointed out by Hoernle. Here, therefore, we have not a true case-ending in any way referable to the organic Aryan genitive, but an independent word reduced by phonetic decay to a single agglutinated letter. Its true agglutinating character is clearly revealed by the way in which it shifts its place to make room for the plural form, as in *pānī-sabha-k* = of all waters. Cases of this sort are most instructive, as showing the evolution of speech from one morphological order to another going on under our very eyes. First of all, in the prehistoric period, the Aryan possessive was slowly built up by the agglutination and final fusion of the pronominal element with the root. Then, in the historic period, the root was again laid bare by the destruction of the pronominal element, or case-ending, for which was substituted an independent word in the nature of a postposition, gradually reduced by phonetic corruption to a single letter agglutinated to the root. The last stage in this instance belongs to the future period, when the agglutinated form will tend to become perfectly fused with the root, and thus develop a true case-ending—that is, *true inflection*, corresponding to, but not identical with, the oldest extant Aryan form. Yet there are philologists who hold that human speech is so far fixed that it never can pass from one morphological order to another, but must continue its external evolutions always within the particular order from which it originally started. No language started from inflection, nor even from agglutination, for, when analysed, these are found to be developments out of previous simpler states. And as such developments from the simple to the complex are thus shown to have taken place, so also must the reverse process of development from the complex back to the simple be held to be possible. The history of these neo-Sanskritic, as well as of the neo-Latin, tongues shows this latter process at work for the last 2,000 years, or thereabouts.

WITH the *Beiträge zur Kenntnis der melanesischen, mikronesischen und papuanischen Sprachen*, by G. von der Gabelentz and A. B. Meyer (Leipzig), a new departure is made in the study of the Oceanic languages. The *Melanesische Sprachen* of the elder von der Gabelentz (Leipzig, 1860 and 1873) was based on the assumption that the Melanesian and Malayo-Polynesian linguistic families were fundamentally one, although the races speaking them were confessedly sprung from at least two distinct stocks. The assumption, as might have almost been anticipated, proved to be erroneous, and is now practically abandoned by the authors of these *Beiträge*. Hence the systematic enquiry into the true character of these widespread idioms will no longer continue to be hampered

by false theories, which placed philology and anthropology in antagonism, and which could never have led to satisfactory results. This volume is merely an instalment, to be followed in due course by other excursions in a field which is virtually of almost unlimited range. It is chiefly glottologic, containing few grammatical details, except as regards the Papuan dialects current on the Macleay coast, North-east coast of New Guinea, and two or three others on the South-west coast and in Torres Strait. But a vast amount of labour has been expended on the vocabularies of about eighty dialects spoken in Melanesia, Mikronesia, New Caledonia, New Guinea, the Admiralty, and other groups in the Western Pacific area. These vocabularies are arranged on a somewhat novel plan, whereby the work of comparison is greatly facilitated. In fact, it becomes possible to ascertain at a glance the various forms assumed by a given word in all the languages here dealt with. Thus, taking the numeral *lima* = five, a good test of the presence or contact of Malayo-Polynesian peoples, we see at once by a single reference that under various modified forms, *rim*, *ném*, *lalim*, *crirum*, &c., it ranges over the islands at the western extremity of New Guinea, the North coast of New Guinea itself, the New Hebrides, Biak (Mysore), the Philippines, the Admiralty group, Fiji, parts of the Solomon and other islands. The same reference shows it absent from Hattam, Mairassai, Amberbaki, Tandia, the Arfak Hills, Loyalty, New Caledonia, and so on. A judicious consultation of these admirably prepared tables thus gives us a better idea of the migrations of the Malay and brown Polynesian races than could be derived from many hours' study of the subject. Their value to the students of comparative philology are too obvious to be here dwelt upon.

A. H. KEANE.

SCIENCE NOTES.

It is stated in the last Report of the Thames Conservancy Board that the river above the intake of the water companies is practically free from sewage contamination, and the public are informed that whatever organic matter chemists may detect in the water must have its origin in sources other than sewage.

THE Rev. W. Houghton is engaged on the examination of the stomachs of various sea-fishes with the view of determining the food of the respective species in connexion with their distribution and migrations. With this object he has recently been out in the North Sea in a steam-trawler and taken notes of the contents of the stomachs of several fish. He thinks it probable that the search for food is one of the chief causes of the migrations of certain fish, and that the nature of the food consumed influences the quality of the flesh as an article of diet. *Crustacea* appear to enter largely into the food-list of many fishes, the smaller kinds, such as the *Entomostrea*, being the favourite food of whitebait (young herrings), whose little stomachs are often full of these minute creatures. Mackerel are also very fond of small crustacea, a microscopic examination of their stomachs frequently revealing their presence, as also that of quantities of the larval forms (zoæ) of crabs; the rich quality of their flesh, like that of herrings, is perhaps mainly attributable to the nutritious properties of an abundant crustacean supply. The examination of the contents of the stomachs of fish in connexion with their distribution and migrations is probably the best way of obtaining reliable data, and an investigation of this nature is not unlikely to lead to some practical results. Mr. Houghton obtained in a surface-

net large quantities of crab-larvæ in the North Sea, and numbers of *Sagitta* and *Tomopteris*, two aberrant forms of annelid life.

WE understand that the Government of New South Wales are making rapid progress with the organisation of the Technological, Industrial, and Sanitary Museum. This institution has been established in the Garden Palace at Sydney, where the International Exhibition of 1879 was held, and is intended to fulfil the same purposes as are met by the South Kensington Museum and the Parkes Museum of Hygiene. The past few years have witnessed a great development of house-building energy in Sydney and other large cities of New South Wales, and it is said that the chief object of the colonial authorities in establishing this museum has been to provide a means whereby colonists might be made acquainted with improved apparatus and appliances for building and domestic purposes. Many manufacturers in this country have already contributed exhibits, consisting for the most part of sanitary and building appliances, and these articles have, when approved by the British committee, been shipped at the cost of the colonial Government.

THE Clarendon Press will issue very shortly new and enlarged editions of Prof. Holland's *Elements of Jurisprudence*; Sir W. R. Anson's *Principles of the English Law of Contract*; and Prof. Sachs' *Text-Book of Botany*, edited, with an Appendix, by Dr. Sidney H. Vines.

PHILOLOGY NOTES.

WE hear that Dr. Brugmann is going to publish a *Grundriss der Vergleichenden Grammatik der indo-germanischen Sprachen*. Such a book has long been wanted, as Schleicher's *Compendium* has, owing to the author's death, not been republished since 1866. The work is to be brought out by the enterprising firm of Karl Trübner, of Strassburg. The same publishers have just sent out the second number of Kluge's *Etymological Dictionary of the German Language*, a worthy companion to Skeat's *Etymological Dictionary of the English Language*.

WE are glad to hear that Mr. D. B. Monro's *Grammar of the Homeric Dialect* will be published next month by the Clarendon Press. The subject of this book, as scholars are aware, is one in which exceptionally rapid progress has been made of late years—so rapid, indeed, as far to outstrip the process of digesting and systematising the results attained. The movement was due in the first instance to the new light thrown upon the inflections of Greek and Latin by comparison with those of Sanskrit. As regards Homer it may be dated from the publication of the *Tempora und Modi* of G. Curtius (1836), in which the value of the Homeric dialect as a distinct and early stage of Greek was fully recognised. Thenceforth it has been shown with increasing clearness that the forms which used to be set down to mere anomaly, or at best to admixture with other dialects, belong in fact to an older scheme of inflection, usually richer and more intricate than that of Attic, but quite as consistent with itself. In the sketch of Homeric accidence given in the present book the results of this method are adopted, but without discussion of points lying outside Greek grammar. The formation of nouns (including the kindred questions of gender, accent, &c.) is more fully discussed than is usual in elementary treatises; and the chief questions as to nominal composition are briefly noticed. The larger portion of the book is taken up by syntax. The application of the comparative method to that part of grammar is more recent, but has already yielded most important results, and indeed for the in-

terpretation of Homer has been more fruitful than the analysis of the inflections. The uses of the moods in particular have been put in a completely new light. It is now seen that the different grammatical forms and combinations are not used loosely or at random—e.g., that the subjunctive is not used as an equivalent for the future indicative, or the subjunctive with *ἄν* for the optative with *ἄν*—but that each has its proper shade of meaning. The usage, in short, is regular, but the rules which it follows are not those of later Greek, and cannot be understood from the point of view at which the study of later Greek places us. The same may be said of the usage of the cases, the prepositions, the infinitive and participle, the article, the pronouns, and indeed of every chapter of syntax. In each case, as it is the object of this book to show, the difference between the Homeric and the Attic syntax may be greater or less, but it is almost always a difference in the whole character of the usage, not a mere irregularity or licence, such as might arise from mixture of earlier and later idioms. The structure of the hexameter verse, and the rules regarding the quantity of syllables, are treated at some length. In this department, too, the appearance of irregularity is found to be chiefly due to the Attic medium through which the facts have generally been seen. In the same chapter room has been made for an abstract of the learning connected with the digamma. The subject may seem to occupy a disproportionate space; but a briefer treatment would probably have failed to be interesting or instructive. The proportion of new matter in the book is necessarily small, and controversy is generally excluded. It will doubtless be thought enough if the true account is disengaged in each case from the theories put forward in special treatises. Some degree of novelty, however, will be found (among other points) in the analysis of the uses of *ἄν* and *ἄν* (especially in conditional clauses with the subjunctive), the account of the article and the different forms of the relative, the distinction drawn between the two main uses of *τε* (with the explanation of *τε* in the combinations *ἄν τε*, *ἄν τε*), and the suggestions made in the Appendix as to the place of enclitics in the sentence.

THE first volume of the *Proceedings* of the Congress of Orientalists which was held at Berlin last September is now ready for distribution. It contains the papers read in the two departments of Semitic and African learning.

THE large number of inscriptions brought back from Cambodia by M. Aymonier were delivered to the Société asiatique, which has appointed a committee to examine them, consisting of MM. Barth, Sénart, and Bergaigne. The last-mentioned has already read a paper upon the Sanskrit inscriptions before the Académie des Inscriptions.

AT its recent annual meeting the Société asiatique celebrated its sixtieth anniversary. As usual, M. Renan read the Report, in which he summarised the work accomplished in France during the past year in the various departments of Oriental study. A paper was also communicated by M. E. Sénart upon "The Sources of the Indian Drama." Without denying the fact of Greek influence, he claimed for India a larger measure of originality than has been allowed by some German scholars. The following are the officers of the Société asiatique for the coming year:—Hon. president, M. Barthélemy Saint-Hilaire; president, M. A. Regnier; vice-presidents, MM. Defrémery and Barbier de Meynard; secretary, M. Renan; assistant-secretary, M. Stanislas Guyard.

THE third number has just appeared (Berlin: Calvary) of the Annual Report upon the progress of German philology issued by the Society of German Philology.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HESS, 110, Strand, near Waterloo-bridge.

Report of the Investigations at Assos, 1881.
By Joseph Thacher Clarke. With Appendix, &c. (Boston, U.S.: Williams; London: Trübner.)

IN America the pursuit of classical archaeology, failing assistance from the public purse, is liberally promoted by an association known as the Archaeological Institute. To that body it must be satisfactory to find that their expenditure in the exploration of Assos in the Troad has been justified by the finding of several important pieces of sculpture and by the recovery of the architectural features of an ancient temple about which much had been written in the way of conjecture. These and other results to be seen in the *Report* lately published are an honour to the association no less than to those by whose skill and accomplishments the operations were successfully conducted.

The *Report* is profusely illustrated; and, so far as concerns the many plans and topographical sketches, there is every reason to be satisfied. But in the delineation of human and animal forms it is difficult to believe that the artist is always true to the original—not that we suppose him to have lost the general effect of the sculptures; in that respect he seems to have succeeded. Take, however, the three centaurs on pl. 15; and it will be seen that the outline of the back, especially of the last two, has altogether lost the subtlety which we know to exist in the sculptures from the same temple now in the Louvre, and which we suppose must also characterise the newly found pieces. Probably the engraver is chiefly to blame. The *Report*, it is stated on the title-page, was printed at the cost of the Harvard Art Club and the Harvard Philological Society. It shows almost for the first time how much American students have gained in recent years from the professors of archaeology in Germany, and doubtless also from the practical example of the Germans at Olympia. In one instance, at least, where Mr. Clarke ventures to be original it is not with success. This is at p. 106, where he suggests that the marine deity with whom Herakles is seen struggling on one of the Assos slabs in the Louvre is not Nereus, but the sea monster to whom the daughter of Laomedon was exposed, and from whom she was rescued by Herakles. It is possible that this legend, localised in the Troad, was familiar in Assos, and might well have been the subject of a piece of sculpture on a temple. But so slight an argument cannot stand an instant before the obvious fact that it is not a sea monster with whom Herakles is struggling; we know the forms of sea monsters in ancient art, and we know that with so hideous a creature it was not a question of struggling, but one of striking. Equally obvious is it on the slab that the female figures who rush from the scene with their hands raised in alarm are in sympathy with the sea-deity, and dread his being killed. In Mr. Clarke's view they could not be otherwise than in sympathy with Herakles,

and in that case there was more reason for them to approach clapping their hands. Then, where was Hesione, the king's daughter? It was to rescue her that Herakles undertook to slay the monster as it approached her, and yet in the reliefs she is nowhere present!

As regards Texier's illustrations of Asia Minor, it is, we believe, beyond doubt that in many cases the data which he brought back with him from that quarter were few, and carelessly collected. For this reason his restorations cannot be implicitly followed; they may be right or they may be wrong; but to say that this or that statement of his is "deliberately false" (p. 107), or to speak of his "tendency to distort facts in favour of his theories," is to go beyond what the circumstances warrant.

Among the reliefs found by the American expedition was one which "decorated the lintel above the central intercolumniation of the front," representing two Sphinxes confronted (pl. 16, p. 111). "The carving of the relief," it is said, "is of a delicacy and vigour comparable to the best works of fully developed Greek art." This excellence, which surely is a great excess of praise, is, in Mr. Clarke's judgment (p. 118), "a weighty argument that the construction of the temple does not date from an epoch more remote than the termination of the Persian war." He had previously shown (p. 100) that a period of prosperity followed the battle of Mycale, B.C. 479, during which the temple might have been erected. It is, however, on architectural arguments that he proposes to rely mainly for the lateness of the epoch he has adopted as compared with that which the archaic treatment of the sculpture had led others to accept, and still to maintain, it appears, notwithstanding the newly acquired knowledge. Apart from the question of date we have some interesting, though not novel, remarks on what Mr. Clarke calls the "Hellenisation of Oriental types and artistic methods" (p. 105) and "the empaistic character of the sculptures of Assos, which explains the striking similarity noticeable between them and the most ancient bronze works of Etruria."

It is a little curious, perhaps, to find on one and the same building figures of centaurs with human, and others with equine, forelegs. But such was the case at Assos; and the fact puts an end to the possibility of treating every representation of a centaur with human forelegs as older than the other manner of representing him, though it does not affect the probability that the former manner was the earlier of the two in point of invention. The temple at Assos appears to have been erected at a time of transition before the completely equine body of the centaur was firmly established. But although a transition from archaic subjects and archaic style may have been long, as Mr. Clarke thinks, in penetrating the artistic minds of Assos, it is nevertheless asking too great an admission in this respect when we are invited to trace to this cause the backwardness of the sculptures in question compared with those from Aegina, which, it is argued, are of the same date.

To the main reports on the work at Assos are added others on the topography and

geology of the district. The investigation of the topography is particularly interesting, though it does not contribute any solution of this vexed question. A. S. MURRAY.

LATEST NEWS OF PROF. MASPERO.

FEELING assured that all readers of the ACADEMY will share in the heartfelt satisfaction with which I hasten to announce the safety of Prof. and M^{me}. Maspero, I translate the following extract from a letter received on Tuesday evening from M. Arthur Rhoné, bearing date August 13:—

"As for Maspero, I have news of him from his brother. Notwithstanding that our consul, M. Monge, urgently recommended him to leave as long since as July 8, he persisted in remaining at Boulak, where he was working day and night upon the completion of the new rooms lately added to the museum. For these rooms he had but lately received the necessary credit which should enable him to decorate and fit them up. On the 13th, however, our Minister of Public Works, under whose control he acts, despatched a formal order for his immediate departure. Despite this order, I believe he would still have remained had he been alone; but he had with him his young wife, who is but just recovering from a severe illness, caused by the extreme heat on board the steamer in which they have been living, and his mother-in-law, M^{me}. la Baronne d'Estournelles (the mother of our *chargé d'affaires* at Tunis), and these ladies refused to desert him. The railway lines of the Isthmus were threatened; his brigade of soldiers had been withdrawn; and his steamer was in danger of being requisitioned for purposes of war. This boat was his only home. The hotels were empty and shut up. The European shops were all closed. He had no resource but to obey.

"He has left the museum in charge of his Nazir, the faithful Kourschid-Effendi—a brave old Circassian, who was especially valued by Mariette on account of his energy and integrity. All the precious relics in wrought gold, and everything which might tempt the cupidity of mere spoilers, have been removed; and I think there is nothing to fear from ordinary thieves; but, if it comes to burning, pillaging, and assassination, as at Alexandria, I do not see how even Maspero's presence would avail to defend the building. As in war-time a house which it is particularly sought to protect is converted into an ambulance, the old tumble-down dwelling in which Mariette lived has been assigned to some Arab harems.

"It was not possible for M. Maspero to remain at Immailah; he has therefore started for France by way of Italy, where he is at this moment. He is expected to arrive in Paris about the 20th inst., where he will hold himself in readiness to return to his post as soon as such return is possible."

AMELIA B. EDWARDS.

THE SILVER COINAGE OF TIBET.

The Silver Coinage of Tibet. By A. Terrien de La Couperie. (Trübner.)

THIS is a valuable paper—a *tirage apart* from the pages of the *Numismatic Chronicle*—and it affords a curious example of the interesting points of history which would probably be lost altogether if there were no such quasi-science as that of numismatics, with its devoted specialists and appropriate organ. Like most able numismatists, M. de La Couperie is a great deal besides a mere specialist.

If Tibet used any coined money before the latter half of the sixteenth century, it seems to be unknown. The earlier currency was probably one of metallic ingots, such as the mediæval travellers found in vogue in Central Asia, under such names as *kumush*, *yastak*, and *balshti* (the two latter words meaning "cushion"), and which in later days were known to English traders in China as *shoes* of gold and silver—a term which is probably a

corruption of *gold-schuyt*, "boats of gold," the phrase used by the Dutch; *pani a gusa di navicelle*, as the Venetian Cesare Federici calls them. In Eastern Tibet, or the provinces adjoining it, cakes of salt were used in the Middle Ages as currency; and quite recently, in Eastern Tibet, before the Anglo-Indian rupee was so largely introduced, the minor currency was furnished by "bricks" or cakes of the coarse tea imported from China for Tibetan use. Indeed, at Batang, as late as 1878, Mr. Baber tells us, a brick of ordinary tea was not merely worth a rupee, but in a certain sense was a rupee, being accepted without minute regard to its weight, just like the silver coin, as a legal tender. But this quasi-Ceruseian system of double standard was then approaching its end; for in that year, as the same distinguished traveller tells us, the Lamas of Batang monastery, having hoarded a great treasure of tea-bricks, found it impossible to dispose of them at par, and had to put up with a loss of thirty per cent.

In the last half of the sixteenth century, probably under Akbar, the Nepalese Raja of Khatmandu is said to have gone to Delhi with a present of a swan and hawks for the Emperor, who then granted him permission to strike money in his own name. The coins so struck were silver, of six *mashas* in weight (= 90 grs. troy), and were called *mohrs*. These *mohrs* were adopted before long by the Tibetans, it would seem, as a convenient currency; and a compact was entered into under which lumps of silver were sent by the ruling Lamas to Khatmandu with a small proportionate quantity of gold dust, return being made from Nepal in coin of weight equal to that of the silver sent. The profit of the Nepalese consisted in the value of the gold dust, reckoned at four per cent., and the amount of alloy in the coin reckoned at eight.

For some generations prior to the conquest of Nepal by the Gorkhas in 1768, that valley was divided among three native dynasties, all of which coined *mohrs*; and the coins which Duhalde (1736) has figured as "Tibetan" are, in fact, specimens of such *mohrs* from the mints of those three dynasties—viz., of Patan (date corresponding to 1689), of Bhatgón (1694), and of Khatmandu (1700).

The larger part of the Nepalese profit being derived from alloy, naturally the temptation to increase this was yielded to. In the reign of Ranjit Malla (1721-68), last Raja of Bhatgón, this debasement was enhanced so enormously that the Tibetans deserted the Nepal mints altogether. After the Gorkhas had established themselves in Nepal, their chief Prithvi Naráyana Sáh hankered after the old profit from Lhasa, but without success; and though the Tibetans during his reign took no initiative, after his death they appear to have plucked up courage, and in 1772 they issued a silver coin of their own, struck at the palace-convent of Galdan. This was imitated from the better *mohrs* of the Nepalese Rajas, but with such differences as to show independent origin; it is the first coin struck in Tibet of which there is any knowledge. During the next fifteen years there is no evidence of coinage of this character, whether Nepalese or indigenous; but when the restless Bahádur Sáh became Regent in Nepal the Khatmandu coinage for Tibetan circulation was resumed, and from 1788 to 1792-93 we have coins of progressively degenerate character. The refusal of the Lama authorities to accept this debased currency, or to renew the ancient compacts, became a pretext for the invasion of Tibet by the Gorkhas. The Chinese were summoned to the rescue, the Gorkhas were completely defeated and driven through the passes with great loss, and again routed within a march of Khatmandu, a result which led to a humiliating treaty

recognising the vassalage of Nepal to China. The Chinese then took on themselves to provide for the currency of Tibet. Their issue of silver coin began well, but rapidly deteriorated in execution, though not in purity; and it retained little resemblance, except in size and the ornamentation of the circumference, to the old coinage. The pieces bear on one side in Tibetan, and on the other in Chinese, characters the cycle-date and the style of the Imperial reign. The latest specimen of these coins in the British Museum is of 1822.

Both Père Huc and the great "Pundit" Nain Singh tell us that small change was provided in Lhasa by cutting these coins into fractional parts. But probably the whole amount of such coinage was quite insufficient for the wants of the country, and within the last eighteen years it has been in process of supersession by the Anglo-Indian rupees. Indeed, even at Tatsienlu, in the extreme East, and beyond the political frontier of Tibet, these rupees were found by Mr. Baber, in 1878, to be abundant; and, though melted down there in large quantities, he already says "they have become the currency of Tibet, and are counted instead of being valued by weight." He adds: "Georgian" (but read *Gulielmian*—there are no Georgian rupees with effigy) "and Victorian rupees are distinguished as *po-tu* and *mo-tu*, meaning male-head and female-head. Those which have a crowned presentment of Her Majesty are named *Lama tob-du*, vagabond Lama, the crown having been mistaken for the headgear of a religious mendicant."

The preceding curious history of Tibetan currency is, with the exception of a few connected circumstances, derived from M. de La Couperie's paper, which also contains a detailed description of the coins, and a plate of their most notable types.

H. YULE.

DISCOVERY OF BUDDHIST RELICS AT BASSEIN, NEAR BOMBAY.

In February last, Mr. J. M. Campbell, of the Bombay Civil Service, went with Mr. Pandit Bhagvanlal Indrají, a well-known scholar and antiquary, to Sopara, near Bassein, to examine a mound, known as the Burud Raja's Killa—that is, the Bamboo-working King's Fort. The mound had been previously noticed by Mr. W. W. Loch, who observed that it was too small for a fort, and was shaped like a Buddhist burial mound. On examining the fort with Mr. Campbell, Mr. Bhagvanlal was satisfied that it was a Buddhist tope or relic mound, and that it had not been opened. Accordingly, they arranged, with the help of Mr. Muloch, the collector, to open it during the Easter holidays. The mound stands like a knoll or hillock with steep lower slopes, a terrace about two-thirds of the way up, and, in the centre of the terrace, a domed top. A passage was cut through the mound about four feet broad, rising towards the centre, about twelve feet above the level of the ground outside. In the centre, about twelve feet below the top of the dome, the bricks were found to be built in the form of a small chamber, about two feet nine inches square. Three feet from the top of the chamber was found a dark circular stone coffer or box, about a foot and a-half high and two feet across, and consisting of two closely fitting disks of stone. Inside, each was hollowed to the depth of about five inches, so making a circular cavity ten inches high and eighteen inches in diameter. In the centre of this stood a copper casket six inches high and wide, and about two inches from the casket there was a circle of eight copper images of seated Buddhas, each about six inches high and two inches across. Inside the copper casket was a silver one, inside that a stone one,

inside that a crystal one, and inside that a little round dome-topped gold box. In the gold box, covered with gold flowers, as bright as the day they were laid there, were thirteen small shreds of earthenware, perhaps pieces of Buddha's begging bowl. Between the copper and the silver caskets was a space about half-an-inch deep. This was filled with about 300 gold flowers much dimmed by damp and verdigris, a handful of caked *abir* powder, thirty-four precious stones, and some pieces and beads of blue and greenish glass. Last and most important was a small silver coin, a Hindu copy of a Greek or Baktrian model. Mr. Bhagvanlal is nearly satisfied that it is a coin of one of the Shatakarni kings who ruled the Konkan in the latter part of the second century A.D. In the brick chamber, about six feet below the relic box, was found a frog. The mound measured about seventy yards round the base, thirty feet in height; and on it grew some big brab palms, some *karanj*-trees, and bushes.

Mr. Campbell thinks that the mound must have been set up by a king in his capital to mark some successful relic-raid into Northern India, relic-raiding being a favourite form of chivalry among Buddhist knights. There is little doubt, he thinks, that the chips were enshrined in the belief that they were chips of the true bowl.

NOTES ON ART AND ARCHAEOLOGY.

THE Council of the Holbein Society have issued to their members the first part of the *Tewrdannik*, reproduced by photo-lithography. Two more parts will complete the work; and it is proposed to give also a descriptive Introduction and a translation of the notes that describe the plates. This is the rarest of the series of illustrated works associated with the name of the Emperor Maximilian. The text consists of an allegorical poem of knight-errantry, written by Melchior Pfintzing, chaplain to Charles V., the subject being the wooing of Mary of Burgundy by Maximilian. There are 239 large wood-cuts by Hans Burgmair and Schaeufelin. It was published at Augsburg in 1519.

TEN pictures have been added to the Luxembourg collection during the short period it has been closed to the public. One of the new pictures is Courbet's "Man with the Leather Belt." The other nine have been selected from the last Salon. There seems to be no talk now of removing the Luxembourg collection, although the necessity for doing so was apparently urgent a year or so ago.

At a recent meeting of the Société nationale des Antiquaires de France, M. Proust announced the discovery, at Sablon, near Metz, of a Roman building, octagonal in form, and of two *cippi* bearing the name of a goddess hitherto unknown—*Scovellauna*. M. Héron de Villefoasse read a communication upon a leaden plate, found at El-jem, Constantine, Algeria, with the inscription *Genio Tus-dritanoru(m)*, "to the genius of the people of Thydrus."

THE "Nike" of Samothrace, which was formerly in the Salle des Caryatides of the Louvre, has just been placed upon its original pedestal at the top of the great staircase (escalier Daru), where formerly stood a Victory imitated from the Venus of Milo. It was found in 1863 by M. Champoiseau, vice-consul of France, in a chamber hewn in the hill behind the ruins of the great Doric temple, which was situated some distance from the town of Paleopoli (the ancient Samothrace) on the north-west side of the island looking towards Thrace. The chamber was square, open at the top, with a fifth wall dividing it into two parts. It

contained, beside the statue, many blocks of marble ornamented with mouldings, which have since been found to form the prow of the vessel upon which the goddess stood; also fragments of coloured terra-cotta. M. Coquart, who visited the spot in 1866, reported in the *Archives des Missions scientifiques* that the statue was "uninteresting" and "d'un goût brutal." His fellow-traveller, M. Deville, expressed himself in a no more enthusiastic manner: "The Victory herself is nothing but a mediocre decorative figure; and the whole appears to be of an inferior style." Since that time, the appreciation of the "Nike" has changed considerably; and it has been acknowledged that, although later than the Alexandrian period, it approaches the grand style of the school of Phidias. Nothing can be finer than the movement of the wind-wafted chiton; indeed, the only examples to be compared to it are one of the statues of the Parthenon and the torso of the second daughter of Niobe in the Vatican. The moment represented by the sculptor is that in which the goddess, flying from heaven, lightly touches the prow of the vessel upon which she stands. Her wings, more than half the size of her body, form the balance to the bent-forward figure; and no doubt formerly she bore a trophy in her hands. The drapery (almost transparent) is arranged in the most exquisite folds, and with the most thorough realism; one seems to feel the wind as the vessel cuts through the water. The figure is in Parian, the vessel in gray, marble; and when brought to Paris there were no less than 118 fragments. The head, arms, feet, part of the bust, and portions of the drapery and wings are wanting; but, in spite of its mutilated condition, it is one of the finest sculptures in the museum, and, placed as it now is, forms a grand vista when seen from the entrance by the Pavillon Denon.

A GALLERY of modern art has been instituted at Rome by order of the King of Italy; and the Government have voted a sum of 100,000 francs a-year to keep it up, and for the purchase of pictures by living artists. This new gallery will be opened some time in October. It is to be hoped that it will act as an incentive to Italian painters to produce something better worthy of being preserved for posterity than most of the works they send to exhibitions.

LAST week's *L'Art* is full of delightful artists' sketches for pictures in the Salon, many being full-page illustrations. The etching is by Ed. Yon from his picture of "Saint Marc." It represents with remarkably soft effect a large pool surrounded by rushes. Besides the Salon review, the text contains a short account of the French sculptor Rude by J. Pigalle.

A REPRODUCTION in heliogravure of the drawings in the Louvre collection is now being published in weekly numbers by L. Baschet, of 125 Boulevard Saint-Germain. Considering that the Louvre collection, which is the finest in the world, numbers no fewer than 37,000 drawings, sketches, and studies, it will be seen that this publication, even at the rate of weekly numbers, will be some time in coming to a close. The reproductions are accompanied by short biographies of the artists by M. H. de Chennevières, and the price of each number is 1 fr. 50 c.

M. PAUL BAUDRY, the much admired artist of the Paris Opera-house, has been recently exhibiting in the Orangery of the Tuileries two large and important designs for ceiling decoration executed for Messrs. Vanderbilt, of New York. On one ceiling is depicted the favourite myth of Cupid and Psyche that Raphael related with so much grace on the ceiling of the Farnesina.

On the other, Phoebe, Queen of Night, a large-limbed, powerful woman, appears amid the constellation of Orion; while Day, tired out, drops his sun-torch to the ground. This composition is "arranged" after the manner of Mr. Whistler in tones of blue, violet, and gray, and the effect is said to be marvellously harmonious. Beside these ceilings, M. Paul Baudry exhibits a picture of the conversion of St. Hubertus or Eustachius, to whom a stag with the crucifix between his horns appeared while he was hunting on a Good Friday, and turned him from a sinner into a saint. M. Baudry's St. Hubert is stated to have been drawn from the present Duo de Chartres. It is certainly a totally different conception from that of Dürer in his well-known engraving.

A PROPOSAL is being made at Lyons to commemorate in some way the great sculptor Roubillat, who was born in that city in 1695. Up to the present time he has been entirely ignored in France. The Louvre has no example of his work, nor has his native city even called a street after him. An annotated catalogue of the works of Roubillat is now appearing in the *Revue artistique*, a French paper published in England which contains a good deal of interesting, though somewhat over-laudatory, criticism.

THE publication has commenced (in weekly parts) of the second volume of the elaborate *History of Art*, of which M. Perrot and Chippiez are the joint editors. This volume is devoted to the art of Chaldaea, Assyria, and Phoenicia. It will contain fifteen plates and about 500 wood-cuts. The entire collection of objects recently brought back from Chaldaea by M. Sarzec will here be represented for the first time.

Two Spanish antiquaries have found, in the ruins of the Roman town of Merida, a Latin inscription dated in the reign of Titus, which seems to them to corroborate the traditional account of St. Librana, inasmuch as it contains the name of Catelinus, who is described in local tradition as the father and executioner of the saint.

IN the *Jahrbuch* of the Royal Prussian Art Collections there are several learned articles this quarter, all of considerable importance as materials for art history. Herr Lippmann especially is doing good work by his thorough study of the Italian wood-cuts of the fifteenth century. The Italian medals of the fifteenth century have also been subjected to a thorough examination by J. Friedlaender. The photographic reproductions of these medals that have appeared in several numbers show them to be extremely interesting. Herr Friedlaender has now finished his treatise, which probably will be published separately with its excellent illustrations.

UNDER the title of *Antike Bildwerke in Rom*, Herren F. Matz and F. von Duhn have published (Leipzig: Breitkopf and Härtel) a descriptive catalogue of all the sculptures to be found at Rome, whether in public galleries, private houses, churches, or squares. The total number of works in the list is 3,438.

A SOCIETY has been founded in Belgium, under the presidency of M. Gacharel, with the object of collecting and publishing materials for a complete Life of Rubens. The first number of the society's *Proceedings* has been issued.

M. ADOLF DE COULENEER's valuable series of essays on Portuguese archaeology and early graphic art have been reprinted from the *Bulletin* of the Belgian Archaeological Society, and published under the title *Le Portugal, Notes d'Art et d'Archéologie*.

AS SECRETARY.—WANTED, a RE-ENGAGEMENT, to a Society or private individual, by a LADY, accustomed to rapid, confidential correspondence and to accounts, also to invalids. Excellent references.—C. A., 44, Highbury-park, Highbury, N.

BOOK COLLECTOR.—NEW CATALOGUE (K), Rare and Curious Books, 1,300 Lots, with Notes, just published. Penny postage-stamp.—KEER & RICHARDSON, 69, Queen-street, Glasgow.

REFORM in READING in CHURCHES, SCHOOLS, and FAMILIES.—The Rev. ALEX. J. D. DORSEY, B.D., Lecturer on Public Reading at King's College, London, will LECTURE during SEPTEMBER in the chief towns, if invited.—12, Prince's-sq., W.

TO LITERARY, PHILOSOPHICAL, and other SOCIETIES.—W. CLARKE ROBINSON, M.A., Ph.D., B.Sc. (Lecturer and Examiner in Modern Literature and Languages in the University), Durham, is prepared again to enter into ENGAGEMENTS for the following LECTURES:—
1. ANGLO-SAXON LITERATURE. With Illustrations.
2. BEOWULF. With Extracts and Translations.
3. GODS and HEROES of the NORTHERN MYTHOLOGY.
4. ARTHUR, and the INSTITUTION of the ROUND TABLE.
5. THE SONG of ROLAND.
6. THE NIBELUNGEN LIED.

LONDON LIBRARY, 12, St. James's-square, S.W.—Just published, price 5s.; to Members, 4s. SUPPLEMENT to the CATALOGUE, containing the Accessions of six years (1876–80), with a Classified Index of Subjects. Application to be made to the Secretary, who will also furnish Rules and Terms of Subscription to the Library.
ROBT. HARRISON, Secretary and Librarian.

Now ready, Folded and Coloured, 1s. 6d.; Mounted in Case, 3s. 6d.
SEAT of WAR in EGYPT.—STANFORD'S LARGE-SCALE MAP of the SEAT of WAR in LOWER EGYPT. Scale, 3 miles to an inch; size, 25 inches by 37. Including Alexandria, Hamieh, Abukir, Elbet Kirsh, Kait ed Bazar, the Mahmudiyyeh Canal, Damamhar, and Rosetta. Showing the Forts, Railways, Sites of Battles, &c.
London: EDWARD STANFORD, 55, Charing-cross, S.W.

MACMILLAN'S MAGAZINE.
No. 274. For SEPTEMBER. Price 1s.
CONTENTS OF THE NUMBER.
1. THE LITTLE PILGRIM GOES UP HIGHER.
2. THE HISTORY of the ENGLISH LAND LAWS. By F. POLLOCK.
3. THE HADES of VIRGIL. By Principal SHAIRP.
4. FORTUNE'S FOOL. By JULIAN HAWTHORNE, Chapters XXXVII–XL.
5. POEM—TWO YEARS after NOVEMBER, 1890. By JOSEPH TRUMAN.
6. THE SALVATION ARMY. By M. A. LEWIS.
London: MACMILLAN & CO.

HANDY VOLUMES FOR TOURISTS.
Just published, crown 8vo, cloth, price 2s. 6d.
PHILIPS' HANDY ATLAS of the COUNTRIES of SCOTLAND: a Series of Thirty-two Maps, showing the Roads, Railways, County Seats, Parishes, &c., with a Railway Map of Scotland, and a Consulting Index. Constructed by JOHN BARTHOLOMAEW, F.R.G.S.

Also, uniform with the above,
PHILIPS' HANDY ATLAS of the COUNTRIES of ENGLAND. Forty-three Maps, with Index. Price 2s. 6d.

PHILIPS' HANDY ATLAS of the COUNTRIES of IRELAND. Thirty-three Maps, with Index. Edited by F. W. JOYCE, LL.D. Price 2s. 6d.
London: GEORGE PHILIP & SON, 32, Fleet-street; and all Booksellers.

THE AUTOTYPE COMPANY,
74, NEW OXFORD STREET, W.C.
(Twenty doors west of Madia's Library.)

AUTOTYPE represents Permanent Photography, with unique powers of artistic expression.
AUTOTYPE is celebrated for the noble Collection of Copies of the OLD MASTERS, and for numerous fine examples of MODERN ART.

MUSEO DEL PRADO, MADRID.
ISSUE of 307 AUTOTYPE REPRODUCTIONS of PAINTINGS in this Celebrated Gallery. Catalogue on application.

TURNER'S ETCHINGS
For the "LIBER STUDIUM."
Twenty-five of these Celebrated Etchings, in Autotype Facsimile, are now ready, Half-a-Crown each; or the Set can be obtained, elegantly bound in cloth, at Three Guineas.

WALKER'S CABINET of OLD FANS. Fifty-two Illustrations. A few Copies left. One Guinea each.

The AUTOTYPE COMPANY are producers of BOOK ILLUSTRATIONS of special photographic excellence and wide application.
To adorn at little cost the walls of Home with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 74, New Oxford-street, W.C.

THE AUTOTYPE COMPANY,
LONDON.

THE LIBER STUDIUM
OF
J. M. W. TURNER, R.A.

Reproduced in Facsimile by the Autotype Process, and accompanied with Notices of each Plate by the Rev. STUFFORD BROOK, M.A. Publishing in Three Volumes, each containing Twenty-four Illustrations, price Four Guineas per Volume. Volume the First now ready.

Detached Plates of this Edition of the "Liber," with the Commentary appertaining, are sold at 2s. 6d.

HENRY SOTHERAN & CO.,
36, Piccadilly, W., and 136, Strand, W.C.

SATURDAY, AUGUST 26, 1882.

No. 538, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Reformation of the Church of England: its History, Principles, and Results. By the Rev. John Henry Blunt. Vol. II. A.D. 1547-1662. (Rivingtons.)

THIS volume is the second and concluding one of a work whose first instalment was published so far back as 1869. That work merits the praise of having been the first serious and sustained effort to deal with its subject in the light of modern documentary knowledge, without following, like Prof. J. J. Blunt and Chancellor Massingberd, in the groove of Burnet, or lending too easy credence to Cobbett's very opposite presentment. While Mr. Blunt has been delayed in the completion of his task, more than one rival has appeared in the field, notably Canon Dixon, whose admirable work, however, has as yet covered only the same ground as Mr. Blunt's first volume, and Canon Perry, whose *Student's English Church History*, excellent as a convenient summary, is on a much smaller scale. But even if these works came more directly into competition with Mr. Blunt's than they actually do, he cannot be deprived of the honours of priority, and he is practically still in advance in the full handling of the period covered by the present instalment. That he takes a far less favourable view of the character and conduct of the most prominent Reformers than was traditional for some two centuries is merely another way of saying that he has gone to history, and not to tradition; and in any case his judgment is scarcely so severe as that of the greatest of all the Puritans—John Milton himself.

The first chapter is merely a brief survey of the political situation in England from the accession of Edward VI. till the execution of Northumberland in the beginning of Mary's reign, and contains no more than one or two references to the course of ecclesiastical events. But the second launches directly into the main subject, and deals with the relations of Church and State under Edward VI., when the aim of the Government was to reduce the spirituality to a mere subordinate position as a civil department. The wishes and temper of the young King, the policy of Cranmer and Ridley, and the interests of the Puritan section among the clergy and laity all worked together in this direction; and the end might have been secured had it not been for the weakness of the Executive, which was in a small minority of the nation, and knew it. The three principal forms taken by the changes introduced

with this aim of depressing the Church were the direct appointment of all bishops by the Crown—which, however, did little more than make formally legal what had been virtually acted on for centuries; the general visitation of the Church by the Crown; and the spoliation of the endowments of the chantries and of the goods of the parish churches and cathedrals to supply the necessities of the Exchequer—a measure readily carried through Parliament by a House of Lords which looked to securing much of the booty, and by a House of Commons which regarded it as a means of escaping taxation. The genesis of the First and Second Prayer-books of Edward VI., and that of the Forty-two Articles of Religion, the precursors of the existing Thirty-nine, are then narrated; but there is little opportunity for novelty of fact or treatment in this part of the volume, and it does not call for detailed notice. A moderate defence of the characters of Bonner and Gardiner, whose portraits have been long accepted as distorted by Foxe, follows, together with an account of the persecution they underwent from the Privy Council, which was not without effect on their attitude when the reaction came. The analysis of the causes of that reaction, which was too complete for a time to be attributable to the mere change of Sovereign, even in that golden age of Erastianism, is one of the most commendable parts of Mr. Blunt's book. He sums them up as follows:—(1) The scandal given by the irreligion and immorality of several among the advanced Reformers, including the judicially established adultery of the Archbishop of York and the Bishop of Winchester; (2) the marked social degeneracy throughout the nation, exhibiting itself in the form of lawlessness, fraud, and aggressive impiety; (3) the disgust occasioned to men of strong national feeling by the position and influence accorded to the foreign refugees and adventurers who flocked in as allies to the extreme school of the New Learning, where an historical parallel might well have been drawn of the way England rose against the Norman prelates and favourites of Edward the Confessor; (4) the sympathy felt for the Princess Mary under that course of treatment which so fatally embittered her, and which Mr. Blunt ascribes in great measure to Cranmer, from whom a stern retribution was to be one day exacted. But he has omitted one element of the general dissatisfaction, which probably outbalanced all the other motives—that mismanagement of the national business, both at home and abroad, which ranks the reign of Edward VI. with that of John as a time of suffering and degradation, with the inevitable result of extending the deserved unpopularity of the Government to the religious opinions of its most prominent members. The Ultramontane episode of five years under Mary forms the next division of the work; and here Mr. Blunt usefully dwells on the little regarded fact that the policy advocated at first by Gardiner and other leaders of the Old Learning, and acquiesced in by the Queen, was simply to revert to the state of ecclesiastical affairs at the close of Henry VIII.'s reign, repealing the Edwardine legislation as an experiment which had something more than failed. The bent given later

was due chiefly to the influence of Philip II. and to that of Card. Pole, the former in virtue of his character of "mallemus haereticorum," the latter with the object of clearing himself from the suspicion of heresy under which he lay at Rome—a motive which Mr. Blunt has omitted to mention. The most remarkable proof supplied in defence of the first of these propositions is that Queen Mary retained the title of "Supreme Head of the Church of England" in the first nineteen Acts of Parliament passed during her reign, not laying it aside till her marriage with Philip had been settled, and even then styling herself Queen of Ireland, a title regarded at Rome as unlawful because not conferred by Papal authority, but due solely to the action of Henry VIII. The definite change of policy on the Queen's part dates from the mission of Pole, since immediately after the parliamentary reconciliation of the nation to the Roman obedience two Acts were passed, one for repealing all the reforming statutes of Henry VIII., the other re-enacting the repealed Acts of Richard II., Henry IV., and Henry V. against heretics, so as to provide a swifter and easier mode of dealing with them than that of the ecclesiastical law—a scheme closely imitated 320 years later by another English Parliament assembled under another Queen. The humble rank of the great majority of the 277 victims of the persecution which ensued has doubtless been the reason why the cruelties of Mary, though actually and proportionally far below those of Elizabeth, have sunk so ineffaceably into the popular memory, little moved by the wholesale shedding of royal and noble blood which marked the four other Tudor reigns. It is Juvenal's experience over again;

"Sed perit, postquam cordibus esse timendus
Cooperat: hoc nocuit Lamiarum caede midenti."

The memories of Gardiner and Bonner are cleared by Mr. Blunt from the opprobrium heaped on them by Foxe of having been the chief agents in the persecution, by adducing proof that in Gardiner's case only three persons suffered within his jurisdiction, while Bonner did no more than the official duties of his position as Bishop of London forced on him, and even that with such obvious reluctance as to bring down on his head a censure for slackness from the Privy Council. The real head of the Marian Terror Mr. Blunt, on good grounds, holds to have been Alphonsus à Castro, a Franciscan, confessor to Philip II., and author of the then standard work on the punishment of heretics.

Much space is devoted to sketches of the careers and deaths of the chief clerical sufferers; but the only thing which calls for special note is the doubt thrown on the story of Cranmer's burning his own right hand. It is true that it looks mythical, but Mr. Blunt has overlooked the confirmation of it in the report of the Venetian envoy at the time, lately printed by Mr. Rawdon Brown. A chapter is given to an account of the rise and spread of the Puritans, but nothing is said of the active share in their development taken by a section of the Elizabethan bishops, notably Pilkington, Parkhurst, Bullingham, Grindal, and Aylmer; while several of those who opposed them on points

of discipline, such as Whitgift, were far too nearly agreed with them in doctrine to be effective checks on them. After this follows a chapter on the separate organisation of the Anglo-Roman communion, in which there is some minimising of the sufferings inflicted on Roman Catholics under the penal laws. Doubtless it is true that the plots against the Crown and life of Elizabeth gave the first occasion and excuse for these severities; but an impartial historian is bound to admit that, in a large number of cases, the persecution was as definitely religious, and not political, as the Marian one. The account of the conflict under Charles I., which ended in the total overthrow of the Church of England for twenty years, is given with more fullness than almost any other section of the work, but needs some little re-arrangement, as the chronological order is not observed throughout; the execution of Strafford and Laud, for example, preceding the history of the Canons of 1640 and that of the parliamentary proceedings of 1641–43. The account of the reinstatement of the Anglican polity under Charles II. ends with the enforcement of the Act of Uniformity in 1662; but the narrative ought to have been carried on to the parliamentary reprisals on the fallen Puritans in such statutes as the Conventicle and Five Mile Acts, which are necessary to a just understanding of subsequent Nonconformist relations to the Church of England. This would not have seriously increased the bulk of the volume, which closes with a chapter setting forth the author's views as to the theological position of the Anglican communion, discussion of which lies outside the province of this journal.

RICHARD F. LITTLEDALE.

Selections from the Writings of Walter Savage Landor. Arranged and Edited by Sidney Colvin. "Golden Treasury" Series. (Macmillan.)

A LANDORIAN anthology has long been wanted, and badly. To the many, Landor has always been more or less unapproachable, and has always seemed more or less shadowy and unreal. To begin with, he wrote for himself and a few others, and principally for himself. Then, he wrote waywardly and unequally, as well as selfishly; he published pretty much at random; the bulk of his work is very large; the editions in which he appears are rare or unwieldy, or both; and the majority have passed him by for writers more accessible and work less freakish and more comprehensible. It is probable, too, that, even among those who, inspired by natural temerity or the intemperate curiosity of the general reader, have essayed his conquest and set out upon what has been described as "the Adventure of the Seven Volumes which were Seven Valleys of Dry Bones," only a few have returned victorious. Of course, the Seven Volumes are a world. But (it is objected) the world is one of a peculiar pattern, abounding in antres vast and deserts idle, in gaps and precipices and "manifest solutions of continuity," and enveloped with an atmosphere which ordinary lungs find now too rare and now too dense and

too hypnotic. Moreover, it is peopled chiefly with abstractions: bearing noble and suggestive names, but all surprisingly alike in stature and feature; all more or less incapable of sustained emotion and even of logical argument; all inordinately addicted to superb generalities and a kind of monumental skittishness; all expressing themselves in a style whose principal characteristic is a magnificent monotony; and all apparently the outcome of a theory that to be wayward is to be creative, that human interest is a matter of apophthegms and oracular sentences, and that axiomatic and dramatic are identical qualities and convertible terms. This is the opinion of those adventurers in whom defeat has generated a sense of injury and an instinct of antagonism. Others, less fortunate still, have found Landor a continent of dulness and futility—have come to consider the Seven Volumes as so many aggregations of *ennui*. Such experiences are one-sided and partial, no doubt; and, considered from a certain point of view, they seem worthless enough. But they exist, and by existing they are in some sort justified. Landor, when all is said and done, remains a writers' writer; and it is impossible not to feel a certain sympathy with those who hesitate to accept him for anything else.

The number of those who do so—from ignorance, or distaste, or downright stupidity—is large. It is probable, however, that by the publication of the present volume their ranks will be thinned perceptibly, and their pretensions considerably abated. Mr. Colvin is a determined Landorian; but his Landorism is neither pedantic nor fanatical, and has in no wise debauched his humanity. His judgment of Landor—conveyed in a prefatory note which is certainly one of the best of recent years—is exceptionally generous both in essence and substance—too generous, I think, to be final. But it is nicely balanced on the whole, and strikes a possible mean between the enthusiasm of disdain and the enthusiasm of admiration. Mr. Colvin takes cognizance not only of what is good and sound in his author, but—to a great extent—of what is bad and false as well. He is quite willing to recognise the fact that the author of Landor's unpopularity is mainly Landor himself; and that, unique as was Landor's talent and notable as is Landor's achievement, the world is not altogether to blame for the attitude of indifference it has hitherto maintained to them. He claims much for the man, and perceives a vast deal in the work; but he admits, more or less explicitly, its many faults—its abruptness, its inconsecutiveness, its want of tact, the unreality of much of it, the egotism of all. His object has been to produce a Landor who shall be generally acceptable: a Landor, that is to say, whose blunders shall be corrected, and whose better qualities alone shall be in evidence. This object he has attained, and eminently. Well planned and brilliantly executed, his work is really a model of its kind. It takes rank with the best anthologies in English; and I cannot choose but believe that it will succeed in conquering for Landor an enduring popularity, and will remain the text-book of his fame and the proof of his greatness as a writer.

I have already referred to Mr. Colvin's Preface. I shall add that it contains, among other notable passages, an analysis of the classic and romantic methods which is comparable with Heine's own. The book proper is divided into three Parts. The first, "Dramatic and Narrative," is subdivided into two sections: of specimens of Landor at his best and most coherent as a writer of what it appears to be the proper thing to recognise as "drama," and of Landor at his best and stateliest as a story-teller and an artist in allegory. In the first, one is surprised (and not pleasantly surprised) to find extracts from the "Conversation" between Peter the Great and Alexis—which Mr. Colvin obligingly describes as "this fierce historic satire"—and that between Fra Lippo Lippi and Pope Eugenius, which contains some of the worst "comedy" ever perpetrated even by Landor. The rest of this section has been chosen with perfect tact, as has the whole of the second. Of the second Part, which is split up into nine subdivisions—of "Religion," of "Love and Human Nature," of "Literature and Language," and so forth—the interest is purely gnomonic. It is admirably edited, and its effect is extraordinary. Such a hoard of verbal jewels—of maxims cut like gems, and sentences that ring like golden oracles—has not before, I think, been brought together. The lustre it reflects upon Landor, considered merely as an artist in words, is remarkable; never before have the dignity and beauty of his style asserted themselves to such purpose; never before has the ocular proof of his genius as a writer appeared so majestic and so overwhelming. The third Part—of extracts "Personal and Autobiographical"—affects us in a different way. Before, we have only admired; here, we learn to love. Before, we have dealt with Landor the writer; here, we are brought face to face with Landor the man. The effect is irresistible. Mr. Colvin has performed his task with infinite delicacy and skill, and by selection and arrangement merely has given us a better and a nobler Landor than we ever knew before. No doubt the Landor existed; but he existed in Seven Volumes, and his aspect was vague and nebulous. His editor may be said to have rescued him from himself, to have made him organic and comprehensible, and to have set him full in the light of that affectionate immortality which is, after all, his due.

I regret that the space at my disposal does not permit me to do more than refer in passing to one or two of what I conceive to be the weak points in Mr. Colvin's Preface. As I think, for instance, he is grievously mistaken in his estimate of Landor as a dramatist; and I cannot choose but quarrel with his attribution to Landor of the gifts of heroic imagination and a sound creative faculty. To many of us Landor's imagination is not only inferior in kind, but limited in degree; his creative faculty is limited by the reflection that its one achievement is Landor; his claim to consideration as a dramatic writer is negated by the fact that, poignant as are the situations with which he loved to deal, he was apparently incapable of perceiving their capacities—inasmuch as he has failed completely and logically to develop a single

one of them; inasmuch, too, as he has never once succeeded in conceiving, much less in picturing, such a train of conflicting emotions as any one of the complications from which he starts might be supposed to generate. To many of us there is nothing Greek about his dramatic work but the absence of stage directions; and that quality of "Landorian abruptness" which seems to Mr. Colvin to excuse so many of its shortcomings is identical with a certain sort of what in men of lesser mould is called stupidity.

W. E. HENLEY.

The Honourable Henry Erskine, Lord Advocate for Scotland. With Notices of certain of his Kinsfolk and of his Time. By Lieut.-Col. Alex. Fergusson. (Blackwood.)

COL. FERGUSSON has made out of very mixed materials a very readable book, of which a very worthy man is the centre, rather than the soul or hero. He might have done still better if he had on one side been more careful, on another less careful, than he has been. His habit of breaking out, at stages in Erskine's singularly even life, into moralisation and quotation—as when, after telling us of the high jinks of the Edinburgh revellers of the "Beggars' Benison," he reminds us, in the words of George Eliot, that "we cannot reform our ancestors"—is old-fashioned, and apt to be a source of irritation to the reader. Then he is too apologetic when giving the old jokes associated with the name of Erskine. It may be true, as he says, that the jocosity about which he has qualms is attributed to half-a-dozen other people besides Erskine, or that it has already appeared in some collection of the Dean Ramsay or "Joe Miller" order. Erskine's wit was manifested chiefly in the making of puns, which resembled his character in having no subtlety about them, such as that the Dutch fleet, like Lord Kames's guests, were "confined to port," and that—in answer to Dundas's offer of his silk gown during his presumably brief occupancy of the Lord Advocateship—he would never adopt "the abandoned habits of his predecessor." But Col. Fergusson should have remembered that there are thousands of people, at least on this side of the Tweed, who have but a slight acquaintance even with Dean Ramsay's *Reminiscences*, and are altogether ignorant of Miss Nicky Murray or the brutal Lord Braxfield. He would have made his book more lively and more artistic if, regardless of consequences, he had printed every story, familiar or unfamiliar, which could reasonably be associated with his subject.

Henry Erskine deserved a volume of this kind. He was the second of three brothers, whose portraits, as given here, tell their own tale. David, the eldest and Earl of Buchan, stands confessed as the "gowk" of the family—although a very clever and even generous "gowk." It is equally easy to tell from the clear and strong eye of the youngest, Thomas, that he was the true force of the three; it is just such a face as one would

expect to find in the man who, after being soldier, sailor, and preacher—although of "cauld morality" only—went to the English Bar, had the courage to defend Tom Paine and Horne Tooke and to withstand the Regent to his face, and yet won his way to the woolsack. Henry Erskine must surely have been well advanced in life when he sat to Raeburn. The wateriness of eye and the depression of the lower jaw here given suggest a Thackerayan melancholy—as if Erskine were nearing the bottom of his cup, as if the wallet of his jokes were nearly empty, as if something were a-wanting to complete the measure of his success in life. Yet the face is the face of a man of character, and that is precisely what Henry Erskine was. He was not a profound lawyer. His personality as a politician was not imposing. Although he made a vast number of jokes and wrote an enormous number of verses—Col. Fergusson shows an interesting resemblance between some of his translations and certain admirable ones by Mr. Andrew Lang—and did strenuously all things that were the vogue of the day, with the happy exception of drinking, he will certainly not live as either humorist or poet. Lord Jeffrey thought that a good deal of his style of pleading was acquired in the Scottish General Assembly; yet even of this, Col. Fergusson says,

"The species of oratory which a high authority has described as the best suited to such an audience was precisely that with which Mr. Erskine could at the same time indulge his hearers and his own natural bent—namely, speeches argumentative, declamatory, or humorous, as the occasion might require, with few trammels on account of the demands of either relevancy or pertinency."

But, on the other hand, Erskine was an open-minded, upright, and generous man. His consistency and courage, like his brother's, were beyond question. He was identified from first to last with the Whigs in British, and the "Highflyers," or Evangelicals, in Scotch ecclesiastical, politics; and his loyalty to his comrades is proverbial. Rightly does Col. Fergusson associate him with "the independence of the Scotch Bar," and maintain the truth of the remark, attributed to a poor man threatened with oppression, that so long as "Hairy Askin" lived people of his class need never want a friend or fear a foe. Because he boldly avowed his sympathy with "the reformers," he was ejected from the leadership of the Scotch Bar, otherwise known as the Deanship of the Faculty—by-the-way, Col. Fergusson's account of this incident in Erskine's life is the best bit of narrative he has given us. Like his brother, too, he was attached to home and family, although poor Amanda, whom he idealised in sad doggerel before marriage, turned out after that event a gentle, valetudinarian Martha, known chiefly for having once interrupted her husband's rest with "Harry, lovey, where's your white waistcoat?" Yet, warm-hearted and sociable as Erskine was, he was sensible and "canuy." He passed unscathed through the rough ordeal of "seeing life" in Edinburgh; he always carried the cup of conviviality with a steady hand, because he never allowed it to be more than three-fourths full. Although he had not the powerful

brain and did not exercise one tithe of the influence of his contemporary and rival, Dundas, Erskine was a man of higher character, and Scotland has done well to hold him in greater regard.

The most interesting features of this work may be said to be genealogy and Edinburgh. It may be doubted if a man could have been happier in his ancestry and his kinsfolk than Henry Erskine. He had in his veins the best aristocratic and legal blood in Scotland—the blood of the Stuarts and the Dalrymples. Col. Fergusson introduces his readers to a remarkable company of Scotch ladies, from the beautiful and spirited Marie Stuart, Countess of Mar, and the tenderly domestic Frances Fairfax, to Lady Anne Erskine, the pious disciple of Lady Huntingdon; the anxious and superstitious "Aunt Betty;" Mrs. Calderwood, the shrewd correspondent of Lady Mary Wortley Montague; and the lady "the delicacy of whose person and the sweetness of whose disposition made her enjoy two husbands before she attained to the twentieth year of her age." Like good Scotch families, in all ranks—the Carlyles are the latest conspicuous example—the Erskines were warmly attached to each other. Of their mutual and tender solicitude we have here many evidences, not the least interesting being a letter from Thomas Erskine to his eldest brother, in which he writes at length of himself and of his family. As for what Col. Fergusson has to say of Edinburgh in the time of Erskine, most readers will wish there had been more of it. As the book stands, however, it gives the best account we have read of the Edinburgh of a century ago—its balls, its clubs, its frivolities, its social atrocities, of which perhaps the worst is the horrible alcoholic orgy known as "saving the ladies." It is to be regretted that Col. Fergusson was not able to throw more light on the relations between Burns and Henry Erskine. That the two men met and appreciated each other is matter of history—and of the poet's verse. But their mutual understanding does not seem to have been complete. Perhaps Burns was too "democratic" for Erskine, or perhaps Erskine was too "Evangelical" for Burns.

WILLIAM WALLACE.

Kaffir Folk-lore. By G. McCall Theal. (Sonnenschein.)

WE offer a hearty welcome to this valuable and interesting collection of Kaffir tales. Many of them are already known to us as having appeared in various South African papers and magazines, and we have often wished that they could be put together in a form which would render them more accessible to the student of folk-lore as well as to the general reader. Mr. Theal's name guarantees their originality and perfect accuracy; in dealing with them we need not be troubled with suspicions of their having been "cooked" for the English market or derived from natives who have been influenced by intercourse with Europeans. The tales, too, are generally complete; it is seldom that they are fragments of older and more intelligible stories. Two versions are given of the first story—

that of the bird who made milk—which it is interesting to compare with each other. The Seethana version has evidently mixed together two different tales. Cannibals and birds play a great part in these stories, as they do in most specimens of Kaffir folk-lore; and it is difficult not to believe that the introduction of the former points to a time when the Bantu race was in contact with the cannibal tribes of Central Africa. We have also the story of Hlakanyana, a sort of Kaffir combination of Hop-o'-my-thumb and the Master-thief. Hlakanyana, however, comes to a bad end, as he deserves to do. Curiously enough, there is more of a moral undertone in these Kaffir tales than is usually the case in folk-lore. With all their general resemblance, too, to the nursery tales of other lands, they have a peculiar and striking physiognomy of their own which shows how far wrong those scholars have gone who have attempted to compare South African and Indo-European folk-lore together. They have simply been misled by collections of Kaffir stories which have received a European colouring.

Mr. Theal adds a number of excellent Kaffir proverbs to his collection of tales, and prefixes to them an interesting account of Kaffir beliefs and customs. When he tells us that the natives "protect their bodies from the effects of the sun by rubbing themselves all over with fat and red clay," we cannot help being reminded how the Greeks, too, in their gymnastic exercises, anointed themselves with oil and dirt, or rather mud, evidently for the same reason as the Kaffirs. Boys, again,

"before being circumcised, are permitted to eat any kind of meat, even that of wild cats and other carnivora; but, after that ceremony has been performed, the flesh of all unclean animals is rejected by them. They use no kinds of fish as an article of diet, and call them all snakes without distinction."

It is curious how prevalent the repugnance to eating fish has been; even the Highlanders on the sea-coast of Scotland used to regard it as unfit for food. Can this repugnance be connected with the fact that among the ancient Egyptians, as among modern Hindus, the sea was unclean? One of the most curious of Kaffir customs is that which forbids a married woman to pronounce any words in which the principal syllable of her father-in-law's name occurs—a custom similar to the Polynesian *taps*, which also prevails to a limited extent among the Chinese. The custom is illustrated by the story of Tangalimlibo, as the woman who sang the song of Tangalimlibo for Mr. Theal

"used the word *angoca* instead of *amansi* for water, because this last contained the syllable *na*, which she would not on any account pronounce. She had, therefore, manufactured another word, the meaning of which had to be judged of by the context, as standing alone it is meaningless."

It must not be supposed, however, that Mr. Theal's book is of interest to scholars only. The tales in it will be found highly entertaining by every reader. Indeed, it could hardly be otherwise. They constitute the national literature of a people which possesses a strong character and no lack of intelligence.

A. H. SAYOR.

Uganda and the Egyptian Soudan. By the Rev. C. T. Wilson and R. W. Felkin. Maps and Illustrations. (Sampson Low.)

THE joint narrative of Messrs. Wilson and Felkin introduces us to a region of Africa which, ever since the memorable expedition of Capts. Speke and Grant, and the exciting narrative of Mr. Stanley, has held the attention of England. Stanley's announcement that he had succeeded in impressing the powerful ruler of an extensive African empire with the truths of Christianity deeply stirred the feelings of those who look to the teachings of the Prophet of Bethlehem as the surest, if not the only, means of raising man from a state of barbarism to civilisation. Funds for establishing a mission in so promising a field were rapidly forthcoming; and now we have before us the first connected account of the doings of the missionaries. The results, unfortunately, have not fulfilled the hopes that had been raised. Stanley was right, no doubt, when he spoke of Mtesa's willingness to become a Christian; but that monarch, always with an eye to his own advancement, looked less to the spiritual blessings promised than to the prestige and profit which he expected to result from clever Europeans permanently residing at his Court. When the missionaries made their appearance he received them with *empressment*; he allowed religious services to be held in his palace, and, like a well-bred courtier, feigned to take a deep interest in their discourse, but converted he would not be. And when the novelty of the thing wore off, and the mundane advantages expected failed to show themselves, he grew cold, and even hostile. His interest, however, appears to have revived when his ambassadors returned from Europe, and told of the marvels they had witnessed.

Stanley may have exaggerated the importance of Mtesa and his "empire;" but, as empires go in Central Africa, Mtesa is a powerful Sovereign, whose influence is dreaded by all around him. Seated astride the north-western rim of the Victoria Nyanza, a lake the size of all England, he holds sway over a country extending over 100,000 square miles. Mr. Wilson's account of the constitution of this African empire, though far less ample than we should have expected from his long residence in the country, is full of interest.

The King, of the royal race of the Wahuma, who founded the now collapsed empires of Kittara and Meru, traces back his descent for thirty or forty generations. He and three hereditary dukes, or *bakungu*, form the aristocracy of the country. It is the *bakungu* who, on the death of the King, select among his children the prince who is to succeed him. During the minority of the heir his mother acts as regent; and, when he ascends the throne, his brothers, with the exception of two or three who are kept as a "reserve," are burnt at the stake. The King, who thus steps over the ashes of his own brothers into power, is not, however, an absolute Sovereign. He is, in truth, but the president of a *luchiko*, or Council of Notables, which consists of the three *bakungu*, the *katikiro*, or Lord Chancellor (who holds office during the King's pleasure, and who, though generally of base origin, takes precedence of all other nobles), the *batonyoli*, or life chiefs, and a few Court

officials, including the head cook and brewer. This dependence upon a council may possibly explain much of what appears fickle in the King's conduct, for we learn that the nobles of Uganda are as strictly conservative as are the nobility in other lands, and strenuously oppose the supersession of old customs.

The people are divided into *bakopi*, or freemen—who may rise to be chiefs—and slaves taken in war and their descendants. The slaves, we are told, are "fairly well off, and not often badly treated, living often on a footing of members of the family." Far different, however, is the lot of the slaves who are sold to the Arab merchants. Mr. Wilson shows very conclusively that slaves and ivory are, under present conditions, the only articles of export which will pay carriage down to the coast; and in proportion as ivory gets scarcer so does the demand for slaves increase. The evil can be cured only by freely opening Central Africa to legitimate commerce—or, let us add, by manufacturing in the heart of Africa itself those articles for which the progress of the natives on the road to civilisation has created a demand.

Of the Waganda both Mr. Wilson and Mr. Felkin speak in terms of praise and hope. They are in many respects superior to their neighbours. They manufacture their own iron implements, produce capital pottery, are good wood-carvers, and excel in the dressing of skins. They do not render themselves hideous to the sight by disfiguring their persons, and are one of the few African tribes that wear decent clothing. On the other hand, they show an utter disregard of truth, are drunkards, and gluttons. Taking, however, their good qualities with the bad, it is plain that they are capable of being raised in the scale of humanity. Their religion teaches a belief in a Supreme Being, or Katonda—the creator of all. They have no images or outward symbols of this creator, and look upon him as far too exalted a personage to interfere in the concerns of man. Of course, they believe in a devil and in spirits, or *lubari*, whom they seek to propitiate, as do most uneducated people, even in Europe; but their belief in a Supreme Being ought to render them accessible to an unsophisticated type of Christianity.

Woman holds as low a rank in Uganda as she does in other parts of Africa; and this, no doubt, is in a large measure owing to the preponderance of the female sex. Mr. Wilson arrives at the startling conclusion that there are 350 females to every 100 males. Among the causes which contribute to this result, he mentions bloody wars—in the course of which all full-grown men made captives are put to death—and the excess of female births. The birth-rate, at the same time, is very low, for women scarcely ever bear more than two or three children in the course of their lives; and this is only what might be expected, for after a woman has borne a child she lives apart from her husband for two years, at which age infants are weaned. Mr. Felkin bears out these facts, for he tells us that King Mtesa, who is credited with having 7,000 wives (although he himself confesses complete ignorance of the number), acknowledges having 158 children, of whom only seventy are sons. Under these circumstances, women

are naturally a drug in the market, and Mr. Wilson has often been offered one "in exchange for a coat or a pair of shoes." At the death of the husband, the wives pass with the other property to the heir-at-law—that is, a mother becomes the property of her own son.

Mr. Felkin describes the countries to the north of Uganda; and his animated account of them is well worth perusal, on its own merits no less than because of the interest which naturally attaches to regions with which the names of Sir S. Baker and Col. Gordon will for ever be associated. Mr. Felkin's account of the provinces of the Upper Nile and Bahr el Ghazal is highly satisfactory; and as long as their government is entrusted to men like Dr. Emin Bey (whose merits as a geographical explorer have frequently been referred to in the pages of the ACADEMY) there is no fear of a return to the evil days of slave-hunting. Constant vigilance, however, is required, and in the districts which lie beyond the influence of the authorities the slave trade appears still to flourish. Of the horrors during the time antecedent to Col. Gordon's stern rule the work before us furnishes many harrowing examples. The roads by which the slave caravans passed can still be distinguished by the human bones, often those of little children, which are strewed along them. The story of Capsum, a little slave-boy presented to the author by Statin Bey, is told with touching simplicity. His home stood "far away" from Dara, many days to the south, in a land of running waters. His father must have been a man of some substance, for he had cows and sheep; and, besides the necessary food, the ground he cultivated yielded cotton, which was spun and woven for the use of the family. Capsum, like many another unfortunate, owes his liberation to the "Kurnuk," or Col. Gordon, whose gray eyes struck terror into evil-doers, but whose memory is affectionately cherished by the people over whom he was called to rule. "Where government is conducted as it is by the present governor of the Equatorial provinces," so says Mr. Felkin, "the natives are in far better circumstances than under their own despotic and brutish kings." Alas! that all the good seed sown in this remote part of Africa should be threatened with destruction through the unhappy events now going on in Egypt.

The scientific Appendices include the result of anthropological measurements of fifty-nine natives made by Mr. Felkin, a list of plants collected by Mr. Wilson, vocabularies, and meteorological observations. These latter are of considerable importance; and, had a mercurial barometer been available instead of aneroids, subject to uncertain and incalculable variations, they would have enabled us to determine very accurately the elevation of the Victoria Nyanza above sea-level. The result deduced by me—4,244 feet—must be looked upon as a mere approximation; and only when a traveller shall have succeeded in carrying to the lake a mercurial barometer can we expect to obtain a trustworthy estimate of its height. Mr. Felkin's map of the route from Gondokoro to Dar Fur possesses substantial value. Taken all in all, the book of the two missionaries presents many features of

interest, and ought to prove equally acceptable to the general reader and the student of geography. E. G. RAVENSTEIN.

MDME. DE LA FAYETTE'S HENRIETTA OF ENGLAND.

Histoire d'Henriette d'Angleterre. Par M^{me}. de La Fayette. Avec une Introduction par Anatole France. (Paris: Charavay.)

THE activity of the French typographers in the republication of their classical writers seems to have no limit. This is the third volume of a new series which is to embrace the chief masterpieces in verse and prose from Montaigne to Beaumarchais. It has a good deal to recommend it, and will, no doubt, be successful. The size and shape of the volumes—a square 12mo—are convenient; the paper is excellent; the type (elsevierien) decidedly more pleasing to the eye than either that of the "Grands Ecrivains de la France" of Hachette or the "Petite Bibliothèque littéraire" of Lemerre; it is not so dark and heavy as the one, nor so sharp and dazzling as the other. The amount of note and commentary also appears to be regulated by a sound judgment—neither too full nor too scanty. The neglect of this moderation is the one serious objection which can be made to Messrs. Hachette's really superb publication; certainly the annotations of such scholars as Monmerqué and Boislisle are welcome under almost any conditions. Still, it is a severe tax on the shelf-space of a private library to find room for fourteen stout octavos, containing M^{me}. de Sévigné's letters; and where can one hope to stow away the fifty volumes of St-Simon's *Mémoires* when they appear, if they ever do appear? Yet, after all is said, one cannot but be amazed at the variety, beauty, and abundance of the books now publishing in France, whose printers seem determined to surpass the achievements of their great predecessors in the sixteenth and seventeenth centuries.

We regret to be forced to add that the editor has not done his share of the work by any means as well as the publisher. M. Anatole France's Introduction has considerable literary merits, to which we shall presently refer. But in the cardinal virtue of accuracy he does not shine. In two places we notice such serious misprints of "date" as 1644 for 1664 (pp. xv. and l.). Even the text of M^{me}. de La Fayette's charming opusculum has not been read and corrected for the press with care—e.g., "Il déclara au roi qu'il ne consenteroit jamais à lui [sic] laisser faire une alliance si disproportionnée." This is simply negligence, though of a very reprehensible kind. But we find traces of ignorance as well. The editor actually supposes that the Dukes of Buckingham who perished on the scaffold in the times of Richard III. and Henry VIII. (Henry and Edward Stafford) were of the same family as George Villiers Duke of Buckingham, who was assassinated by Felton. The study of genealogy is not a very exalted one, but it has its uses on condition of being severely accurate. M^{me}. de La Fayette had made the mistake of saying

that the Buckingham of Charles II.'s time was "the son of the Buckingham who had been beheaded," which was probably a mere slip of the pen for assassinated. M. Anatole France takes upon himself to correct this error, and falls into much more serious errors himself:—

"Les deux membres de cette famille qui eurent le sort que Madame de La Fayette attribue au favori de Charles I^{er} sont Henri duc de Buckingham qui eut la tête tranchée sous Richard III. en 1483 et Edmond fils de Henri qui mourut par le même supplice sous Henri VII. en 1521."

Besides the immense mistake of confusing the families of Stafford and Villiers, the reader will notice two minor errors. Henry VII., as everyone knows, died in 1509, and yet M. France makes him survive till 1521. It was not Edmond but Edward Stafford Duke of Buckingham who was beheaded in the last-named year. After such a note as that it is impossible to trust M. France any further than one can see him. All comfort and repose in reading his annotations are at an end. We know not what spurious information disguised as knowledge may be palmed off upon us just when we are not in a position to verify it for ourselves. By an error in imposing or making up the forms several pages in the Appendix are entirely confused. Thus the sequence of p. 154 is found on p. 157 and the sequence of p. 155 on p. 154. Such carelessness is without excuse, and the fact that M. France writes well and with true insight rather increases one's regret to find him so wanting in the humbler qualities of an editor.

Henrietta Duchess of Orleans, youngest child of our King Charles I., is one of the most graceful figures in history. Scarcely of any other Princess is there such unanimous and enthusiastic testimony as there is to her unrivalled sweetness and charm, by which both sexes were alike fascinated. M^{me}. de La Fayette, in the work before us, says, "Never was Princess so equally capable of making herself loved by men and adored by women." Henrietta seems to have united in herself the most attractive qualities of her Stuart and Bourbon ancestors—the witchery of Mary Queen of Scots, and the popular manners and masculine sense of Henry of Navarre. Her mind was strong and penetrating, and well nourished by study. "Under her smiles," said Bossuet, "and that light air of youth which seemed only made for pastime, was hidden a seriousness and perspicacity which astonished those who dealt with her." But her most marked trait was a winning, sympathetic softness (*douceur*), which, as it was said, seemed to ask people to give her their hearts. It was agreed that in this respect she was unlike other royal persons—that her sweetness was genuine, and not the result of artifice or policy. Her personal attractions were of that radiant kind which enforces instant homage and admiration; regular, yet animated, features, a complexion of extraordinary purity, lustrous blue eyes—so dark that they were commonly taken for black; a sylph-like grace of carriage; all her whole body seemed instinct with *esprit*, which she "had down to her feet," says Cosnac Bishop of Valence, who adds, "and she danced better than any woman in the world." She

was mourned with a fidelity rare in Courts. "Her loss," says M^{de}. de La Fayette, "is one of those for which there is no consolation, and which leave a bitterness that lasts through life." Cosnac, in his *Mémoires*, writes: "As there have been persons who have died of grief, it is shameful to me to have survived mine. If I had had really a tender heart, it must have cost me my life." Her sudden and frightful death has been made known to all by the majestic eloquence of Bossuet's funeral oration; but those who would realise its heartrending pathos must turn to the last part of this little work of M^{de}. de La Fayette. There are not many pages in the literature of any country more remarkable for passion hushed into calm by its own intensity. It seems nothing but a bare record of facts—and yet it is one of the most pathetic pieces ever written. No reflection is made by the writer on her own feelings; no expression even of sorrow is suffered to escape. The depth of the silent grief is only shown by the vivid objective presentation of the whole scene, the record of every touching trait and circumstance which marked the last hours of the loved one. A better example could hardly be found of the artistic power of genuine feeling, or one more fitted to show how passion seeks a simple and direct utterance in proportion to its strength.

M^{de}. de La Fayette herself was a hardly less attractive and interesting character than her own adored Princess. She wrote little, but her few works are among the purest of the French classics. She did for French fiction what Wordsworth did for English poetry, and with more unchequered success. *La Princesse de Clèves* is one of the most perfect works of its kind in any language. Prolonged ill-health, and the languor it produced, limited her work to a few opuscles, but they are gems. Her principles in the matter of composition were the most austere. A period suppressed she said was worth a *louis d'or*, and a phrase twenty *sous*. She had such dislike for writing that she declared that if she had a lover who expected a letter from her every day she would break with him. Her friend, M^{de}. de Sévigné, was never tired of praising her "*divine raison*." A new application of the word *vérai* (true) was invented in her behalf to express the clear sincerity of her character and the vigour of her mind. She was a warm friend and an affectionate mother, but she so entirely eclipsed her husband that nearly all trace of him is lost, and even when he died is unknown.

M. Anatole France's Introduction, as I said before, has great merit; it is full of bright *aperçus*, expressed with the finish which the French bring to these things. In it will be found a fresh and suggestive study of Madame Henriette's character, two unpublished letters of Marie de Gonzague (Queen of Poland), and other interesting topics treated with insight and ability. M. France discusses the vexed question whether Henrietta was poisoned or not; and one is glad to see that he adopts the sensible view of Littré, that she died from natural causes, in favour of which the medical evidence, viewed in the light of modern science, seems clearly preponderant.

JAM. COOPER MORISON.

THREE BOOKS ON SOUTH AFRICA.

Cetywayo and his White Neighbours. By H. Rider Haggard. (Trübner.) A man must be both bold who ventures on a new work upon South Africa, and credulous if he expects it to be read. Mr. Haggard is aware that the public are tired of the subject, but writes with three objects:—

- (1) "To give a true history of the events attendant on the annexation of the Transvaal, which act has so frequently been assigned to the most unworthy motives, and has never yet been fairly described by anyone who was in a position to know the facts;"
- (2) "To throw as much publicity as possible on the present disgraceful state of Zululand resulting from our recent settlement in that country;"
- (3) "To show all interested in the Kafir races what has been the character of our recent surrender in the Transvaal, and what its effect will be on our abandoned native subjects living in that country."

The author has resided in various parts of South Africa from a period anterior to the annexation of the Transvaal, and has evidently been an intelligent and accurate observer of all that has happened since. We cannot always agree with him in his deductions from facts; and we must still think the annexation a most ill-advised measure, and the principal source of the misfortunes which have followed it. But when we come to his stirring account of the late Boer War, we go along with him, and heartily join in his pungent criticisms. He does not exaggerate the harm done by the Midlothian speeches; nor is it too much to say, as he does, that, humanly speaking, many a man would have been alive and strong to-day whose bones now whiten the African Veldt had those reckless words never been spoken. On the three great questions which loom in the future, and no distant future—the state of Zululand, the Dutch supremacy, and the enormous increase of the native population—Mr. Haggard looks despondingly; and, to judge by the conduct of affairs in the past, there is nothing to warrant a more hopeful view.

A Defence of Zululand and its King. By Lady Florence Dixie. (Ohatto and Windus.) Lady Florence Dixie is well known as an ardent champion of Cetywayo, and in the present pamphlet makes out a strong case of him. She argues her point with much ability, and supports her view by passages from Blue-Books and despatches, which are sufficiently convincing. The ex-king's star is at present in the ascendant; and now that his restoration has been promised, we may say that he owes much of his success to his lady friends.

Peace and War in the Transvaal. By Mrs. Walter H. C. Long. (Sampson Low.) In all national emergencies there are always to be found Englishmen equal to the most serious positions in which circumstances place them. This was especially the case in the Indian Mutiny, and it is comforting to find that it was still so in the Boer War. The siege of the camp at Lydenberg may have been overlooked by many in the more startling events that then so painfully occupied public attention, but it is a story which it is impossible to read without admiration, and it could not be better told than it is in Mrs. Walter Long's modest and unpretending little book. Her husband, the youngest officer in the 94th, was left with fifty-three men in charge of the stores at Lydenberg when the rest of the regiment started on their disastrous march to Pretoria. Mr. Long, who was only twenty-two years of age, showed remarkable capacity and energy in the difficult and trying position in which he was placed. He lost not a moment in fortifying the open camp just vacated by the regiment, and was ready for the Boers when they began the attack, 700 strong. For eighty-four days he held his fort till the war was over.

The men under so good a leader behaved admirably; and no doubt the example of Mrs. Long, the only woman in the camp, who bore every discomfort and hardship most cheerfully, must have had an excellent effect on them. A rivulet ran through the camp, but was soon cut off by the enemy; and the siege having been begun in a time of great drought, the well in the camp after a time began to fail, and the little garrison suffered much from thirst. This was at last alleviated by heavy rains, which brought with them fresh discomforts, for the huts had been unroofed to avoid the danger of fire, and there was no protection from the drenching storms. Mrs. Long does justice to the Boers, whom she found after the siege very civil and friendly. Strict discipline was maintained in the besieging force by their leader Piet Steyne, who protected the town of Lydenberg from pillage, and flogged one of his men for addressing Mrs. Long in a jeering tone. We must not omit mention of Mr. Walsh, a Roman Catholic clergyman, who came out of the town of Lydenberg to the camp, voluntarily endured the hardships of the siege, and was of the greatest help to all, encouraging and cheering the men, and working with them himself. We trust that weariness with South African literature will not deter any of our readers from spending an hour with Mrs. Long; her book can easily be read in that time. The defence of Fort Mary at Lydenberg is a bright spot in a very dreary prospect.

CURRENT LITERATURE.

The Home Life of Henry W. Longfellow. By Blanche Roosevelt Tucker-Machetta. (Sampson Low.) This little book records some reminiscences of Longfellow's home-life and conversation by a lady who saw the poet in the domestic circle on several occasions during the last two years of his life. The poet's personal appearance, as well as his likes in the matters of books, furniture, and food, are set forth in great detail; but, with one or two exceptions, the reader will not be instructed as to the sources or circumstances which inspired his pen. But Mrs. Machetta has put on record the fact that Longfellow admitted the beautiful prose-sketch *Hyperion* to have described an episode in his own life. The original of Fanny Asburton, the heroine of *Hyperion*, was Miss Fanny Appleton, who subsequently became the poet's second wife. The general impression left on the mind of the reader will be that Longfellow was an affectionate father, a sincere friend, and a courteous host, and that he was endowed with a singularly modest nature by no means accessible to flattery. Although the American poet had travelled in many countries and spoken to men of all nationalities and religions, he never seems to have acquired much knowledge of the ways of this world. An amusing instance of his ignorance in this respect is afforded by the account of his relations with Jules Janin. It seems that Longfellow met Janin in Paris, when the latter was entering on his career as a literary critic, and that Longfellow was invited to dine in Janin's chambers, where he met a young lady who was introduced to him as M^{de}. Janin. Ten years later Longfellow again met Janin, and a second time dined with his friend, who had now become a man of light and leading among Parisian journalists. Again the American poet was introduced to M^{de}. Janin, but, failing to recognise his acquaintance of former years, he took his host aside and expressed his surprise that she should have changed so much.

"When did you meet her?" said Janin eagerly. "Why, let me see," said the American, pondering, "about nine or ten years ago, and since then she is wonderfully altered." "Great heavens!" answered Janin in a serious tone, "are you jesting? Did you

think this the same one? Who knows how many Madame Janins there have been during that time? Longfellow replied quietly, "And this one?" "Ah, ha!" his interlocutor added, "this time, *mon cher*, I have been caught myself, and the real Madame Jules Janin stands before you; but *à propos* of my little dinner in the Quartier Latin, nothing to my wife of that, I beg; otherwise your evening to-night might be less tranquil."

MR. W. C. HAZLITT'S second series of *Bibliographical Collections and Notes* (Quaritch) is the result of many years' searches among rare books, tracts, ballads, and broadsides by a man whose specialty is bibliography, and who has thus produced a volume of high value. If anyone will read through the fifty-four closely printed columns relating to Charles I., or the ten and a-half columns given to "London" from 1541 to 1794, and recollect that these are only a supplement to twelve columns in Hazlitt's *Handbook* and five and a-half in his first *Collections*, he will get an idea of the work involved in this book. Other like entries are "James I.," "Ireland," "France," "England," "Elizabeth," "Scotland" (which has twenty-one and a-half columns), and so on. As to the curiosity and rarity of the works that Mr. Hazlitt has catalogued, anyone who has been for even twenty or thirty years among old books will acknowledge that the strangers to him are far more numerous than the acquaintances and friends. This second series of *Collections* will add to Mr. Hazlitt's well-earned reputation as a bibliographer, and should be in every real library through the English-speaking world. The only thing we desiderate in it is more of his welcome marks and names, B. M., Britwell, Lambeth, &c., to show where all the books approaching rarity are. The service that these have done in Mr. Hazlitt's former books to editors for the Early-English Text, New Shakspeare, Spenser, Hunterian, and other societies, &c., has been so great that we hope he will always say where he has seen the rare books that he makes entries of.

The State and the Church. By the Hon. Arthur Elliot. "English Citizen" Series. (Macmillan.) The student engaged on a summary of the relations between the State and the Church has our "heartfelt sympathy." The connexions are so varied and the subject so overlaid with doctrinal strife that the task must try the knowledge of the most learned in ecclesiastical law and the impartiality of the historian the least fettered by religious prejudice. It must be confessed, even by those members of the Church of England who are possessed of "distinct" Church views on the thousand-and-one points of difference that divide the various sections of the Church, that Mr. Elliot has acquitted himself ably in spite of all his difficulties. For ourselves we can say that we have read his book from the beginning to the end without finding any trace of the religious opinions which he entertains. On some points of detail, chiefly on the temporal affairs of the Church, we may confess to a different opinion from Mr. Elliot. We do not agree with him in his description of the position (p. 36) of those clergymen who used to be known by the objectionable title of "perpetual curates;" and we think that in the second part of the note on the preceding page some qualifying words of an important character have been omitted. The work of Dr. Cove on *The Revenues of the Church of England*, which Mr. Elliot quotes from, is still, though published in 1816, the best authority on its emoluments; but it is, no doubt, from its pages that the author of this handbook has drawn the erroneous assertion that one of the chief sources of the income of the Church is derived "from fines on renewals of leases." Nearly all the episcopal and capitular estates are now under the management of the Ecclesiastical

Commissioners, and it is the invariable principle of that body to refuse to renew Church leases on payment of fines. This treatise is a useful summary of the past history and present position of an organisation which must, in a few years, become the centre of political agitation.

On the Construction of Roofs. By E. Wyndham Tarn. (Crosby Lockwood and Co.) This rudimentary treatise is intended to introduce the student of architecture to the first principles upon which the roofs of buildings are constructed, and to enable him the more readily to understand the more elaborate works upon the subject. This very important, though unambitious, function it admirably fulfils, and is a worthy contribution to the series of books on practical architecture which the publishers have for many years been giving to the public. Mr. Tarn has never, so far as we know, busied himself much with what may be called the transcendentalism of the art of building; and certainly his present little volume keeps very close to the ground, and must stand or fall on considerations of immediate usefulness, not only to the architect, but also to the actual operative. Beginning with a chapter on the objects of a roof (wherein differences of design and material, determined by climatic differences, are dwelt upon), the author goes on to describe every kind of wood roof, from the simple shed-roof to the V and M roofs, the Mansard and the open-timbered cathedral roof. In each case a specific reason, based on fundamental principles of structure, is assigned for every addition of a principal, purlin, strut, or brace; and so the student is enabled, through the channel of a very simple definition, to arrive at a correct idea of the causes of what is called a "thrust," a "subsidence," or "settlement," and to learn an accurate code for the distribution of the structural load. Perhaps the section of the work dealing with iron roofs is, on the whole, most valuable as affording a view of the methods employed in modern buildings of enormous span where, as in a railway-station, light is a primary necessity. The tables given are often valuable, as, for instance, Tredgold's table designed to show the maximum pitch to be given to roofs according to the nature of the material of the covering, and also the pressure which such material produces on every square foot of roofing. We suspect, however, that architects are much more frequently influenced by aesthetic than mathematical considerations in determining pitch. For example, roofs were erected in England up to the twelfth century of a very low pitch, and during the Gothic period of the three succeeding centuries of a very high pitch, without any violent climatic change to account for the altered fashion. Then, about the sixteenth century, the high-pitched roofs were taken off the cathedrals and low-pitched ones (sometimes lead-flats) substituted. In the present "Queen Anne" revival it is obviously a chance whether the roof be high or low as to pitch, and considerations of whether rain or snow is the more frequent in any district operate but little against the argument of elevational appearances. One interesting branch of the subject Mr. Tarn has not exhaustively dealt with—we mean the covering of roofs. In the south of England red tiles are largely employed, and no doubt they make, on the whole, the warmest, most durable, and beautiful covering; but slates, and sometimes slabs, are often both convenient to use and pleasant to the eye. Certain of the Cumberland and Westmoreland slates (as, for example, the green slates from the Tilberthwaite quarries and the gray-green from Conistone Old Man) are, though heavy as to *per foot* pressure, very beautiful, and work well with red-faced pressed bricks. Then certain of the Welsh slates, both *count and tone*, are admirable; and for large ware-

houses and other lofty buildings of wide span and low pitch the cheaper and heavier qualities of Penrhyn slates make the best possible covering. Messrs. Crosby Lockwood and Co. have given the public an excellent little treatise which any non-professional reader might find interesting and well worthy of purchase at its popular price.

NOTES AND NEWS.

CAPT. RICHARD F. BURTON'S long-promised work on the sword will have for its full title *The Book of the Sword: being a History of the Sword and its Use from the Earliest Times*. As we have already announced, it will be published this winter by Messrs. Chatto and Windus. Its form will be small quarto, with about four hundred illustrations.

MESSRS. CHATTO AND WINDUS' other announcements include *Social Life in the Reign of Queen Anne*, by Mr. John Ashton, with one hundred drawings by the author after old engravings; *Twenty Years of a Publisher's Life*, by Mr. Alexander Strahan, with portrait and illustrations; *The Natural History of the Poets—Birds*, by Mr. Phil. Robinson; and a *Dictionary of the Drama*, by Mr. W. Davenport Adams.

In fiction, the same publishers announce:—*Kept in the Dark*, by Mr. Anthony Trollope; *Fog-glove Manor*, by Mr. Robert Buchanan; *Dust*, by Mr. Julian Hawthorne; *All Sorts and Conditions of Men*, by Mr. Walter Besant and the late James Rice, illustrated by Mr. Fred Barnard; *Val Strange*, by Mr. D. Christie Murray; *The Golden Staff*, by Mr. Charles Gibbon; as well as new novels by Mr. Wilkie Collins, Ouida, Mr. F. W. Robinson, and the author of *A French Heiress in her own Château*.

WE hear that Mr. Talboys Wheeler's *Short History of India*, published two years ago by Messrs. Macmillan and Co., has been adopted by the University of Calcutta as the text-book in Indian history for the examinations for degrees in B.A. and M.A.

WHAT Karl Andreen did for German on a small scale in his *Deutsche Volksetymologie* (1876) has been attempted for English in a forthcoming volume on *Folk-etymology*, of a much more elaborate description, by the Rev. A. Smythe Palmer. It will be published this autumn by Messrs. Bell and Sons.

MESSRS. HURST AND BLACKETT will shortly publish a new novel in three volumes by Mrs. Spender, entitled *Gabrielle de Bourdaine*; and also *The Brandreths*, by the author of *Strictly Tied Up*, who some while ago disclosed himself as Mr. Beresford-Hope.

WE understand that an article by Sir J. H. Ramsay on the accounts of Henry IV., in continuation of a former one on the accounts of Richard II., will appear in the September number of the *Antiquary*.

MESSRS. W. SWAN SONNENSCHN & Co.'s "Illustrated Library of the Fairy Tales of All Nations" seems to have met a want. The following volumes are already announced as in second editions:—*Caballero's* (Spanish) *Tales*, *Croker's Irish Fairy Legends*, *Gustafsson's* (Scandinavian) *Tea-Time Tales*, *Hauß's* (German) *Fairy Tales*. The publishers' list includes many new volumes for the coming season, representing (among others) Portugal, the Basque Provinces, Iceland, Modern Greece; and, in an Extra Series of the same library, the *Gesta Romanorum* and a collection of Chap-books.

A PROPOSAL has been started to place a bust of Longfellow in Westminster Abbey by public subscription. That the people of this country owe more to Longfellow than they ever paid him during his life is very certain. But it may

be doubted whether a bust in the Abbey would be the most appropriate way of cancelling that obligation, nor are we informed whether the scheme has received the approval of the authorities. Those interested in it may communicate with Mr. W. C. Bennett, Hyde Cottage, Royal Hill, Greenwich.

THE publication of a curious collection of the London signs of booksellers, publishers, and printers up to the end of the seventeenth century will be commenced in the September number of the *Bibliographer*.

THE September number of the *Century* will contain a portrait of Rebecca Gratz, a Jewess of Philadelphia, who is said (we know not on what authority) to have been the original of Rebecca in *Ivanhoe*. The story goes that Washington Irving, who knew her as the friend of his early love, Matilda Hoffman, described her to Scott.

MR. WILLIAM PETERSON, formerly scholar of Corpus Christi College, Oxford, and recently assistant to Prof. Sellar at Edinburgh, has been appointed principal of the new University College at Dundee, which it is proposed to open by the beginning of next year.

THE English Dialect Society have undertaken to print Mr. H. Percy Alsopp's glossary of public-school words and phrases, and also (in conjunction with the Devonshire Association for the Advancement of Science, Literature, and Art) the list of Devonshire plant-names compiled by the Rev. Hilderic Friend.

THE Rev. J. R. Boyle, of Hull, has in preparation an elaborate Swedenborg bibliography, to be entitled *Bibliotheca Novae Ecclesiae*. It is intended to comprise a description of every book and tract in connexion with Swedenborg and the New Church published in England, the Continent, America, and the colonies. The first part will give a list of theological works by members of the New Church, from Swedenborg downwards. Mention will be made of every edition and translation of Swedenborg's own writings. The second part will give a list of secular works by members of the New Church, which will include Mrs. Strutt's novels, Dr. Wilkinson's medical works, Prof. Parsons's legal treatises, and Mr. Wornum's books on art. The third part will give a list of works written in opposition to the New Church. It is estimated that the total number of titles will be about 6,000, and to each a short descriptive notice will be appended.

WE hear that an English translation will be undertaken of Soherer's *Geschichte der deutschen Literatur*, to which reference was made in the ACADEMY of last week, as soon as the work is completed. It is highly spoken of in Germany, where it bids fair to become the standard authority—at least for a time.

WE are asked to state that the Library at Lambeth Palace will be closed for the recess for six weeks from August 29.

It is stated that Dr. Georg Brandes, the celebrated Danish author, will shortly return home from Berlin, where he has been residing for some years past. His fellow-countrymen have guaranteed him an income of 4,000 crowns for ten years, with the single stipulation that he shall deliver public lectures on literature at Copenhagen.

THE Hungarian novelist, Moriz Jokai, is engaged on a new novel, the scene of which is laid in the time of the Crusades.

WE hear from Russia that M. Nemirovich-Danchenko will shortly publish a volume containing personal reminiscences of the late Gen. M. D. Skobelev. During the campaign of 1877-78 he was attached to Gen. Skobelev's division as correspondent of a Russian news-

paper, and formed very intimate relations with him. The book will contain a number of characteristic anecdotes of the deceased general.

In a second paper upon "The Hazardous State of Literary Property in the Sixteenth Century," read before the Académie des Inscriptions, M. Ch. Nisard took up the cause of a certain Suffridus Petrus, a Frisian by birth, and Professor of Law at Cologne, who died in 1597. It appears that he had devoted much labour to textual criticisms of Cicero, which he proposed to publish under the title of *Castigationes*. For the purposes of printing, he handed over his MS. to a friend, Janus Wilhelms, of Lübeck, who was to add his own corrections and publish the whole as a joint work. But they both died before the work was printed; and when it appeared at last, in 1618, the entire credit was given to Janus, with whom it has ever since remained, although, according to M. Nisard, the substance of it was really written by Suffridus.

THE *Revue politique et littéraire* for August 19 contains two articles of English interest—one is an estimate of the influence exercised in France by English literature during the second half of the eighteenth century, by M. Raoul Rosières; the other is a review, by Arède Barine, of two English novels—Mr. Murray's *Joseph's Coat* and Mr. Gibbon's *A Heart's Problem*.

It is beyond dispute that French papers give more space to English literature than our English papers do to French literature. Only last week we noticed M. Darmesteter's appreciation of "Hervé Riel" in the *Parlement*. Another recent number of the same paper contains an elaborate review, by M. René Tassel, of the Hon. Roden Noel's pathetic poem *A Little Child's Monument*, to which, we believe, the ACADEMY was the first to call attention.

MR. PARKMAN's work upon the Jesuits in North America during the seventeenth century has been translated into French by the Countess de Clermont-Tonnerre.

A CORRESPONDENT writes that one of the most striking, but improbable, incidents in *John Inglesant*—the meeting with, and forgiveness of, the murderer of his brother—is evidently taken from the life of Saint John Gualberto, the founder of Vallombrosa, who died July 12, 1073. In Milman's *History of Latin Christianity*, (iii. 476) the story is thus related:—

"He was of noble Florentine birth; his brother had been murdered. The honour of his house, paternal love, the solemn imprecation of his father, imposed upon Gualberto the sacred duty of avenging his brother's blood. He brooded in fixed and sullen determination over this settled purpose. One day (it was Good Friday) he met his destined victim, the murderer, in a narrow pass; he drew his sword to plunge it to the heart of the guilty man. The assassin attempted no defence, but threw himself from his horse, and folded his arms over his breast in the form of a cross. Gualberto held his arm—he forgave for the sake of that holy sign. He rode on to pay his devotions in the church of San Miniato; the crucifix seemed to bow toward him as if in approval of his holy deed. From that moment Gualberto was a monk in heart as in life."

In *John Inglesant* it is the murderer, and not the merciful avenger, who becomes the monk.

Correction.—Owing to the non-return of a proof, there were some misprints in Capt. Burton's article on "The Trieste Exhibition" which appeared in the ACADEMY of last week. The following proper names require correction:—Dr. Bergatti should be "Dr. Bujatti"; Baron Marco Morpengo should be "Baron M. Morpurgo"; Baron Pasie should be "Baron Pino."

AMERICAN JOTTINGS.

In order, apparently, to avoid an unseemly competition after their death, the poets Whittier and Wendell Holmes are both reported to have made arrangements that their biographies shall be undertaken by Mr. F. H. Underwood.

MR. W. D. HOWELLS, the novelist, who has recently arrived in England, proposes to spend at least twelve months in Europe.

THE Rev. Edward Abbott, editor of the *Literary World* (Boston) who is travelling in Europe, has left London en route for France, Switzerland, Belgium, and the Rhine.

THE *Critic* announces that a translation of Machiavelli's historical, political, and diplomatic writings, by Mr. Charles E. Detmold, will be published this autumn by Messrs. Osgood, of Boston. No complete translation of Machiavelli's correspondence on his many diplomatic missions has before appeared in English.

MESSRS. STODDART AND CO., publishers, of Philadelphia, are bringing out an important work, entitled *The American Supplement to the Encyclopædia Britannica*, consisting of original articles by American and European writers, bringing all the most important subjects down to the point of the latest information. Prof. Robert Ellis Thompson, Ph.D., is acting as editor-in-chief, with a competent staff.

LIEUT. F. V. GREENE, the historian of the late Turco-Russian War, and author of *Army Life in Russia*, has written the leading article in the *Critic* of August 12, taking as his text the official records of the Franco-Prussian and the American Civil Wars.

MR. HENRY J. MORGAN, Keeper of the Records at Toronto, has just issued the third volume of the *Dominion Annual Register and Review*, which covers the two years 1880 and 1881. At the end is a summary of achievements in literature, science, and art. Excluding Mr. Goldwin Smith's *Cowper* and *Lectures and Essays*, the most important works of Canadian authors seem to have been Ryerson's *Loyalists of America*, Rattray's *Scot in British North America*, Gagnon's *Ohansons populaires du Canada*, and Todd's *Parliamentary Government in the British Colonies*. There are seven historical societies in the Dominion, one of the youngest, that of Nova Scotia, being perhaps the most vigorous.

MR. MORGAN, we learn from the *Nation*, is now engaged in preparing a new edition of his *Sketches of Celebrated Canadians and Persons connected with Canada*. He has also in hand a *Bibliotheca Canadensis*; or, Manual of Canadian Literature.

MESSRS. CASSELL, PETTER, GALPIN AND CO. will publish from their New York house a *Constitutional History of the United States*, which has been written, printed, indexed, and bound in America.

THE forthcoming volumes in the "American Statesmen" series, published by Messrs. Houghton, Mifflin and Co., of Boston, will deal with John Randolph, James Madison, James Monroe, Henry Clay, and Daniel Webster.

THE *Penn Monthly* has ceased publication with its July number. It was started about twelve years ago by members of the Pennsylvania University.

SPANISH JOTTINGS.

THE *Euskal-Erria* states that the veteran author, Don Antonio de Trueba, has almost ready two new works which will be welcome to all students of folk-lore—*Cuentos populares recogidos en Vizcaya* and *Leyendas genealógicas*.

AFTER remaining inedited for more than a

century, the *Corografía de Guipúzcoa*, by Larra-mendi, has just been published by the firm of Subirana, at Barcelona, in the series entitled "La Verdadera Ciencia Española." The editor is the indefatigable Padre F. Fita, and the work is a valuable picture of the author's native province at the beginning of the last century.

NUMBERS 4 and 5, for June and July, of *El Folk-lore Andalus* are fully equal to the former ones. Señor García Blanco continues his useful notes on the phonetics of the Andalusian dialect. "Los Corrales de Vecinos," by Luis Montolo, is a valuable study of artisan life in Seville, and might even afford some suggestions to those who seek to improve the dwellings of that class in our own large towns. The "Juegos Infantiles," "trabalenguas," "adivanzas," &c., sparkle with the fun and wit of the Andalusian *gamin*, and render this journal more amusing than many of its rivals. He must be stern, indeed, who can read these pages without a laugh.

"CHER Bergonhet" wrote Edward II., August 24, 1316, to the Mayor of Bayonne, Loup-Bergonhet de Borden,

"achetez pour ma provision cent tonneaux de cidre ou pomade de votre pays; choisissez la bonne et pure; mettez-la dans des tonnes et laissez l'y reposer jusqu'à ce qu'elle ait bien purgé; vous la verserez alors doucement, pour ne pas entraîner la lie, dans de petits tonneaux, et me l'enverrez sans retard en Angleterre."

From this it would seem that the South-west of France and the Basque country were noted for cider long before Devonshire and the West of England attained their reputation. The many names of estates and families, like our Appleton and the French Pommerais, composed of *Sagarra* (apple) show how extensively the fruit was grown in the Basque Provinces. We learn from the *Euskal-Erria* of July 30 that endeavours are being made to revive this declining industry. Señor Aguirre-Miramon has just published at San Sebastian a work on the *Fabricación de la Sidra en las Provincias Vascongadas*. Beside an historical sketch of the making of cider in the Basque Provinces from the tenth century downwards, and practical details for culture and amelioration, the author has been successful in identifying and describing, with their Basque names, many of the almost forgotten varieties of apples formerly grown for cider, and this gives the work a special interest to all students of pomology.

ORIGINAL VERSE.

THE SUMMER OF LIFE.

YE who desire amid life's stress and strain
The silent spaces of the summer day,
Slow movements of leaf masses soft and gray,
And the rich harvest of the varied plain,
Ye to whom rest is life, and silence gain,
Whose burning feet have worn the dusty way,
Tread hither lightly o'er the scented hay
'Mid labour void of strife and toil of pain.
Here imaged in this new life of our age,
Re-live the sacred loves that death hath sealed,
Childhood's delight, and youth, and wounds
long healed,
The burden of slow years—the present stage—
Whence gazing on the old work that is done
We question dimly of the work begun.

C. G. O'BRIEN.

OBITUARY.

WILLIAM STANLEY JEVONS.

THE conditions of an obituary notice required with such appalling suddenness allow neither extent nor depth enough to delineate the lofty and wide-ranging genius of Professor Jevons. Of his work may be said what was said by

Herschel of Laplace—that, if it alone of modern writings should survive, it would "convey to the latest posterity an impression of intellectual greatness" exceeding the furthest attainments of the ancients. In him an antique boldness of theory was complemented by the cautious spirit of Baconian investigation. He seemed to see with equal eye the general and the particular. Of him alone it would be difficult to say that he looked on one side of truth's shield more readily than the other. Indeed, the difference vanished in his view. "Induction," he saw, "is inverse deduction." Like the *σופός* of Aristotle, embracing in a comprehensive system not only all social, but also physical, science—for he was deeply imbued with, and no insignificant contributor to, physical science—he contemplated "things great and wonderful and remote from immediate utility." And yet he showed an attention to particulars, a diffidence in applying general reasoning (which, in reference to the labour question, he says "should be used as sparingly as possible"), and all the character of *σφέρσις*.

At the basis of his system, as the groundwork of his magnificent *Principles of Science*, he placed Logic. He took a mathematical pleasure in manipulating her empty forms. He went so far as to regard all propositions as equations—a hard saying which those who have followed Prof. Croom Robertson's criticism in *Mind* may not receive. He himself once expressed to the writer of these lines the hope of clearing up this point (and others of almost insuperable difficulty in the logic of mathematics) "if I live twenty years more!" It certainly is remarkable that one who had such a hold of scientific fact should have attached so much importance to the most formal species of logic, and even to the construction of a "logical machine." Perhaps it may be said that the use of cultivating symbolic logic can hardly be estimated without valuating a certain conterminous field in Probabilities as yet explored by Boole alone.

The abstract nature of Prof. Jevons' intellect, instinctively flying to the highest generalisations, is conspicuous in his daring attempt to apply mathematics to political economy. Of course the attempt stands condemned beforehand by dull routine and *littérateur* pertness—profoundly ignorant of the methods of mathematics. Yet common-sense and the man of general education may perceive that here also, as in other departments of nature, there is a sort of pre-established harmony between mathematics and phenomena, between the ideal forms of the calculus of variations and the real increments of pleasure and its external causes. With such felicity of illustration did the great exponent pass and repass between symbol and fact; so impartially cultivating science by a variety of methods, in the self-same treatise did he introduce the powerful engine of mathematics, and approve that historical gleaming which is the only method of the late Oliffe Leslie and his one-sided school. That there is room enough for both schools, he showed in a temperate article in the *Fortnightly*.

Coming to a more ordinary level of abstraction, in the region of "Middle Axiom," we shall find more universally conspicuous monuments of genius in Prof. Jevons' splendid investigations on the "Fall in the Value of Gold," the "Coal Question," and a series of some fifty papers of the highest economical and statistical value. In such publications as formed part of educational or scientific series, the scientific primer of Political Economy, and the volume on *Money* he showed his unrivalled power of making dry subjects attractive and even amusing, as when the different species of currency in which the *prima donna* was paid in Otaheite—pigs, poultry, fruit—one night were some of them eaten up by the others.

Still, as we follow the series of Professor Jevons' labours into regions of social science more concrete and more immersed in matter, we ask whether here was not the peculiar province of his genius? With such uberty of wisdom he advocated all manner of reforms—"Amusements of the People," "A State Parcel Post," "Free Public Libraries," &c.—examined the policy of Postal Telegraphs and Postal Money Orders, or the morality of Vivisection. In reference to these popular articles, it is not impertinent again to allude to that ease of style which leads the reader on into difficult and dry subjects. Take the opening of an article in the *Contemporary Review*, January 1879:—

"At a season of the year when many persons are anxious about their Christmas hampers and their New Year's gifts, it is appropriate to consider whether our social arrangements for the conveyance of suchlike small goods are as well devised as they might be. We all now feel how much we owe to Sir Rowland Hill for that daily pile of letters which brightens the breakfast table more than does the silver urn, and sweetens it more than the untaxed sugar-basin. In these kind of matters great effects follow from small causes, and a few pence more to pay, a few yards farther to walk, or a few hours longer to wait, constantly decide whether or not it is worth while to send this little present, to order that little comfort, or exchange this parcel of library books. The amenities of life depend greatly upon the receipt of a due succession of little things, each appearing at the right moment. Wealth itself is but matter in its right place—happily disposed in quality and time and space. Hence it is possible that among the most insidious Methods of Social Reform might be found a well-organised State Parcel Post."

Or the sustained irony of the following, too long to quote in full:

"In safety and eventual certainty of acquittance, money orders leave little to be desired. The payer has only to walk to the nearest Money Order Office; wait five or ten minutes while other customers are being served; fill up a small application form; decide, after mature deliberation with the postmaster, and reference to a private official list, upon the Money Order Office most convenient to the payee; then wait until the order is duly filled up, counterfoiled, stamped, &c.; and, finally, hand over his money, and his work is done, with the exception of enclosing the order in the properly addressed letter. The payee, too, may be sure of getting his money. He need only walk to the Money Order Office named," &c., &c.

Prof. Jevons' last great work, on *The State in Relation to Labour*, peculiarly exhibited the contrasted virtues of his intellect—large distant views of the most general ends, the utilitarian ideal of Greatest Happiness, and minute attention to slight details and individual cases.

This theoretical life was favoured by such external conditions as Aristotle postulated for his philosopher—competence, a happy marriage, offices held with honour and resigned for the sake of studious leisure. A philosophic mildness irradiated his private life. His friends and all who consulted him in their difficulties experienced that the wisest was also the kindest of men. Those who know nothing of him but his books should learn that it was only in his controversial writing that the appearance of a sort of *odium logicum* might seem to overcast the serenity of his nature. After all, like Mr. Butler in the *Heart of Midlothian*, he was a man and had been a teacher. The imposed necessity of using Mill's writings as text-books may have led him at once to scan too minutely the faults and to estimate too extravagantly the influence of his great predecessor, till at last he burst out—

"I will no longer consent to live silently under the incubus of bad logic and bad philosophy which Mill's works have laid upon us."

There may have been here an error of judgment;

but there never was an unworthy feeling of jealousy in the breast of the philosopher.
F. Y. EDGEWORTH.

THE *Russian Invalid* announces the death, at Oranienbaum, on the 16th inst., of Lieut.-Gen. M. I. Bogdanovich, a voluminous Russian writer on military subjects. The deceased was born in 1805, and took part in the Polish campaign of 1832, when he was severely wounded. This was his only period of active service. He was subsequently attached to the Headquarters Staff, and, after various stages of promotion, was in 1881 appointed a member of the Military Council of the Empire. He was the author of no fewer than thirty-four volumes of military history. Among these are *Histories of the art of war* and of most memorable campaigns, the war in Russia 1812, the German War of Independence 1813, the war in France 1814, the war in the East 1853-55, and a sketch of the military history of Russia during the years 1855-80.

MAGAZINES AND REVIEWS.

MR. BRAILSFORD contributes to the *Antiquary* for August an interesting paper on the tombs of members of the great house of Nevil at Brancepeth and Durham. Dr. Brandes, of Göttingen, discourses on "Old Footsteps of the Saxon Ancestors of the English Nation in Germany." This is a most thoughtful and important paper, which shows how very much more might be discovered as to the *origines* of the English people if the right sort of men would but undertake the work in the right places. Mr. John Fenton's paper on "The Influence of Pastoral Life on the Village Community" will be interesting to those to whom the subject is new, but we do not detect anything of importance that has not been said before in works of authority. Mr. Theodore Bent gives a very good account of the Bank of Genoa, "the cradle of modern commercial enterprise." We gather from it that the old bank, a building dating from 1260 or earlier, is likely to be demolished to make way for a new street. We hope that the commercial men of the Old World and the New will protest against the destruction of a relic which has world-wide interest. There is a short paper on old iron-work by an anonymous contributor.

Le *Livre* for August contains four original articles, all interesting, and one illustration of great merit, besides a less remarkable engraving of the Houdon statuette of Voltaire which recently changed hands at the Hamilton sale. M. Derôme has a paper of more than bibliographic interest on the elder Crébillon, that most curiously irregular genius, born altogether out of due time. A hundred years earlier, or a hundred years later, Crébillon would probably have been one of the three greatest tragic poets of France. Some unpublished letters of Voltaire to the Comte d'Argenson (it seems decreed that the world shall not be able to contain Voltaire's letters) afford a subject to M. Eugène Muller; and M. Collet gives an anecdote of the scholar and book-lover Achaintre. But the chief article of the number is, unquestionably, that of M. Forgues on the work of a living painter—M. Gigoux—as a book-illustrator in days long ago. The illustration which accompanies this is a portrait of M. Gigoux by himself, from an unpublished sketch nearly fifty years old. It is a very characteristic and remarkable drawing.

THE LIBRARY ASSOCIATION.

The annual meeting of the Library Association will be held at King's College, Cambridge, on September 5 and three following days, under the presidency of Mr. Henry Bradshaw, Uni-

versity Librarian. The following papers, among others, will appear on the programme:—"The Cambridge Libraries in 1710," by the Rev. Prof. Mayor; "Mediaeval Libraries," by Mr. J. W. Clark; "The Spread of Books in Early Times," by Mr. Eirik Magnusson; "The Trinity College Library," by the Rev. Robert Sinker; "The History of Binding," by Mr. Henry Bradshaw; "The Printing of the British Museum Catalogue," by Mr. R. Garnett; "Librarianship as a Profession," by Mr. H. B. Tedder; "Early Book Fairs," by Mr. Cornelius Walford; "Public Historiography and Printing," by Mr. James Yates; "Who Spoils our Books?" by Mr. Henry Stevens; "The Cataloguing of Journals and Transactions," by Mr. H. B. Wheatley; and "Binding," by Messrs. F. T. Barrett and J. Y. W. MacAlister. It is expected that this the fifth meeting of the association will prove more than usually interesting and successful.

CORRESPONDENCE.

COLERIDGE'S EARLY COMMONPLACE-BOOK.

32 Bernard Street, London, W.C.: Aug. 18, 1882.

Coleridge students will be glad to learn that the poet's commonplace-book of about 1795-98 is preserved in the British Museum (MS. Addit. 27901), and that it furnishes a good deal of fresh information about his political views and literary studies. More boldly even than in his *Conciones ad populum*, he pours forth in this commonplace-book his communistic ideas ("Pantisocracy—a practical essay on the abolition of property"), and ridicules the optimists who, "by having no will but the will of heaven, call in almightiness to fight our battles." At the same time we get a peep into his artistic workshop, and watch him indulging his luxuriant fancy, noting down stories and scenes of daily life, fairy tales, descriptions of strange animals, and storing up metaphors, images, and other materials for future use—e.g., "infant playing with its mother's shadow;" "slaughter—stern music of vultures." The lines of poetry which are scattered throughout the whole book are for the most part already printed in his *Literary Remains*, vol. i., but not all—e.g., the couplet:

"Where Cam his stealthy flowings most dissembles
And scarce the willow's wat'ry shadow trembles."

The small duodecimo volume further contains long lists of subjects for essays and poems which Coleridge intended to write, critical strictures on Milton and Darwin, quotations from Greek, Latin, and English authors, and aphorisms of all kinds. Though I shall insert everything of interest in the monograph on Coleridge which I am now preparing, I cannot refrain from quoting a few of the best thoughts without delay.

"Of how many pleasures, of what lasting happiness, is Pain the parent and Woe the womb!"

"What we must do, let us love to do. It is a noble chemistry that turns necessity into pleasure."

"Bad means for a good end—I cannot conceive that there be any road to heaven through hell."

"Equality—Pity and Envy her handmaids."

"The poor and the rich in this resemble each other—they are usually unloving of their children."

"Poetry excites us to artificial feelings—makes us callous to real ones."

"Men anxious for this world—owls that watch all night to catch mice."

I need hardly add that any further unpublished material that may exist will be gratefully accepted by me.
A. BRANDL.

A BROADSIDE MENTION OF SHAKSPEARE IN 1666.

3 St. George's Square, N.W.: Aug. 14, 1882.

In my hunt for Shakspeare allusions during the hundred years after the first printed notice of him, on which task I have been at odd times at work for the last two or three years for the New Shakspeare Society, the most unexpected place in which a mention of our great dramatist has turned up is a Broadside on the victory of the English fleet—under Prince Rupert and the Duke of Albemarle—over the Dutch fleet on July 25 and 26, 1666. On June 1 the Dutch fleet, ninety strong, commanded by de Ruyter and van Tromp, had fallen on part of the English fleet, about fifty ships, under the Duke of Albemarle. The Duke fought them for three days, was then joined by Prince Rupert, and, after an obstinate battle on June 4 without decisive advantage on either side, both Dutch and English fleets retired to their harbours to refit. On July 19 the English put to sea again, and on the 25th and 26th completely defeated the Dutch, destroyed above twenty of their men-of-war, drove the rest into their harbours, killed "4 Dutch admirals besides 4,000 other officers and seamen," while the English loss was small.

This sea-fight the Broadside-writer describes,

and then contrasts it with actors' doings at the theatre:—

Had Goffe, Ben. Johnson, or had Shakespear been... }
Spectators there, such Acts they should have seen, }
As they ne'r acted in an English Seaman: }
These fought with Blows, they only claf'd in
Words;

They fought with Foysls, but these with naked
Swords.

Here should they've seen an angry Sea their Stage,
Cover'd with rolling Billows, Foam and Rage;
Now sunk to Hell, anon with Pride so high,
As if it gave defiance to the Skie.

There should they've seen retiring Rooms of VVar,
Such Rooms as farr excells Romes Theater:
A Ghastful Seaman, not Thebes, but Thetis VVomb,
VVherein the Actors did themselves intomb.

The Dutch-Gazette: | Or, | The Sheet of Wild-
fire, that Fired the | Dutch Fleet. | col. 2.
Licenfed Aug. 20. Roger L'Estrange. London.
Printed by T. Leach, in Shoe-Lane, 1666.
(In "Political Broadfides," C. 20, f. 2. Brit.
Mus. 67.)

That Shakspeare should be put after Ben Jonson
is only what one would expect in a classification
of the time, and that a poor animal like Goffe
should be put by a contemporary before both
is only natural too. But we may fairly take
a more charitable view, and look on Shakspeare
as the climax that started with Goffe, and passed
through Ben Jonson to his greater friend and
fellow-writer.

F. J. FURNIVALL.

M. LENORMANT AND HERR RÖHL.

Paris: Aug. 18, 1882.

In the last number of *Hermes*, Herr H. Röhl
has attacked my learned colleague and friend,
M. François Lenormant. Among other matters,
he mentions an inscription discovered by me in
1866 on a small terra-cotta figure from Aegina,
which represents Demeter seated on a throne.
With reference to this he writes (p. 464):

"Tum quod in epistolae tres testes excitat Lenor-
mant ut titule Aeginetico fidem faciat, hominibus
honestis abutitur. Nam De Witte, qui de monu-
mento Aeginetico et de quatuor litteris tituli,
IA-KE, mentionem facit, manifesto non iniquitavit
in originem tituli."

I might content myself with referring to the
article which I published at the time in the
Gazette des Beaux-Arts (xxi. 14), but I prefer to
quote the passage dealing with this point:

"Une particularité qui se présente, si je ne me
trompe, pour la première fois, c'est une inscription
peinte en blanc sur le dossier du trône de Déméter;
on y distingue assez bien sept ou huit lettres: ΕΑΙΑ
de manière que l'on peut conjecturer avec toute
vraisemblance que l'inscription devait se lire:
ΜΕΛΙΑ ΑΕΔΕΡΕ."

And in a note:

"Ou un autre nom finissant en ια, comme, Δελια,
Πελια, etc."

I maintain what I then wrote. I affirm that
the inscription is perfectly authentic. I was
the first to notice it, and it was I who pointed
it out to M. Lenormant. That after sixteen
years the inscription should be partly effaced,
and that Mr. Newton, the eminent Keeper
of Greek and Roman Antiquities at the British
Museum, should no longer be able to find all
the letters copied by me in 1866, is no matter
for surprise. Those who are familiar with the
methods used by Greek potters and workmen
know very well that some inscriptions, whether
on terra-cotta or on painted vases, completely
disappear after a few years.

I said in my article in the *Gazette des Beaux-
Arts* that an inscription painted on a terra-cotta
figure was a fact hitherto without example to
my knowledge. But one may ask the question
whether other terra-cottas, dedicated in temples,
have not borne similar inscriptions? Terra-
cottas sent from Greece or Italy are too much

cleaned, and those which have long been pre-
served in public museums or private collections
may originally have had inscriptions that have
now disappeared. So far as regards inscriptions
on painted vases, I am able to quote a decisive
instance of the disappearance, not only of letters,
but even of entire names. In 1864, I published
in the *Archäologische Zeitung* (pl. clxxxiv.) a
pyxis of very ancient date and of Corinthian
manufacture, bearing the signature of the
artist, Ophares. Upon this pyxis are represented
the heroes of the Trojan War. Many of the
names which I read, and which had also been
recognised a few years earlier by M. Charles
Lenormant, are now entirely gone. These are
the names which are lightly marked on the
plate with a single line.

J. DE WITTE.

SCIENCE.

*An Etymological Dictionary of the English
Language arranged on an Historical Basis.*
By the Rev. W. W. Skeat, M.A., Professor
of Anglo-Saxon in the University of Cam-
bridge. (Oxford: Clarendon Press.)

It is to be feared that the popular estimate
of the value of etymology in this country is
still more or less a tradition of the period
when etymology was simple guess-work, and
its results were valued accordingly. It is so
seldom that the ordinary reader refers to an
etymological dictionary, except to gratify
mere idle curiosity, that he is apt to assume
that investigations of which he makes so
trifling a use must in themselves be trifling—
that an etymologist must be what I once
heard him described as: "a cross between an
antiquary and a stamp collector." Now that
we have a real science of language, the truth
ought to be recognised that an etymological
dictionary of any language is really the sum
of our knowledge of the history of its sounds
and word-meanings. Such a work as Curtius's
Greek Etymology is the work of a lifetime,
and requires incessant revision to be kept up
to the level of contemporary investigation.
In the case of a mixed language like English,
the difficulties are increased tenfold. The
investigation of the Germanic element is no
light task, but that of the French words is
still more arduous; and if not only these two
classes of words, but also the Greek and
Latin contributions, are traced back to their
ultimate sources, the etymologist takes on his
shoulders the vast burden of general Arian
philology, and any energy that may be left
will be effectually taken out of him in the
impassable sloughs of Celtic philology. The
natural difficulties of so wide a field of study
are aggravated indefinitely by the want of
reliable materials. The extant dictionaries of
Old English (Anglo-Saxon) are untrustworthy
and incomplete, and there is no dictionary at
all of Old French or the Old Celtic languages.
In short, a complete scientific etymological
dictionary of English is an impossibility.
All that can be done is to contribute to such
a work by special investigations of parts of
the vocabulary. If some young scholar would
take up the study of the French element in
English so worthily initiated by the late
Henry Nicol, and devote his life to it, he
would be doing an infinitely greater service to
English etymology than by vainly attempting
to command the whole field. So also with
the other departments.

Prof. Skeat has chosen rather to produce a
popular book, in which the demand for com-
pleteness has necessitated a compromise
between original research and collection of
material on the one hand and compilation on
the other. His own speciality is Middle
English; this he commands in a detailed
and comprehensive way in which a man
can command but one subject. Herein lies
his great superiority over the purely com-
pilatory work of his German rival, Eduard
Müller; and the exact references and quota-
tions for the earliest appearance of words in
Middle English will always retain their value
as material for future investigation. The
treatment of the Old English stage is less
satisfactory, Prof. Skeat having (as I pointed
out in a review of the first part of the work
in the *ACADEMY* of July 12, 1879) relied too
much on the dictionaries and too little on
his own reading. Still less satisfactory is
the general treatment of the very difficult
Old French element, for which the work was
somewhat severely criticised by Mr. Nicol in
the *Literaturblatt für germanische Philologie*.
It must be said, however, in justice to Prof.
Skeat, that he evidently began his work
without any adequate idea of the importance
of Old French and the great difficulty of its
study. He has now very wisely printed Mr.
Nicol's notes entire in his Appendix. These
notes make us feel vividly the irreparable
loss English, not less than Old French, phil-
ology has sustained by his death.

Prof. Skeat's strength lies more in the
investigation of isolated words than in the
firm grasp and rigorous application of general
laws—a tendency which is natural enough
in all dictionary work. Although he insists
strongly and repeatedly on the necessity
of observing Grimm's law, and even puts
in a word now and then in favour of the
vowels, his etymologies not unfrequently
violate elementary laws. Several of those
objected to on such grounds by myself and
others, such as *bird* from *breed*, *bless* from
blithe, have been corrected or modified in the
Addenda. Many others remain. Thus *hive*,
Old-English *hýfe*, is still referred to the *hîw* of
hîwraden (household), in spite of the dis-
crepancy of both the vowel and the following
consonant. The word cannot possibly be
connected with Greek *keimai*, &c. Of course,
an etymologist is not always bound to give
up an etymology because it is opposed to
general laws, for these may have been im-
perfectly investigated, but he is bound either
to prove the invalidity of the law, or else to
show how in any exceptional case it has been
crossed by some other law. Attention has
lately been called in the pages of the *ACADEMY*
to Prof. Skeat's apparent forgetfulness of the
law of initial *p* being lost in Celtic (I say
forgetfulness, for it is hardly credible that he
had never heard of it), which simply knocks
on the head a considerable number of his
etymologies.

If we approach the work from a purely
popular point of view, our estimate of its
value must be a much higher one. It leaves
its English predecessors far behind, and far
excels the German work of Müller in fullness
both of vocabulary and general treatment.
Its chief defect as compared with the latter
is in the literature of etymology itself. It is

often impossible to tell without reference to Wedgwood and Müller whether or not Prof. Skeat himself originated an etymology or not, and, in the latter case, who originated it. The brief notes on the languages cited in the dictionary, which in many cases give an outline of their phonology, will be most useful and welcome to the unphilological reader. The lists of homonyms, doublets, Arian roots, &c., given in the Appendix will prove useful to every class of students. In short, the work is certain to exercise a very favourable influence on the popular study of etymology, and so to pave the way for a more rigorously scientific method. The labour and research expended on it must have been great, although the plan of not spending more than three hours over one word, which Prof. Skeat says he adopted "in very difficult cases," can hardly be recommended for imitation by future investigators, much as it facilitates progress through the press. Nor do I quite appreciate the reasoning of the remark which follows:—"My honest opinion is that those whose philological knowledge is but small may safely accept the results here given, since they may else do worse." Surely doing worse does not exclude the alternative of doing badly. I should rather say that the only readers who can use the book with perfect safety are those who have a sound knowledge of the general laws of language, and the structure of the languages referred to. For such readers Prof. Skeat's dictionary will prove an inexhaustible mine of quotations, references, and happy suggestions.

H. SWEET.

RECENT BOOKS ON BUDDHISM.

I.

Der Buddhismus in seiner Psychologie, von A. Bastian (Berlin: Dümmler), is a very characteristic work by the well-known traveller and anthropologist who holds a professorship at Berlin. A volume of nearly 400 pages, chiefly devoted to obscure points in Buddhist psychology, must necessarily be somewhat severe reading. Most authors would have taken some care to arrange what they had to say on such a subject in orderly sequence; to give authorities for the facts, and chapter and verse for the quotations from Buddhist authors, on which they based their principal arguments; and to observe some distinction between the very different schools of Buddhism in the various times and countries in which that faith has been professed. All such concessions to weakness are despised by Prof. Bastian. His table of contents occupies barely a page, there is no index of any kind, there are no headlines to the pages, and not a single reference in the wilderness of notes. Any belief held at any time and by any person in any country where Buddhism prevailed seems to be regarded as equally good Buddhism. And there is no apparent reason why the paragraphs should not be arranged in any other order than the one adopted. The general method of the book might be called comparative—if the word comparative could be used of the bald and careless way in which opinions more or less cognate to the supposed Buddhist ones are placed beside them. The following paragraph, in which we translate only the German words, will afford a fair example of the style, the method, and the accuracy of the learned author. The parentheses are his own, and so also is the spelling of the French and Pāli words:—

"Paripāṭchaniya saññā (l'idée qui doit être conduit

à sa maturité) begins (by sorrow and its destruction) in the Saggiṭṭi sutta (les cinq affranchissements). Apollonophanes identified virtue with φρόνησις."

As no attempt has been made to bring the paragraph into any logical connexion with either the preceding or the following sentences, it is probably intended to be intelligible as it stands; but we cannot pretend to understand it. The slightest acquaintance with Buddhist writings only makes its obscurity more profound. The *Saggiṭṭi sutta* is a blunder for Sangiti Sutta, which is the name of a well-known book in the Buddhist scriptures, and means, not "les cinq affranchissements," or anything of the kind, but simply "the Book of the Convocation." How an idea which ought to be conducted to maturity, indeed, or any other idea, can begin by sorrow and its destruction in that book we must leave to the reader to decide; and we will only point out that *paripāṭchaniya* offends as grossly against Pāli grammar as *conduit* does against French. One must admire the ingenuity with which three blunders in essential matters have been introduced into one sentence, which, after all, conveys no apparent meaning. And even were these blunders corrected, there would remain the further question why the unfortunate quotation from Apollonophanes, if it be a quotation, should have been brought forward at all in this connexion. The whole work is of a similar kind, though the comparisons usually extend to a portentous length, the paragraph we have quoted being the only short one we could find. We must express our regret that an author whose range of reading is so wide, and who has travelled so far, should be so absolutely devoid of the accurate care and of the historical criticism which are absolutely necessary in such investigations as are here attempted. And we can only add in mitigation that the reader who has the courage to wade through the mass of material here thrown together with such thoughtless profusion will find scattered amid the granary of chaff a few grains of wheat.

Le Mahāvastu: Texte sanscrit publié pour la première fois. Par Emile Senart. Vol. I. (Paris: Imprimerie nationale.) It is well known that when the disputes in the early Buddhist Church culminated in the great schism which followed on the Council of Vesālī, about 100 years after Gotama's death, the more numerous party who refused to adhere to the decision of the Council held another council of their own, called, from the number of those who attended it, the Great Council, the Mahā Sangiti. One of the results of this secession was the gradual rise among the seceders of a Buddhist literature in Sanskrit, as opposed to the Pāli Pitakas, in which the previously current Buddhist literature has been preserved. Of these Sanskrit Buddhist works the oldest forms are now, unfortunately, irretrievably lost. But the various schools into which the seceders rapidly broke up produced a considerable number of later works, some of which are now extant only in Chinese translations, while others of them are still in existence in Sanskrit. These new works, so far as we can judge, were not divided, like the older Pāli ones, into Vinaya and Sutta—the regulations of the order, and the ethical or narrative discourses. Only one of them is as yet accessible in its entirety—the *Lalitā Vistara*—of which we have a very bad edition, published in Calcutta, and a very excellent translation, through the Tibetan, into French, by M. Foucaux. Of a second—the *Buddharma-puṇḍarikā*—we owe a complete translation to the accurate industry of Burnouf; but no edition of the text has as yet appeared. And Mr. Beal has given us an abridged translation into English of a Chinese version of a third—the *Abhinishkramana*

Sūtra—the Sanskrit text of which is perhaps no longer recoverable. It will be seen, from the above, that our knowledge of this Sanskrit Buddhist literature (which must have been very extensive, to judge from the remains of it still preserved in Nepāl) is at present of the most meagre kind. Very heartily, therefore, do we welcome this work of M. Senart's, who comes to the rescue with the first volume of a careful and scholarly edition of the whole of the Mahāvastu. This work claims to be of the Vinaya class; and, in this respect, it confirms the opinion expressed above as to the division of the Sanskrit Buddhist books, for it contains nothing which would be called Vinaya according to the older division of the Pāli literature. It is an outcome of a sect of the Mahāśāghikas, who were called Lokutara-vādins, and who hold much the same position in the history of Buddhism as the Doketists do in the history of Christianity. Its contents are of the most varied kind, chiefly legends of the supposed previous Buddhas, corresponding to those in the Pāli Buddhavaṇsa, but much more lengthy, and evidently modelled on the legend of the Buddha as it existed in Nepāl and Bactria at the time, probably about the Christian era, when the Mahāvastu was composed. Other legends, however, more after the fashion of the Pāli Apadāna and Jātaka, and not a little ethica, are incidentally introduced. This first volume contains 366 pages of text (rather more than a third of the whole); nearly 300 pages of notes, almost exclusively philological; and more than sixty pages of so-called Introduction, which is, in fact, an abridged translation into French of the text, and forms, therefore, a very complete and valuable table of contents. We are promised in the fourth volume an extensive Index, and another Introduction specially devoted to the consideration of the many historical questions which are raised by the close resemblance between many passages of the Mahāvastu and other Buddhist works. We would venture to suggest that these resemblances should at least be cursorily noticed in the notes to the succeeding volumes, without waiting for this promised historical survey. The published portion of the text has the Seven Jewels, the Heavenly City, and the four and eight thousand palaces of the Pāli Mahā-suddassana Sutta at pp. 108, 194, and 113; the episode of the dancing-girls of the earlier Pāli legend of Yasa at p. 227; the list of the previous Buddhas of the Pāli Jātaka Book at pp. 112 and following; the Six Teachers at p. 253; the Genesis legend of the Pāli Aggañña Sutta at pp. 338 and following; the list of ancient kings of the Pāli Mahāvāṇsa at pp. 348 and following; the Ghaṭikāra legend of the Pāli Jātaka Book at pp. 359-361; and several Jātaka tales found also in the same collection. These coincidences, and others of a similar kind, seem to us to be one of the most interesting results of the important edition which M. Senart has here given to us; and it would be a pity if this should remain unnoticed till the concluding volume of this work had actually appeared. At the same time we would not be supposed to detract from the value of the notes which have been already given. The curious dialect of Sanskrit in which the Mahāvastu, like the other Buddhist Sanskrit works, is composed is at present very little understood; and, though several distinguished scholars, notably Prof. Kern, have written about it, it has never been treated with anything like the completeness and care with which it is here discussed in the minutest detail. It is such works as the present which bring within the realm of knowledge new territory that can never be lost; and it is not too much to say that M. Senart bids fair to do larger and more important services to historical and philological study in this field than even his great fellow-countryman Burnouf.

Ueber den Lalita Vistara, von Hermann Oldenberg (Berlin: Hertz), treats of one point in the problem of the Buddhist Sanskrit dialect just referred to. The *Lalita Vistara*, like the other Buddhist Sanskrit works known to us, is written partly in ungrammatical prose, and partly in verse, bearing strong marks of the influence of Prakrit, the same matter being first related in the one form, and then in the other. The question has been raised whether the prose passages or the ones in verse were probably the older; and some scholars have decided the question in favour of the prose, some in favour of the verse. Prof. Oldenberg seeks to prove that neither the one nor the other is necessarily or always the older. He shows how some of the prose passages, and some also of the verses, contain unmistakable signs of belonging to the comparatively older portions of the composite poem which he agrees that the *Lalita Vistara* must be taken to be. And he contends that it is not the fact of their being in prose or in verse, but in their resemblance to the corresponding passages in the Pāli Pitakas, that the criterion of the age of the various parts of the poem must be sought. The little brochure, which is a reprint from the *Proceedings* of the Oriental Congress held last year in Berlin, will probably revolutionise the method of argument on the point in question.

Buddha, sein Leben, seine Lehre, und seine Gemeinde (Berlin: Hertz), by the same author, is a handy manual of the Buddhism of the Pāli Pitakas. Prof. Oldenberg is probably more widely read in the Pāli MSS. of the Buddhist scriptures, and has copied a more considerable portion of them, than any other living European scholar. He has here brought together in one octavo volume of about five hundred pages the general results of his reading. The work consists of an historical introduction on the earlier religious speculations of the more thoughtful among the Brāhmins (more especially as expressed in some of the oldest Upanishads), followed by three books devoted to the information given in the Pāli scriptures regarding the Buddha, the Dharma, and the Sangha respectively. The first of these three books seems to us to be the most successful. There being no formal biography of Gotama in the Pāli Pitakas, and the biographical fragments scattered throughout them being comparatively few and simple, the author has been able, without exceeding the limits of space at his disposal, to give a satisfactorily complete compilation of all that the Pitakas say on this subject. Compression there necessarily must be, but it has been used with great judgment; and the most important parts of the narrative are given nearly in full. These are naturally the few details about Gotama's early life, the Great Renunciation, the attainment of Nirvāna and of Buddhahood under the Tree of Wisdom, and the First Sermon; and then, again, the account of his death, and of the events immediately preceding it, as given in the "Book of the Great Decease." The central period of Gotama's life—the period of his wanderings and of his work as a teacher and preacher—is only summarised; and no attempt has been made to reproduce, much less to arrange in chronological order, the various details in the Pāli Suttas relating to the events of these forty years. This will have to be done, and will very probably lead to interesting results; but the course adopted here is clearly the right one. Comparatively speaking, such details are of little practical value for the right understanding of early Buddhism. They are among the least trustworthy of the traditions that were handed down in the Sangha; and they cannot be profitably discussed without the help of personal and geographical data which only the actual publication of the Pāli Suttas

will enable European scholars to use with efficiency. The chapter on the following subject, that of the Dharma ("Die Lehren des Buddhismus"), is not quite so successful. It is, of course, impossible to give any complete representation of the Buddhism of the Pāli Pitakas in 130 pages; and in choosing what to omit the decision here does not seem to us to have been so happily made as in the previous book. The philosophical side of early Buddhism is very clearly and fully discussed. Twenty pages are devoted to a careful review of the so-called chain of causation (the *Paticea-samuppāda*), one of the most difficult and doubtful points in Buddhist metaphysics; and we are not more satisfied than the author himself is with the result of his investigation. The ethical side of Gotama's teaching is referred to, but is not brought out with so much prominence as its overwhelming position in the Pitakas themselves would seem to demand. And the details of Arahatsip, which are at once the special peculiarity and the most essential part of early Buddhism, are, for the most part, not even mentioned. The reader of this chapter will, therefore, be apt to carry away the very erroneous impression that Buddhism was metaphysical rather than ethical. This objection, however, after all, merely touches the matter of proportion. Those points that have been dealt with are treated in a sober and scholarly manner; the firm ground of chapter and verse is seldom, if ever, deserted for airy flights of speculation; and those who wish to know what the Pitakas say, or do not say, about Nirvāna, the Soul, the Cause of Sorrow and its Destruction, and the Excellent Way will find here just what they want. The third book, the shortest of the three, gives an able sketch of the Buddhist Order—the modes of entering and leaving it, its customs as to food, clothing, residence, &c.; the Pātimokkha; the sisters of the Order; and its relation to the outside world. It is needless to state that the editor of the Vinaya Pitaka and the *collaborateur* in the translation of the Vinaya Texts is quite at home in this part of his subject. The volume closes with three Appendices. The first, on the geographical relationship of Vedic and Buddhism, makes a good point in drawing attention to the fact that Buddhism arose in a part of the valley of the Ganges where the influence of Brahminism had never been supreme. The second and third contain the original authorities for the conclusions which the author has reached as to the early life of the Buddha, and as to the meaning of Nirvāna. It may be mentioned, in closing, that these conclusions are substantially the same as certain new views on Buddhism which have lately been put forward in this country, while they are supported by independent investigation; and it is a pity that the use of certain expressions, due to the erroneous opinions previously held on these points, has been nevertheless retained. Thus Prof. Oldenberg agrees that the Buddhist system is built up without any reliance whatever on the so widely prevalent belief in the existence of a "soul" inside the human body. But, in translating passages from the Pāli, he still occasionally makes use of the word "soul" in a manner implying a belief in its existence, when there is no such word in the original. So he maintains, as strongly as the present writer has done, that Nirvāna is neither the annihilation of the soul nor the existence of the soul in an eternal state of rest, nor any other condition of any kind to be reached only after death; that, on the contrary, it meant to the early Buddhists a state of mind to be reached and enjoyed here on earth, and only here on earth. Yet he talks occasionally of Gotama's death as his "*entry into Nirvāna*"—an expression for which he can find no authority in the Pāli Pitakas, nor, we may

add, in any later Buddhist text that has yet been published. But all imperfections notwithstanding—and when can a small book on a great subject be entirely perfect?—this is evidently the best work on Buddhism which has appeared in Germany.

T. W. RHYS DAVIDS.

NOTES OF TRAVEL.

WE hear that the description of their recent visit to the Gold Coast which Capt. Richard F. Burton and Commander Cameron brought back with them will be published in the coming season by Messrs. Chatto and Windus. It will be in two volumes, under the title of *To the Gold Coast for Gold*; or, *Vingt Ans après: a Personal Narrative*.

AMONG other books of travel announced by the same publishers are *The New South-West*, by the chevalier Ernst von Hesse-Wartegg, being sketches of Kansas, New Mexico, Arizona, and Northern Mexico; and (coming nearer home) *About Yorkshire*, by Mrs. Katharine S. Macquoid, with seventy illustrations drawn on the spot by Mr. Thomas Macquoid, and engraved by Swain; *The Hebride Isles: Wanderings in the Land of Lorne and the Outer Hebrides*, by Mr. Robert Buchanan; and *About England with Dickens*, by Mr. Alfred Rimmer, with fifty illustrations by the author and Mr. O. A. Vanderhoof.

M. DEGOREZ-CAJOT, the head of the enterprising firm which has reprinted Pigault Lebrun's novels in a cheap and attractive form, is about to publish a series of popular accounts of French exploration and travel. Two books have already appeared—*Les grandes Découvertes maritimes du XIII^e au XIV^e Siècle*, by E. Oot; and *Les Explorations françaises de 1870 à 1881*, by M. Paul Gaffarel. It may safely be affirmed that ten years ago such an enterprise would have brought heavy loss to any French publisher. The price of each volume will be 2 frs. 50 c.

THE *Turkestan Gazette* states that M. Begel, at the head of an exploring party, intended proceeding from Penzhkent, by way of Lake Iskander-Kul and the passes of the Mur, to Khissar, and thence by the towns of Bal-Juab to Darvaz. From information received, however, it appears that this route, owing to the great snowfall of last winter, would present too many difficulties. It has, therefore, been decided to advance by way of Karatag and Khissar. No Russian expedition has hitherto penetrated by this route.

MR. STANFORD has sent us two more maps of Egypt—one of Lower Egypt, i.e., of the entire possible field of operations, but on too small a scale to be really useful; the other a map of the environs of Alexandria, on the scale of two miles to the inch. This latter is very clearly drawn, and is adequate for all stay-at-home purposes.

WE have also received a "special war map" from Mr. Bartholomew, of Edinburgh, which is a most excellent sixpennyworth. The physical features of the country and the possible routes are marked with extreme distinctness. There are also valuable inset maps of Alexandria and Cairo. The only fault is that the names are not quite so thick as the scale might have allowed.

SCIENCE NOTES.

WE understand that Messrs. Cassell, Petter, Galpin and Co. will shortly publish in serial form a work entitled *Familiar Wild Birds*, by W. Swaisland, with coloured plates painted from Nature and numerous wood-engravings.

AMONG scientific books, Messrs. Chatto and Windus announce *Chapters on Evolution*: a Popular History of the Darwinian and Allied Theories of Development, by Dr. Andrew Wilson, with nearly three hundred illustrations; *The Folk-lore of Plants*, by Mr. T. F. Thiselton-Dyer; *Science in Short Chapters*, by Mr. W. Mattieu Williams; and two new books by Mr. Proctor—*Mysteries of Time and Space* and *The Great Pyramid, its Plan and Purpose*. Some of our readers may know that Mr. Proctor has been printing in *Knowledge* some papers on the Pyramid, which are extremely ingenious, if not convincing.

DR. MACKINTOSH, superintendent of Murthly Asylum, in Perthshire, has been appointed to the Chair of Natural History in the University of St. Andrews vacant by the transfer of Prof. Nicholson to Aberdeen.

THE trustees of the Gilchrist Educational Trust have made arrangements for the delivery of courses of "Science Lectures for the People" in five Lancashire towns, in seven other towns of Northern and Central England, and in five Scotch towns. The lecturers include Dr. Carpenter (the secretary to the trust), Prof. Balfour Stewart, Prof. W. O. Williamson, Prof. Martin Duncan, and the Rev. W. H. Dallinger.

FROM the Report of the trustees of the Australian Museum at Sydney, New South Wales, for 1881, we learn that the experiment of opening the museum on Sundays has proved very successful. The average attendance on Sundays during the year was 801, as compared with an average on week-days of only 281.

WE must content ourselves here with calling the attention of our readers to a series of papers on "The Colours of Flowers as Illustrated by the British Flora" by Mr. Grant Allen which have been appearing in recent numbers of *Nature*. Doubtless they will soon be published in a permanent form.

THE firm of Germer Baillière, of Paris, announces a work on the horse in prehistoric and historical times, by M. Piétrement.

PHILOLOGY NOTES.

WE wish to call attention to the Annual Report on "Indian Literature" in the *Jahresbericht der Geschichtswissenschaft*. It is the work of Dr. Klatt, well known by his edition of the verses ascribed to Kāśakya. Dr. Klatt is at the head of the Indian Department in the Royal Library at Berlin; and he has given in his Annual Report a fuller and more accurate account of the latest publications connected with Indian history and literature than we ever remember to have seen before.

THE *Pandit*, a monthly publication of the Benares College devoted to Sanskrit literature, has been revived. The first four numbers of the new series contain several valuable contributions, such as a continuation of Kumārila-svāmin's *Tantrayārtika*, a *Sulbapariśiṣṭa* with translation, containing some new information on ancient geometry, the *Vedāntaparibhāṣā* with translation, the beginning of Śāyana's *Dhātuvṛtti*, and an original treatise on the *Vedānta*, written in Sanskrit verse by Pandit Kesava Śāstri. We hope that the undertaking may meet with sufficient support. The annual subscription is only nine rupees paid in advance, and two rupees four annas for postage to Europe. It can be paid by postal money order to Messrs. Lazarus and Co., Benares.

WE learn from the *North China Herald* that Sir Robert Hart, the well-known Inspector-General of Customs of China, is superintending, in conjunction with the Imperial College at Peking, the translation of a series of scientific text-books into Chinese.

AT a recent meeting of the Académie des Inscriptions, M. Egger read a paper upon a tomb-stone recently found at Athens, which has been published by Coumanoudis in the last number of the *Archæologon*. It contains a list of the names of Athenian citizens who fell in battle during the forty years preceding the Peloponnesian War, followed by two verses in their honour. On several grounds the inscription is remarkable. First, for its comparative antiquity; the verses in particular show many archaic characteristics. Second, for the forms of some of the proper names, which are compounded so as to express military achievements, like the Latin *Africanus* and *Asiaticus*. Third, for the fact that the names are mentioned at all, which is in direct opposition to the received practice in the case of funeral orations.

AT the same meeting M. Heuzey announced an interesting discovery in connexion with the Chaldaean inscriptions brought back by M. de Sarzec from the ruins of Tello, the ancient Sirtella. Hitherto, M. Oppert had only found the names of *patesis*, or governors, who all bore the title of Gudea. But M. Heuzey, after removing an efflorescence from one of the oldest monuments, has succeeded in deciphering an inscription, written in archaic cuneiform characters, which gives a dynasty of four kings, not governors, who ruled at Sirtella as independent monarchs. He has also found a list of new governors, later than the kings, but earlier than those styled Gudea.

FINE ART.

Albert Dürer: his Life and Works. By Moritz Thausing. Translated from the German. Edited by Fred. A. Eaton. (John Murray.)

(First Notice.)

THIS English translation of Prof. Thausing's important work has been a very long time in making its appearance. The magnificent French edition translated and edited by the well-known art critic M. Gustave Grùyer was published in 1878, two years after the German original; and it was hoped that the English edition would then quickly follow. But it was still unaccountably delayed, and was passed from one hand to another for revision and re-revision until it was feared that so many cooks would inevitably have their proverbial influence. Happily, they have not. The translation, so far as I have been able to test it by comparing it with many difficult passages in the original, gives a clear and accurate rendering of Prof. Thausing's meaning, though it is not very literal. The difficulties of the task, however, were great, and we can only congratulate the translators, whoever they may be, in having so well overcome them.

Turning from the translation to the book itself, criticism becomes diffident. Prof. Thausing is the last of a long line of Dürer biographers and commentators, beginning with worthy old Johann Neudorfer, who gave Dürer a place in his *Nachrichten*, published in 1546. He has entered on all the labours of his predecessors, and has submitted their results to a strict method of analysis, never allowing any doubtful statement to escape examination. He has also contributed very much of original research, for which he was well fitted by his position as Keeper of the Albertina Collection at Vienna. His book, therefore, for the first time in Dürer

bibliography, presents us with a detailed history of Dürer's life, combined with a most careful and critical study of his work.

But while destroying the false hypotheses of others it may be doubted in some instances whether Prof. Thausing has taken sufficient care to verify his own. Indeed, while rendering full acknowledgment to the wide learning and keen critical insight shown in this work, it seems to me that its author has sometimes, like Dürer's less scientific biographers, been led away by the ingenuity of his theories into accepting them as established facts.

Before venturing to differ, however, from certain conclusions arrived at by Prof. Thausing, it is necessary to understand the real value of his investigations, and to appreciate the amount of light he has let in on many confused questions.

Albrecht Dürer, it has lately been satisfactorily ascertained (see ACADEMY, December 7, 1878), was of Hungarian descent, but his father had settled in Nürnberg as a goldsmith many years before Albrecht's birth, which took place on May 21, 1471. Albrecht was trained at first to follow his father's craft, but "my inclination," he writes in the short family chronicle he has left us, "carried me more towards painting than to goldsmith's work." So his father, giving way to his desire, apprenticed him on St. Andrew's Day, 1486, for three years to the well-known Nürnberg master, Michel Wolgemut, to learn the secrets of the painter's art.

One of the first disputed points we come upon in Dürer's history relates to the value of the teaching which he received from this source. Most writers on Dürer are inclined to regard Wolgemut with something like contempt, and are unwilling to admit that Dürer gained anything from his teaching beyond mere practical acquaintance with the methods of painting and perhaps of wood-engraving. But Prof. Thausing undoubtedly has restored this slighted master to his true place in art history. He has shown that, although the works that pass under his name are strangely unequal in merit, he was in many of them by no means the mechanical copyist he is generally deemed. Schongauer and he occupy indeed much the same position in the history of German art, for they both remained, on the whole, faithful to old traditions, though new ideas cropped up occasionally in the art of each. Wolgemut especially, living in busy, free-thinking Nürnberg, must have been aware of the great movement that was going on around, though he was probably too old to be much affected by it. The chief work by which he is now known is the celebrated *Nürnberg Chronicle* written by Dr. Hartmann Schedel, a physician in Nürnberg, and illustrated by Wolgemut and his stepson, Wilhelm Pleydenwurff.

It is improbable that Dürer had any share in the execution of the 2,000 cuts that adorn this quaint work, for it was brought out in 1493, while he was away on his travels; but he must have had plenty of other opportunities for the practice of engraving in Wolgemut's busy workshop. "In time God gave me diligence," he writes, "that I learnt well; but I had much to suffer from Wolgemut's assistants" (*Knechten*). These suffer-

ings of the boy from the rude manners and harsh treatment of his fellow-apprentices and workmen have hitherto been more dwelt upon than the advantages he gained; but Prof. Thausing considers that his training under Wolgemut exerted a powerful influence over Dürer's art in its early stages of development. He recognises Wolgemut, in fact, as about the most desirable master that could have been found for Dürer; but he only does this by crediting Wolgemut with a series of prints which for nearly a century past have been made over to another master. These are the prints, found in most collections of German masters, signed with a plain Roman "W" at the bottom of the sheet in the middle. Now this "W" was very generally accepted as the mark of Wolgemut until Bartsch at the beginning of the present century lit upon an old inscription on one of these prints stating that "the engraver of this was called Wenceslaus, and was a goldsmith." Since then they have been made over without more examination to a certain Wenceslaus von Olmutz, of whom nothing is known except that his name appears on a copy of Schongauer's "Death of the Virgin."

But it so happens that several of the prints marked with Dürer's well-known monogram are exactly the same as those marked W., and it has generally been supposed that this Meister W., whoever he may have been, copied Dürer's work. But may it not have been the other way? We have the authority of almost all writers previous to Bartsch for assigning the W. prints to Wolgemut; and it is more natural to suppose that the pupil in his early time copied from the master, than the master from the pupil. We find allusions, moreover, to his having done so by different writers, and especially in a catalogue of the Derschau collection printed in Nürnberg in 1825, which says that

"the three prints of 'Amymone,' 'The Dream of Love,' and 'The Promenade' marked W. that were copied by Dürer were certainly executed by Wolgemut, for the copper-plates were still preserved in Nürnberg by the dealer Knorr, whose books showed that they had been bought many years before from the heirs of Wolgemut."

Added to this historical evidence, Prof. Thausing brings forward, in a masterly chapter entitled "Dürer's Rivalry with Wolgemut," a mass of curious internal evidence to prove that Dürer was the copier, and not, as has been supposed, the inventor, of these prints. Artists at that time seem to have made it a frequent practice to copy one another's plates, not being afflicted, as Prof. Thausing remarks, with "that sickly desire for originality which marks the modern mind." The Meister W., or Wolgemut as we may perhaps again call him, is known to have copied no fewer than forty-three of Schongauer's engravings, as well as several from the master of 1480. Nothing is more likely than that Dürer in his turn should have copied from him; indeed, that he did so is almost conclusively proved by the careful examination to which Prof. Thausing has subjected several of the disputed prints, finding in them numerous little points of divergence both in design and execution that

show without much room for doubt that those marked W. were the originals.

Of course, this view of the subject robs Dürer of the merit of designing these few prints, but no one need grudge them to another master, for they are not among his characteristic works, being for the most part simply early trials of skill.

In many cases the Dürer copy is better executed than the original; in others, it merely seems to be so because it has come down to us in a better state. There was nothing unfair in this general practice of copying, for the marks put on the plates were not intended, it is evident, to imply authorship in the modern sense, but were simply used as trade signatures to show certain rights. Thus, if a copyist, as in the case of Marc Antonio with regard to Dürer's "Life of the Virgin," added the artist's particular mark it was considered a forgery, and he might be restrained; but if he only put his own mark, then he might copy as much as he liked without hindrance. This practice led to endless confusion in later times, as we see in many cases besides this of Wolgemut and Dürer, it being, of course, very difficult to distinguish between the originator and the copiers of an oft-repeated design.

Another artist under whose influence Dürer appears to have come during the early period of his development was that perplexing master known as Jacob Walch, or Jacopo de' Barbari, or the Master of the Caduceus. Dürer did not, it is true, copy directly any of this master's engravings, as he did those of the Master W., but he seems to have derived motives from them here and there, and to have entered as it were into a sort of rivalry with him by treating the same subject in a different manner. Dürer himself tells us that he admired Jacob Walch very much in his youth. He speaks of him in one of his rough drafts for the preface to his *Book of Human Proportions* as "a man named Jacobus, born at Venice, a clever and gracious painter," and adds, "He showed me a man and a woman which he had drawn according to proportion, and at that time I would rather have known what his opinions were than have seen a new kingdom; but I was then very young, and had never before heard of these things." Walch, however, was somewhat secretive about his theory of proportion, and did not care to explain it to Dürer, who immediately, he tells us, set about studying the subject for himself with the aid of Vitruvius. And here may be mentioned another theory with regard to the prints signed "W" that has been recently set up by the learned German critic, Dr. Anton Springer (*Zeitschrift für bildende Kunst*, September 1877), who makes over these disputed prints to Barbari, imagining that, although he always signed with the caduceus in Italy, he used the "W" in Germany in allusion to his cognomen of Walch. But, although the works of this Protean artist often strangely differ in style and execution one from another, it seems very unlikely that he should have executed such a totally distinct series as these, or that he should have influenced Dürer under both his signatures in different directions.

MARY M. HEATON.

ANOTHER FRAGMENT OF THE METOPES OF THE PARTHENON.

I HAVE from time to time noted in the ACADEMY the discovery of new fragments of the pedimental sculptures, metopes, and frieze of the Parthenon. I have now to announce a very important addition to a metope which has just been made by Dr. Charles Waldstein. In a recent visit to the Louvre, he observed a male head corresponding in scale and style with those of the Lapiths in the groups of the metopes. Having obtained a cast of this head, Dr. Waldstein brought it for examination to the British Museum. It was at once identified as the head of the Lapith in the metope marked No. 6 in the Guide to the Elgin Room (*Museum Marbles*, vii. pl. 3; *Michaelis, Parthenon*, pl. 3, vii.). The head of the Centaur in this group, which is at Athens, had been previously identified. By the addition of the head of the Lapith, his antagonist, through Dr. Waldstein's happy discovery, the metope has gained immensely, and seems animated with new life and spirit.

C. T. NEWTON.

A WAIF FROM DAYR-EL-BAHAREE.

KINDLY grant me space to report an interesting little discovery which I have had the good fortune to make, and which casts another sidelight upon the famous find at Dayr-el-Baharee. In four "canopic" jars belonging to G. Briscoe Eyre, Esq., I have identified the sepulchral vases of Pinotem I., second priest-king of the Her-Hor Dynasty. Mr. Eyre purchased these vases at Luxor in 1874. They are of fine alabaster, and stand about fifteen inches high. Each vase is engraved with a short legend in three vertical columns, the hieroglyphs being filled in with blue. The inscriptions read as follows:—

1. The Osiris, High Priest of Amen, Beloved of the Great God Amset, Pinotem, justified before Ptah.
2. The Osiris, High Priest of Amen, Beloved of the Great God Hapi, Pinotem, justified before the Gods.
3. The Osiris, High Priest of Amen, Beloved of the Great God Tuatmutf, Pinotem, justified before Osiris.
4. The Osiris, High Priest of Amen, Beloved of the Great God Kebhsenf, Pinotem, justified before Ptah.

The name not being enclosed in a royal oval, it is evident that we here have the vases of Pinotem I., who ranked as Pontiff only. He was son to the High Priest Piankhi, and grandson to Her-Hor; and he stands third in order of succession. His mummy, it will be remembered, was found at Dayr-el-Baharee, enclosed in two wooden sarcophagi; and it was during the sixth, tenth, and sixteenth years of his reign, and by his command, that the mummies of Amenhotep I., Thothmes II., Rameses I., Seti I., and Rameses II. were inspected, removed from place to place, and had their "funerary appointments" renewed, by a commission of dignitaries and scribes, who recorded these facts and dates upon the coffins and bandages of the illustrious dead. Nor must we forget that it was in consequence of Col. Campbell's purchase of the funeral papyrus of this same Pontiff that Prof. Maspero was last year enabled to trace the plunderers of the Her-Hor vault (see the ACADEMY, No. 484, August 13, 1881).

Three of Mr. Eyre's vases are empty; but the fourth (Amset) is yet unopened, and doubtless contains part of the viscera of Pinotem I.

AMELIA B. EDWARDS.

EXCAVATIONS IN THE FORUM ROMANUM.

LETTERS from friends in Rome inform me that the Minister of Public Instruction is now carrying on an important work there—removing the bank of earth that has long covered a large part of the Forum Romanum, having a road upon it winding up from the arch of Septimius Severus to the open place or square at the top of the hill, where the Capitoline Museum is situated. This is on the south side of the hill. Ten years ago, either the municipality of Rome or the Pontifical Government made a zigzag road on the north side up to the same point; and it was then given out that this was to enable them to remove the other bank on the south side. But, with the usual procrastination of the Pontifical Government, nothing was done until the present time, when the present Minister of Public Instruction has obtained the consent of the municipality, with considerable difficulty, to this being done at once. Fearing they might change their mind and revoke this permission, he has set a number of men at work to do it at once, knowing that when it is once done it cannot be undone. For this he is roundly abused by the Roman newspapers of a low class, because he causes temporary inconvenience to the drivers of a certain number of carts and wagons, who have to make a considerable detour in going from one low part of Rome to another. The Minister proposes also to destroy the wall of the Farnese Gardens on the eastern side of the Via Sacra, and remove the earth to the original level, the same as has been done on the western side. It is now at least ten feet above that level. This bringing to light some of the most interesting parts of old Rome will certainly attract hundreds of persons to visit Rome during the next winter. Every educated person must see the importance of these great excavations in demonstrating the truth of the early history of Rome, and the folly of the Niebuhr theory—or the German theory, as it is commonly called in England.

JOHN HENRY PARKER.

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. MARCUS WARD AND CO.'s Christmas book *At Home*, which was so successful last season, is to be followed this year by a companion volume entitled *Abroad*. The subject is a trip to Paris and through old towns of Normandy, supposed to be made at Easter-time by English children. It will be full of pictures from drawings specially made on a recent sketching tour. Mr. Thomas Crane is the chief designer of the book, which will, of course, be printed in colours.

THE Académie des Inscriptions et Belles-Lettres has awarded the prix Duchalais to Mr. Stanley Lane-Poole for his *Coins of the Moors of Africa and Spain*, which forms the fifth part of the "Catalogue of Oriental Coins in the British Museum." The prix Duchalais is a "grand prix" awarded every second year to the best work on mediæval numismatics.

MESSRS. CHATTO AND WINDUS announce *Birthday Flowers, their Language and Legends*, by Mr. W. J. Gordon, with coloured pictures of flowers for every day of the year, drawn from Nature by Miss Viola Boughton; also a new illustrated edition of "The Lady of the Lake," and a new edition of Maclise's *Portraits of Literary Characters*, with descriptive text by Mr. W. Bates.

MESSRS. FROST AND REED, of Bristol, have published a large mezzotint engraving of Miss Ada E. Tucker's "Playmates"—a spirited and capably painted group of kittens on a kitchen dresser. The engraver, Mr. A. C. Alais, has caught the humour of the subject, and

reproduced with really remarkable skill the soft and powdery look of the kittens' tabby coats, the innocently mischievous expression of their faces, and the relative strength and distance of the homely background. Miss Ada E. Tucker is a local artist of deserved popularity, and the engraving merits more than local success.

M. ARTHUR RHONÉ is writing an article on last year's discovery at Dayr-el-Baharee for the *Gazette des Beaux-Arts*. The same author's excellent papers on this subject in *Le Temps* (May and June) are yet fresh in the recollection of all who take an interest in that extraordinary "find."

MESSRS. GEORGE ROUTLEDGE AND SONS have issued a collection of the pictures which Mr. Caldecott has contributed from time to time to the holiday numbers of the *Graphic*. They were quite worthy of preservation in this permanent form. We may be wrong, but the colours seem to us somewhat more bright than in the original. And why is the title-page dated 1883? The frontispiece is (we think) new, but not specially characteristic.

THE Belgian painter M. Gaillait has declined to receive the medal awarded to him by the jury of the International Exhibition at Vienna, on the broad ground that works of fine art are incapable of being classified and distinguished like mechanical products.

THE French papers state that M. Gustave Doré has bought a site for a new house in the rue Van Dyck, Parc Monceaux. The ground alone cost 527,000 frs. (£22,000).

OUT of the total number (4,264) of exhibitors at the recent Salon, no less than 697 were foreigners, thus classified:—Belgians, 94; Americans, 86; English, 81; Italians, 60; Germans, 53; Spaniards, 39; Dutch, 35; Russians and Swedes, 31 each; Austrians, Poles, and inhabitants of the Argentine Republic, 14 each; Finns, 13; Norwegians, 11; Portuguese and Turks, 10 each. Eighteen other nationalities were represented by smaller numbers, including one Japanese and one Javanese.

IT is proposed to hold an exhibition of fans at Paris during the coming winter.

IN the competition for designs for new buildings for the Imperial Parliament at Berlin, the first prize has been awarded to Herr Paul Wallot, who is under forty years of age, and the second prize to Herr Thiersch, who is little more than thirty. Many architects competed of greater age and established reputation.

THE death is announced at Paris of the well-known draughtsman, M. Edmond Morin, aged fifty-seven. He first tried his pencil for the *Journal amusant*. In 1851 he came to England, where he remained for five years on the staff of the *Illustrated London News*. Later, he contributed to the *Monde illustré*, the *Vie parisienne*, and many other French periodicals.

A SECOND statue is to be raised to Rouget de Lisle, this time at his birthplace—Lons-le-Saulnier. It is to be inaugurated by M. de Mahy, Minister of Agriculture, on August 27.

A COMMITTEE has been formed in France to erect a national monument to Rousseau, who is described as

"l'inspirateur immédiat de la déclaration des droits de l'homme, le proclamateur de la souveraineté du peuple et du suffrage universel, et le réformateur de l'éducation dans le sens de la nature et de la raison."

Among the names on the committee are those of M. M. Berthelot, Carnot, Louis Blanc, and Henri Martin. A circular in support of the proposal has been issued to the departmental assemblies, which are now in session; but the verdict of the Parisian press is already adverse—"no one now reads Rousseau."

MUSIC.

SOME MUSICAL PUBLICATIONS.

Kevin's Choice: Operetta in Two Acts. Adapted from a Sketch by F. Hazlewood; Music by T. A. Wallworth. (Metzler.) The libretto is not a strong one, but the music is light, graceful, and pleasing. The duet "Spin the slender thread," the trio "Father, I'm young," and the trio "Hark! the clock," are the best numbers of the work.

April Song ("Chanson d'Avril"). Words by T. Marziale; Music by G. Bizet. (Metzler.) A very pleasing and original song. The accompaniment is written with great taste.

Scarlet and Gold. Song, by Childs Avison. (Novello.) The melody is extremely simple, but the accompaniment varied and effective.

Shaking Grass. Song, by A. M. Wakefield. (Metzler.) Simple and tuneful.

For Aye. By Odoardo Barri. (Metzler.) Effective, though somewhat commonplace.

Sae Many Years Ago. By Lady Ramsay. *Divine and Sweet Reality.* By J. McLachlan Key. (Edinburgh: Paterson and Sons.) Two pleasing, though not very original, songs. The accompaniment to the second is somewhat monotonous.

Bourrée No. 3. By E. Silas. (Novello.) Herr Silas has written many good pieces for the piano, but we cannot say that this is one of his best. It is so far a *bourrée* that it commences on the fourth crotchet of the bar, but it is rambling, and wanting in character.

An Autumn Leaf. Sketch for Pianoforte, by G. E. Bambridge. (Forsyth Bros.) A simple little piece, but one in which there is a great deal of taste displayed. It is written in a very pleasing manner, and we think the composer gives promise of good things.

Valse Impromptu. By Allan Gordon Cameron. (Novello.) Not very original, and not comfortably written for the pianoforte. The author wants ideas and experience.

Minster Bells. Cantata for Female Voices, by Franz Abt. (Novello.) This little cantata consists of ten numbers, all of them exceedingly well written for the voices, and most of them very pleasing. There are solos, duets, trios, and choral recitatives. Abt's compositions, if not equal to those of the great masters, are always tuneful, elegant, and musicianlike.

J. S. SHEDLOCK.

MUSIC NOTE.

THE Birmingham Musical Festival will be held in the Town Hall next week, on August 29, 30, 31, and September 1. Sir Michael Costa will be the conductor. The band, consisting of 131 players, will be led by M. Sainton. Mr. Stockley is, as usual, chorus-master, and Mr. Stimpson organist. The principal vocalists announced are Mme. Albani, Miss A. Williams, Mme. Marie Roze, Mme. Patey, and Mme. Treballi; Mr. E. Lloyd, Mr. W. H. Cummings, Mr. J. Maas, Mr. Santley, Mr. F. King, and Sig. Foli. "The Redemption," a new oratorio composed expressly for the festival by M. Charles Gounod, will be performed on the Wednesday and again on the Friday. Herr Gade has also written for the occasion a cantata entitled "Psyche." The other vocal novelties are "The Holy City," a cantata by Mr. A. R. Gaul, and "Graziella," a new cantata by Sir Julius Benedict. A new symphony of Mr. Hubert Parry will also be heard, and an orchestral serenade by Mr. C. V. Stanford. The programmes, beside the novelties mentioned, will include "Elijah," "The Messiah," "The Mount of Olives," Cherubini's fourth Mass in C, Brahms' "Triumphed," and pieces vocal and instrumental.

SATURDAY, SEPTEMBER 2, 1882.

No. 539, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

RECENT EGYPTIAN BOOKS.

The Coptic Morning Service for the Lord's Day. Translated into English by John Marquess of Bute. (Masters.)

Egyptian Obelisks. By Henry H. Gorringer, Lieut.-Commander U.S.N. (New York: Published by the Author.)

Auguste Mariette, Esquisse de sa Vie et de ses Travaux. Par Arthur Rhoné. (Paris: "Gazette des Beaux-Arts.")

Les Débuts de Mariette-Pacha. Par Ernest Deseille. (Boulogne-sur-Mer: A. Oury.)

Eau-de-Nil: a Chronicle. By E. C. Hope-Edwardes. (Bentley.)

IN thus translating the Coptic Liturgies, Lord Bute has conferred a real obligation upon European travellers in Egypt. With this little volume in his hand, the stranger may henceforth follow the ancient and beautiful morning service of the native Christian Church more intelligently than even the Copts themselves, to whom, with few exceptions, the old historic tongue of their forefathers is a lost heritage. They echo certain prayers and gabble certain responses in the original Coptic, as unlettered Roman Catholic peasants echo and gabble the Latin of the Mass; but the only portions of the whole four hours' service which are really "understandable of the people" are spoken in Arabic. These are some three or four exhortations and responses; the Gospels (chanted in Coptic by the priest, but simultaneously translated into Arabic by the deacon); and the final Benediction. Whether any knowledge of Coptic as a living language yet survives among the fellahs is extremely doubtful; but a high native authority whom I questioned upon this point some eight years ago was of opinion that here and there in some of the more out-of-the-way villages an old man might possibly be found, even then, who would understand it a little. Lord Bute's translation contains "The Prayer of the Morning Incense," "The Liturgy," the "Seven Offices" (or Hours), and "The Prayer of the Curtain," which is an additional office for repetition at bedtime. These "Hours" are never read publicly, except in convents; and they never vary. Their length is so portentous that the Coptic missionaries have obtained a dispensation which permits them to distribute the recitation of the whole series over a week, instead of performing it each several day. Upon the fidelity of Lord Bute's translation I am not competent to form an opinion;

but the English of his rendering is pure and devotional. The book is excellently printed in parallel columns of Coptic and English; the ceremonial is duly rubricated; and the text is illustrated by a few judicious footnotes. The Preface, however, might well have included a more complete account of the ancient Coptic churches of Cairo, which are among the most interesting early Christian edifices in the world.

Commander Henry H. Gorringer's handsome quarto on *Egyptian Obelisks* appropriately commemorates the successful shipment, transport, and erection of the great historic monolith which now graces the central park at New York. The story of "Cleopatra's Needles" has been too often and too recently told to need repetition. The adventures of the British obelisk, its shipwreck, its recovery, and the patriotic munificence of Sir Erasmus Wilson, at whose expense it was brought hither, are facts yet fresh in the public memory; and it was but the other day that Mr. Vanderbilt, of New York, moved by a generous spirit of emulation, volunteered to defray the cost of transporting the remaining obelisk across the Atlantic. How this was done, by what mechanical means, with how much labour, patience, and skill, is here told with great modesty and simplicity by the eminent naval officer who undertook and successfully accomplished the task. Only an engineer can probably appreciate the scientific details of Commander Gorringer's narrative, which, however, are perfectly intelligible to an uninitiated reader. From the moment when the United States flag was run up to the top of the obelisk to the moment when the *Dessoug*, with her precious freight, steamed up the Hudson on July 20, 1880, the whole story reads like a romance; and—beginning with endless cabals, jealousies, and obstructions on the part of the Alexandrian colony; ending with storms at sea, accidents to the engines, and imminent danger from the bursting of a gigantic water-spout—it is a romance to which no element of suspense or peril is lacking. The Americans are fortunate in possessing the original pedestal, steps, and crabs upon which their obelisk was erected at Alexandria in the eighth year of Augustus Caesar; and, with excellent judgment, they have again put the whole structure together with no other alteration than the substitution of new bronze crabs engraved with appropriate legends. The archaeological chapters of Commander Gorringer's book are very fairly done; the illustrations, both in autotype and wood (forty-five in number), are as good as possible; while the type and paper leave nothing to be desired. To Egyptologists the most interesting pages in the whole volume will be those which relate to a granite model of the Great Temple at Heliopolis found near Cairo in 1875, and now in the possession of Commander Gorringer. This curious relic measures 44.25 inches long by 34.65 inches wide, and is 9.25 inches in depth. It shows a double flight of steps ascending to the level of the temple pavement, and marks the position of the sphinxes, obelisks, statues, and pylons in advance of the building. The stone pivots on which the great gates turned are also represented in miniature. The edge of

the model is covered with vertical and horizontal lines of incised hieroglyphs recording the erection of a sanctuary at Heliopolis by Seti I., who is depicted, in *cavo-relievo*, in a kneeling posture, presenting offerings of incense, wine, bread, divine images, and the like to the Heliopolitan gods. This is probably the most ancient architectural model in existence. Judging from the autotype illustrations given by Commander Gorringer, I conclude that it was designed for a libation-table.

M. Arthur Rhoné's sketch of the life and work of Mariette-Pacha is a reprint from the *Gazette des Beaux-Arts* for September 1881. Written with that fine taste which his readers have learned to expect from the pen of M. Rhoné, this brief memoir, it may be hoped, is but the precursor of a more extended narrative. A Life of the founder of Boulak, written as M. Rhoné could write it, and illustrated as admirably as the present *Esquisse*, would be a welcome addition to French literature.

Les Débuts de Mariette-Pacha, by M. Ernest Deseille, may be read as a prelude to the foregoing. In this little pamphlet of twenty-eight pages, a fellow-townsmen contributes recollections and anecdotes of the childhood, education, and early struggles of the great Egyptologist whose statue was unveiled the other day at Boulogne-sur-Mer. The little record is tenderly and gracefully written, and gives a touching picture of Mariette in his domestic relations. Following him from Boulogne to Paris, where, in 1849, he occupied a room in the Cité Pigalle, M. Deseille shows him to us writing at a book-laden table in a bare, unfurnished room, with one of his infant daughters on his knee and two others playing at his feet. "I never work better," he said to the astonished visitor, "than when I have all my little world around me."

Eau de Nil—a lady's journal sent home bit by bit during a winter on the Nile—has all the freshness and charm of a work not intended for publication. Like the late Lady Duff-Gordon, Miss Hope-Edwardes takes more interest in the fellahs than in the monuments; though, as she apologetically observes, "it is impossible to leave out such subjects altogether." Having, however, left them out as much as possible, she has succeeded in writing a very novel and amusing record of innumerable conversations with all kinds of natives, high and low, Arab and Coptic. Some of these conversations, committed to paper a year and a-half ago, before the "National party" had been invented, have acquired a value and significance which Miss Hope-Edwardes did not certainly anticipate when she entered them in her diary. "The people," she says,

"are so delighted with the ease they feel from the decreased taxes that they see everything *couleur de rose* under the present régime, make no complaints, and are full of praises of 'Effendina' (the Khedive), to whom they loyally attribute all credit in the matter. The tax, or tribute on land, seems to be decreased by about half; and, best of all, they now know pretty well what the yearly tax will be; whereas in the time of the last Khedive, if he wanted more money one year than another, he sent round to the Moodirs of each province

to say that they must raise so much each, irrespective of seasons and crops. They speak very bitterly of that last régime."

Miss Hope-Edwardes could not do better than dedicate her second edition to the English partisans of Arabi Pasha.

AMELIA B. EDWARDS.

Prizes and Proximes. (John Walker.)

ABOUT a year ago there appeared a pleasant volume of translations, epigrams, parodies, &c., which had been got together out of rather unpromising material—the prize compositions sent in to the *Journal of Education* in reply to the proposal of a monthly premium. This volume is a second instalment of the results of the same practice, with the addition of certain voluntary contributions. The literary tournament is an institution of venerable age, and we owe to it some of the best of the little masterpieces of literature, especially those dating from the French seventeenth century. But the editor of the *Journal of Education* has been wise in limiting, for the most part, his competitions to the safe ground of translations and paraphrases. Of these, the present little volume contains some examples of very considerable merit. The original poems please us less; and, as for certain prose maxims on education which also occur, they have too much the effect of a challenge to anybody who, having been *du métier* for a decade, has hung up gown and ferule and escaped into literature to be fairly criticised by him. But translations may be said to have at the present day peculiar appropriateness as the subject of literary competition. We ought to translate well, just as the Frenchmen of the seventeenth century ought to have written Portraits and Maxims and Conversations well, of which three things the nineteenth century has hopelessly lost the secret. We know a great many languages, we have no foolish prejudices about the supremacy of our own, we are not carried away by affection for the *belles infidèles* of M. Perrot d'Ablancourt, we have most of us absolutely nothing original to say that is worth ink and paper, and we have the grace to suspect that fact. All these things, positive and negative, make for criticism, history, translation, and the other ingenious methods of cutting a reputation out of other men's cloth.

Accordingly, these translations, written for the most part by thoroughly well-educated people (and there is nothing which requires so much education as translating), are in parts very good. The first thing noticeable is some versions of La Rochefoucauld by the editor, the only fault to be found with which is that the English is more archaic than the French, and that the translator sometimes tries to point La Rochefoucauld's arrows still more sharply—a dangerous attempt. This same excess of archaism is still more observable in a version of Mme. de Sévigné's famous passage about the Archbishop of Rheims upsetting a harmless passer-by, and wanting to flog him for being upset. "All in a vast hurry" for "fort vite" is a false note, and "God wot" introduced quite gratis is a falseness. It ought not to be forgotten that French prose is about half-a-century

ahead of English, and that the style which really corresponds to that of the men and women of the Fronde is certainly even less archaic than Temple and Halifax, neither of whom, we think, would have said "God wot" in natural writing. Mr. Arthur Sidgwick's version of George Sand's Landscape after Holbein in the *Mare au Diable* is very good. But a remark of the editor's in a note is worth reproducing, for the truth of it has been ascertained by the present writer, not merely by actual practice in translation from French, but by critical reading of much more. "Most," he says, of his competitors, "failed to see that the short sentences must be combined." That is the real secret of translation; the re-adjustment of the clauses according to the demands of the new language in which the thoughts find themselves. Mr. Rhoades' version of Leconte de Lisle's charming "Les Elfes" (we only hope that the editor is wrong in saying that Leconte de Lisle is hardly known in England) would, if we had been the judge, have lost the game because of the terrible weakness of the refrain.

"With thyme and marjoram crowned for jollity,
The elves are dancing over lawn and lea,"

is surely a vile travesty of the simple original:

"Couronnés de thym et de marjolaine,
Les elfes joyeux dansent dans la plaine."

But the body of Mr. Rhoades' version is excellent. Prof. Jebb has contributed some admirable Latin elegiacs; and part, at least, of Mr. Morshead's translation of Leconte de Lisle's fine sonnet "Aux Morts" deserves the same adjective. But the difficulties of the translator could hardly be better illustrated than by the first two lines. The French Creole poet has

"Après l'apothéose, après les gémonies,
Pour le vorace oubli marquée du même socan,"

which Mr. Morshead renders

"One delfed, one slain with infamy,
All sealed alike to glut oblivion's greed."

With the second line there is no fault to find, but the first clearly misses the strong pictorial effect which is so characteristic of the French poet. The bloody stairs, with the Tiber swirling at their foot, and the flight of the eagle from the smoke of the pyre, strike the eye at once as the Frenchman sings. With Mr. Morshead the verse becomes a pale generality. However, the translator makes amends in perhaps the most famous piece of the same poet, "Le Sommeil du Condor;" and nobody knows better than the candid reviewer that criticising translations and making them are two very different things.

We can only quote, in conclusion, the two versions, both good, of the famous three lines in Catullus' fifth poem by Mr. and Mrs. Tollemache. Here they are:

He: "Suns set to rise and rise to set again.

To us, when light is o'er,

One sleep that wakes no more

For ever and for ever shall remain."

She: "The sun may set and yet again return,
We, when our taper's too short light we burn,
On through one endless night must sleep,
While far off stars their vigils keep."

With a modest request for the MS. authority for this last line, we take leave of a very pleasant and scholarly book.

GEORGE SAINTSBURY.

Roumania, Past and Present. By James Samuelson. (Longmans.)

THOUGHTFUL men have praised Pepys's Diary highly, but not too highly, because that book and that class of writers satisfy one great want of human nature—the desire for gossip. If wholesome gossip is not forthcoming, men betake themselves to scandal. We will not charge Mr. Samuelson with the folly of being *toujours philosophe*, but we do think he somewhat neglects opportunities of being entertaining. For instance, when speaking of the custom of the King and Queen of Roumania of giving private audiences to their subjects—a custom quite unparalleled among other crowned heads—Mr. Samuelson suddenly stops with the solemn remark, "But we are digressing" (p. 260). He again "apologises" for digression when he is describing Sinaia (p. 16), the summer resort of the Roumanian Court. We could well forgive some more "digressions" that would give us information respecting social life in Roumania. Then, too, Mr. Samuelson is strangely reticent respecting the Jews. If some writers err in creating a Jewish question, Mr. Samuelson errs in ignoring it. He positively allots more space to the Gypsies than he does to the Jews. Has not he heard the statement that the peasantry and even the priests in Roumania lived on most friendly terms with the Jews until Liberal politicians set on foot the theory that the heavy taxation and poverty of the country were due not to the late war and other causes, but to the Jews? But perhaps Mr. Samuelson's friendship for M. Rosetti prevented his consorting with the Jews and those of their Christian neighbours who are not Jew-haters.

We sympathise with the writer's enthusiasm for Roumania, but sometimes that enthusiasm carries him too far. Owing to a variety of causes, but mainly to the Greek or Phanariote rule, which blighted the country for ninety years, the Roumanians are not distinguished for their morality. In fact, the contemptuous opinion expressed in Russia of Roumanian virtue (though it comes ill from the mouths of those whom Roumanians rescued in their great necessity) is, on the whole, well founded. Mr. Samuelson is at first indignant with his English friends for sharing this opinion; yet he himself furnishes the best reason for holding it (note to p. 213). Again, Mr. Samuelson sometimes forgets the claim of neighbouring States to that independence which Roumania has so gloriously won for herself. He asks (p. 268), "Why should not the plains on both sides of the Danube guarded by the Balkans and the Carpathians constitute a strong realm, one and indivisible, with the great river flowing as an artery through its centre? The answer is, Russia!" No, we reply, the answer is Bulgaria. The Bulgarians have not shaken off one foreign yoke to submit to another. We trust this Roumanian ambition exists only in the imagination of the writer. Doubtless, Bulgarians would entertain more friendly feelings than they do for Roumanians if the Dobrukscha, which is Bulgarian soil, had not been taken from them and given to Roumania. Mr. Samuelson speaks of the Dobrukscha as a "valuable acquisition" to Roumania. We

are not so sure that it is. As we read Roumanian history, we find that their greatest leader, Michael the Brave, was successful so long as he restricted himself to Roumania's natural borders, the Carpathians and the Danube River, and that he failed when he crossed those limits. We would say to Mr. Samuelson as we said to our Bulgarian friends, "Do not clamour too much about Pan-roumanism or Panbulgarism, for, if the rule of the majority be always applicable, you must give up Jassy and Salonica to the Jews, as there are more Jews than Christians in those towns."

If Mr. Samuelson does not give us much gossip, he is at least free from the faults of the well-travelled stork, for ever prattling of the ditches in which he had gobbled up the fattest frogs. Mr. Samuelson has not picked up his information in Bucharest restaurants, but has gone deeply into the subject of the government, prisons, and schools in Roumania. He devotes a chapter very properly to the *Asyle Héléne*, the most admirable girls' school we have ever visited. We do not think he lays sufficient stress on the fact that the upper classes of Bucharest raise no objection to their daughters attending a school for foundlings. This common-sense of the Bucharesters compares well with the snobishness of many English parents. Mr. Samuelson gives us a chapter on wages and cost of living—a rare excellence in a book of travel, which Buckle would have thoroughly appreciated. He tells us in one of his "digressions" that, of the 400 workmen employed to build the King's summer palace, 150 were Germans and the rest Italians. This reminds us that, when the present Prince of Bulgaria wished to mend the holes in his palace staircase at Sophia, he had to send to Pesth for workmen to do it. We hope that skilled labour may soon spring up in Eastern Europe now that the Turk, that great enemy of industry, has been driven out. The chapter on the navigation of the Danube is a most useful *résumé* of facts. The writer conclusively proves the importance to England of unrestricted trade on the Danube, and that our interests and those of Roumania are one. He also gives us a clear and succinct account of the peasant proprietary of Roumania. Our limits forbid us entering on this wide field, or on the historical portion of the present work.

In conclusion, we can recommend Mr. Samuelson's useful book. It will interest all who wish to know something about Roumania—a country which "through a cloud, not of war only," has at length taken her place among the free nations of Europe.

JAMES GEORGE MINCHIN.

The Coming Democracy. By G. Harwood. (Macmillan.)

ANYTHING trustworthy that can be learnt about the probable disposition of our future masters cannot fail to be of general interest. Mr. Harwood, indeed, does not claim to have the gift of prophecy; but, from intercourse with the lower classes, he has gained some knowledge of their habits of thought, their prejudices and aspirations, and he gives us, very ably, his own deliberate opinion as to the way

in which they are likely to exercise the political supremacy of which they are as yet the unconscious possessors. He thinks—and it is not a foolish optimism so to think—that their employment of it will not be more exclusively selfish than has been that of the upper and middle classes, which have successively directed the policy of the nation. Classes, like individuals, are influenced by mixed, rather than by single, motives; and the separate actions of a life selfish in the main may exhibit every gradation between egoism and altruism. And though it is absurd to suppose that the lower classes will not generally pursue the course which seems most likely to promote their own advantage, we may feel tolerably sure that the pursuit will not be made in an unbroken or systematic way.

In foreign politics, therefore, the Democracy may make neither power nor wealth its chief aims, and yet under the name of progress it may compass those ends, and be ready in their behalf to bear quite as heavy burdens as have hitherto been forced upon it. And, again, ambition in some form may influence the lower as it has influenced the higher classes; and, as there is no chance of gratifying this in their case, except collectively, the masses, who cannot hope for a family history or pedigree, may wish to be remembered as having belonged to a nation which made the improvement of the whole world its object. "So there are many things more unlikely than that, under the Coming Democracy, we may see, in this direction, an enthusiasm and an enterprise which have not been equalled since the days of Elizabeth." It may be remembered that "the spirited foreign policy" of Lord Beaconsfield awoke a far more hearty response among the working classes than did the appeal which Mr. Gladstone made to them in 1874, and which was based upon prudence and economy.

But even if the Democracy should be ready to forego its more immediate interests for the sake of the maintenance or extension of the empire, it is not likely so to alter the Constitution as to make it subserve its own particular ends? Mr. Harwood thinks that the history of our country shows that the masses of the people have never been in favour of violent changes either in politics, in manufactures, or in social life, and that the conservatism of the lower classes is a national trait which must not be overlooked. And, again, we must remember that there is no feeling among them that they have been kept down and wronged, and therefore the desire for retaliation is altogether absent. On the whole, they are proud of their Constitution, and it is not by their hands that the Crown will be endangered or the existence of the House of Lords terminated.

As to the House of Commons, changes must necessarily occur there, but they will not necessarily be changes for the worse. The number of members who regard the House as the pleasantest club in London, or covet a seat in it for the social distinction it confers, will become very much smaller. Mere wealth will meet with less consideration, and the direct representatives of the working class will fill the places now occupied by self-seeking barristers; but there is no probability that

"men of light and leading," whatever their rank or their political views, will fail to find admission. For the masses are not a homogeneous body, but a mixed multitude, having diverse aims and widely differing opinions. The English Democracy has never learned the middle-class axiom that political honesty means sticking to your party, whether right or wrong, or, rather, not even thinking about that, but always taking it for granted that your own party must be right and the other wrong. On the whole, the future is hopeful enough for him whose only wish is to serve his country, and who will do it in an open and manly fashion. Of course the tenure of land is a matter which must engage the earliest attention of the Coming Democracy; and, as the idea of the soil being the monopoly of a small class is repugnant to the people's instinct, such a reform as will give free play to natural principles is sure to take place. And the result must be that the importance of the upper or landed classes will decline in proportion as their territorial supremacy is diminished. But the position of the middle or monied classes will not be left untouched. Taxation may be re-arranged so as to fall more directly upon them. The labour question may be solved in ways detrimental to their interests. Competition with other countries, and especially with America, may—nay, certainly will—reduce the margin of profit till it almost disappears; and history abundantly shows that manufacturing pre-eminence, if it is the gift which nations desire most, is also that of whose retention they are least secure. We owe much to the middle classes for what they have done of late years in the way of legislation, but no sense of obligation can blind us to the fact that, for good or evil, the political supremacy is now slipping away from their hands.

What, lastly, will be the attitude of the Coming Democracy towards religion? What is it now? we may ask. Those who are most qualified to answer tell us that the working classes are rather indifferent than hostile to it. The Church and the Denominations have done, and are doing, a good deal for the masses, but the masses are doing in this matter next to nothing for themselves. But if religion can be presented to them as a living reality—a matter not of doctrines and ceremonies, but of practical use in raising men and women to a higher level—the lower classes may yet embrace it with more genuine fervour than the upper classes now exhibit towards it, and the Church of England may enter upon a future more glorious than its past, as it will then be indeed the National Church.

Whether we regard Mr. Harwood's forecasts as too sanguine or the reverse, they well merit consideration; and the book—in spite of its occasional sententiousness—is pleasant reading.

CHARLES J. ROBINSON.

The Theological and Philosophical Works of Hermes Trimegistus, Christian Neoplatonist. Translated, &c., by J. D. Chambers. (Edinburgh: Clark.)

THIS is a diligent but inadequate study of a very interesting subject, a disappointing and tantalising introduction of it to other students. As Mr. Chambers says, "The 'Hermataica' have been unaccountably neglected in England;" but it goes some way to account for the neglect if an Englishman who has studied them so diligently as he himself has is so little able to grasp their significance.

The title embodies in itself most of the defects of the work. This volume does not contain "the theological and philosophical works of Hermes Trimegistus," but only the "Poemandres" and the excerpts of Stobaeus, which are pronounced to be the only "genuine" works of Hermes extant. Now what is meant by the "genuine" works of a mythical person? There is a sense in which the "Iliad" and "Odyssey" are "genuine" Homeric poems, and the "Batrachomyomachia" is not; and in this sense the "Book of the Dead," and possibly a few other works of prehistoric antiquity, may be called genuine works of an Egyptian god. But if this limitation be abandoned, if by "Hermes" we understand the pseudo epigraphic works issued under his name between the first and third centuries of the Christian era, then it is meaningless to say that the earliest of these works alone are genuine; the latest member of the school that produced them has as good a right to the name of Hermes as the first. Then in what sense is "Hermes" a Christian, and in what sense a Neoplatonist? It is certain that the oldest Hermetic works—probably these very works—are older than the school of Ammonius, to which the name of Neoplatonist is usually applied—this, in fact, Mr. Chambers is careful to insist on. It is quite true that the relation of these works, on the one hand to Plato and on the other to Christian and Pagan mystical religion, is nearly the same as that of the Neoplatonists in the narrower sense; and we may thank anyone who gives us materials for the history of the rise of Neoplatonism. But we should thank him more if he did something to arrange the materials in form for the history.

A more important omission is that the editor seems to have no conception how complicated is the question of the author's relation to Christianity. There are, in Hermes, certain reminiscences of, or parallels to, passages in the Jewish and Christian Scriptures; there are certain doctrines more or less akin to that of the Christian Trinity; but it does not follow that Hermes was a Christian, still less an orthodox one. We are told truly that the most distinctive Christian doctrines—those which were "foolishness to the Greeks"—are omitted; so is the central doctrine, for which, more than any other, Christian martyrs died, and which Christian apologists put forward in their most exoteric works—the unity of God as the one object of worship. Then, however firmly we may believe that the doctrine of the Trinity is contained in the Christian Revelation, we ought not to be afraid to put the question:—Is the similar doctrine in Hermes derived from the Christian Scriptures or from Christian teaching, or did

he arrive at it independently? nay, we ought not to forget that it is a possible view that the doctrine is not purely of Christian origin, but developed from Pagan or semi-Pagan speculations like those of Hermes. In truth, an orthodox Christian has less temptation to shrink from discussing the question, because he knows that there *was* a great deal of semi-Pagan speculation on subjects akin to these which used the Christian Scriptures and presupposed the Catholic doctrine. There is no small affinity between Hermes' doctrine and that of the Gnostics, in particular of Basilides; and if these works of Hermes be a generation earlier than Basilides, the evidence for the antiquity of the Fourth Gospel, or at least of the doctrine contained in it, is pushed so much farther back. But—it is hard to prove a negative, yet the impression remains—the word "Gnosticism" does not occur in Mr. Chambers' discussion of Hermes' position; certainly, Basilides is not named.

It perhaps would be unfair to complain of the style of the translation; its avowed object is to be literal rather than to be readable; and to look at the English is in general enough (at least with the help of the extracts in the margin) to enable the student to see what the Greek must be. But then it is a question whether, if this were the object, it would not have been better to give a Greek text; very often it is only by referring to or reconstructing the Greek that the translation can be made intelligible. Sometimes it is positively misleading; e.g., "The Father of the *Universals*" does not represent $\delta \pi \alpha \tau \eta \rho \tau \omega \nu \delta \lambda \omega \nu$, but $\tau \omega \nu \kappa \alpha \theta \acute{o} \lambda \omega \nu$. Again, $\delta \theta \epsilon \acute{o} \varsigma$ is Greek for "God" in a monotheistic sense. "The God" is only English when we are speaking of one particular god out of many.

WILLIAM HENRY SIMCOX.

THE DANES IN ENGLAND.

Normannerna. IIIb. and IV. "Danske og norske Riger paa de Brittiske øer i Danvældens Tidsalder" and "Danelag." By Dr. Joh. C. H. R. Steenstrup. (Copenhagen.)

IN these two instalments Dr. Steenstrup brings to an end his remarkable study on the Northmen and their colonies in the ninth, tenth, and eleventh centuries—a book which I hope will be speedily translated for the benefit of those many students of our early history who have not mastered modern Danish. These parts exhibit the wide range of reading, the acute and observant eye for evidence, and the clear, concise arrangement and simple style which characterised the preceding volumes. To discuss the numerous points of interest which they present would altogether exceed the present limits, but one may rapidly notice some of the more salient. Vol. IIIb. deals with the reigns of Cnut and his two sons, and certainly forms the best existing monograph on the subject, supplementing the brief study of the period which Mr. Freeman has given in his *Norman Conquest*. Singularly interesting is the well-supported and acceptable suggestion that the Ethelung Eadmund's children were sent to the "sclavi," not the "auai," and that the

English authority's Rogians and Rex Malesclodus stand for the Russians and the King Macesclausus, sister's-son of Stephen of Hungary. A similar literal confusion between "sci" and "su" is at the root of the mistaken idea that Cnut ruled over part of Sweden and claimed that kingdom as his own—a position clearly refuted by Dr. Steenstrup. Again, the difficulty as to the "Wihtlande" or "Wiht" of the Peterborough and Abingdon Chronicles of the year 1022 is happily solved by the reference to Alfred's "Wihtland which belongeth to the Eathonians," thus providing a rational explanation of the 1023 entry—"Here King Cnut came back to England."

There are rectifications of several small errors into which former workers on the field have fallen. Thus the fourfold division of England is rightly assigned to Cnut rather than Ethelred; the name of Godescalc's wife is Siritha, not Demmyn, as, by a funny mistake, it has been given. On the other hand, we see no reason for doubting the old translation of "Port-hund," *oppidi canis*, especially when one considers the use of the word "port" in the Northern Court-poetry of the eleventh century.

It is amusing to see how hard the superstitious reverence for such "sources" as Egil's Saga dies in Scandinavia. Petersen, Jessen, Vigfússon, and Heinzel have all spoken out on this point; and yet people persist in puzzling over and trying to reconcile the discrepancies between Ari's historical works and the late twelfth-century Tale of Egil—a saga which, though it contains verbal extracts in its earlier chapters from a lost historical work, is, as far as its own substance goes, a mere romance largely composed of absolutely fictitious matter. In this romance there are just two or three beautiful family traditions of the usual undateable kind about Egil himself, which gleam out of the midst of a mass of dull and worthless setting of a late and conventional kind. On the other hand, scepticism as to Sighvat's verses and the character of the earlier Kings' Lives (down to and including Sigurd the Crusader's Life) is unfounded, for, though there are many difficulties connected with them, they are works which require to be judged by a very different canon to that which applies to the Icelandic Family Tales.

But little space is left for consideration of the fourth volume, which is even of greater interest than the preceding, for it is an advance upon comparatively new ground. In it Dr. Steenstrup considers the influence of the Danish Settlement upon the Old English Law, and has with singular skill and boldness been able to reconstruct to a great degree the legal system, both adjective and substantive, of the Dane-law. This is a work which has long been wanted, and it has been well done here. Since the publication of the charming American essays on "Anglo-Saxon Law" no book has thrown so much light upon the still obscure recesses of our pre-Angvin law as this. The author has a good case, and shows himself an able advocate; his conclusions may, in most cases, be gladly accepted, although there are here and there propositions to establish which one would be glad of better philological evidence than is at

present forthcoming. Especially interesting are the chapters on "Law" and its derivatives "lah-cop, lah-man, lah-slit, by-lah, ut-lah," on "Mal" and its cognates "mal-men, sam-male, widher-mal," on "Grith," "Ordeal," "Wager of battle," "ran," "seht," "wapentake," "nithing," "sac," &c. The explanations of the "sipesoon" of the later English Laws, of the "Rydhrenan" of the Worcester Chronicle, of the "lechef" or "leoheof" of William's Laws, are not only ingenious, but convincing. The questions of the House-carls and their position, and of the Ship-tax, are really adequately treated for the first time. Few authorities have been overlooked, though one notes that Eyton's noble volume on the Dorset Domesday would have given welcome aid on several questions; and the later Eddic poems might certainly have been appealed to far more frequently, for, from their date and standpoint, they are authorities of the highest value on legal questions connected with the Scandinavian colonies in the West. I have resisted a strong temptation to "argue the point" on several heads with Dr. Steenstrup, preferring to devote the lines allotted to me to setting forth in some degree the peculiar value of his book. He will find plenty of adversaries, but will no doubt be able to give a good account of them in most cases.

In conclusion, it is a pleasure to see that Dr. Vigfússon's Oxford Dictionary has been so profitably worked by our author, and that it has stood his every test so well. And it is reassuring to note that Dr. Steenstrup has not, like so many scholars both in Scandinavia and England, swallowed whole the ingenious albeit visionary speculations of Prof. Bugge, but preferred to think for himself on this as on other questions. F. YORK POWELL.

NEW NOVELS.

The Merchant Prince. By John B. Harwood. In 3 vols. (Hurst & Blackett.)

Saint and Sibyl. By C. L. Pirakis. In 3 vols. (Hurst & Blackett.)

A Western Wild Flower. By Katherine Lee. In 3 vols. (Bentley.)

A Chance Acquaintance. By W. D. Howells. "Author's Edition." (Edinburgh: David Douglas.)

The Merchant Prince has one good old-fashioned merit, which never fails to arouse genuine, if not very cultured, interest. A justice rather romantic than poetic tilts the cruelly exact balance of human affairs ever in favour of lovers young, poor, and courageous. From the first the reader has no misgivings; the woe and want of the first volume do but portend the wealth, bliss, and numerous offspring of the third. Introduced in the first chapter to the wretched garret of the young mill-hand, we recognise at once the future millionaire. It is over plans and models that he is consuming the midnight tallow; so the millions are to be made by the civil-engineering process, and a new era is to dawn upon our fleets and bridges. He is thin and wasted and interesting; he will perform miracles of forethought and daring, as he certainly does in a very original and dashing

way. He is strikingly handsome, even for a mill-hand; we do not need to be told that he will be a good deal pestered by the ambitious advances of high-born beauties. But for all that we do like to be told; and, when the rich doctor with the two nice daughters succours the lad in his need, we are only a little sorry for the poor old gentleman, who will of course have to put up with death and bankruptcy to permit Bertram to endow the daughter with his gratitude and fine prospects. A hundred years ago these lucky rises in life (for, so far as we can gather, Bertram owed nearly everything to the sudden likings of eccentric old gentlemen) were perhaps possible. Nowadays, well-spoken but shabby youths are seldom promoted by benevolence to the command of vast shipbuilding yards, or beloved by imperious heiresses. Still we like, and always shall like, to pretend that they are, and to make believe that all good things are possible to a handsome, modest, clever, honest youth. Mr. Harwood's hero is all this, and that is why most readers will gladly follow him through his troubles and successes to the baronial splendour which awaits him. For ourselves we cannot but regret that neither he nor the author seems to have thought of the doctor's elder daughter, who is a dear good girl, but perhaps after all more fitted to console a real prince in disgrace and exile than to share the success of an engine-room Croesus. There is much spirited work in the book, especially the affair with the river-pirates at Blackwall; and the good people are all pleasant and worth reading about. The villany is not very plentiful, but dreadfully stupid and melodramatic. Cut-throats, blacklegs, and fraudulent clerks, culled from various old novels, cross the path of our aspirant, only to fall a prey to a detective more garrulous, bungling, and funny than lady-novelist ever yet conceived. However, as the wicked part of the book is the only bad part, it may be recommended as a pleasantly conventional novel.

Saint and Sibyl is readable and rather prettily written. It has only the old, deep-seated fault of most ladies' romances—that they seldom know what manner of woman is really to be admired. With their female saints they usually succeed well, except when they adopt the new, mulish, pig-headed model; but fortunately their experience can seldom help them much in portraying the female of impulse. With a hazy notion that furious and ungovernable animal passions, an original turn of genius, supreme contempt for the feelings of others, numerous attractions, and scanty principles invariably conduct the heroines of real life into infamies more or less indescribable, they think it safer to paint the youthful *femme libre* either as a tomboy or a perfect Shaitan of frowardness, or, as here, a mixture of both, and then expect us to pity and adore. It would be amazing how any lady could take so much pains to delineate a social nuisance like this Sibyl, and then delude herself into thinking she had painted a paragon, were not the delusion so common. From the day when the young artist, Sebastian, purchased the little wretch from a travelling show to that when she finally consented to marry him and cut out his faithful cousin, Rose, the Saint, she wrought woe and

disunion in a happy family. Like several recent heroines, her evil tendencies seem to have some curious connexion with the climbing propensity. She returns a young lady from a strict school to the villa of her benefactress—an exclusive old maid—and in ten minutes she has clambered over the fence and is trespassing in the next garden, and making love to another artist—a profligate one—whom she finds there. After three interviews, if not in the first, she declares her love. Sibyl's inspirations are original, but invariably disgusting, whether coolly dangling her legs over a high wall to look out for the artist, or using the acacia as a handy bedroom staircase for her frequent nocturnal expeditions, or getting rid of her amber necklace—the moral artist's gift—by posting it to the Archbishop of Canterbury. She attracts Sebastian from his old love, the gentle Rose, then refuses him; the old aunt curses her, and the profligate deserts her; and so of course she flees to her natural sphere among the show-people and thieves—amid scenes, as might be expected, absurdly and tediously described. The aunt dies, Sibyl is brought home by a tragic contrivance, and Rose's sacrifice and Sebastian's bliss is tiresomely deferred by a new trick—Sibyl for some months pretending to see the poor aunt's eye glaring curses from the arm-chair. Apart from the Sibyl element, the book has much merit. A Maecenas Earl and his chemical Countess are very amusing; and the character of Rose, a gentle, loving, sensible girl under Evangelical influence, is most firmly, delicately, and faithfully drawn.

For a first work, and probably because it is a first work, *A Western Wild-flower* is really admirable. It is a success which may be repeated if the authoress will remain contented to describe what she has so keenly observed and can so aptly describe. She gives us a wonderful family group in the excellent Hildebrandine Archdeacon, his motherly, obedient wife, his well-conducted matins and evensong daughters, his eldest son, the priggish don; and, best of all, the neglected, uneducated, sulky despair of the family, the youngest son, Bob, who, as the authoress with perfect art never tells us, but lets us find out, is worth all the rest put together, and is his father's true son all over, though the Archdeacon clings wholly to the other. The group as a whole is as good as, or better than, any of Mr. Trollope's clerical interiors, and is evidently drawn from living models; but there is a force and charm altogether peculiar in the study of the intense practical energy and strong healthy feeling—hereditary and irrepressible traits—forcing themselves through the sullen discontent and barbarism of the family pariah. His love affair with the farmer's daughter is too natural for invention; and the scene in which Bob asks Nanny to elope with him is quite perfect. His language is the roughest of slang, and his manner not a little rough; but, if the honest lad's love seems too prosaic and practical, it is very pure and healthy and manly, and touches the reader's heart far more than the poetical sublimities which gorgeously veil the self-delusion and effeminate sensuality of a *grande passion*. The heroine is an orphan

niece from California, whose free impulses are sadly fettered by the archidiaconal proprieties. Without belonging exactly to the Sibyl tribe, she partakes in some of its eccentricities. All her troubles may be traced, as we rejoice to find, to her sitting perched on the churchyard gate, instead of joining the daily service. However, she is not praised, but blamed, for her waywardness, both by the authoress and herself; so no great harm is done. The third volume is a mistake. The lovers are nearly united and the story running out, when Joyce and her lover perpetrate the usual misunderstanding, and she, of course, runs away from home. This absurdity entails some stupid chapters—Joyce tramping the streets of London, hardships of a governess, jealous mistress, designing Major, another flight, penniless wandering, rescue by Anglican Sister of Mercy, restoration to heart-broken and repentant relatives. However, this third volume does not affect the real story, which is peculiarly rich in characters if not in incident. The young Baronet and his mother are excellent; but the Miss Sacketts, a pair of delightfully apologetic, incoherent, kindly old maids, are something quite new. They are only of the farmer class, but admitted to privileged intimacy with the Archdeacon's wife and the dear young ladies, and live in a life-long flutter of gratitude for the condescension. Mrs. Gaskell, though they are quite in her manner, never hit on this precise type, which is quite a real one. The Kentish hop-garden and marsh scenery is finely described, and the style everywhere is easy and refined. The book may be very strongly recommended.

Mr. Howells' elaborate and rather finical little novels show to peculiar advantage in their new form. Each tiny volume may be recommended as a pleasant afternoon's reading in the lazy season. *A Chance Acquaintance* was more successful in the States than in England, where the keen satire on Boston and its "best families" was hardly likely to be understood; and for most people its interest lies mainly in the charming descriptions of Quebec, which raises the old French stronghold to a place in our imaginations beside the storied cities of the Rhine and Danube. The cover of this little volume is sadly disfigured by a curious puff personal from a Scotch professor, regally approving of Mr. Howells' "moral pathology," "subtle mysteries of human nature," &c., a condescension which must have made the author feel rather uncomfortable, even if he has not yet come to see that his moral pathology business is all moonshine, and that too of the *lux maligna* kind. E. PURCELL.

TWO COOKERY BOOKS.

366 Menus and 1,200 Recipes of the Baron Brisse in French and English. Translated by Mrs. Matthew Clark. (Sampson Low.) The plan of the above collection of bills of fare, rendered from the French of the celebrated Baron Brisse into excellent English, certainly possesses the merit of novelty. It was the object of the author to furnish his countrymen with a selection of recipes for providing each day in the year with a different dinner, suitable

to the pockets of those who could not afford a large outlay on the butcher and greengrocer. The *menus* are preceded by a short essay on the ordering of a dinner and the mutual duties of host and guest. This treatise is written in an airy and yet dogmatic style which would at once betray the nationality of its author. We are told that "the art of giving dinners consists in the knowledge of certain rules . . . as to the choice of dishes and the reason of their selection, according to time and circumstances." After this very sufficient preamble, the author complacently remarks that France is the sole and supreme arbiter of fashion in culinary matters, adding, "in fact, it is to us that all fashions of different nations are brought to be accepted according to their merits, and this exchange of new thoughts and ideas has created what is called 'fashionable life.'" Hosts are admonished to put their guests at ease by welcoming them with effusion, by losing no opportunity of introducing kindred spirits to each other before the dinner table is reached, and by grouping their guests' chairs so as to promote a due circulation of congenial dialogue. English hosts may draw some profit from this last hint; what can be more depressing than the sight of a dozen ill-assorted guests placed round a dinner-table as if for the very purpose of striking as many discordant notes? And yet, through the want of a little social tact, this is by no means an uncommon sight at the dinner parties of English middle-class homes. One maxim of the author we must emphatically repudiate: "If a guest refuses a dish the host must try and persuade him to change his mind." The stomachs of men are at least as variously constituted as their minds; to one jugged hare may be a delicacy, to another an abomination, bringing sleepless nights and days of torture. So far as the practical value of this compilation is concerned, we may say that it will be a treasure to housekeepers who have to cater for a family of five or more members on £500 a-year. In the hands of a really good plain cook (not the drudge whose services are remunerated by £15 a-year, board, beer, and washing) the greater number of Baron Brisse's concise recipes will produce palatable made-dishes at a moderate outlay. Before parting with this book we feel bound to notice a recipe for preparing a sweet dish which we imagine will be new to most readers—baked ice. According to the author, it was acclimatised at Paris by the *chef* of the Chinese ambassadors, and the mode of its preparation is as follows:—"Make your ice very firm; roll out some light paste thin, and cut it into small squares; place a spoonful of ice in the centre of each piece of paste, and fold it up carefully so that no air may get in, and bake. The paste will be cooked before the ice can melt."

Wholesome Cookery. By Mdme. Marie de Joncourt. (Kegan Paul, Trench and Co.) Yet another cookery-book, though as different from the preceding as can be. The writer, who will hardly persuade us that her French name is other than assumed, aims pointedly at English middle-class families, whom she tries to convert to her view that made dishes are economical. About plain roast and boiled, grilled and fried, she has nothing to say. Such elementary matters she leaves to Mrs. Beeton, or some similar classic, "which no kitchen should be without." Why she should have chosen the precise title she has we are at a loss to understand. As regards "wholesomeness," her chief bit of advice is to avoid all cooking media that are sour, and thus cheat the doctor. She begins by giving bills of fare for twenty-four different dinners, six of which have the great merit (in our eyes) of being "without meat." These are followed by more than 400 recipes, mostly for made dishes, but a few of a miscellaneous

character. If the best test of a book is to be found in its meeting an urgent want, we can heartily recommend this to all young housewives. The age of maternal instruction of daughters in hereditary recipes (if it ever existed) is gone. Happy is the man, in stomach as well as in pocket, who has a "Mdme. Marie de Joncourt" to wife.

CURRENT LITERATURE.

An Englishman's Views on Questions of the Day in Victoria. By O. J. Rowe. (Trübner.) The writer of this little book exposes with an unsparing hand the corruption of the democratic government and legislation of Victoria. He has no Preface, nor does he tell us what his connexion with the colony is. We presume that he has resided there, and personally witnessed and experienced the evil results of bad government which he describes. The principal subjects he treats of are protection, the land-laws and land-tax, anti-Chinese legislation, State-management of railways, public works, and education. It is satisfactory to learn that the results of protection in Victoria are precisely such as all political economists and correct thinkers foresaw. But that the demonstration of these results will serve any good purpose is, perhaps, too much to expect. The famous land-tax of 1877, which was imposed "not to produce revenue, but to burst up the large estates, and so to make them accessible to the poorer classes," has had exactly the contrary effect; the only class which has derived any benefit from it is that of the largest and wealthiest landowners, who have had additional opportunities offered them of purchasing land and increasing their estates. We wish the doctrinaire politicians, who all have plans ready cut and dried for dealing with the land of this country, would study the effects of a departure from the sound rules of political economy with regard to land in Victoria; but we fear argument and demonstration will be as completely lost upon them as upon the protectionists. The injustice and folly of anti-Chinese legislation is too obvious to require comment; but the result of the State having undertaken the management of all railways and public works in Victoria is such as may serve as a warning to us at home. The chief function of the State railway department in that colony is not the convenience of travellers, but the procuring of votes. The experience—we presume personal—of Mr. Rowe is that State-management leads to needless expense and the pushing of lines in wrong directions; that it pays small attention to the safety or comfort of passengers, charges high fares, and travels slowly; and that little civility is to be had from the porters clothed in the dignity of State officials, and all participating in the general political corruption. Political jobbery and red tapeism are, adds Mr. Rowe, of course characteristics of all Government departments for public works. Let no one suppose that this writer, who shows up the venality, gross ignorance, and absolute indifference to the public good of the Government of Victoria, is a Tory. He is, on the contrary, what in this country is called an advanced Liberal, and he labours hard to exculpate manhood suffrage from any share in producing such a government. The whole blame, in his opinion, must be attributed to the practice of paying the members of the Assembly. In truth, are not both manhood suffrage and the payment of members alike errors, and alike responsible for the evil results the author describes? He makes this remarkable observation on the transformation of parties:—

"In Victoria the set of politicians who there dub themselves *Liberal* possess every vice of principle

which it has been the mission of the English Liberal party to extirpate from the creed of their Conservative opponents. On the other hand, a more genuine and enlightened Liberalism pervades the action and speech of the Victorian Conservative."

Foreign Relations. By Spencer Walpole. "English Citizen Series." (Macmillan.) If the object of this series is to afford information on subjects of which the ordinary British householder is ignorant no volume is more urgently called for than this of Mr. Spencer Walpole on England's foreign relations. The general indisposition on the part of the public to study the foreign policy of this country in the past is probably due to the excessive dulness of the narrative and to the current conviction—which renders the retrospect irksome and distasteful—that our sacrifices of blood and treasure on the battle-fields of Europe have been productive of slight advantage to us. Not even Mr. Walpole's art can galvanise into life the summary of England's external policy before 1815. Any interest which the reader may feel in the changes of the settlement of the Continent begin with Mr. Canning's tenure of the Foreign Office, when, under his guidance, England once more threw her influence into the cause of freedom for the oppressed. A history of our foreign relations might be supposed to tempt the historian into some display of political bias, but Mr. Walpole seems to have imposed upon himself a rigid abstinence from any undue sympathy with either party in the State. The chapters on the rise and the duties of ambassadors and consuls supply opportunities for some piquancy of illustration, of which he has availed himself not unduly. The MS. memoirs of the first Lord Heytesbury, who was sent to represent this country at the Court of Russia in 1828, have, we notice, been opened to Mr. Walpole's view. Why should not the rest of the world be admitted to the same happiness?

Shaftesbury and Hutcheson. By Thomas Fowler. "English Philosophers Series." (Sampson Low.) Prof. Fowler has treated, with his usual care, two philosophers who, he admits, do not stand in the first rank. Yet they are not unimportant. Shaftesbury's influence, never better traced than here, was great; and Hutcheson's psychological and metaphysical views are interesting as occupying an intermediate position between Locke and the Scotch school. The value of the present volume, however, consists not merely in the Lives (although that of Shaftesbury is "the most detailed which has yet been published"), nor in the analysis of opinions, nor in the account of the reception and influence of these opinions, nor in the direct criticism thereof; but at least equally in the judicious remarks (as, for instance, those on ridicule) with which Prof. Fowler has enriched his commentary. Hutcheson proposed "a kind of moral algebra" for the purpose of "computing the morality of actions" (p. 193); and we should have been glad if some fuller account had been given of this proposal, to enable readers to compare or contrast it with such modern attempts as Mr. Edgeworth's *Hedonical Calculus*. We hope that this sketch of Shaftesbury and Hutcheson will not be held to release Prof. Fowler from that wider history of moral philosophy in England which his pupils have been long expecting from him.

The Foreign Freaks of Five Friends. By C. A. Jones. (Kegan Paul, Trench and Co.) Nothing could be slighter than the matter of this book. It is a trip to Switzerland of five weeks' duration, made by five ladies (who are for a time joined by four more), at the cost of twenty-five pounds a-head. They go up the Rhine, and visit Lucerne, Interlachen, Chamouni,

and Zermatt. How many thousands of our fellow-countrywomen have done the same! Yet we are not going to rebuke "Miss Jones" for rushing into print. The writer of this notice belongs to that class who once went to Switzerland pretty often, but now goes no longer. There are corners in his memory so pleasantly filled that he can endure to read Swiss guide-books, and even exploits by Alpine climbers. Far be it from him to withhold gratitude from "Miss Jones" for having given him another pleasant hour of Switzerland. She evidently possesses an unusual stock of that common-sense which we are pleased to call masculine. This she shows not only in her management of the party, but still more in the wise reticence of her pen. Only as to the pictures, we trust that they do her less than justice. Generally, the artist has been more successful with landscape than with the figure.

Tourists' Guide to Essex. By E. Walford. (Stanford.) Essex is an unfavourable specimen of this handy little series. Certain "Principal Routes" are recommended to the tourist in the Introduction, but the routes actually described in the book are arranged on a wholly different system, being classed under "Rivers," "Coast," "Railways," "Roads." It is one of the results of this confusing plan that Braintree, for instance, is described under "Rivers" (p. 61) and again under "Railways" (p. 119), Manningtree under "Rivers" (p. 37) and again under "Railways" (p. 111). Its church, moreover, was "erected early in the seventeenth century" (p. 111), or "rebuilt in 1616," if we prefer the statement on p. 37. With less repetition there might have been less omission. We miss allusions to "the Roothings" ("Roothings" *apud* Mr. Walford) as a famous hunting country, to the Colne as a great yachting station and nursery of yachtsmen, to the cheap clothing trade of North Essex, and even to beer at Romford! The dreaded "sands" and their "salvagers" are also omitted. Maldon, we may add, is no longer a "port" (p. 66), but is reduced to a "creek." The antiquarian lore is very poor. Mr. Walford is astonished at finding more than one "hall" in some parishes (p. 9). Has he never heard of there being more than one manor? The Forest Charter was granted by Henry III., not by John, nor was it "compulsively [*sic*] procured." Camulodunum is spelt Camulodunum throughout; and, with utter disregard of Mr. Freeman's feelings, his famous battle of Maldon is reduced to an "affray." The book has been hastily compiled: the conversion of the East Saxons and foundation of St. Paul's is told thrice over on pp. 3, 5, and a paragraph on the Flemings which belongs to p. 19 is found under "Extent and Boundaries" (p. 22); "a canal has been cut from Romford to the Thames" (p. 29), yet "Essex has no navigable canals" (p. 24); a church "stands in the Ipswich Road" (p. 111), and in another case, by a yet stranger freak, "both the church and the churchyard have been carried out to the sea" (p. 90), where they are doubtless to be found by the adventurous tourist who, like "the great Dane-king Canute" (p. 6), can brave the "yeasty waves" (p. 90).

The Banquet of Wit. By James Gray and J. B. Maidment. (Pickering.) The sub-title of this most recent of "Joe Millers" is "A Varied Selection of Anecdotes, Bon-mots, et cetera, compiled from numerous sources." There is often much meaning in a sub-title; and, in this case, the vulgar misuse of the adjective "numerous" gives the key-note to the character of the book. It would be unjust to deny that we have got amusement from turning over its pages; but we cannot give much credit for that to the compilers. A book of this kind has no reason to exist unless it shows some special improvement upon its

many predecessors. The tracing of stories to their original sources, and the giving of references, might be such justification. But that our compilers have not attempted. They have not even been successful in their humble task of mere editing. The same story is repeated in the same words, though not with the same punctuation, on p. 39 and p. 177. Atterbury is described (p. 40) as Bishop of Gloucester. The combined scholarship of the two compilers may be inferred from their passing the following translation from the Vulgate (p. 9):—"quorum tectis sunt peccata" = under whose roof there are no faults." We are not sure that this is not the best thing in the book.

Edward Trelawny: a Biographical Sketch. By Richard Edgcombe. (Plymouth: Luke.) We must confess to a feeling of disappointment at the perusal of this brief memoir. Mr. Edgcombe acknowledges to have passed "many pleasant hours" in the company of the Greek, and we had hoped that he would have been able and willing to remove the veil which still hides much of Trelawny's life. Our expectations have been left unfulfilled. There is hardly a single fresh incident or fact in the career of this extraordinary wanderer on the face of the earth to be gleaned from Mr. Edgcombe's compilation. It consists at the best of but a few selections from Trelawny's *Adventures of a Younger Son* and his *Records of Shelley and Byron*, strung together with the slightest thread of connecting narrative. The curiosity which most people must feel in the life of one of Shelley's truest friends must still remain unsatisfied. We learn from Mr. Edgcombe that "Tre" once offered to write a sequel of his early autobiography, but that the publisher to whom he communicated the proposal held out little hopes of publishing the narrative. The suggestion of Trelawny thereupon fell to the ground. Had he but revived the idea a year or two before his death his overtures would have met with a sympathetic response from any publishing house in London.

NOTES AND NEWS.

MESSRS. LONGMANS, GREEN AND Co. announce a new monthly magazine, to be published at sixpence. The first number will appear on November 1. Leaving the discussion of politics and religion to the established Reviews, it will be devoted mainly to pure literature, especially of a light character. Altogether, if we read the prospectus aright, its aim will be to reach that large class of the public which demands to be interested as well as instructed. Following a practice that is now becoming almost universal, the articles (or, at least, most of them) will be signed. The list of those who have promised contributions includes many well-known names. Among them is the author of *Vice Versa*, who will have no easy task to sustain his reputation. The title of this new venture will be *Longman's Magazine*.

WE understand that the late James Thompson, the author of "The City of Dreadful Night," has left several poems and critical essays in MS. Among them is a long symbolical poem, called "The Doom of the City," which was written in 1857. A companion piece to "The Lord of the Castle of Indolence," which appeared in his second volume, entitled "The Happy Poet," has also been found. All that James Thompson wrote previous to 1857 he destroyed some time before his death. His prose remains include essays on Heine and Shelley. The publication of these works has not yet been definitely arranged for. It is probable, however, that the prose will be published before the poems.

EGYPTIAN books are evidently in demand in

at least one branch of the services. We hear that the Lords of the Admiralty have decided to add Mr. Stanley Lane-Poole's *Egypt* (Sampson Low) to their list of works to be supplied to seamen's libraries.

THE second edition of *Natural Religion* is at press. It will contain a fresh Preface, in which the author answers some of the objections of some of his critics.

WE hear from Dublin that a new edition, edited by his son, of the poems of Mr. D. F. MacCarthy will shortly be published there by Messrs. M. H. Gill and Son.

MESSRS. SAMPSON LOW, MARSTON AND CO. will publish almost immediately an *édition de luxe* of Mr. B. D. Blackmore's masterpiece, *Lorna Doone*, being the twentieth edition in a period of eighteen years. It will have full-page illustrations of scenes, events, characters, &c., from drawings made on the spot by Mr. W. Small, and engraved by Mr. J. D. Cooper; and also head-pieces and initial letters by Mr. W. H. J. Boot, consisting of views in Devon and Somerset.

THE same publishers also announce *Lives of Illustrious Shoemakers*, by Mr. W. E. Winks, with nine portraits; and seven new novels, each in the orthodox three volumes:—*Two in a Tower*, by Mr. Thomas Hardy, now appearing in the *Atlantic Monthly*; *Weighted and Wanting*, by Dr. George MacDonald; *Lady Maud*, by Mr. W. Clark Russell; *Under the Downs*, by E. Gilliat; *A Stranger in a Strange Land*, by Lady Olney; *The Granvilles*, by the Hon. E. Talbot; and *A Chelsea Householder*, by a new writer.

MESSRS. HURST AND BLACKETT will publish this month, in two volumes, *The Friendships of Mary Russell Mitford*, as recorded in *Letters from her Literary Correspondents*, by the Rev. A. G. L'Estrange. We announced this work as far back as April, but its publication has been delayed.

MESSRS. GRIFFITH AND FARRAN will publish this autumn three books profusely illustrated with coloured pictures:—*Wee Babies*, by Amy Blanchard and Ida Waugh, in which child-life from the cradle upwards is portrayed both in verse and drawings; *Fly-away Fairies and Baby Blossoms*, a fanciful picture book, by Miss Clarkson, whose illustrations in *Indian Summer* were much admired last year; and *My Own Dolly*, by Amy Blanchard, a child's story, illustrated by Ida Waugh.

THE same publishers will also issue *The Babies' Museum of Rhymes, Jingles, and Ditties*, illustrated and arranged by the "Uncle Charlie" whose *Favourite Picture Book* has delighted so many thousands of little folk.

A CALOUTTA gentleman, Babu Lok Nath Ghose, has conceived the idea of compiling a "Peerage and Landed Gentry" for India. He proposes to give the genealogy and family history of all the native chiefs, great and small; and also some account of the many native gentlemen upon whom honorific distinctions have been conferred by the British Government.

MESSRS. GILBERT, of Southampton, announce as in preparation a *History of Southampton and its Institutions*, to be published by subscription. It will be based upon Dr. Speed's History, preserved in the archives of the corporation; but the editor, the Rev. J. Silvester Davies, has added more than an equal amount of new material from the town records and other original sources. We may add that on the specimen page sent to us there is a painful misuse of the word "transpire."

THE *Pictorial World* is issued to-day in a permanently enlarged form, with a coloured supplement every week. Miss Braddon's new novel,

"The Golden Calf," is now appearing in this paper, with illustrations by Mr. Hal Ludlow, engraved on wood by Messrs. Dalziel Bros.

WE are asked to state that the library of Trinity College, Dublin, will be closed to the public from September 4 to 18.

WE believe that Miss Mary Robinson's paper on D. G. Rossetti will appear in the October number of *Harper's*.

MESSRS. OSGOOD, of Boston, U.S., announce the *Private Correspondence of Carlyle and Emerson from 1834 to 1872*, edited by Mr. C. E. Norton.

A LITTLE while ago, it was announced that Mr. Julian Hawthorne had discovered, among his father's papers, an unpublished novel, entitled "Dr. Grimshawe's Secret." Mrs. Lathrop, the daughter of Nathaniel Hawthorne, writes to deny, circumstantially, that any such unpublished novel can be in existence:—

"All Mr. Hawthorne's manuscripts were kept together until 1872. There were very few of them, and nothing was overlooked. They were first examined by Mrs. Hawthorne, and, after her decease, again examined by Miss Una Hawthorne and myself. Still later, Mr. Lathrop and myself carefully read them all, and the sketch above mentioned is the only one resembling the story now announced as 'practically finished.' There is hardly a doubt that it was not 'left for publication in this shape.' It cannot be truthfully published as anything more than an experimental fragment."

"The sketch" here referred to was described by Mr. Lathrop, in an article in the *Atlantic Monthly* for October 1872, called "History of Hawthorne's Last Romance." The "last romance" was *The Dolliver Romance*, to which the sketch had been a preliminary outline two degrees removed.

A NEW edition (the third) of Mr. W. F. Poole's *Index to Periodical Literature* is now in the press, and will be published by Messrs. Osgood, of Boston, U.S. The number of periodicals indexed is more than two hundred; and the total number of entries more than 200,000. The whole will be compressed into a single volume of about 1,200 closely printed pages. Mr. Poole, of course, has had the assistance of many fellow-workers; but he has been personally engaged upon the undertaking since the publication of the last edition in 1843.

DR. BERNHARD STUDER, Professor of Geology at the University of Bern, the French chemists MM. Bousisingault and Bertholet, the Roman archaeologist Sig. Fiorelli, and the astronomer Struve, of Pulkowa, have been nominated by the German Emperor foreign knights *pour le mérite*.

AN Austrian paper announces that Prince Nicholas of Montenegro is about to publish a drama in three acts, in verse. The piece is entitled "The Empress of the Balkans," and is in Serbian; but it is added that the author contemplates translating it into French.

GREAT preparations are being made at Assisi to celebrate this winter the seventh centenary of the birth of St. Francis. It is hoped that a speech will be delivered on the occasion by the veteran historian, Cesare Cantù.

DR. MENENDEZ PELAYO, the eloquent professor at Madrid, has just published, as the tenth volume of the series entitled "Arte y Letras," a new translation into Spanish of the *Odes of Horace*, illustrated by several of the best-known Catalan artists.

DR. TROELS LUND, of Copenhagen, is engaged on an elaborate History of Denmark and Norway during the second half of the sixteenth century, of which four parts have already appeared. The work is written in Danish; but Dr. Lund has just published a translation into German of that section (parts ii. and iii.) which treats generally of the conditions of

social life in Scandinavia at the period in question.

AN historical and ethnological society has been founded at Athens whose aim will be to do for the middle ages and modern times what the Archaeological Society does for ancient Greece. It is proposed to establish a museum for the reception of all kinds of historic objects, including MSS. and other documents.

SCHOOL libraries are greatly on the increase in France. In 1865 the number was only 4,833, and in 1874, 16,648. There are now 25,913. This does not include the teachers' libraries, which number 2,348, with an aggregate of five hundred thousand volumes.

M. MAX ROOSES, the learned Keeper of the Musée Plantin at Antwerp, has just published (Ghent: Hoste) a collection of essays in Flemish, or *Nieuw Schetsenboek*. These include a study of hymns and ballads in the Netherlands during the sixteenth century; notices of the dramatist Willem Ogier and the Jesuit Pointers, the only two remarkable Flemish authors of the seventeenth century; a paper on Flemish poetry during the past fifty years; and a critical appreciation of Hendrik Conscience.

M. PAUL BOURGET is contributing to the *Nouvelle Revue* a series of literary studies which he calls "Psychologie contemporaine." He has already discussed Flaubert, Baudelaire, and M. Renan. The article in the current number is devoted to Henri Beyle, the author of *Rouge et Noir*, who wrote under the pseudonym of "Stendhal."

THE first numbers have appeared (Stuttgart: Hallberger) of a serial edition of Goethe's complete works, edited by Herr Düntzer, and illustrated by several well-known German artists. It is intended to be a companion to the illustrated editions of Shakspeare and Schiller which were issued some time ago by the same publishers.

THE last volume in the series of "Deutsche Litteraturdenkmale" of the eighteenth century, published by Henninger, of Heilbronn, is Wieland's *Hermann*.

THE Académie des Inscriptions et Belles-Lettres has appointed M. Le Blant to deliver the discourse at its annual public meeting, which takes place on October 25. His subject will be "The Christians in Pagan Society during the Early Ages of the Church," upon which he has just read a paper before the Académie. He argues that the majority of the early Christians never acted up to the strict letter of that rule which forbade them to have any intercourse whatever with pagans or to recognise pagan ceremonies. Tertullian complains that in his day various subterfuges were adopted. Where the validity of certain contracts depended upon the form of an oath to the gods, weak-kneed Christians saved their consciences by signing their names to the oath instead of swearing it with their lips. They accepted public offices with the mental reservation that they would not offer sacrifices, enter temples, or consecrate money to the gods. There are many examples of their filling municipal posts—which, indeed, the law did not allow them to refuse. It is well known, also, that numbers of Christians served in the army, and would thus be compelled to take part in pagan ceremonies.

SWISS JOTTINGS.

THE annual festival of the Swiss Alpenklub was held this year at Neuchâtel on August 19, 20, and 21. About 250 "Klubisten" attended on Saturday. The conference of delegates, under the presidency of Prof. Eugen Rambert, dealt with the business of the club and arranged

its future programme. The club has determined to be well represented at the National Swiss Exhibition to be held next year. Bern was selected for the festival of 1882, and Herr Lindt elected Festpräsident. On Sunday a series of interesting papers were read, including one by Prof. Forel, of Lausanne, on the structure and movement of glaciers, and a monograph by M. Colomb, of Neuchâtel, on Creux-du-Vent. It was also proposed that the mountain-sections of the club should be relieved by the undertaking of the construction of club huts by other sections.

THE section "Oberland" of the Swiss Alpine Club has just issued a printed *Verzeichnis der patentierten Berg-Führer im Berner Oberland*. The names of 223 licensed or patented guides appear in the catalogue. In the Amtsbezirk of Oberhasli there are 76, who are divided among the communes as follows:—Gadmen 3, Guttannen 6, Innertkirchen 20, Meiringen 47. The district of Interlachen has 132, 58 belonging to Grindelwald, 58 to Lauterbrunnen, 7 to Gsteigwyl, and other communes 1 and 2 a-piece. The district of Frutigen has 12, 9 of whom belong to Kandergrund. The district of Obersimmenthal has 2, both of Lenk. One hundred and thirty-four of these licensed guides have insured in the Accident Insurance Company at Zürich, through the intervention of the Swiss Alpine Club, for a total sum of 323,000 frs. The lowest sum for which a guide has insured is 1,000 frs., and the highest 4,000 frs.

ERNEST STÜCKELBERG, of Basel, has just completed the last of his series of frescoes in the Tellkapelle, on the Lake of the Four Cantons. The bell of the chapel was rung on July 22 to announce the event to the world, and small cannon were fired by the passing steamboats. Herr Stückelberg has worked hard for three years upon these fine paintings, and upon the preliminary studies for the heads of the numerous figures, all of which are from natives of the three cantons of Uri, Unterwalden, and Schwyz.

SINCE the month of May in the present year, M^{re} Bertoni has edited and published at Lottigna, in the canton of Ticino, a periodical named the *Revista scientifica svizzera*. It is devoted chiefly to local natural science, statistics, anthropology, industry, and agriculture, but makes an occasional excursion into social questions. In order to widen the circle of its readers, the articles are printed both in Italian and French. It is published monthly, and each part contains forty-eight pages.

ACKNOWLEDGMENTS.

WE have on our table the following new editions and reprints:—*English Proverbs and Proverbial Phrases*, collected from the most authentic sources, Alphabetically Arranged and Annotated, by W. Carew Hazlitt, Second Edition, greatly enlarged and carefully revised (Reeves and Turner); *The Story of the Earth and Man*, by Principal J. W. Dawson, of McGill University, Montreal, Seventh Edition, with Corrections and Additions (Hodder and Stoughton); *Handbook to the Mastery Series*, by Thomas Prendergast, Fifth Edition, revised and greatly improved (Longmans); *Origin and History of the New Testament*, by James Martin, with Preface and Critical Notes by the Rev. Dr. David Brown, Fifth Edition (Hodder and Stoughton); *Money, Weights, and Measures of the Chief Commercial Nations in the World*, with the British Equivalents, by W. A. Browne (Stanford); *French Examination Papers*, especially adapted for the use of Schools and Students reading for Examinations, by Prof. C. ORIGINAL VERSE.

AFTER THE BATTLE OF MAHUTA; OR, ENGLISH GUNS AT THE CITY OF RAMESES II.

SON of the sun Ra-amnes, lord of war,
When from the North he drave his Syrian bride
With peace, the Hebrews in the clay-pits cried,
Our treasure city is too mean by far
For such a king!—the Baasilk like a star
Burned at his forehead, his great heart to guide
He held the Cross of Life, and at his side
The Lion ramped, grim footman of his car.
Oh, had they seen but yesterday the strife
That choked Bubastis' channel, and the dead
Plagueing its stream with loathsomeness, or heard
The Christian cannon speak its dreadful word
Above Mahuta's waste, they ne'er had said,
"Praised be the Lion-lord who bears the Cross of Life."

H. D. RAWNSLEY.

OBITUARY.

THE Rev. Pascoe Grenfell Hill, who for nineteen years has been the Rector of the City parish of St. Edmond the King and Martyr, died at his house in Finsbury Square on August 28. In early life he was a naval chaplain, and published, in 1844, an account of *Fifty Days on Board a Slave Ship in the Mozambique Channel in 1843*. This was reprinted in 1849 and again in 1853, and its success led to the publication of *A Voyage to the Slave Coast of West and East Africa* (1849). For the S. P. O. K. he wrote two pleasing little volumes descriptive of *A Journey Through Palestine* and *A Visit to Cairo*, which appeared thirty years ago, before the great band of English tourists had penetrated so far East. By far the most ambitious of his works was a *Life of Napoleon III.* It was issued in 1869, while the Napoleonic dream still brooded over France; and rumour said that some part of its inspiration had proceeded from the Tuileries. As a City incumbent Mr. Hill was one of the first who sought to attract merchants and clerks to his church in the middle of the day by means of bright services and stirring discourses. Many of the more active members of the extreme High Church party were allowed to display their earnestness in the pulpit of his church in Lombard Street. Mr. Hill started a practice which has since been adopted by many of his brethren.

THE city of Basel has just lost the oldest representative of one of its distinguished literary families in the person of Obersthelfer Abel Burckhardt, who died at the age of seventy-seven. He studied theology at Berlin under Schleiermacher. Together with the brothers Wackernagel, of Berlin, Prof. J. J. Herzog, of Erlangen, and the late Prof. Bluntschli, of Heidelberg, he was one of the founders of the so-called "Nameless Society for the Cultivation of Literature." The first edition of Wilhelm Wackernagel's poems (1827) was dedicated to his Swiss friends Burckhardt and Bluntschli. Their friendship resulted in the invitation of Wackernagel to a professorship at Basel in 1833. From 1830 to 1839 Abel Burckhardt was an assistant-clergyman in the city. In the latter year he became Pfarrer of

Gelterkinden-i-Baselland, and held that post until 1854, when he was elected one of the clergy of the minster of Basel. In addition to his historical work on his native city, a fifth portion of which remains unpublished and incomplete, Abel Burckhardt has left two abiding memorials of his influence upon his fellow-citizens. One is the popular annual festival of Basel—the celebration of the famous "Schlachtag bei St. Jakob," the great holiday of August 26; the other is his collection of original songs for children in the local dialect—"Baseldeutsch." He was one of the founders of the Basel Historische Gesellschaft. As a theologian, he belonged to the moderate or "mild-orthodox" school.

WE learn that Rudolf Rey, of Geneva, died at Bex a few days ago. He was well known to a wide circle by his interesting work on Geneva and the shores of Lake Lemán. He published a first instalment of a *History of the Political Regeneration of Italy* (1814-1861) and several minor works on history and art criticism.

THE BODLEIAN LIBRARY.

WE quote the following from the *Monthly Notes* for August of the Library Association:—"The Bodleian Library, having acquired the old examination schools, now occupies every floor of the quadrangle, and one of the old schools is already being shelved for 40,000 volumes. The "Curators" or "Clarendon" room has also been handsomely fitted up; all incunabula will probably be transferred to it, and arranged as a guide to the early history of printing. Open shelves, to contain all the bibliography (by subjects), have been erected in Duke Humphrey's reading-room; the reference collection attached to this room will also be revised and extended shortly. A new select library is being formed in the open cases in the Camera, and will be completed before term. Accession lists of new foreign purchases, and of the most interesting purchases of old works, will be posted in both reading-rooms. The 723 volumes of the Catalogue are being paged; and an official will be employed for some years to come in revising all headings and titles, and indexing all extensive articles. For accessions, the cataloguing rules of the Library Association will be adopted, with only such modifications as are essential to the Catalogue; the practicability of introducing print will also be considered. The sorting of the spare set of slips which are to form a subject-catalogue is being rapidly expedited by a special extra staff; whether they shall be laid down in volumes or on cards is undecided. The long-designed classified re-arrangement of the library will be carried out (as intended) by first arranging the slips relating to a subject, and then bringing the books on it into a corresponding order. University College has transferred to the Bodleian, as a deposit, its collection of 185 volumes of MSS. A rough list of more than 1,200 Oxford-published books not in the library has been compiled, and very many have been already obtained. Half-morocco binding has been substituted for half-calf, and a new cheap binding for tracts, &c.—paper boards with parchment back—has been devised. All printed volumes containing several distinct works (not being homogeneous tracts) are now broken up on rebinding."

THE ANNUAL MEETING OF THE LIBRARY ASSOCIATION.

THE programme of the proceedings at the fifth annual meeting of the association, to be held at Cambridge on Tuesday next and three following days, has now been issued to members. The chair will be taken on Tuesday morning at eleven o'clock by Mr. Henry Bradshaw, who

will open the proceedings by delivering his presidential address. After the council and treasurer have presented their Reports, papers will be read on "Cambridge Libraries in 1710," by Prof. J. E. B. Mayor, and on "The Printing of the British Museum Catalogue," by Mr. Richard Garnett. In the afternoon, papers will be read by Mr. Eirik Magnússon on "The Spread of Books in Early Times," by Mr. Cornelius Walford on "Early Book Fairs," and on "The Trinity College Library" by the Rev. R. Sinker.

On Wednesday, papers will be read on "The Work of the Nineteenth-Century Librarian for the Librarian of the Twentieth," by Mr. E. R. Bowker, of New York, late editor of the *Library Journal*; on "Electric Lighting in Public Libraries," by Mr. Peter Cowell, of Liverpool; and on "Public Historiography and Printing," by Mr. James Yates, of Leeds. The Reports of the committees on illustrations to the cataloguing rules of the association and on the training of library assistants will be considered. In connexion with the latter, Mr. H. R. Tedder will treat of "Librarianship as a Profession;" and the day's work will be concluded by a paper on "Some Recent Schemes of Classification," by Mr. E. C. Thomas.

On Thursday, Mr. Henry Stevens will ask "Who spoils our New English Books?" and it is to be hoped will answer his own question; and the subject of binding will be thoroughly discussed, Mr. Henry Bradshaw writing on the "History of English Binding," and Mr. F. T. Barrett, of Glasgow, and Mr. J. Y. W. MacAlister, of Leeds, offering practical suggestions. In the afternoon, Mr. H. B. Wheatley will offer some "Thoughts on the Cataloguing of Journals and Transactions;" Mr. Wright, of Plymouth, will read a paper on "Librarians and Local Bibliography," and Mr. Henry Bradshaw a note on "Libraries as Local Book Museums;" and a Report on Size-Notation will finish the day's work.

Friday will be given up to private business, although one question of public interest will be discussed upon a motion by Mr. E. B. Nicholson, Bodley's Librarian, in favour of the Sunday opening of libraries, museums, &c.

Arrangements will be made for visiting the various colleges and libraries of Cambridge, and a small exhibition will be arranged by Mr. Bradshaw to illustrate the history and progress of the art of binding. On Tuesday evening the president will receive the members at King's College; and on Wednesday evening a *soirée* will be given at the Guildhall by the Committee of the Free Public Library.

MR. BULLEN'S COLLECTION OF OLD PLAYS.

MR. A. H. BULLEN, whose admirable edition of the works of John Day was reviewed in the *ACADEMY* of January 14, is now engaged in the publication of his collection of old plays, which, seeing the importance of the alterations made in the original scheme, bids fair to prove the most valuable contribution to the study of Elizabethan dramatic literature that has appeared for very many years. The first volume of the series, including four hitherto unprinted plays, has already been published, and we hope shortly to notice it at length. The second volume, which may be expected about next November, is to consist entirely, we understand, of dramas now printed for the first time from MS. sources. Through Mr. Bullen's courtesy we have had an opportunity of looking over these newly discovered plays, and we have little doubt that many of them will, when published, take a place among representative Elizabethan productions. "Dick of Devonshire," an unpublished anonymous play from Egerton MS. 1994, treats of the adventures of a popular

Devonshire sailor engaged against the Spaniards. Its vigorously worded pages give repeated expression to a fiery patriotism and a fervid enthusiasm for the sea, almost in the best Elizabethan vein. Mr. Bullen conjectures that the play, which is certainly by no 'prentice hand, proceeded from the pen of Thomas Heywood. Another work, "The Tragedy of Sir John Van Olden Barnavelt," printed from Addit. MS. 18653, is also characterised by considerable intensity of sentiment and expression. Whether the editor is quite justified in attributing this play to George Chapman, although the choice of subject and its general treatment might support the assumption, must be left for future discussion. "The Lady Mother," from the Egerton MS. 1992, and probably a sprightly domestic comedy, entitled "Captain Underwit," from the Harleian MS. 7650, will complete Mr. Bullen's second volume. The concluding volumes of the series will consist of equally interesting and inaccessible productions. The collection, it will be remembered, is being published by subscription; and we are surprised to learn that the list of subscribers, though limited to 150 names, is not yet filled up. We should have thought that twice the number of lovers of Elizabethan literature would have come forward to aid so important an undertaking. Mr. Bullen's address is Clarence House, Godwin Road, New Town, Margate.

THE DUBLIN EXHIBITION.

Dublin: Aug. 23, 1882.

IRELAND has always taken kindly to exhibitions. Long before the Marquis d'Avèze in 1797 started an exhibition at St. Cloud in aid of the starving workmen of the Gobelins and Sevres and the Savonnerie (carpets), the Royal Dublin Society used to hold small triennial exhibitions, award prizes, give bounties, and otherwise, wisely or unwisely, try to foster home manufacture. But it did not succeed. Irish manufactures, with the one exception of linen, kept going down. William III. is answerable for this to a considerable extent. He undertook to do what he could "to depress the Irish woollen, and to promote the Irish linen." He certainly "depressed the woollen;" for, whatever may be said about the advantage of protecting an industry, it is unquestionably possible to crush it out. As to "promoting the linen," William did much less in that direction than an Antrim man, who, finding trade stagnant and hearing that the Bradford weavers had got a law for burying in woollen, started the custom of linen scarves and handkerchiefs at funerals. It took; and not in Ireland only. So great was the consequent consumption that within twelve months the imports of Irish linen into the port of London were nearly trebled, and the impulse thus given enabled Ulster to hold her own against the previously successful rivalry of Holland. This was in 1729. The Irish woollen trade (once so famous that, by a statute of Edward I., Irish *friesages* were admitted into England, although they did not conform to regulation size, and the *saie d'Irlanda* was in good repute in Italy and Spain till the latter part of the sixteenth century) fell into decay, and carried with it several smaller trades—hat-making, fringe- and tape-making, &c., which had thriven in various places. Ireland, too, was not in a condition to recover from a blow of that kind. Macanlay describes, only too faithfully, the state of prostration into which she sank after the breach of the Treaty of Limerick. Molyneux and Swift tried to galvanise into life what William's Parliament had killed; but in vain. A great part of the manufacturing population of Dublin emigrated into the country; and, finally, joined by many country-folk, went to America to swell

the Irish colony whose bitter hatred of England was such a marked feature in the War of Independence. Only two mills lived through these bad times—Foley (now Lucy), of Cork, and Mahony, then of Cork, now of Blarney, which latter house is now at the head of the woollen trade of the country. When, in 1779, the ruinous statutes were repealed, they had done their work; and even the Volunteer movement, with its motto, surmounting a cannon, "Free trade or this," failed to give permanent life to the almost extinct industry. It did something; the statistics talk of fifty master-clothiers, employing 5,000 hands, in Dublin within a decade of the famous 1782. In spite of the disturbances of '98, there was marked progress; but with the Union a more fatal blight settled on the country. This is not the place for politics; but it belongs to our subject to remark that the Union, without Catholic Emancipation and the consequent elevation of the mass of the Irish people, was simply illusory. The class which could have encouraged home manufacture began to live in England and to acquire English tastes; and the masses were too poor and too unenlightened to be of any use to the cause.

Ireland had not got her political grievances settled when the potato-famine came; and a desire to give the country some set-off for the misery she had been suffering was the origin of exhibitions on a large scale. They had proved so successful in France that they were being held all over the Continent; and in 1852 Cork set the example with a big show of purely Irish goods, many of the exhibits bearing touching witness to the crisis through which the country had just passed, being the work of those who had been five or six years in the workhouse. Dargan's exhibition came the next year. It was a fine show, with an exceptionally good loan-collection; but of the exhibits very few even professed to be Irish, and those which did were often English goods with Irish names. It failed financially; the expenses incident to the visit of royalty far exceeded the value of the "patronage," and it did very little good to Irish manufacture. On the contrary, it taught the Irish that English fabrics were cheaper and more sightly, if less honest and lasting, than the goods to which they had been accustomed. Indeed, from 1853 may be dated, not the improvement of Irish fabrics owing to the adoption of the improved methods exhibited by the English manufacturers, but the spread of shoddy, which, even in many country parts, has superseded homespun as completely as tea and white bread (a legacy of the days of famine weakness) have superseded stirabout. Dargan's exhibition did not help to fulfil Isaac Butt's prophecy, uttered in 1841, that "the revival of manufactures will make Ireland great, prosperous, and happy." Several small exhibitions followed, notably one in 1864, in which home manufactures were far more largely represented than in the 1853 exhibition, or than in the so-called "international" exhibition of 1865. Indeed, it would seem that Ireland has not hitherto been in a fit condition for international shows. They have done no good; while the more unpretending affairs devoted to home products have always given an impulse to trade.

With the circumstances under which the present exhibition was founded Englishmen have no concern. It was determined to hold an exhibition; and then there arose a dispute on the question of patronage, whereupon Lord Brabazon proposed that the whole project should be abandoned. This was accordingly done; but the people were resolved to have their show, and a joint-stock company limited soon found the necessary support. It is astonishing how little will start an industrial exhibition when we consider the cost of an

ironclad—nay, of a single discharge from the *Invisible*. Surely no one will blame the Irish for determining to “get rid” (in Mr. Butt’s words) “of that crouching spirit which depends upon patronage,” and with which, by-the-way, the English have been too fond of reproaching them. Certain it is that, not from any disrespect to the Queen, but from a determination to resist the domineering of a section of the Belfast folks did things take the line which they have taken. It was hard to get a site; Mr. Cecil Guinness refused the use of the old Dargan building. At last the Rotunda Gardens in Rutland Square were fixed on; and the greatest wonder is the speed with which the work was completed. There were only eighty-three working days between turning the first sod and the formal opening.

And it is a most creditable and interesting exhibition, small compared with that of 1853, but well fitted with well-made and admirably arranged exhibits. It will be best to take a very few subjects, and go through these with some care. Ceramic art is almost solely connected with the name of Belleek, where Messrs. M’Birney and Scott have been at work since 1852. Everybody knows the delicate little shells and vases, light as paper and beautifully iridescent, which may be called Belleek ware; there are plenty of these in two of the exhibition cases. It is a pity there is not also a selection of the good dinner and chamber ware which, as well as the toy-work, is largely made at Belleek. Anybody who wants to get a beautiful thing, and also to encourage Irish art, should order an afternoon tea-set. The things are sent carriage free to any English port. The only other “china” is some small vases, hand-painted, which Mr. Vorey, one of the exhibitors of the Belleek ware, has made by way of experiment. They are certainly a success; and here we may note that a good deal of English china is sent over to be hand-painted by Irish gentlewomen and in Dublin institutions. Of rough glazed pottery and also of artistic “terra-cottas” there is a good show from Coalisland, Co. Tyrone. Daniel Devlin, of this place, deserves notice as the first and only Irish manufacturer of vitrified sewage pipes. Fleming, of Youghal, also sends glazed ware, drain tiles, &c.; and so does M’Cormick, of Bray. Ferrumite, or artificial stone, is sent from Rocksavage Works, Cork; and Courtown, Queenstown, Athy, &c., send bricks and fire-bricks. Of flint glass, the only Irish maker is Pugh, of Dublin; his metal is excellent, and the engraving very good; but the latter is done by Austrian workmen. Of altar lamps and other brass-work there are many good samples by Hughes, and also by Mooney, of Dublin. Perry, of Cork, is more ambitious; his wrought-iron sanctuary gates are almost too elaborate. M’Loughlin, of Dublin, has some beautiful work; one spray, with rose and lily, sent in in the rough, would not discredit Matsys. J. Fagan, of Dublin, also shows good ironwork (it is a pity that in this case, as in others, all of the same class of exhibits are not placed together). His fire-grates with wrought standard are good; and he sends a fine oak door with richly wrought massive hinges. What a pity the work at Christ Church and St. Patrick’s was not entrusted to men like these, instead of being all got over from England. Bog-oak is well known; but the Kilmarney inlaid work—arbutus (the root for the darker shades) and box—will be new to many visitors. Some of this is as good as the best Tunbridge ware, and the veneers are much thicker. In bog-oak itself, some of Coggin’s blotting-cases and jewel-boxes are admirably done—rich in that peculiar ornament which is the charm of the *opus Scoticum*.

The machinery, really good and abundant, is beyond our scope; but Dublin has long been

famous for carriage-building, and the exhibits show that the art has not declined. Those, again, who want a cheap dog-cart can get one from Murphy, of Clonmel, at a good deal below the English price for a like article. Sisk, of Cork, shows wall-tiling and mosaic; M’Donough sends paper; Vere Foster (the father of inspection of emigrant ships) his well-known and excellent copy- and drawing-books; Marcus Ward has a good display not only of his cards, which are known everywhere, but of illustrated books and specimens of colour-printing. This firm may almost be called the restorers of Irish illumination. From their work the transition is easy to Art in its more limited sense.

One does not come to Dublin to see pictures; yet nobody should leave the exhibition without looking carefully through both the long upper gallery and the lower room which is to be opened to-morrow (August 29). In the former there are a characteristic Maclise—“King Cophetua;” several pictures of historical interest—“O’Connell as Lord Mayor,” “O’Connell at Olifden,” “O’Connell in Prison,” “Father Matthew,” &c.; some coast studies by P. V. Duffy; and two striking pictures by Thaddeus Jones, of Cork. G. Grey’s “Peasant Proprietor” is not bad, but it is by no means equal to James Grey’s “Home Manufacture.” The centre of the lower room is filled with cases of antiques—stone clubs, flint implements, bronzes, &c., most of them lent by the Rev. Jas. O’Lavery, P.P. of Holywood, Co. Down, author of the valuable *History of the Diocese of Down and Connor*. They were collected by himself, so that in every case their history is known. Other cases contain autographs, coins, &c. We are glad of this addition; the show of Irish products was not complete without some examples of the early metal-work for which she was so famous. It is a pity that the Irish Academy and Trinity College should not have lent for the occasion those marvels of early work such as the Cross of Cong and St. Patrick’s bell, better known, we fear, to the foreign archaeologist than to the British or Irish public. Among the pictures on the wall of this room may be named two sketches by Dr. Petrie (263, 264), interesting because they are his; “A Glen with Rocks” (470) and “A Seaweed Beach” (490), by O. Stuart, who has one excellent sea-side picture in the long gallery; two very clever dance programmes by O’Hen (354, 355), the painter of the big picture of “Punchestown—the Irish Derby;” and a portrait (412) of “Father O’Malley,” the father of Home Rule. There are several old pictures, and a good many English—among them Frith’s “Marseilles Prison.” In the sculpture Foley, of course, towers sublime. M’Dowell is not represented. There is a good deal by both the Farrells; but Foley’s “Goldsmith” (perhaps his masterpiece), his “Burke,” and his figures from the Dublin Prince Consort Memorial (all placed in the nave) are enough to set us thinking how much of “British sculpture” has been done by Irishmen. O’Neill’s pulpit, of different marbles with numerous small figures in white oolite, almost ranks with the sculpture, though it is placed in another room.

On the whole, the English stranger will be pleasantly surprised at the state of the Fine Arts in Ireland as set forth in the exhibition. So few on the east of the Channel are aware that, though men like Danby, Mulready, Maclise, have generally exhibited in England, several of those who are content with the Dublin Academy are very clever artists. But it is to arts other than what are called “fine” that I wanted to call attention. Everyone who can do so should come and see for himself how Ireland stands in glass ware, in woollen fabrics, in printing, in ornamental metal-work, as compared with England and Scotland. It is just

the time to see the Dublin people, too. They are enthusiastic, and in a good cause.

HENRY STUART FAGAN,
Rector of Great Cressingham, Norfolk.

PS.—A word about the needlework. The round room is nearly full of it, some gorgeous and intricate (Mr. Hill Burton says the Scotch art “runs too much into minuteness”—a good fault in needlework); some simple, like that sent by the poor evicted folks of Ounrao and Olymagh, the exhibitor of which, Miss Yates, with her quiet resolute enthusiasm, is *toto coelo* removed from the English idea of a lady Land Leaguer.

CORRESPONDENCE.

"THE LAST SUPPER" AT TONGERLOO.

Hortel House, Halifax: Aug. 19, 1882.

On a recent tour in Belgium, I paid a visit to the abbey of Tongerlo, belonging to the Order of St. Norbert, commonly called Premonstratensians, which was founded in 1130 by Giselbert. The religious were expelled from this monastery during the French Revolution in 1796, but were able to purchase back their own property and to return in 1840.

Some rare tapestries and pictures were saved; and out of the number was a superb tableau representing "The Last Supper," a reproduction on the same scale as the famous mural painting in the refectory of the convent of Sta. Maria delle Grazie at Milan. The existence of a work of this nature is not generally known in the art world, so that a brief description of the picture may be interesting to some of the readers of the ACADEMY. It may induce some of them to visit the monastery, and inspect for themselves this important work. There are not many reproductions of the original painting. The best-known, according to Eastlake, may be summed up as follows:—(1) In the Royal Academy, by Marco d'Oggione; (2) in the refectory of the convent of Castellazzo at Milan, by the same painter; (3) the more modern cartoon in the Leuchtenberg gallery at Munich, by Bossi; (4) the mosaic in the Ambras gallery, Vienna. The picture in the refectory of the abbey of Tongerlo is in an excellent state of preservation, though it has evidently been subjected at some time to rude treatment. Its history, apocryphal or not, is thus given by its present possessors; they are prepared to produce evidence as to its antiquity:—

It became the property of the religious in 1544, when it was sold by the heirs of one Jean le Grand as the work of Leonardo da Vinci himself, having been painted expressly for Pope Clement VII., who intended it as a present for Henry VIII. In consequence of the apostasy of the English king, it received another destination, and was sent to Flanders in order that a design might be woven from it in silk and gold. Whatever may be the truth of this narrative, and whoever may have been the painter, the work resembles in all its details the great painting at Milan, so that a general conception of the grandeur and power of the original may be easily gathered by the art student.

Tongerloo is situated about six miles from Herenthals; it may be reached from Antwerp, stopping at the station of Oosterloo; from Louvain, by Arschoot and Monchoveron. A pleasant walk of three miles through a flat, pine-clad country will bring the artist or art connoisseur to the monastery, where, I have no doubt, he will be courteously received by the Lord Abbot—the Right Rev. John Chrysostom de Swertz—more especially if he mentions his desire to see the tableau of "The Last Supper." The Lord Abbot is an accomplished scholar, speaking English, French, German, Spanish, and Latin fluently. The artist will find on his entrance to the monastery an avenue of lime-trees, planted about the sixteenth century, which will almost of themselves repay the visit.

TH. M. DOLAN.

"RESTORATION" AT THE TOWER OF LONDON.

The Society for the Protection of Ancient Buildings, 9 Buckingham Street, Adelphi, W.C.: Aug. 26, 1882.

In the June number of the *Nineteenth Century* appeared an article on the Tower of London by Mr. A. B. Mitford. Its aim was stated to be "to explain the object of certain works of restoration which have been carried on for some years past, and which it is hoped will shortly be brought to a good end." From the

position of the writer, the article may be regarded as a semi-official exposition of departmental intentions. It begins with a discussion of the questions at issue between "Restorationists" and the Society for the Protection of Ancient Buildings, which at once discloses that the writer hopelessly misunderstands the aim of that society; then follow a disquisition on the history of the Tower, and a eulogy of the "restoration" done from time to time, some of which is described "as not mere restoration in the sense of keeping together the existing state of things, but also of alteration." To our thinking, the restoration of the chapel in the White Tower and that of the Cradle Tower, the latter with joints of wide black mortar, neat dressed stonework, flat concrete roof, and rolled iron joists, of which Mr. Mitford boasts, are painful examples of that "barbarous stupidity" which he elsewhere deplures. They show to anyone who may see them, and who will take the trouble to think the matter out, the irreparable injury which old work suffers at the hands of restorers, however well-intentioned.

We are then told that no work at the Tower can be satisfactory till the great warehouse which succeeded the fire in 1788 is removed. Were it this warehouse only that it is intended to remove, no objection need have been made, as it is entirely modern and uninteresting, and is, moreover, said to be in an unsafe condition. But it is proposed also to clear away the whole of the buildings occupying the site between the Salt Tower on the east and the Wakefield Tower on the west. Now, between the end of the warehouse and the Wakefield Tower, which it connects, stands a modest building (of the existence of which Mr. Mitford is apparently ignorant) which is of genuine old workmanship and of considerable value and interest. Its loss would be as irreparable as that of the Lanthorn Tower which Mr. Mitford laments; yet this is quietly condemned to be swept away in order to make room for a modern presentment of the old inner ballium wall and Lanthorn Tower. Such a feeling we entirely fail to understand. The elevation of this house, which was formerly the residence of the Keeper of the Records, is of some architectural pretension. The wall, though not of continuous building with the adjoining Wakefield Tower, is of mediæval construction, altered by subsequent face repairs. It has been pierced in later times by a doorway and windows, the former of which is surmounted by a large and boldly ornamented and carved royal escutcheon of a date between Charles II. and Anne, which bears the motto "Semper eadem." In the interior there is a mediæval spiral stone staircase leading to the first and second stories, the front rooms of which are lined from floor to ceiling with oak panelling, and the windows of which have oak shutters, window backs, and seats, all of a date not later than the reign of Anne, possibly as early as Charles II. or James II. Some of the panels serve as doors to deep recesses in the wall, in which were formerly kept part of the records of England; and in these rooms lived and laboured Sir F. Palgrave and Sir T. Duffus Hardy. After lamenting the loss of the Lanthorn Tower, Mr. Mitford confesses that the new building proposed to be erected on the site of the warehouse will

"be but a reproduction," and that "no one will pretend that as a work of protection the inner ballium is now a necessity;" but he says that—"as a building of some sort must take the place of the warehouses removed, for a portion of the accommodation will be wanted—to put anything else in this place but a true representation of what stood there of old would be an act of stupidity and vandalism."

Will not the attempted reproduction, which is to be accomplished "by following strictly in

the old lines, which have been preserved in ancient drawings and engravings," be an act of greater stupidity? Where are the old drawings and engravings which show the old work sufficiently accurately to allow of its reproduction?

Mr. Mitford once challenged the society to say what other building should be put in place of the warehouses, if a presentment of the Lanthorn Tower, &c., be inadmissible. The society might reply, What would be the most useful building that the site allows? Is the cylindrical form the best? Rather, is it not the most inconvenient of all forms for the purposes to which the new building is to be put? Would not the new tower, with its side curtains, be but a sort of toy, the wonder and admiration of people who go to stare at the axe and the block? Could it possibly be accepted by educated people as a true image or presentment of the Lanthorn Tower, built at a time when English architecture was noblest? There are several reasons why anything approaching a "correct presentment" is impossible. We have no positive guide to the rebuilding, except what may be found of the foundations when the warehouse is removed. The old views of the Tower are too small and too general to be relied on for any detail. No drawing made before 1788 of a Gothic building would be accurate, whatever its size. We have no record whatever as to the arrangements and details of the interior; and restoration of this most important part of the Tower, in which Henry III. had his apartments, would be wholly conjectural. To this general, almost total, uncertainty must be added the disappointment attaching to all attempts to reproduce the character and style which belonged to mediæval work, which are quite unattainable at present, and our reproductions of which are always awkward, stiff, and spiritless in consequence.

These are some among the difficulties fatal to the work before it begins. They are stated, as the opinion of the society was challenged; but if it were merely a question of replacing tumble-down storehouses with something more picturesque, the society, which was founded for the protection of ancient buildings, and not by any means for the discouragement of studies in ancient architecture, any more than for the criticism of genuine modern architecture, would have nothing further to say. Whether it were the Lanthorn Tower or the Mausoleum of Halicarnassus, the exercise would not concern it more than other taxpayers. But in making the examination of the buildings proposed to be destroyed, other objections of a much more serious kind present themselves. It is not merely the fanciful reproduction of an ancient work, but the positive destruction of the old building before described, that comes in question. That building is in many ways beautiful; it is clearly a part of the original Tower, and is associated in various ways with its history.

Surely the reviving respect for the Tower of London, which Mr. Mitford so eloquently represents, would be better shown by preserving this fragment of the real building than by pulling it down to make way for a restoration which must be almost entirely conjectural, and, at the best, can never have the value of the smallest fragment of original work.

THOMAS WISE, Secretary.

SCIENCE.

Anecdota Oxoniensia. Classical Series. Vol. I., Part 2. Nonius Marcellus, Harleian MS. 2719. Collated by J. H. Onions. (Oxford: Clarendon Press.)

THE second part of the first volume of the "*Anecdota Oxoniensia*" (classical) is a new collation by Mr. J. H. Onions, of Christ

Church, of the Harleian MS. of Nonius, assigned to the ninth or early tenth century. This MS., of which Quicherat seems to have had but an imperfect collation when making his edition, contains a great number of valuable readings, partly new, partly already anticipated by conjecture; while others render correct conjecture easier than it had been before. In a scholarly preface Mr. Onions gives an account of the MS., which is written in three hands and annotated also by three.

Nonius Marcellus was an inhabitant of Thubursicum, in Numidia Proconsularis. An inscription, of A.D. 323, found at that town, and printed in the eighth volume of the *Berlin Corpus Inscriptionum Latinarum* (No. 4878), mentions a Nonius Marcellus Heraculus as restoring a pavement and baths. If this Nonius was the author of the *De Compensanda Doctrina*, we may imagine our scholar, like many other Roman *litterati*, as a citizen of the upper classes, and withal a man of substance and liberality.

The work which bears his name consists of twenty books, which may, for the sake of convenience, be said to fall into three classes—lexicographical, grammatical, and antiquarian. The first class comprises books i., "De proprietate sermonum;" ii., "De honestis et nove veterum dictis;" iv., "De varia significatione sermonum;" v., "De differentiis similium sermonum;" vi., "De impropriis." The grammatical books are—iii., "De indiscretis generibus;" vii., "De contrariis generibus verborum;" viii., "De mutata declinatione;" ix., "De numeris et casibus;" x., "De mutata coniugatione;" xi., "De indiscretis adverbis." The twelfth book, "De doctorum indagine" ("a selection from the researches of learned men"), is a miscellany of grammar and lexicography. The remaining books are antiquarian:—xiii., "De genere navigatorum;" xiv., "De genere vestimentorum;" xv., "De genere vasorum et poculorum;" xvi., "De genere calceamentorum;" xvii., "De colore vestimentorum;" xviii., "De genere ciborum et potuum;" xix., "De genere armorum;" xx., "De propinquitatibus et cognominibus." The sixteenth book is lost, and only a fragment of the twentieth is preserved.

For his supposed ignorance and stupidity Nonius has long been the butt of modern scholars; and no doubt there are mistakes enough in his book. But two considerations must be borne in mind. The text of Nonius has been handed down in a mutilated condition, all known MSS. having apparently been copied from an archetype in many places corrupt, and in not a few imperfect. Mr. Onions' collation of the Harleian MS. shows that in the ninth or early tenth century there were two differing recensions of this imperfect text, both of which the copyists had before them; but the complete text of Nonius has not yet been discovered. Secondly, there is nothing to show that the scholarship of Nonius fell below the average standard of his age. He was, if the title of his work as preserved in our copies may be trusted, a professed Peripatetic; and this implies that he was at least not destitute of philosophical culture. That he consulted excellent authorities there can be no question; that he was a genuine lover of antiquity appears from the

fact that he hardly ever quotes any writer later than the Augustan age. It is generally supposed that he borrowed largely and without intelligence from Gellius; but a close examination of the facts points, as I have elsewhere endeavoured to show, to the conclusion that Gellius and Nonius are independent, and derived their common information from the same sources. What were these sources? The grammatical books may be almost certainly traced to Pliny and Probus (see Conington's *Vergil*, vol. i., pp. lxxviii. foll., fourth edition). Much of the lexicographical work, notably much of that in the first book, must have come ultimately from Verrius Flaccus, though Nonius probably had several later treatises before him, such as that of Caesellius Vindex, from which the first, second, fourth, fifth, and sixth books were copied or abridged. The antiquarian books may with some probability be referred to the *Pratum* of Suetonius, or to some similar work of the same period.

The strong probability that when we are reading Nonius we are in many cases reading Verrius Flaccus, Probus, or Pliny lends a fresh interest to the work of the despised African scholar. His book is to all appearance an imperfect epitome of the scholarship of the first and early second centuries after Christ. This was, perhaps, the golden age of ancient Roman philology; at any rate, it was the period after which nothing at the same time new and true was contributed to ancient Italian grammar or criticism.

H. NETTLESHIP.

NORTH AMERICAN BUTTERFLIES AND MOTHS.

Papilio. Devoted to Lepidoptera exclusively. Organ of the New York Entomological Club. (8vo, 2 vols., in monthly parts. New York.)

Butterflies and Moths of North America. With Full Instructions for Collecting, Breeding, Preparing, Classifying, Packing for Shipment, &c. By Herman Strecker. (Reading, Pa.: L. Diurnes; 1878. Large 8vo, pp. 283.)

The Butterflies of North America. With Coloured Drawings and Descriptions. By W. H. Edwards. (4to, in parts, each containing five coloured plates.)

Lepidoptera, Rhopaloceres and Heteroceres, Indigenous and Exotic. With Descriptions and Coloured Illustrations. By Herman Strecker. (4to, in parts, each containing one coloured plate, with descriptions.)

An Illustrated Essay on the Noctuidæ of North America. With "A Colony of Butterflies." By Augustus Radcliffe Grote. (8vo, pp. 86, four plates. London: Van Voorst; 1882.)

Illustrations of Typical Specimens of Lepidoptera Heterocera in the Collection of the British Museum. Part IV., "North American Tortricidæ." By Lord Walsingham. (Printed by Order of the Trustees of the British Museum; 1879. 4to, pp. 84, seventeen plates.)

THE study of zoology, and more especially the entomological portion of the science, is making rapid advance in North America; and the various publications which have recently appeared upon the subject are formidable rivals to those of the Old World. In the heading to the present article we have given the titles of some of the more recently published works which we owe to the zeal of American writers, who, following the plan adopted by juvenile entomologists, have been especially charmed

by the beautiful insects, butterflies and moths, which have in all ages attracted the attention of the observer of natural objects. So far has this partiality to these particular insects extended that a periodical work, the first in our list, is in course of publication, entirely confined to the order Lepidoptera, in which we find the names of Messrs. Bailey, Grote (whose New Check List of North American Moths, brought down to July 1, 1882, is announced), Stretch, Henry Edwards (the editor), Samuel H. Scudder (who has given a series of articles on the anatomy of diurnal Lepidoptera), Riley, Packard, and others as contributors.

The synonymical catalogue of H. Strecker, as far as hitherto published, is confined to the diurnal species, or butterflies, of which 472 species are carefully catalogued, with hosts of their synonymical names and references, accompanied by a useful Introduction and a supplement of nearly 100 pages, containing a complete Index and bibliographical notes of all the works hitherto published in which descriptions of these beautiful creatures are described.

The work of Mr. W. H. Edwards on the American butterflies has been in progress for a considerable period, the plates being executed in a first-rate style, each giving the life-history of a separate species of butterfly, the insect being represented in all its stages with the utmost care, reminding the student of the beautiful works of Sepp and Hübner.

The illustrated work of Herman Strecker is devoted both to butterflies and moths in the perfect state only, which are represented with great fidelity and boldness in a series of plates, executed by the author himself as a labour of love; the species selected are quite miscellaneous, but do not extend to the Geometridæ or the Microlepidoptera, as the small moths are collectively termed.

Mr. Grote's *Illustrated Essay on the Noctuidæ of North America* is a valuable addition to our knowledge of the North American "thread-horned, full-bodied moths" (as the Noctuidæ were comprehensively termed by the older English Aurelians), although the title of the work is somewhat too comprehensive. In a Preface of sixteen pages, the author regrets that there is no work on any American species of Noctuidæ similar to Prof. Huxley's exhaustive volume on the cray-fish, instead of which he gives a rapid sketch of the life-history from the egg to the moth-stage of *Aletia argillacea*, the cotton worm of the Southern States—a very destructive species, which has already formed the subject of an extensive volume by Prof. Comstock, recently published by the Department of Agriculture, and a shorter one by Prof. O. V. Riley. But Mr. Grote considers that the history of this species is not yet fully ascertained, especially in reference to the relation of its appearance in widely spread districts according to the prevalence of certain peculiarities of atmospheric influences and prevailing winds. In respect to the objections raised by the author against the use of Paris green as a preventive against the attacks of this cotton worm and other insects injurious to agricultural produce, he grants that Paris green has saved a good many crops of potatoes in the United States from the attacks of the Doryphora, or potato-beetle, but he asserts that lime applied to the young insect, and an industrious use of the beating process, would have effected the same result; at all events, the attack made by the author upon Prof. Riley is in bad taste, and might have been well spared. In a chapter of fourteen pages the author rather vaguely discusses the classification and relations of the Noctuidæ. We are then treated with a critical revision of forty-five species of the family described by the late Mr.

F. Walker in the British Museum Catalogues, admitting at the same time that

"It will be only after much labour that Mr. Walker's names will cease to annoy the student. I have shown here the necessity which exists that this work should be undertaken by a competent hand. It will need a great deal more patience than the description of new species. In order that some conclusion be arrived at which will allow the study of American moths to go on with safety to the describers of species, I hope that the authorities of the British Museum will undertake this work, which, until it is done, will always be expected of the institution which sanctioned the printing of Mr. Walker's Catalogues."

This is followed by notes (chiefly referring to localities, names of captors, &c.) upon forty-five handsome species of the family previously described by the author in various American journals, of which an admirable series of coloured figures are given in four plates. The work terminates with a dissertation upon "a colony of butterflies" which is stated to have settled in New England upon Mount Washington, in New Hampshire,

"about one hundred thousand years ago [*sic*] during the decline of the Ice period, and their descendants occupy the rocky summit of that mountain to this day. Mount Washington is 6,293 feet high, and the White Mountain butterflies are not found below an elevation of about 5,000 feet,"—the caterpillars feeding upon the sedges which grow, as best they may, in hollows between the rocks. The butterfly is known by the name of *Oenete semidea*. The distance from Mount Washington to Long's Peak, Colorado, is 1,800 miles west, and 1,000 miles northward to Hope-dale, Labrador. In the intervening districts no butterflies like the White Mountain butterfly are to be met with; but on these mountains "species similar to the White Mountain butterfly, and probably one exactly like it, are found again occupying elevated lands."

"This is a strange distribution for a butterfly; and so the question comes up as to the manner in which it was brought about. By comparing what has been found out with regard to past conditions of the earth and the present state of things, a solution of the question has been offered. This solution gives us the Ice period in North America as the agent which induced the present distribution of the genus to which the White Mountain butterfly belongs."

This is followed by a dissertation on the geological aspect of the question, which will doubtless interest enquirers as to the present geographical range of plants and animals.

Lord Walsingham's beautiful volume, published by the British Museum, is an important addition to our knowledge of the smaller species of the order, being confined to the moths belonging to the family Tortricidae, of which the common Codling moth is a well-known British example. A large number of new species were collected by Lord Walsingham himself in California and Oregon, which he liberally presented to the British Museum; and many species in the national collection named and insufficiently characterised by the late Mr. F. Walker are fully described and figured in this work, in which 155 species are described, and beautiful figures given of 170 different species and varieties.

J. O. WESTWOOD.

CORRESPONDENCE.

THE CODEX AMIATINUS OF THE LATIN BIBLE.
Florence: Aug. 26, 1882.

For many years I felt almost certain—from intrinsic reasons—that the celebrated Codex Amiatinus of the Latin Bible, preserved in the Laurenziana at Florence, is not of the sixth, but of the ninth century.

Having come to Florence expressly to examine those parts of the document in ques-

tion which bear upon the Septuagint, and having been with much courtesy allowed at once to inspect the book and to re-collate what I wanted to get re-collated, I may be allowed to state that the external evidence fully agrees with what I had anticipated. I may, I think, go so far as to conjecture that the MS. was written in all probability at Reichenau on the Lake of Constance, by the same scribe to whom we owe the copy of Jerome's *Psalterium iuxta Hebraeos* now preserved at Carlsruhe, and made use of in my edition of this version.

Scholars desirous of forming a judgment of their own are requested to get put on the same table before them the celebrated MS. of the Pandeots, which appears to me to be of the beginning of the seventh century, and the Codex Amiatinus of the Latin Bible. They will at once see the difference between a genuine and an artificial uncial handwriting, between real old vellum and vellum of the Carolingian age, between the truly antique size of a book and a size chosen in order to make the most of the skins at hand.

PAUL DE LAGARDE.

THE BOOKS OF THE ANCIENTS.

Jena: Aug. 15, 1882.

In the last number of *Hermes* (17. 3. 377) H. Diels criticises the stichometry of Graux and Birt, and suggests that the normal *stixos* was reckoned, not at thirty-five letters, but at sixteen syllables, and finds an example in Galen (v. 655 κ). But the example is not clear, and the English printers' practice of paying compositors by the number of letters set up shows it is not hard to estimate this number; while lines reckoned by syllables only would vary too much for practical use. The line-length depended, rather, on the (hexametric) width of the *charta*, and the lines were reckoned simply from copies written on paper of this normal width. The number of letters would then naturally vary (33-37) in different lines. Diels also argues that Birt trusts too much to the subscriptions of the Herculean papyri, but this affects none of his conclusions. Objection has been taken (*Liter. Centralbl.* August 12) to two other of Birt's conclusions—that papyrus was dearer than membrane, and that the author received an *honorarium* from the publisher; but both need more discussion. It may be added that K. Püth, in *Rh. Mus.* 35. 468, notes traces of stichometric numbering in the Urbina MS. of Isokrates.

F. HAVERFIELD.

NOTES OF TRAVEL.

MESSRS. SAMPSON LOW announce for immediate publication a new book by Lady Brassey, entitled *Tahiti*. It will be illustrated with autotypes, after photographs taken specially by Col. Stuart-Wortley.

THE Bolivian Government has despatched an expedition of 100 soldiers, under the command of a Lieutenant, to avenge the death of the French explorer Dr. Orebaux, who was recently murdered with all his party by Toba Indians on the Pileomayo River.

M. ALPHONSE L. PINART proposes to publish in Paris the results of an expedition he has recently made through Central America and Mexico.

Polybiblion states that M. Laroche, of the Société de Géographie de Paris, is engaged upon a systematic bibliography of all geographical works relating to England.

MAPS of Egypt continue to multiply. Mr. Stanford has sent us two more—one of which, a large map of the country between the Suez Canal and Cairo, on the scale of four miles to the inch—will be invaluable to all those who

wish to follow the present military operations. Not only are names thickly printed, but the physical configuration of the country is very clearly indicated. The other of Mr. Stanford's new maps will be useful for its plans of Cairo, Ismailia, Suez, and Port Said.

WE have also received from the *Graphic* office an advance copy of their supplement to be issued to-day, which consists of a tinted bird's-eye view of the Suez Canal and the country as far as Cairo. It is hoped that this "will largely assist the public in following the course of events now transpiring in Egypt"—by which, we suppose, is meant events of which Sir Garnet Wolseley allows the news to leak out.

SCIENCE NOTES.

WE regret to hear that the collection of shells of the Mediterranean formed by the late Henry H. Calvert has been destroyed together with the consulate at Alexandria. This collection was said to be unique, and Mr. Calvert had announced his intention of presenting it to the British Museum this very summer. We fear that Mr. Calvert's valuable collection of Egyptian *anticas* must have perished at the same time.

THE French Government has decided to send out the following scientific missions:—M. Chapiet, vice-president of the Société géologique de France, to study the geology and mineralogy of India; Prof. Joret, of Aix, to examine the ethnology of Denmark and Norway; M. Babot, to explore the great glacier of Swarlisen, in Norway, and also Russian Lapland; M. Raffray, vice-consul at Tamatave, in Madagascar, to form a collection of the fauna of that island; and M. Munier-Chalmas, assistant at the zoological laboratory in Paris, to undertake zoological researches in the neighbourhood of Cormons, north of Trieste and Slavonia.

HERB. HELMERSEN has been appointed Director of the Geological Institute of Russia. A detailed geological map of the Russian empire is in preparation under the care of the Institute, a credit of 30,000 roubles (£3,000) having been provided in the budget of 1882.

THE botanical section of the *Encyclopédie der Naturwissenschaften* (Breslau: Trewendt), edited by Dr. Schenk, to which we have already more than once alluded, proceeds rapidly and satisfactorily. In the domain of Cryptogamic Botany, Falkenberg's *Algae*, which we have already noticed, has been succeeded by Pfitzer's *Diatomaceae* and Goebel's *Muscineae*, both the finished products of master-hands, and very valuable accounts of the most recent investigations in their special departments; while Dr. Haberlandt contributes a treatise on the physiology of vegetable tissues; and Prof. Detmer one on the physiology of growth.

PHILOLOGY NOTES.

MR. W. M. RAMSAY has been fortunate enough to obtain five Kappadokian cuneiform tablets, together with a scarab and a terra-cotta whorl closely resembling those found by Dr. Schliemann at Troy. He has also examined two curious stones discovered between Amasia and Amisos. They are covered with rude reliefs of an extraordinary description. One of them represents a king and attendants in the "Hittite" dress receiving some prisoners, whose costume Mr. Ramsay would call Phrygian. Above the scene is a cuneiform inscription of five lines, which are separated from one another like the lines of the Hittite texts. At the end comes the mark which denotes the end of a paragraph in the Hittite inscriptions. The forms of the characters are rude and remarkable,

and the language they embody resembles that of the Kappadokian tablets. The inscription on the other stone consists of two short lines of perfectly unknown characters.

DR. A. C. BURNELL has undertaken for Messrs. Trübner's "Oriental Series" a new translation, with introduction and notes, of the *Mānavi-dharma-sāstra*, commonly known as the "Laws of Manu."

M. EUGÈNE REVILLOUT, assistant-keeper of the Egyptian Museum at the Louvre and the first demotic scholar in Europe, has received a mission from the French Government to examine the demotic papyri in the British Museum, and also those at Dublin.

THE Madras Government has issued a series of Chronological Tables for Southern India from the sixth century A.D. onwards, compiled by Mr. Robert Sewell, of the Civil Service, for the use of archaeologists who may wish to fix the date of inscriptions and other early records.

WE learn from the *Revue critique* that two important monographs have recently been published at Athens upon the topography of the ancient Peiræus. The one, by Prof. Oh. Dragatsis, fixes the site of the two theatres at the Peiræus and of the harbour known as *κρητὸς λιμήν*; the other, by M. A. Meletopoulos, treats of the arsenal of Philo.*

THE Greek journal, the *Ἀθηναίος*, has ceased to appear.

WE have received two numbers of a journal entitled *Nyare Bidrag till Kännedom om de Svenska Landmälen och Svenskt Folkliif* (Stockholm: Samson and Wallin), which is published at irregular intervals on behalf of the three Swedish dialect societies at Upsala, Helsingfors, and Lund. The contributions principally consist of narratives and conversations in various provincial dialects. Many of these possess considerable interest as illustrations of folk-lore and of rural character and customs, although for the most part they have rather the appearance of literary compositions than of records of actual peasant utterances. For the representation of dialectal sounds an elaborate phonetic alphabet has been devised, containing more than sixty new characters, in addition to the ordinary italic letters. The editors have, however, wisely abandoned their original intention of printing their specimens of dialect entirely in this formidable alphabet, and have introduced a simple orthography, based on that of the literary language, and employing only three new letters. Dr. A. Noreen's severely condemnatory review of a work by one of his fellow-editors, Dr. H. A. Vendell, on the Swedish dialects of Esthonia, is rather a remarkable instance of plain speaking between colleagues. The editors would have done better to adopt some shorter name for their publication; the present long title can neither be easily quoted in full nor conveniently abbreviated.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. BARR, 115, Strand, near Waterloo-bridge.

Albert Dürer: his Life and Works. By Moritz Thausing. Translated from the German. Edited by Fred. A. Eaton. (John Murray.)

(Second Notice.)

IN 1490, after Dürer's term of three years' apprenticeship to Wolgemut was finished, he set out on his travels, after the fashion of the German youth of that period. "And when I had served out my time," he writes, "my

father sent me away, and I remained away four years until my father wanted me back again. And as I set out in 1490 after Easter, so I returned in 1494 after Whitsuntide." This is all Dürer tells about these four *Wanderjahre*, which must have been so important for the development of his mind and art. Not a word as to where he went, or what he learnt during this period. Nor is this easy to find out from other writers. According to Neudorfer, whose statement is confirmed likewise by Pirkheimer and Christoph Scheurl, he was undoubtedly in Colmar in 1492, and there made the acquaintance of Martin Schongauer's three brothers, who "received him honourably and, entertained him in a friendly manner." Schongauer himself, whom Dürer had greatly desired to know, was dead at this time, but he must have been well acquainted with the engravings of this charming master, and possibly went to Colmar to study his mode of painting as well as engraving. It would seem he went to Basel also, where he was received by a fourth brother of Schongauer's; and, if we may believe an old inscription on two portraits formerly in the Imhof collection, he must have been in Strassburg in 1494.*

This is all that has been gleaned of authentic fact concerning Dürer's *Wanderjahre*, though many writers have tried to find a clue to his whereabouts during these four years about which he is so provokingly silent. It was supposed at one time that he spent some portion of this time in the schools of the Netherlands, while other writers have thought it more probable that he crossed the Alps and studied in Italy.

This latter view it is which, after having been long out of favour, has lately been revived, firstly by Hermann Grimm and the Baron von Rettberg, and more recently by Prof. Thausing, who certainly supports it by a finer chain of reasoning than any of Dürer's previous biographers, who, for the most part, indeed, were content with merely assuming its truth.

But, although the arguments Prof. Thausing brings forward in proof of Dürer having journeyed to Venice during the latter part of his *Wanderjahre* are undoubtedly worthy of consideration, they cannot be said to be convincing. They rest—

1. On the mysterious sentence in one of Dürer's letters from Venice, in which he says "the thing that pleased me so much eleven years ago pleases me now no more." This is interpreted by Prof. Thausing as a reference to the early school of painting in Venice, which had given place before Dürer's visit in 1306 to the more brilliant school of Bellini. But Dürer, immediately after this perplexing sentence, runs on to speak of a certain Master Jacob (presumably Jacob Walch), of whom he says, "Also be it known to you that there are many better painters within this city than Meister Jacob is outside it [da draussen], although Anthony Kolb swears there is no better painter on earth than Jacob. The others laugh at this, and say if he were good for anything he would stay here."

* Prof. Thausing believes in the probable authenticity of these portraits, but to suit his own views he changes their date from 1494 to 1490 or 1491, merely stating that most likely the figure 4 had been read wrongly. This, however, is pure assumption.

It seems more likely, therefore, that the "thing" (by which term Dürer usually means either paintings or engravings by himself or other people) was some work of Walch's, whom, as we have seen, Dürer greatly admired when he was young. Their intercourse would appear to have taken place just about the time mentioned in the letter—eleven years before, when Dürer, returning from his *Wanderjahre*, found Walch settled in Nürnberg.

2. Christoph Scheurl, in his *Liber de laudibus Germaniae*, writing of Dürer's journey to Venice in 1506, uses the words "qui quum nuper in Italiam rediisset." But, on the other hand, this same Scheurl, a distinguished citizen of Nürnberg, and one of Dürer's friends, states expressly in another place that he made a tour through Germany during his *Wanderjahre*, and says nothing about a visit to Italy, so that this one word *rediisset* forms a slight foundation for any theory.

3. But Prof. Thausing's strongest argument is derived from a number of highly finished drawings and studies from Nature, many of them in water-colour, which lie scattered in various collections. Among these are several representing towns and places in the Tyrol and the valleys of the Alps which would certainly seem to have been executed during a journey to Italy. The question is, At what period? Prof. Thausing holds that, being undated and unsigned, they must have been executed before 1503, after which date Dürer was accustomed to sign even his drawings with his monogram. But this rule is by no means without exceptions; besides, we do actually find one of these landscape sketches in the British Museum, executed with the same minute care as the others, which is so signed and is dated 1506. Why should this particular work belong, as Prof. Thausing admits it does, to this period, and a number of others strongly resembling it in character of scenery and mode of execution be referred to an earlier journey of which we have no other knowledge. Prof. Thausing asserts, indeed, that Dürer, journeying to Venice on business in 1505-6, would not have had the time to stop to make these elaborate sketches. But how do we know that he did not make them on his return journey; or, as M. Ephrussi ingeniously suggests, may he not have taken a little excursion from Venice in the summer of 1506, and have refreshed his health among the surrounding mountainous districts, studying landscape the while, and opening his mind to direct impressions from Nature such as no other artist before his time had thought of recording in art? It is significant also that, whereas we find very few landscape motives in his early prints, we constantly find them introduced into the prints executed after his return from Venice.

But the argument that seems to me most powerful against the supposition of an early journey to Italy is derived from Dürer's own works. Is it probable that, if he had been subjected to Italian influences for however short a period during the impressionable season of youth, before his style was formed, he would have remained so utterly impervious to them as not to allow them to affect in the least degree the national character of his art? It is true he copied a few Italian engravings

in his early time, and now and then he introduces an Italian motive, derived from Mantegna or from Barbari, into his prints and drawings; but for the rest, he is German to the core, and never makes the mistake of the poor Italianisers who followed him of trying to deck German thought in Italian clothing. Look, for instance, at the noble "Apocalypse" series executed immediately after his return from his *Wanderjahre*. Can anyone believe this to be the work of a youth who had received Italian training and who had worked in a Venetian studio as Prof. Thausing supposes? It has been, as before said, the lament of many writers that he should not have had the benefit of Italian culture; yet here we have a writer who claims it for him, and yet cannot find one instance in which it materially affected his style.

After his four years of travel were over Dürer returned, we know not from whence, to his native town. "And when I came back," he writes, "Hans Frey treated with my father and gave me his daughter, by name Jungfrau Agnes, and he gave me with her two hundred florins. The wedding took place on the Monday before St. Margaret's Day [July 7] 1494," less than two months after his return.

This is all Dürer tells us regarding his marriage, and he scarcely mentions his wife again except now and then incidentally in his letters and journal. But Dürer's silence has been more than made up for by his biographers, many of whom have woven quite a pathetic little romance out of the supposed unhappiness of his domestic relations. Now it must be distinctly understood that the belief in this unhappiness has not grown up, as such beliefs usually do, out of mere tradition and hearsay, but is founded solely upon a letter of Pirkheimer's which is still preserved in the town library of Nürnberg. In this letter, which is addressed to Johann Tscherte, architect to Charles V. at Vienna, after speaking with the deepest feeling of Dürer's death, and saying that he had lost in him "the best friend he ever had in the world," Pirkheimer brings a fearful accusation against the wife of the man he loved. "But what grieves me most," he writes,

"is to think that he died such an unhappy death, for, after the providence of God, I can ascribe it to no one else but his wife, who so gnawed into his heart [sein Herz eyngenagen] and worried him to such an extent that he departed from this world sooner than he would otherwise have done. He was dried up like a bundle of straw, and never dared to be in good spirits or to go out into society. For this bad woman was always anxious, though she really had no cause to be, and she urged him on day and night and forced him to hard work only for this—that he might make money and leave it to her when he died. For she always feared him, as she does still, though Albrecht has left her property worth about six thousand gulden. But nothing ever satisfied her, and, in short [*in summa*], she alone was the cause of his death."

These bitter remarks and others of the same kind that follow are the only evidence that exists regarding the unfortunate disposition of Dürer's wife, and the question is whether we are to believe Pirkheimer or not. Prof. Thausing, who has long been known as the champion of Agnes Frey, considers that

this letter, which was not written until two years after Dürer's death, was composed in a fit of rage and spite against the virtuous Agnes, whom Pirkheimer admits to have been "an honourable, pious, and very God-fearing woman," because she had sold some very fine stag's antlers belonging to Dürer that he wished to have. Pirkheimer was an enthusiastic collector of such objects, as was Dürer also; and he hints that Agnes, who evidently had no great affection for her husband's learned friend, merely sold them in order to annoy him, which is quite possible. But it is difficult to believe that any gentleman, even in a fit of the gout, would allow his temper so far to get the better of him as to cause him to invent all these fearful calumnies against an innocent woman merely to gratify his feelings of spite. The distinguished councillor, reformer, and humanist was not, it is true, of very exemplary conduct. The present writer has indeed characterised him elsewhere as "an immoral old pedant," but it need not therefore be assumed that he was an inventor of malicious lies, as we must do if we accept Prof. Thausing's view of the matter. It may be possible that his irritated feelings led him to exaggerate the worries from which his friend suffered; but unfortunately a nagging tongue in a woman is not so rare an attribute that we need go out of the way to frame hypotheses to disprove it, especially when certified by what in any other case would be received as credible evidence.

In his seventh chapter, entitled "The Painter's Workshop, Assistants and Falsifiers," Prof. Thausing gives an excellent account of Dürer's mode of working, the commissions he received, and the paintings he executed with the help of apprentices and assistants. He does not consider that any of the paintings ascribed to Dürer's early period, such as the triptych at Dresden, the Holzschuher altar-piece, the Baumgartner altar-piece, &c., can be affirmed to have been painted by Dürer's own hand, but they proceeded from his workshop, and were painted under his direction, in the same way that he himself had formerly painted under Wolgemut. The production of painted altar-pieces seems indeed to have been looked upon both by patron and artist more as a manufacture than anything else at this time, and it was only at a later date that Dürer really can be said to have painted his pictures with his own hand. Perhaps it was the example of the Italian masters that led him so to do, though the first work Prof. Thausing reckons as having been executed entirely by himself is "The Adoration of the Magi" in the Uffizi at Florence, painted in 1504, before the journey to Venice. So also in the chapter called "The Artist and the Man" much information is given of a kind to interest general readers, who, it is to be feared, will be inclined to skip the controversial chapters that have most charm for the Dürer student.

It is to be regretted that Prof. Thausing has not given in his work the letters and journal of Dürer which he translated into modern German in 1872; but, with the exception of this omission, his history of Dürer and his works leaves little to be desired in its clear and exhaustive treatment of the subject.

MARY M. HEATON.

THE PARIS MUSEUM OF MEDIAEVAL SCULPTURE.

THE museum of casts from French mediaeval sculpture (*Musée de Sculpture comparée*), so long the dream of antiquaries, has at length begun to take its place as an accomplished fact. The incessant labours of Viollet-le-Duc, seconded by Government support tendered with no niggardly hand, through the instrumentality of the Commission des Monuments historiques, are now producing visible effect; and one of the vacant wings of the Trocadéro building is being gradually but steadily filled with a collection destined to take its place as one of the most important in France. At present only about half the wing is occupied, and scarcely half the casts already prepared are placed in their destined positions. It is impossible, therefore, to attempt a detailed description of the museum, hampered, moreover, as the visitor is by the lack of a catalogue, and by the fact that only a small proportion of the objects have their names attached.

The name "*Musée de Sculpture comparée*" is certainly not yet, and probably never will be, justified. The object of the collection is to give the student an opportunity of satisfying himself that in the Middle Ages there did actually exist a school of sculpture in France of the very first order, worthy to take its stand among the great art-schools of the world. That object will be best attained by making the collection itself as complete as possible, and not by wasting space and money on casts of the few pieces of foreign sculpture—Egyptian, Greek, Italian, and German—for which alone room can be found. The space at the disposal of the commission is large enough if they will confine themselves within due limits; but, if they are led away to attempt any such thing as the name they have chosen seems to imply, they will end in getting together a collection representative of nothing except the whims of amateurs. There are some dozen Egyptian casts and some half-dozen Greek—a few Aeginetan marbles, and so forth—a few German tombs, and a few pieces of Tuscan work, but these are of little use; they are not enough for comparison, and they destroy the feeling of harmony which might be one of the pleasantest effects of a collection of works from the various periods of a single great school.

In the Trocadéro the student of art has at last got the chance of which many have long been desirous. He can follow up the growth of a most important school of sculpture from its rise as the rude decoration of masonry at the end of the eleventh century to its culmination as a really fine art in the first half of the thirteenth. In due time he will likewise be able to trace the excesses into which it fell in the fifteenth century, and the extravagances which gradually destroyed it as the Renaissance proceeded and other arts arose to take its place.

The first and most completely furnished of the rooms at present open contains an excellently chosen series of representative works of the end of the eleventh and of the twelfth centuries. There are also a few Gallo-Roman tombstones and pieces of ornament—the ruder works of a vigorous school whose roots had struck deep and were destined in time to grow again. Of these, however, there are not enough to do the student much good, and we must for the present pass them by along with the other things Egyptian and Greek.

The earliest work that attracts attention is a very remarkable doorway from Clermont (*Pay-de-Dôme*)—*Notre Dame du Port*—dating from the end of the eleventh century. On each side of the door is a full-length figure patched into the wall in very high relief—Isaiah on the left, John Baptist on the right. Over the

door, and broader than it, is a bas-relief in the form of a pediment cut into the masonry; it bears representations of the Adoration of the Magi, the Presentation, and the Baptism. Above this pediment is the figure of Christ seated on a throne supported by gryphons and with a seraph on either hand. A dripstone in the form of a round arch shuts all this in above. In the spandrels above the dripstone are two oblong carved stones patched into the wall, the one bearing the Annunciation and the other the Nativity. Throughout, the style of the sculpture manifests strong Gallo-Roman traditions, and seems to be completely free from Byzantine or Arab influence. The attitudes are natural, the drapery is well massed and deeply incised; unfortunately, there has been a general disappearance of heads all round. No attempt at finish of detail has been made; the work is swiftly shaped by the chisel, and not gone over again. Why, when Gallo-Roman traditions were still so strong, did they produce so little permanent visible effect?

The real commencement of the Gothic school of sculpture must be dated, as Viollet-le-Duc pointed out, from the time when Eastern influence began to prevail, returning with the Crusaders from the lands of their pilgrimage. Western eyes became habituated in travel to Eastern forms, and Eastern artificers found a new field open to them in the barbarous countries of the West. The first school to arise at once notable and distinct makes itself known by the adornments of various buildings erected by or for the use of the Oluny monks. The museum possesses a worthy example of their work in an excellent cast of the tympanum of the south porch of St-Pierre, Moissac (Tarn-et-Garonne), dating from the commencement of the twelfth century. It contains, in bold relief, a figure of Christ surrounded by the symbols of the four evangelists and the four-and-twenty elders, the whole being contained within a ribbon ornament of purely Eastern character, and the lintel below being carved with a row of splendid medallions of decorative work, each slightly different from its neighbours. The carving of details is bold, every line that is cut is cut strongly, every bit of work tells. The arrangement is weak, the figures being crowded by main force into their places; but the decorative effect of the whole is excellent. Nothing can exceed the beauty of the medallions on the lintel. The hand that shaped the eight leaves in each (based on the acanthus) and fashioned the boss from which they radiate could have done much harder things. There is no sign of weariness, no lack of thought. No two leaves are the same, no two bosses are alike; from point to point the hand has been guided by a mind and not a plaster model. I know of no more perfect piece of reserved ornamentation in stone than this; I can conceive of nothing finer, nothing better suited for place and purpose. There is no particle of space wasted, and yet the whole looks light and easy. There is no barbarity of over-magnificence, no monotony of repetition, no poverty of invention. Light and shade play softly over the surface with constant variety of intensity and form.

Of equal importance, though an example of a very different style of work, is the well-known portal of Vézelay—the satisfactory interpretation of whose sculptures has as yet baffled every attempt. A noble cast of the whole doorway and recessing occupies the end of the first room. The tympanum contains a figure of Christ surrounded by the twelve apostles, and round it are eight compartments of sculpture; on the lintel is apparently a procession of people bringing their rents in kind to the convent—so suggests Viollet-le-Duc. The recessing is in two degrees, the *voussures* of the inner of which bear twenty-nine medallions, containing the signs of the zodiac and so forth. A figure

of John Baptist divides the two entrances. The sculptor apparently did not care to make his door an intellectual whole, but he would have it an ornamental whole, and the decorative effect of the carvings cannot well be surpassed. The workmanship is very different from that at Moissac, but links itself in style with that of the tympanum of the central porch at Autun (Saône-et-Loire), a cast of which faces it. The two are separated by a period of some third of a century, and a considerable increase of power is observable in the interval—the Autun relief being exceedingly feeble in design. The most conspicuous trick, of which both give examples, is in the manner of dealing with drapery, the skirts of it being usually jerked up at the hem, and the folds being as fine and numerous as in the gold-outlined robes of a Byzantine miniature. The figures are in both exaggerated, and their height is solely determined by their relative importance.

We must be content with simply mentioning a pillar from Arles, part of the tympanum over the north door of Cahors Cathedral, a very remarkable tympanum from Donzy, and a small, but exceedingly rich, portal from La Charité-sur-Loire—all of the twelfth century.

Of later twelfth-century work the best-known and, in some respects, the most important examples are taken from Chartres. Place has been found for the tympanum and two full-length portions of the pillared recessing of the central west portal, as well as for some dozen or more small sculptures from the *voussures* and elsewhere—and this not counting the specimens of work of the following century.

It is necessary to take exception in this place to one unfortunate feature of the arrangement at present adopted. The sculptures above mentioned are all grouped along one wall of the first room; but, in order fully to understand their meaning as parts of a whole system of decoration, the visitor is forced to compare them with photographs of the whole porch. These photographs he has to search for among a mass of others—an excellent collection so far as they go—brought together in a little recess beyond the second room. He is consequently obliged to perambulate to and fro for perhaps an hour before he succeeds in fully identifying each of the casts upon the photographs, thereby running the risk of being taken up as a madman or turned out as a nuisance. The authorities ought at once to arrange the photographs of twelfth-century work in the centre of the twelfth-century room—the value of their collection would be thereby doubled.

The most important of the Chartres casts are those of the portal columns and statues. The latter are of various heights, some surmounted by canopies and some not, but all remarkably slim. Statues occupying this position, it must be remembered, were originally carved, or at least supposed to be carved, out of the masonry of the recessed doorway; the angles of the recessing were first rounded off into pillars, and the pillars were gradually changed into statues. Of the progress of this latter change the Chartres figures are examples. They are half column, half statue. Till a very much later period columns are always placed above the heads of statues in this position (e.g., at Reims and Amiens), and it is not till we come to the completely developed architecture of the central work of Gothic art—the left portal of Notre Dame at Paris—that we find the statues completely independent.

The Chartres figures remain subordinate to the structural ends of the stones out of which they are hewn, but in themselves they are much better than anything that had previously been done. The groups in the little capitals above them begin to be something more than decorative—that of the burial of Christ being a really fine work of art; the mere introduction of these

groups manifests the tendency from decoration to history-telling. We may call this the expiring triumph of the twelfth-century decorative school of sculpture. Ornament is lavished with astounding profuseness; undercutting is the rule. Columns and mouldings are incrustated with a perfect network of carving; toil has been bestowed on well-nigh every inch.

Angels and elders and a multitude of other figures occupy the *voussures*. Their attitudes are usually somewhat stiff, and their figures slender; the type of face is flat, the heads being large but not deep. The draperies fall very straight in a considerable number of small and, as it were, engraved folds; there is comparatively little massing of drapery. The line that forms the hem of a garment is treated with most care, and is usually of a zig-zag form. The bosom drapery is employed because it gives opportunity for the introduction of a large number of similar curves of the catenary type. There is, of course, very little expression in the faces—some wear a gentle smile, others a vacant stare. Yet the little "Visitation" shows that the sculptor was not wanting in feeling and the desire to manifest it—the way Elizabeth embraces Mary and clasps her hand and they put their two heads together is very pretty.

The figure of Christ in the tympanum is a great advance. It has no unnatural slimness, and the face is dignified and calm. The drapery is divided into large masses, and then engraved with folds; but it is stiff, and there is no figure beneath it. The hair, especially that of the moustache and beard, is good—indeed, Chartres hair is, as a rule, excellent.

Figures of a king and queen, originally at Corbeil, but now moved to St-Denis, may be advantageously compared with the pillar figures at Chartres, and it is now for the first time possible to do so. They are wrought in a similar, but somewhat more perfected, style; details of surface are brought to a much higher degree of finish. By the nature of the case both figures are slim, and the drapery has to fall in vertical folds; nevertheless, it is far and away the best drapery of its date. The way in which the king's arm and hand are indicated through the cloak that covers them is really masterly, and has none of the vulgarity of later *tours de force* of the kind; from the hand the cloak falls in a vertical mass, furrowed by vertical folds, and ending, not in a hard zig-zag, but in a freer line. The different textures of the various richly embroidered garments of the queen are excellently rendered.

From the ancient church of St-Remy at Reims comes a niche of twelfth-century workmanship especially valuable as marking the transition to the perfect style of thirteenth-century work. A figure of the Virgin and Child is carved against the wall within the niche; but the most remarkable figures are the little angels in the *voussures*. On the key-stone are two more raising a soul in a cloth to heaven; these alone have preserved their heads, which are rather too large in proportion to their bodies. The carving of these angels is far in advance of any other twelfth-century work known to me. The fluttering skirts of their garments recall at once those of the inhabitants of Fra Angelico's Paradise. The folds are simple, light, and sufficient; there is no trace of mannerism about them; their success is complete.

Thus far nothing has been said of sculpture from that magnificent museum, the exterior of Notre Dame at Paris. It was not, however, necessary to form a collection of casts in the Trocadéro to enable students in Paris to study that; and, though there is no finer Gothic sculpture to be found in Europe, our objection is, not that we have too few specimens of it, but rather that we have too many. All over

France, in remote places, there are important pieces of work that must escape the notice even of the most patient traveller, and it would be much better to spend money upon casts of these than upon casts of objects already within easy reach and well known to all. However, no one will object to the possibility being placed within his reach of closely examining his old friends.

Commencing from the last quarter of the twelfth century, it is possible to follow the development of the Ile de France school on Notre Dame alone down to the end of the thirteenth century. The portal of St. Anne links itself with the twelfth-century work at Chartres; then follows the great central portal with its Last Judgment, unfortunately much restored, and its wealth of other sculpture; and then the culminating work of the period, the beautiful portal of Our Lady. Later than these are the various bas-reliefs of the north side and the very rich portal of St. Stephen on the south. Of all these works the new museum contains representative casts, the best being that of the tympanum of the portal of Our Lady.

Similar series of works decorate the exteriors of the cathedrals at Amiens and Reims, and of these, likewise, representative portions are reproduced. It is impossible, however, in a brief notice like the present, to attempt a sketch of the schools of sculpture of the culminating epoch, and without that no remarks of any value can be made on the part of the Trocadéro collection which illustrates them. Moreover, the thirteenth-century casts are not yet completely arranged. Suffice it to say that sufficient materials will, in a short time, be brought together to render possible a thorough investigation into the characteristics and developments of all the leading schools of French mediæval sculpture, and the architectural student may rest assured that there is a rich treat in store for him.

One question in conclusion. At the other end of Paris, in the Hôtel de Cluny, there are a considerable number of very valuable pieces of sculpture and ornament of the Gothic schools. Among them is the beautiful altar-piece from St-Germer, which, with its fellows, is almost lost among tapestries, old furniture, and similar unfitting companions. Worse than this, there are in the gardens, exposed to the weather, several very fine works. Why should not these be given over bodily to the new museum, where they would be of real value? Cluny is crowded to a painful extent; the space thus acquired would be a real gain, the sculptures would be seen, and everyone would benefit. But red-tape is as strong on the other side of the Channel as it is here, and there is probably little hope of so natural an arrangement ever taking place. W. M. CONWAY.

NOTES ON ART AND ARCHAEOLOGY.

We understand that the next exhibition of the Grosvenor Gallery will be devoted entirely to the works of Mr. Alma Tadema, with the exception of a few paintings by the late Cecil Lawson.

MESSRS. SAMPSON LOW announce for immediate publication several important art books. Among these are a new work in two volumes folio by Mr. G. A. Audsley, entitled *Ornamental Arts of Japan*, which will be illustrated with ninety plates, mostly in colours and gold; a translation of M. Charles Yriarte's *Florence* by C. B. Pitman, with 500 engravings; a translation of M. Auguste Chalmel's *History of Fashion in France*; or, the Dress of Women from the Gallo-Roman Period to the Present Day, by Mrs. Cashel Hoey and Mr. John Lillie, with twenty-one coloured plates after drawings by M. F. Six, and tail-pieces by Mr. Scott; and also a reprint of *Sir Roger de Coverley*, with 125

designs by Mr. O. O. Murray, engraved by Mr. J. D. Cooper, and an etched frontispiece.

MESSRS. GRIFFITH AND FARRAN, the successors of the Newberys, have recently discovered that they are the fortunate possessors of nearly the whole of the actual wood-blocks drawn and engraved for *The Looking-Glass for the Mind* by Bewick. They hope to be able shortly to complete the set, and they propose to issue a reprint of the edition of 1792, printing the illustrations from the actual wood-blocks. The following is the full title of this quaint and almost forgotten volume:—"The Looking-Glass for the Mind: an Intellectual Mirror; being an Elegant Collection of the most Delightful Stories and Interesting Tales, chiefly Translated from that much admired Work 'L'Ami des Enfants.'" The reprint will be prefaced with a brief introduction by Mr. Charles Welsh.

AN interesting exhibition of amateur art work was opened at Lancaster on Monday last. The undertaking owes its origin to a lady; and we observe that the work of lady artists is numerously represented in the Catalogue. Altogether, there are nearly four hundred water-colour drawings and thirty-four oil paintings. Under the circumstances we should have expected more paintings on china and embroidery. Lancaster is an historic town, but its population is not large. It deserves high praise for having set an example that may well be followed elsewhere. The exhibition will be open during the whole of September, at cheap rates of admission on certain evenings and some other times. Any profits will be added to the Lancaster contribution to the proposed Royal College of Music.

THE quarterly meeting of the Executive Committee of the National Society for Preserving the Memorials of the Dead was held on Tuesday, August 22. It was unanimously decided to hold a meeting of the society at Derby during the sitting of the Church Congress. Most satisfactory progress was reported in the enrolment of members, and the prospects of the society are most cheering. Several applications for assistance were entertained, and already the influence of the society has been used to good purpose. The secretary, Mr. W. Vincent, Belle Vue Rise, Norwich, will be happy to give further information.

THE New York *Nation* for August 17 contains a letter from Mr. P. G. Hamerton, defending at length his theory of "truth in art," which had been criticised in a review of his *Graphic Arts*.

A COMMITTEE has been formed at Urbino, under the patronage of the King of Italy, to celebrate the four-hundredth anniversary of the birth of Raphael. It is proposed to erect a statue of the "prince of painters" in Carrara marble, upon a pedestal bearing bas-reliefs illustrative of his art. A public competition is invited, and the models sent in will be exhibited together for twenty days, beginning with March 28, 1883, the birthday of Raphael.

L'Art has made another gift to the Louvre in the shape of a portrait by Allan Ramsay of Queen Charlotte, the wife of George III. The Louvre does not possess many pictures by English artists, but is now desirous of obtaining them, so that this portrait by our popular Scotch master will be a valuable acquisition. *L'Art* has also given to the Louvre six drawings by some unknown miniaturist of the French school.

ABOUT three years ago, Mr. Charles B. Curtis printed at New York a *Catalogue raisonné* of the works of Velasquez and Murillo, with a list of engravings after them, and historical and critical notes. We understand that the book will shortly be published in London by Messrs. Sampson Low.

THE French sculptor M. Bertholdi has been promoted to the rank of officer in the Legion of Honour, on the occasion of the unveiling of his statue of Rouget de l'Isle.

MUSIC.

THE BIRMINGHAM MUSICAL FESTIVAL.

I.

Birmingham: Aug. 30, 1882.

FOR the last half-century, the Birmingham Festivals have held a very prominent, if not the foremost, place among the musical institutions of this country. Important services have been rendered both to charity and to art by these gatherings; the sum of £111,862 has been paid over to the Birmingham Hospital since the foundation of the Festivals, and many secular and sacred choral works by eminent English and foreign composers have been specially written for, and produced at, Birmingham. The Festival which commenced last Tuesday at the Town Hall, if we may judge from the rehearsals and the first two days, bids fair to be very successful—at any rate, so far as regards singing and playing. The band, 142 in number, is excellent. There are 108 strings: M. Sainton is principal first violin, and M. Lasserre leader of the violoncellos; the woodwind, including the best London players, is, as usual, doubled. Mr. Stimpson is the organist. It was feared at one time that Sir Michael Costa would not be able to occupy his accustomed post; those fears have, however, proved groundless, and the veteran composer has now for the twelfth time wielded the baton here with his well-known skill and judgment.

The customary performance of the "Elijah" (Tuesday morning) attracted a very large audience, though not so large as at the previous Festival. The rendering of the oratorio was worthy both of the work and of the composer. "Elijah" is, as it were, the special property of Birmingham. There are many in this town, and some also in the band, who remember the memorable Festival of 1846; and everyone here is naturally anxious that Mendelssohn's masterpiece should be given in as perfect a manner as possible. Perfection is, however, well-nigh impossible; there were moments of unsteadiness in the choir, Mdme. Patey was once or twice sharp, and Mr. Santley was not in good voice. But, notwithstanding these slight flaws, the performance was exceedingly fine. The principal vocalists were Mdme. Albani and Miss Anna Williams, Mdme. Patey and Mdme. Trebelli, Mr. Lloyd, and Mr. Santley, who all sang in a manner deserving of the highest praise. Mr. Santley, in spite of the condition of his voice, gave an unusually fervid rendering of the "Prophet" music. The singing of the National Anthem before the performance gave one a taste of the capabilities of the choir; and throughout the "Elijah" choruses there were many proofs that the labours of Mr. Stockley, the chorus-master, have not been in vain. The quality of the voices is excellent, and the choir sing with much power and also with very great refinement. Particularly would we mention the "Baal" choruses in the first part, and "He watcheth over Israel" and "Behold! God the Lord" in the second. The work was given without encores, the president of the Festival wisely declining to make use of the power vested in him.

In the evening was heard Sir Julius Benedict's new cantata, "Graziella," originally intended for the Norwich Festival of last year, but not finished in time. It is a dramatic cantata in three scenes; the words are written by Mr. Henry Hersee. The plot is uninteresting, and the libretto is not calculated to inspire a

composer. Sir Julius Benedict has, however, produced a great deal of tuneful music and pleasing and effective part-writing. It is a pity that both in the music and orchestration he has at times yielded somewhat too freely to popular taste. The work was conducted by the veteran composer himself, who was greeted with enthusiastic applause. The vocalists were Mdme. Marie Roze, Mdme. Patey, and Messrs. Lloyd, King, and Champion. The second part of the concert was miscellaneous, including Mr. F. Cowen's *suite de ballet* "The Language of the Flowers," the "Eli" march, and Berlioz' overture to "Benvenuto Cellini."

This morning (Wednesday) every part of the hall was filled. The "Redemption" was to be performed. M. Gounod is known all over the world as the author of "Faust." He has now given us a new composition called a sacred trilogy, and he has himself described it as "the work of my life." It is evidently the work by which he would like to be remembered; but composers are not always the best judges, and, whatever may be its success, we do not think that it will ever eclipse that of "Faust." The subjects, however, are so totally different that one would scarcely think of comparing the one with the other; yet the same hand is visible in both works. The sacred trilogy, dedicated to the Queen, is not, as described on the Festival programme, an oratorio, but rather a sacred service suitable for a cathedral; and we believe that sections of it will often be thus given. The continual employment of "monotone" recitative is somewhat heavy and tedious in performance as an oratorio, but as part of a service would be effective and also appropriate.

In the Prologue we have first an instrumental introduction descriptive of Chaos. The Narrator then describes the creation, temptation, and fall of man; he explains the necessity of a divine mediator, and tells of the promised Saviour. A flowing and graceful melody "typical of the Redeemer" is heard three times during this Prologue, and is introduced not only here, but in other portions of the work. The first section of the first part is entitled "Calvary." First comes a narration of the condemnation and sentence of Jesus, and his answer. The going up to Calvary is divided into movements linked together so as to form a single musical series. An instrumental march represents the brutality of the pagan force dragging Jesus to execution. The author, in a note prefixed to the vocal score, has informed us that this march was already written in 1867, the year when he first thought of writing a work on the Redemption. As a march it is not unattractive, but appears to us far too orderly and graceful for the tragic scene which it is intended to depict. The "Lamentation," for female voices, which follows, and which is borrowed from a hymn of the Catholic liturgy, is rendered most effective by the wailing tones of the orchestra. The lamentations of the Holy Women, which are heard after the march has been repeated, are tender and plaintive. The words of Jesus to the women, "Ye daughters of Israel," are quite in M. Gounod's own manner. The Catholic hymn is now taken up *fortissimo* and in unison by the whole choir, the strains of the march being heard at the same time from the orchestra. The combination is very ingenious and telling. It is intended, the composer informs us, to signify "the duration of both persecution and compassion throughout the world." We have in the "Crucifixion" section some fine music. The opening passage, depicting, doubtless, the driving of the nails into the hands and feet, is striking. The chorus of the Priests mocking is bold and characteristic. In the third section, "Mary at the Foot of the Cross," there is a quartet and chorus, "Beside the Cross remaining," which we think one of the best numbers of the whole work. In the "Mystic Lamentation"

at the close, the solo voice is accompanied by the liturgical chant of the "Stabat Mater." In the scene of "The Two Thieves" we again hear the typical melody at the mention of Paradise. The "Darkness" and the "Earthquake" scenes are not in any way remarkable. The second part of the work, entitled "The Resurrection and the Ascension," contains the scene of "The Holy Women at the Sepulchre," much of the music of which is very graceful. In the next number occurs an effective use of the leading theme. It is most appropriately introduced as the women are singing of their risen Lord. The concluding number of this section is a broad and vigorous chorus. The end of the voice parts is, however, disappointing. With the exception of a short *fugato* at the end of the work, M. Gounod seems to have avoided everything in the shape of contrapuntal development; and, indeed, some of the choruses are scarcely worthy of the name. The third part of the work, "The Pentecost," is to our mind the weakest. The solo quartet, "He has said to all the unhappy," is pleasing; but there are some very strong reminiscences of Mendelssohn in one or two of the numbers, and the last chorus, in spite of its vigour, is long and tedious. The *fugato* already mentioned and the final *coda* are not very interesting.

The "Redemption" is the work of a great composer, but we do not think it a thoroughly inspired work. Much of the music is solemn and exceedingly effective, but, on the other hand, a great deal of it seems heavy and lacking in character. There is, too, a strange and uncomfortable mixture of styles. Some of it is very plain and diatonic; in other places it is strained and terribly chromatic. The Trilogy will scarcely be a popular work, but many portions of it will doubtless be often sung in detached form. The orchestration throughout, as would naturally be expected of the composer, is very effective.

The performance, under the able conductorship of the composer, was magnificent, and the hearty and prolonged applause at the close was evidently intended not only for the work, but also for the performers and for M. Gounod himself. The solo vocalists were Mdme. Albani, Mdme. Marie Roze, Mdme. Patey, Mr. E. Lloyd, Mr. W. H. Cummings, Mr. Santley, and Sig. Foli. They all exerted themselves to the utmost to secure a good rendering of the work. With the exception of the last chorus, the singing of the choir was splendid.

The "Redemption" is to be repeated on Friday evening, and every seat in the hall is already sold.

This evening a miscellaneous concert was given. The first part was devoted to "The Holy City," a sacred cantata by Mr. A. B. Gaul. The hall was crowded in every part, and the work was most enthusiastically received. Mr. Gaul has shown that he can write according to rule; and there are, moreover, some numbers which prove that he can do even something more. There is certainly a lack of inspiration in the work, but a great deal of good and skilful writing. Two of the movements were encored. The vocalists were Miss A. Williams, Mdme. Patey, Mdme. Trebelli, Miss Harris, and Messrs. Maas and King. The work was conducted by Mr. Stockley. The second part of the programme commenced with Mr. C. V. Stanford's orchestral serenade in G major, conducted by the composer. The work includes six movements, all of them cleverly written. The best are the first, an *allegro* developed at some length, and a very charming *allegretto* in E flat. The *scherzo* (No. 2) is very Beethovenish, and the *intermezzo* (No. 4) very Schumannish. The latter movement was encored. The whole work was most favourably received.

J. S. SHEDDOCK.

A GENTLEMAN, intimately acquainted with English Literature, and accustomed to English Composition, desires an ENGAGEMENT as CRITIC on the Staff of a Literary Journal or Periodical, on moderate terms. Will be happy to furnish a criticism, by way of specimen (in the first instance), free of charge, on any literary work which may be assigned to him.—Address: TOWN, care of Messrs. C. Mitchell & Co., 13 and 15, Red Lion-court, Fleet-street, E.C.

TO LITERARY, PHILOSOPHICAL, and other SOCIETIES.—W. CLARKE ROBINSON, M.A., F.R.S., B.Sc. (Lecturer and Examiner in Modern Literature and Languages in the University), Durham, is prepared again to enter into ENGAGEMENTS for the following LECTURES:—

1. ANGLO-SAXON LITERATURE. With Illustrations.
2. BEOWULF. With Extracts and Translations.
3. GODS and HEROES of the NORTHERN MYTHOLOGY.
4. ARTHUR, and the INSTITUTION of the ROUND TABLE.
5. THE SONG of ROLAND.
6. THE NIBELUNGEN LIED.

Now ready (One Shilling), No. 273.

THE CORNHILL MAGAZINE

For SEPTEMBER.

With Illustrations by GEORGE DU MAURIER and W. SMALL.

CONTENTS.

DAMOCLES. By the Author of "For Percival." (With an Illustration.) Chap. XIV.—Of the New World. Chap. XV.—A Midnight Picture.

PARLIAMENTARY OATHS. By his Eminence the CARDINAL ARCHBISHOP OF WESTMINSTER.

London: KEGAN PAUL, TRENCH, & Co.

Small crown 8vo, pp. 368, 3s. 6d.

THE HISTORICAL SCHOOL GEOGRAPHY.

By Dr. MORRISON, M.A., F.R.G.S.

NEW EDITION, REVISED.

"In collection and plan we conceive this to be the very best text-book of geography extant."—*School and University Magazine*.

"No better book could be put into the hands of young persons."

Edinburgh Courier.

"We have every confidence in recommending the volume."

Glasgow Herald.

"This is a volume of intrinsically valuable and excellently methodised matter, written in a style at once clear, simple, and attractive, which should render geography in future an enjoying as well as a profitable study."—*Edinburgh Standard*.

"Its information is exhaustive without being tedious. The Introductory Chapter, containing mathematical and physical geography, the general geography of the world, and especially of Europe, is itself a compendium well worth studying."—*Educational News*.

"This book is a decided advance beyond the dry compendium of names and mere skeleton statements which characterise many geographical text-books. It is a high time that many of these gave way for such thoughtful and well-written manuals."—*Practical Teacher*.

* Specimen copies will be sent to Principals on receipt of 1s. 9d. in stamps, by the AUTHOR, 39, Fountaine-road, Stoke Newington, London.

London: SIMPKIN, MARSHALL, & Co.

NEW AND CHEAP EDITION. This day is published.

THE REVOLT OF MAN.

By WALTER BESANT.

Crown 8vo, cloth, 3s. 6d.

"It is a happy idea well worked out, and must rank amongst the best literary confessions of its kind."—*Athenaeum*.

HARRY ERSKINE.

THE HON. HENRY ERSKINE,

LORD ADVOCATE for SCOTLAND.

With Notices of certain of his Kinsfolk and of his Time. Compiled from Family Papers and other Sources of Information.

By Lieut.-Colonel ALEX. FERGUSON,

Late of the Staff of Her Majesty's Indian Army.

With Portraits and other Illustrations. Large 8vo, 31s. 6d.

EDINBURGH AND LONDON: WM. BLACKWOOD & SONS.

Published this day, 1 vol., royal 8vo, price 12s. 6d., in half-Roxburgh.

NOTES on DIGNITIES in the PEERAGE of SCOTLAND which are DORMANT, or which have been FORFEITED. By WILLIAM OXENHAM HEWLETT, Esq., F.R.S., Solicitor. London: WILBY & SONS, Law Bookellers and Publishers, Lincoln's Inn-square, W.C.

SCHORNE COLLEGE.—Warden: Rev. S. B. JAMES, D.D., Trin. Coll., Dub.; Head-Master: J. JULIAN JAMES, Esq., M.A., Sid. Buss. Coll., Camb.; Ch.-plain: Rev. EDWARD SMITH, M.A., Qu. Coll., Oxon.; Second Master: G. H. DAVEY, Esq., M.A., Gov. and Cains Coll., Camb. With efficient Under-Masters and Masters for Modern Languages, Drawing, Drill, &c., &c. The very moderate charges at this School of 100 Boys (Gentlemen's Sons) are Thirty Guineas per Annum, more or less according to age, with very small definite extras, and an Entrance Fee of Five Guineas. The education, diet, sports, air, &c., are, on parental testimony, good and satisfactory; and the religious training is based on the Scriptural and Prayer-book principles of the Church, irrespective of party.—For reference, &c., address Rev. Dr. JAMES, Northampton Vicarage, Winslow, Bucks.

"Dr. Underhill has given us in this work one of the best biographies of one of the best and most honoured of modern missionaries."

"One of the most compact and complete, and, at the same time, one of the most fascinating, biographies it has ever been our privilege to read. It is certain to be popular."—*Baptist Magazine*.

"This volume is one of extreme value to all who are interested in the slavery question."—*Record*.

London: JAMES ALEXANDER & SHEPHERD, 21, Castle-street, Holborn E. MARLBOROUGH & CO., 41, Old Bailey, E.C.

HURST & BLACKETT'S NEW NOVELS

AT ALL LIBRARIES.

NEW BABYLON. By Paul Meritt
and W. HOWEL POOLE. 3 vols.

SAINT and SIBYL. By C. L. FIKKIS, Author of "A Very Opal." "Wanted, an Heir," &c. 3 vols.

"Saint and Sibyl" shows a good deal of ability. It begins well; in a few pages the author gives a vivid picture of the principal characters and their surroundings, and plunges the reader at once into a situation which promises well for a domestic drama.—"Athensum."

"This tale has a lively interest, and its climax will disappoint few if any of its readers."—"Daily Telegraph."

"A cleverly written, readable story. It is a very marked advance on the author's previous work. The two girls, Rose and Sibyl, are ably contrasted; Sibyl in special is an original, clever conception."—"Daily News."

THE MERCHANT PRINCE. By JOHN BERKWOOD HARWOOD, Author of "Lady Flavia," "The Tenth Earl," &c. 3 vols.

"This story is pleasantly told."—"Athensum."

"A very entertaining novel. It has much real merit. The plot is full of incident and adventure. Mr. Harwood appears to be equally at his ease in depicting the bright as well as the seamy side of human nature."—"Morning Post."

DAISY BERESFORD. By CATHARINE CHILDA, Author of "The Future Marquis." 3 vols.

"Miss Childar has written a pretty, pleasant story, full of varied character and entertaining talk. Daisy Beresford is a charming creation; she is full of spirit and enthusiasm."—"Daily News."

FORTUNE'S MARRIAGE. By GEORGINA M. CRAIK, Author of "Dorcas," &c. 3 vols.

"Fortune's Marriage" is written in a serene and temperate spirit that reminds us of Jane Austen; but, though the book is quiet, it is not without its pathos. The story is well told, and is not destitute of charm."—"Academy."

"Fortune's Marriage" is gentle, tender, and unexaggerated. It is carefully written and has been carefully thought out."—"Daily News."

REDEEMED. By Shirley Smith,
Author of "All for Herself," &c. 3 vols.

"Redeemed" is above the average of modern novels. The characters are drawn with care and distinctiveness."—"Daily News."

"This well-told story is both interesting and healthy. All the characters are finely and consistently drawn."—"Academy."

"This clever novel is a fresh piece of manly writing, vigorous in expression of thought that is always healthy and not seldom deep. The characters are all excellently drawn."—"Daily Telegraph."

A FAITHFUL LOVER. By Mrs. MACQUOID, Author of "Patty," &c. 3 vols.

"Mrs. Macquoid has hit on a comparatively unworked lode in fiction. The story is very gracefully and pleasantly told. The chief merit of the book consists in the character of Euan Macquoid, the reclus."—"Academy."

GABRIELLE de BOURDAINE. By Mrs. JOHN KENT SPENDER, Author of "Godwyn's Ordeal," "Both in the Wrong," &c. 3 vols.

Books for the Country and Seaside.

Each Work complete in 1 vol., price 5s. (any of which can be had separately), elegantly printed and bound, and illustrated by Sir J. GILBERT MILLAR, HUNT, LORCH, FOYNT, FOSTER, TENNIEL, SANDS, E. HUGHES, WAMBOURNE, &c.

**HURST & BLACKETT'S
STANDARD LIBRARY**

OF CHEAP EDITIONS OF POPULAR MODERN WORKS.

Sam Slick's Nature and Human Nature. By Amelia B. Edwards.

John Halifax, Gentleman. The Crescent and the Cross. By Eliot Warburton.

Nathalie. By Miss Kavanaugh. A Woman's Thoughts about Women. By the Author of "John Halifax."

Adam Graeme. By Mrs. Oliphant. Sam Slick's Wise Words. Cardinal Wiseman's Popes. A Life for a Life. By the Author of "John Halifax."

Leigh Hunt's Old Court Butch. Margaret and her Bridemaids. Sam Slick's Old Judge. Darien. By Eliot Warburton. Sir B. Burke's Family Romance. The Laird of Norlaw. By Mrs. Oliphant.

The Englishwoman in Italy. Nothing New. By the Author of "John Halifax."

Freer's Life of Jeanne d'Albret. The Valley of a Hundred Fires. Jane's Romance of the Forum. Adèle. By Miss Kavanaugh. Studies from Life. By the Author of "John Halifax."

Brandmother's Money. Jefferson's Book about Doctors. Mistress and Maid. By the Author of "John Halifax."

Los Misérables. By Victor Hugo. St. Olave. Lost and Saved. By the Hon. Mrs. Norton.

Sam Slick's American Humour. Barbara's History. By Amelia B. Edwards.

A Rose in June. By Mrs. Oliphant. My Little Lady. By E. France.

Phoebe, Junior. By Mrs. Oliphant. Life of Marie Antoinette. By Professor C. D. Yonge.

Sir Gibbie. By George MacDonald, LL.D. Young Mrs. Jarline. By the Author of "John Halifax."

Lord Brackenbury. By Amelia B. Edwards.

London: HURST & BLACKETT 13, Great Marlborough Street.

TRÜBNER & CO'S PUBLICATIONS.

**CETTYWAYO and his
WHITE NEIGHBOURS;**
Or, Remarks on Recent Events in
Zululand, Natal, and the Transvaal.

By H. RIDER HAGGARD. Crown 8vo, cloth, 7s. 6d.

"This volume contains a great deal of valuable and important information about the anti-colonial and the consequences of Transvaal annexation, the Zulu War, and Sir Garnet Wolseley's settlement." We commend it to the attention of all who wish to be informed on these subjects."—*Vanity Fair*.

IMPORTANT WORK ON EGYPT.

**A HISTORY of the
EGYPTIAN REVOLUTION,**
From the Period of the Mamelukes
to the Death of Mohammed Ali.

From Arab and European Memoirs, Oral Tradition, and Local Records. By A. A. PATON. Second Edition. 3 vols., cloth, ORIGINALLY PUBLISHED AT 18s., now REDUCED TO 7s. 6d.

"This Work is acknowledged as the best extant on the History, Politics, and Resources of Egypt."

NEW WORK BY THE AUTHOR OF "GINK'S BABY."

A PALADIN of FINANCE.
By Edward Jenkins.

Crown 8vo, cloth, 7s. 6d.

CONTENTS: Monsieur Cosmo—The Marquis de Rochefort—The Mode of Developing a Grand Idea—Opposition from the Inside—Establishing a Moral Equilibrium—Emerald Cut Diamond—M. Astolus makes a Goose of Himself—Botron—An Awkward Complication—The Big Nuisance—The Blind Cattle—Forbidding the Banks—Surprise on Surprises—The Grand Cathedral—An Idyll of Finance—The Dangers of Enthusiasm—Antoine Passes Judgment on Himself—Catalysm.

"With a certain prejudice against his previous works, we must own that here he has written very strongly, fluently, and pleasantly. Mr. Jenkins may be congratulated as the author of the first good French novel in English."—"Academy."

"It is full of incident, personal, social, dramatic, not to say melodramatic. Nor could the most prejudiced reader deny that the story had power, or assert that the style lacked vigour."—"Daily News."

SCENES from the PILGRIM'S PROGRESS.
By R. B. NUTTER. Fcap. 4to, half-bound, 5s.

THE LIGHT of ASIA;
Or, the Great Renunciation.

Being the Life and Teaching of Gautama, Prince of India and Founder of Buddhism. Told in Verse by an Indian Buddhist. By EDWIN ARNOLD, C.B.I. Author of "The Indian Song of Songs." Ninth Edition. Crown 8vo, 2s. 6d.

"The most sympathetic account ever published in Europe of the life and teaching of the Sakya Saint."—"Times."

LINGUISTIC ESSAYS.
By Carl Abel.

Post 8vo, cloth, 9s.

CONTENTS: Language as the Expression of National Modes of Thought—The Conception of Love in some Ancient and Modern Languages—The English Verb of Command—Semantics—Philological Methods—The Connection between Dictionary and Grammar—The Possibility of a Common Literary Language for all Slaves—The Origin and Position of Words in the Latin Sentence—The Coptic Language—The Origin of Language.

"All these essays of Dr. Abel's are so thoughtful, so full of happy illustrations, and so admirably put together, that we hardly know to which we should specially turn to select for our readers a sample of his workmanship."—"Tribune."

TIBETAN TALES
DERIVED FROM INDIAN SOURCES.

Translated from the Tibetan of the Kah-Ghar into German by F. ANTON von SCHLEGEL, of the Imperial Academy of St. Petersburg. Done into English, with Introduction, by W. R. & BALSTON, M.A. Post 8vo, cloth, 14s.

A HISTORY of MATERIALISM.
By Professor F. A. Lange.

Authorized Translation from the German by ERNEST C. THOMAS. Now complete, in 3 vols., post 8vo, cloth, 31s. 6d.

"Although it is only a few years since Lange's book was originally published, it already ranks as a classic in the philosophical literature of Germany. We should be doing an injustice to Mr. Thomas, the translator of this interesting and valuable work, if we were not to add a word on the admirable manner in which he has executed his task."—"Pall Mall Gazette."

**EPISODES in the LIVES of MEN,
WOMEN, and LOVERS.**

By EDITH SIMCOX. Crown 8vo, cloth, 7s. 6d.

CONTENTS: In Memoriam—Consolation—A Diptych—Someone hat Blundered—Midsummer Noon—At Anchor—Men, our Brothers—Looking in the Glass—Love and Friendship—Eclipse—The Shadow of Death—at set Visions.

"The book is one that will have an irresistible charm for thinking readers. It discusses questions which everybody must have put to him in one form or another, and handles them with a breadth, an intellectual force, and a literary grace that are entralling."—"Scotsman."

**THE ESSAYS and DIALOGUES
of GIACOMO LEOPARDI.**

Translated by Charles Edwards.

With Biographical Sketch. Post 8vo, cloth, 7s. 6d.

"He was one of the most extraordinary men whom this century has produced, both in his powers and likewise in his performance."—"Quarterly Review."

THE RELIGIONS of INDIA.
By A. Barth.

Authorized Translation by Rev. J. WOOD. Post 8vo, cloth, 18s.

"It is not only a valuable manual of the religions of India, which marks a distinct step in the treatment of the subject, but also a useful work of reference."—"Academy."

LONDON: TRÜBNER & CO., LONDON HILL.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Six Months in Persia. By Edward Stack. In 2 vols. (Sampson Low.)

In these compact and well-printed volumes Mr. Stack has embodied the results of a journey through Persia made in 1881 on his way to Europe, after eight years' hard work in the Bengal Civil Service. Complaints are often heard of the competitive system, by which public appointments are now almost exclusively made in India as well as in England. But the increasing number of valuable scientific works produced by members of the Indian service is sufficient proof that a superior class of men has been secured by this system. Among these works *Six Months in Persia* must take a high place as a solid contribution to geographical studies.

The ground covered lies mainly between the Persian Gulf and the Caspian. But the traveller, who landed at Bushir in the South, and embarked at Mashhad-i-Sar in the North, contrived to modify his route in such a way as to take in extensive tracts of unexplored or little-known country between these two points. Thus, on reaching Shiraz by the usual track from Bushire, instead of going northwards direct to Ispahán, he struck southwards through an almost unknown section of Farsistán to Firúzabád and Lar. From this place another fresh route was taken through Saiábád north-eastwards to Karmán, whence the traveller made his way over the lofty Kuh-Núgát range and round by the hitherto unvisited district of Kuhbanán to Bafk and Yazd. Kuhbanán, which was supposed to be an extensive tract of fertile upland valleys, proved to be quite a small uninteresting district in a plateau "not more than a farsakh square," and at about the same elevation as Karmán.

After a short trip to the romantic Shirkuh highlands, which seem to be a sort of Persian Switzerland in the Yazd district, the journey was continued via Ardakán and Nain to Ispahán. From this central point a detour was made south-westwards to the magnificent Chahar Mahal and Kallar-Kuh highlands, and westwards to the majestic Zarda-Kuh, the Kuh-i-Zerd of our maps, which appears to be the culminating point of Central Persia. It forms the water-parting between the Kuran and Zainda-rud, towering to an estimated height of 16,000 feet above the head-waters of the latter river. Here the gigantic works were visited which were undertaken by Shah Abbas for the purpose of diverting the Kuran into the Zainda-rud, not by tunnelling, but

by cleaving the intervening mountain in twain.

From the Zarda-Kuh quite a new route was followed through the Bakhtiari hills to Khonsar and Gilpaigan, whence the main highway led to Tehrán. Beyond the capital some useful exploration was done in the Elburz range, especially about the Shamrán-Kuh and mighty Damávand, which last was ascended in company with Capt. Wells from Tehrán. Thence a few stages along the banks of the Lar and through Mazandarán brought the traveller to Barfrúsh and Mashhad-i-Sar, whence he sailed by one of the Russian "Caucasus and Mercury" steamers for Baku and Astrakhan.

Throughout the whole of the journey thus briefly outlined minute and accurate observations were recorded of the main features of the land, of all the centres of population, distances, climate, and other useful details. Too little attention was, perhaps, paid to botanical and geological matters; and it is to be regretted that no attempts were made to determine or verify altitudes. At a certain point during the ascent of Damávand the elevation is "guessed" at 14,000 feet; and, of course, the opportunity was lost of confirming the new estimate (18,600 feet) made by the Russian Caspian Survey of the absolute height of that cone. But the topographical data are all but exhaustive, filling up many blank spaces on the map of Persia, correcting numerous errors of position, frontier lines, and distances, and supplying quite a store-house of information for the compilers of gazetteers and cartographers.

Of course much of this necessarily makes rather dull reading, the weariness of which is needlessly increased by a multiplicity of trifling details which might well have been spared for more important matter. The style also, which is generally clear and simple, is occasionally marred by some awkwardly turned periods, such as "we wended downstream for the space of three hours, till we were aware of a melancholy man who lay stretched along a grassy bank, and pored upon the Lar that babbled by" (ii. 174). But sentences of this curious type are not numerous, and are amply redeemed by many descriptive passages of considerable literary merit. Such is the vivid account of the desolate Kúm district as seen from a neighbouring eminence:—

"The plain and city were shrouded in a haze of heat and dust, blown up by the hot winds that had been moaning fitfully throughout the day. All the rest was a dolorous region of salt hills, twisted and tortured into strange cones and rhombs and angularities, their sides clothed with pale colours, green and gray, red and faint purple, and their bases merging in a sea of ridges and ravines, where the winter rains scour down salt, and the dry water-courses are lined with salt crystals" (ii. 137).

And, again, the night march towards Tehrán from the south:—

"The road led through a country known as the Valley of the Angel of Death, a dreary plain knobbed and seamed all over with ridges and knolls of black rock or gray hardened clay; and the track wound between and among these, and sometimes over them, half in shade, half in light, now giving a far prospect over the rugged contorted region, fantastically scooped and

carved and ribbed and buttressed in all directions, and now sinking between low walls of stone or stony earth, the sides of some dry torrent of salt, with white incrustations gleaming ghostly in the moonlight. A Persian couplet kept running through my head, to the accompaniment of a solemn hymn tune, till I could scarce refrain from breaking the silence of the night and chanting it aloud—

'Raftim o bardim dâgh-i-tu bar dîl,
Wadi ba wadi, manzil ba manzil.'

The words mean, 'We marched and bore thy wound upon our heart, valley by valley, stage by stage' (ii. 145).

Those who have travelled through the arid hilly tracts skirting the Kavir and Kafa wastes of Central Persia will appreciate the truth and beauty of these descriptions. While crossing one of these Kavirs Mr. Stack noticed a peculiar acoustic effect, "a strange hollow whistle, breaking the deep stillness and dying off more than once," which he was unable to account for. He seems to be unaware that this "music of the sands" is a common experience of travellers traversing extensive sandy wastes, such as those of Sinai, Hadramaut, Afghánistán, or Peru. The phenomenon is spoken of by Lenz during his recent visit to Timbuktu; and in the old Chinese accounts of the stony wilderness stretching east of Lob-Nor these mysterious sounds, due largely to the fevered fancy of the traveller, are referred to winged dragons and aerial demons mocking the wayfarer and inspiring him with vague fears. Here the voice of the sands is described as singing or sighing, or muttering like distant thunder, or uttering shrill whistling sounds as if the atmosphere were alive with invisible beings.

However, the general impression conveyed to the reader by a careful study of these volumes is that Persia does not consist altogether of "a salt desert and a saltless desert," as it has been somewhere described. The arable tracts seem to be both more extensive and more productive than is usually supposed. One is also glad to learn that the country appears to be gradually recovering from the effects of the recent famines. Thanks to crucifixions, bricking-up alive, and other caustic remedies, the highways are much safer from Baluchi and other marauders than formerly; postal routes are being extended, trade is reviving, and many of the provincial governors are really doing their best for the people. Among these, special mention is made of Zill-us-Sultán, prince-governor of Ispahán, who, however, since Mr. Stack's visit, has been involved in serious trouble with the neighbouring Bakhtiari tribes. But, on the whole, notwithstanding the great drawbacks of a deficient rainfall, general apathy at head-quarters, and the Shah's notorious avarice, "the progress made by Persia within the last ten years is unmistakable" (ii. 300).

At the same time, political storms seem to be pending in the near future. "The shadow of Russia hangs over the Northern provinces," and the writer was everywhere struck by the growing influence of that Power. The very name of England was unknown in many parts; in one place an English sportsman was supposed to be a Russian; the Ozar was the great Emperor; the traveller is asked, "Are

you a European or a Russian?" For the name of Russia outweighs all the rest of Europe, which is supposed to be divided into two States, "Farang and Rus, whereof the former was tributary to the latter, and China was included in Farang!" (ii. 129). But it may be more important to note that the approaching completion of the Tiflis railway to Baku

"will place the Caspian in immediate communication with Russia proper and all its resources; while at the other side is the railway from the head of Michaelofsky Bay to Kizil Arvat and thence (soon to be completed) to Askabad" (ii. 222).

There is an admirable supplementary essay on the Persian land-revenue system, about which so little is known. All the fresh geographical materials, together with the rectification of numerous errors on existing maps, are also summed up in a useful chapter, which to some extent renders the omission of an index less keenly felt. But the defect ought to be supplied in future editions, in which short summaries of the chapters might also be introduced with advantage. Meantime, the student will be grateful for the excellent series of sectional maps illustrating the various routes followed by the explorer. As these maps have been specially prepared for the present work, there seems to be the less excuse for the usual discrepancies between their orthography and that of the text. Mr. Stack is a good Persian scholar; hence his spelling of geographical names is usually accurate and consistent. But while he writes Linga, Pariz, Ormuz, Qum, Gulahek, the maps give us Linjah, Parhiz, Hormuz, Kóm, Gulhek, &c. And why Kuran and Kurand in the text itself? *Astrabad* occurring twice on p. 222 of vol. ii. is an obvious slip for *Askabad*.
A. H. KEANE.

Chapters in the History of the Insane in the British Isles. By Daniel Hack Tuke. (Kegan Paul, Trench & Co.)

THIS is, for all practical purposes, an exhaustive work upon a subject of great and painful interest, put together and written in a manner calculated to make it attractive to the intelligent general reader as well as to the special student. It is the outcome of much laborious research, directed by full knowledge and sober judgment; and, though it contains nothing that can fairly be called superfluous, covers too much ground to render an adequate sketch of its contents possible in a necessarily brief notice. Dr. Tuke gives a history not only of the medical treatment of the insane, including an interesting account of the principal institutions prepared for their reception, but of the series of legislative measures by which the mentally afflicted have been brought under the supervision and protection of the State, his work having all possible completeness given to it by separate chapters on criminal and chancery lunatics and on idiots and imbeciles, and by a reprint of his own presidential address to the members of the Medico-Psychological Association on "The Progress of Psychological Medicine during the Last Forty Years: 1841-81."

In the early pages, which deal with the time when the treatment of the insane was,

as Dr. Tuke puts it, "a curious compound of pharmacy, superstition, and castigation," there is of course much which will not be new to the fairly well-informed reader, but the familiar facts are interestingly summarised. And Dr. Tuke has also availed himself of material which has not been laid under contribution by earlier writers, particularly of a curious tenth-century work by an unknown author, entitled "Leechdoms, Wortcunning, and Starcraft of Early England," collected and edited by the Rev. O. Cockayne in 1865. The one odd characteristic of the early views—we can hardly call them theories—of insanity is not their want of accuracy (for that was a matter of course) but their want of consistency. While in the main regarding insanity as a form of demoniacal possession, and therefore belonging to the province of the exorcist rather than to that of the physician, our ancestors never seem to have been able to commit themselves wholly to the supernatural view of the matter. And, accordingly, prayers, holy water, and herbs were exhibited simultaneously, and supplemented, when ineffectual, by such very materialistic treatment as knocking the demented person backwards into a pool of water, and holding him there until he was all but drowned. What is really surprising in Dr. Tuke's record is not the existence of such remedial measures, for in a non-scientific age this was inevitable, but their survival into a time when, in the region of general pathology, careful inductions and sound generalisations had fairly established their ground. It is sufficiently surprising that Boerhaave, in the eighteenth century, should be found giving his adhesion to the drowning treatment, but it is still more surprising to find something almost equivalent to it recommended in a work published so late as 1813 by Dr. Currie, of Liverpool, who also makes the extraordinary suggestion that "it is certainly worth trying whether keeping a patient for days in succession in a state of intoxication would be beneficial where every other means has failed."

One of the most interesting portions of Dr. Tuke's work is his history of Bethlem Hospital—popularly known as "Bedlam"—the first, and for many years the only, institution in England devoted to the reception of mentally afflicted persons. Bedlam really dates from 1247, in which year houses and grounds in the neighbourhood of the present Liverpool Street Station were granted to the Order of the Star of Bethlehem for the purpose of building thereupon an hospital or priory. But for nearly two centuries the establishment seems to have been simply a religious house, and it was not until 1403 that there is any evidence of its being devoted to the special purpose with which its fame is associated. For many years the history of the insane in England is one with the history of Bethlem Hospital and its successor, St. Luke's, in both of which the old methods, with gradual modifications but no real improvement, reigned supreme. It was not until the year 1792 that a new departure in the treatment of insanity was taken by William Tuke, a citizen of York, and a member of the Society of Friends. A local asylum scandal drew Mr. Tuke's attention to the noble work which he was destined to make

so peculiarly his own; and his feeling that something should be done had been strengthened by a visit to St. Luke's Hospital, where he saw the patients lying on straw and in chains, and subjected in various ways to treatment which seemed to him calculated to intensify rather than to relieve their malady. Mr. Tuke suggested that a building should be erected for the reception of lunatics, "where there should be no concealment, and where the patients should be treated with all the kindness that their condition allowed;" and, his suggestion finding a ready acceptance among persons like-minded with himself, funds were soon collected, and the foundation-stone of the celebrated "Retreat" at York was laid in the year just mentioned. Mr. Tuke's views of the amount of liberty which might with safety be allowed to the patients were probably at first vague and tentative enough, but they quickly gained breadth and consistency, and before many years the "Retreat" had won a world-wide fame as the scene of the first successful trial of the system of non-restraint. For the details of the reforms instituted by Mr. Tuke, and of the results which followed from them, readers must be referred to this volume, which is not only a history but an argument, and an argument so conclusive that in every place the present century has witnessed a revolution in the treatment of the insane.

Dr. Tuke's account of the various legislative measures affecting mentally afflicted persons is admirably done, and its value is enhanced by the abstract of the more important Acts given in the Appendix. Of the elaborate address on "The Progress of Psychological Medicine" we have not left ourselves space to speak; but it well deserves perusal from all who are interested in the general subject of the volume.

JAMES ASHCROFT NOBLE.

Records of the English Province of the Society of Jesus. Vol. VII., Part I. By Henry Foley, S.J. (Burns & Oates.)

MR. FOLEY is a most industrious writer. To find a fit parallel to him we must go back to some of the laborious brethren of his Order who flourished in the seventeenth century, whose works are all but unknown in England except through the medium of Father de Backer's elaborate catalogue. We have no wish to depreciate the learning, industry, or zeal of the older members of the Order, but we are bound to say that we know of no Jesuit that ever lived who has laid English folk under such deep obligation. With matters theological it is not our place to meddle; but we may confidently assert that, whatsoever may be true or false regarding those things on which we must, as yet, be content to differ, it is beyond all question that the stream of history is still turbid with misrepresentation and falsehood, and that the ordinary boy or girl grows up with notions of the events which took place between the reign of Henry VIII. and that of George III. as much out of perspective as a landscape is when viewed through a knotted pane of glass. It may be true that a very few modern school-books leave but little to be desired, and that there are high-class periodicals

which commonly reject partisan writing of the cruder and denser type; but, notwithstanding this small improvement, Sir Francis Palgrave's little works, written thirty years ago concerning modern historians, are still true to the letter of much that has wide circulation and general credit. "An adequate parallel," he affirms, "to their bitterness, their shabbiness, their shirking, their habitual disregard of honour and veracity, is hardly afforded even by the so-called 'Anti-Jacobin' press during the revolutionary and imperial wars." Political passion has, it perhaps need not be pointed out, much to do with this; men fancy they see this or that modern question debated under another name in the sixteenth and seventeenth centuries, and become furious partisans accordingly. But the main cause of historical perversion and ignorance is theological passion. Novelists, and the historians who frame their books according to the plans of the novel-writer, know this, and turn out their wares accordingly. The students who are too conscientious to do so are voted dull, and their books consigned for the most part to the silence of the great libraries and the shelves of a few seekers after knowledge.

Mr. Foley's elaborate compilations have no claim to be considered light reading. This is the seventh, but we trust by no means the last, of a series devoted to telling the story of the Jesuit mission in England, not as its enemies or its friends would like to have it—all in black or all in white—but as from day to day things came to pass. There is no exaggeration in saying that no future English historian will be competent for his work until he has mastered a great part of the documentary evidence contained in Mr. Foley's earlier volumes. The Order of Jesus has been a potent factor in English history, and it is important to know what its doings were and what the brethren of the Order were really like. Were they dark plotters who were bent on the overthrow of the English monarchy and English freedom, with whom no terms whatever could be kept, and whose crimes went some way towards justifying the penal laws; or were they zealous missionaries only, who in no way interfered with political affairs except by defying those laws which were made for the express purpose of stamping out the old religion? We are bound to say that, speaking broadly—we do not deny a few exceptions—the political Jesuit, as far as England is concerned, was a mere creature of the imagination, and that the persecution which raged for so long a time and with such unrelenting bitterness had no excuse except the popular madness. The people and their rulers lusted for the blood of those whom they persisted in looking upon as the subjects of a foreign Power. The same tale may be told here as in other lands: the persecutors were not all, or even mostly, bad men. The wretched miscreant Richard Topcliffe, of Somersby, who spent his life in bringing priests, and those who sheltered them, to torture and death, may have been only an exaggerated type of his class; but he must by no means be taken as an example of the English gentlemen who were simple enough to believe that the existence of their country depended on the hunting down of Catholic missionaries.

It was a delusion akin to the witchcraft madness, but far more frightful and more intense in its unmitigated horror. There was also, we must add, far less justification for believing one than the other. It should, moreover, never be forgotten that the amount of suffering caused to the English people by the penal laws is in no sort estimated when we have counted up the list of those who were put to death, imprisoned, or tortured for their faith. The catalogue, it is true, can never be made; much of the evidence has perished. If it could, we should have a frightful picture, but one which went but a small way towards showing what the people really suffered. For one person who was killed or imprisoned for the faith we may be certain that there were many weak souls who would obey the law contrary to their convictions, and lead a life of misery by doing so. It has been represented that the suffering fell mainly on the upper classes—that houses such as Scrope and Towneley, Howard and Percy, felt the full weight of the State's anger, but that the storm passed lightly over the poor. This, if true, would perhaps not mend matters. It is, however—as may be most certainly proved from record evidence of a kind that cannot be disputed—an absolute mistake. A fair proportion of the martyred clergy were of gentle blood; but many of them were the sons of farmers and handicraftsmen. But it cannot be too distinctly pointed out that the prison and the scaffold were not the only objects of terror. The poor Catholic peasant felt as much as the Catholic noble that it was contrary to conscience to employ in any way the ministrations of a clergyman of the Established Church. Yet how was he else to be married, or to have his children baptized? The returns constantly speak of secret baptisms and secret marriages. In the latter case much scandal must have been often given; and we could quote cases where the want of evidence by which a marriage could be proved is almost certainly due to the fact that it was solemnised in some secret place by a wandering missionary, who, as a matter of course, could make no permanent record of the union. Yet, bloody and cruel as the administration of the law was, there were persons ever ready to petition that it should be enforced with increased vigour. Cruel beyond imagination as our rulers were, there was a lower depth of cruelty into which even they were unwilling to plunge.

The greater part of Mr. Foley's present volume is taken up with Lives of the English Jesuits from the foundation of the Order until the present day. All that we have the means of testing are well done, though in some instances we think they might have been extended with advantage. The recent Lives, as time rolls on, will be very useful. We confess that we have read with most attention those of the earlier time. The men who suffered death have naturally had the most attention given to them. We have photographic likenesses from pictures and prints where procurable. Of absolute errors we have detected none, except a few misprints and the seeming assertion (p. 62), which, after all, is perhaps but a misprint, that there was a university at Durham in the early part of the seventeenth century. A few cases also

occur where the county in which a man was born is given, but not the place. We apprehend that this does not in every case arise from want of information. We would urge on Mr. Foley the propriety of giving what he knows on these matters in full, as it may save future students many laborious days.

The horrible high-treason punishment by which the priests died is said to be "scarcely credible in the present day." So little do many of us know of the past that, notwithstanding the overwhelming evidence we have for these barbarities, many good souls who shrink from the contemplation of suffering treat them as old wives' fables, and stoutly maintain that such things could never have come to pass in Protestant England. The sentence, in all its naked horror, is given in the trials of the Regicides and many of our other old law-books.

EDWARD PEACOCK.

The Kentish Garland. Edited by Julia De Vaynes. With Notes and Illustrations by J. W. Ebsworth. Vol. II. (Hertford: S. Austin.)

THE admirable motive and design of this compilation, to the first volume of which the ACADEMY gave a fitting welcome (August 20, 1881), dispose the reader to a lenient criticism of any defects in its execution. In one of his happiest aphorisms, Mr. Tennyson declares

"That man's the true cosmopolite
Who loves his native country best."

Applying the same test to patriotism, we find its surest basis in the love of home and place. Provincialism has no doubt its weak side; and it is easy to ridicule the shallow dilettantism and the fussy trifling of county archaeological societies and the like; but it is still easier to underrate their real value and usefulness. In an age so specially prone as the present has shown itself to the temptation of worshipping false ideals of national glory, all influences deserve encouragement which help to remind us of the healthy tastes and homely virtues wherein our true distinction as a people consists. There can be no better application of literary activity to that end than the compilation of such a record as the present. The chronicle of our social history, of which it affords a panoramic view, is, of course, much chequered. There are evidences in the retrospect of the darkness of superstition, which clearer light has dispelled; of the mischievous working of oppressive laws, which timely reforms have since modified; of the prevalence of vicious and coarse habits, which a higher standard of morals and refinement has sensibly diminished. What is best, however, in our past has abided with us; and we have still the same admiration of heroic deeds, the same sympathy with sorrow and misfortune, the same interest in simple love-stories, the same enjoyment of Nature, of out-of-doors life and manly sports, the same love of hospitality, the same appreciation of broad humour and kindly satire, which Englishmen had of yore. All these tempers and dispositions find expression in the Kentish ballads and other metrical forms which Miss De Vaynes has diligently collected. With one or two notable exceptions, their literary merit is inconsiderable. Governed,

perhaps, by the maxim of the "ruler of the feast" at Cana, that "every man at the beginning doth set forth good wine, and when men have well drunk, then that which is worse," the compilers seem to have compressed their choicest *morceaux* into vol. i. Spenser's ornate and picturesque description of the "Wedding of the Thames and Medway," and Ben Jonson's vigorous apostrophe to Penshurst are, indeed, the only specimens of high poetical quality in this second volume; but it contains several pieces which, thanks either to their hearty spirit, plaintive pathos, or rough joviality, make very attractive reading. Laurence Price's "Seaman's Compass" (1651) and some of Dibdin's sea-songs, especially "Jack at Greenwich" and "Old Cunwell the Pilot," have the true English ring which atones for a thousand shortcomings. The satire on the Vicar of Orpington and his wife (1755) and the Vicar's retort have some really humorous traits. Perhaps the best of the modern pieces is the Nonconformist squib upon the audit of the Churchwardens' accounts of Deptford in 1835. Assuming to address the Churchmen of the parish, the satirist protests against the unreasonable outcry of the Dissenting ratepayers at such items as these:—

"For crimson cushions, trimm'd with gold,
The noisy yelping hounds
Object to pay, although they cost
But thirty-seven pounds.
Why! at the very last account
The incorrigible sinners
Murmured at six pound seventeen
For confirmation dinners.
Thus if we eat, or drink, or sleep,
And treat our carnal senses,
They are ever dingling in our ears,
'Pay, pay your own expenses!'

Miss De Vaynes has used a net with somewhat too fine a mesh, and swept up an undue proportion of doggerel that was scarcely worth preserving. The "Gallows Group," as she terms it, a sheaf of Catnach ballads on executions for murder, might have been reduced with advantage; and, considering the uniform type of the lyrics common to all seaport towns on the theme of faithful sailors and true or false maidens, it was hardly necessary to multiply the variations of those belonging to Kent which lack any local colour. Upon the whole, however, Miss De Vaynes has done her editorial work excellently, and her only serious mistake has been believing too blindly in her fellow-editor, Mr. Ebsworth, and overweighting the volume with so much of his mediocre verse. Mr. Ebsworth's labours, so far as the collection of materials is concerned, entitle him to gratitude; but his overweening belief in himself largely detracts from the value of his head-notes and comments. His own political opinions and antipathies—which are matter of concern to no one else, and quite irrelevant to his theme—are here obtruded with a persistence and violence that become offensive. It was probably absorption in the polemical interest of the subject that blinded him to the astounding blunder he has fallen into on p. 778, where he confounds John Wilson Croker with William Gifford, and credits the one with the achievements of the other. This carelessness is the more curious because in a previous page (707) Gifford's literary

credentials are correctly referred to. The tone in which Mr. Ebsworth allows himself to vituperate the objects of his animosity, including two of the greatest living statesmen, is censurable not only as an exhibition of individual bad taste, but as a grave abuse of his editorial function. A reader who, sickened by the spiteful virulence of which certain party newspapers are so profuse, and the vulgar flippancy from which few society journals are free, turns to a miscellany of old verse for purer and serenest air has just cause of complaint when he finds its notes bristling with allusions to modern controversies, and redolent of the very unsavoury taint from which he fondly thought to have escaped. If virulence and flippancy cannot be banished from literature altogether, they should at least be reserved for their proper mixen, and not imported into the fragrant atmosphere of a poetical "garland."

HENRY G. HEWLETT.

Kant. By William Wallace. (Blackwood.)

IN accordance with the design of the series of "Philosophical Classics for English Readers," about one-half of the present volume is occupied with a full account of the life of Immanuel Kant, the varied intellectual activity of the illustrious thinker being skilfully connected with the outward details. This biography of the Königsberg recluse is probably superior to anything we have yet had from an English pen; and it is not only rich in facts, but presented in a lively and entertaining style. Readers of Mr. Wallace's *Epicurus*, prepared for the Christian Knowledge Society, will not need to be assured that an essay of this kind, in which the philosopher and his work are intimately connected, is one peculiarly adapted to the author's talent. Mr. Wallace's estimate of Kant is at once lofty and sober. He does not indulge in the extravagant laudation fashionable in some quarters, although at the same time recognising the vast importance of the Critical movement. The closing words of the book are exactly to the point: "For those who have learned Kant, many questions have ceased to trouble; many are bright with a light unknown before; and others are at least placed in a fair way for further solution"—a statement open to but a single criticism: what is it to "learn" Kant? The learning is apt to be of so varied a description, and the Creed of Criticism does not always run in the same terms. As befitting a work written for a large public, Mr. Wallace's language is always cautious, and free from any hard dogmatic tinge. There is a "gulf between theoretical and practical reasoning in Kant's philosophy," but "his philosophy is not disconnected or self-contradictory;" and "the true perspective of the system can scarcely be gained unless we combine the insights derivable from the points of view successively given by the three criticisms." This is to take safe ground; and, as it is always easier to defend than impugn an orthodox creed, vexatious controversy is avoided by crediting one's authority with the virtues of practical logic, and confining oneself to careful exposition. The same guarded attitude is maintained with respect

to the two versions of the First Critique, when "the claims (by Schopenhauer and others) of superiority for the earliest" are pronounced "exaggerated;" "substantially, the two editions vary but little."

Coming to Mr. Wallace's actual handling of his subject, little need be said of the first part of the book except in the way of praise. We are glad to see that Mr. Wallace's reverence for the eighteenth-century Socrates is yet sufficiently measured to allow of some plain-speaking in regard to the Professor's attitude in the matter of the Government attack in 1794 on the *Lehrfreiheit* of intellect. It must always be a serious blemish in the career of this stern advocate of an Absolute Moral Law and ardent sympathiser with the principles of political independence that, on the sole occasion when he was called upon to show a practical example of adherence to his social ethics, he should have been found wanting. The incident, indeed, cannot fail to weigh somewhat in determining our estimate of some more serious matters—for instance, the deeper question of Kant's intellectual veracity. I do not say that the instance of moral cowardice under notice would tell for much on that wider question; but when one bears in mind the remarkable admission—

"The balance of the understanding is not altogether impartial, and that arm which bears the inscription, 'Hope of the Future,' possesses a mechanical advantage, the effect of which is that even slight reasons on the one side lift speculations of far greater weight placed in the other scale. This is the only inaccuracy which I cannot remove, and which I never will"—

when suspicion is once aroused by such emphatic declarations, it will not be strange if the student does not come to the general discussion of the coherence of the Kantian system prepared to meet with the plainest dealing. In short, it is by no means clear that Kant ever was a *disinterested* thinker. He was scared by Garve's allegation of Idealism, by Fichte's development of his own half-thought, and recoiled before the suggestion of a continuity of Nature in these terms: "I know a not altogether unmanly fear—the fear which shrinks from whatever unsettles reason from her first principles, and opens the gate for her to rove through boundless fancies."

Mr. Wallace has evidently found it no small difficulty to condense his exposition of the *Critique of Pure Reason* into something like a score of pages. We are not sure that he has been altogether successful in this attempt. The account of the Transcendental Aesthetic is unquestionably clear, but the *exposé* of the Analytic will, we fear, be a stumbling-block to the unprepared reader. But the shortcoming must not be wholly credited to the expositor. Might it not even be well if a writer for the average reader forsook the order of the original and remodelled the "Analytic" for the benefit of the less leisured modern student? The cumbrous formalism of this middle region of the Transcendental Doctrine of Elements might be suitable enough for a Professor of a secluded Prussian university in the eighteenth century, but is hardly, we venture to think, the fashion in which a nineteenth-century Kant would approach the same

problems. With regard to the "Deduction of the Categories"—which, judging from the variations of the editions, did not readily acquire a fixed form even in the writer's mind—Mr. Wallace adds the remark "that it is elsewhere described as comparatively unimportant." We do not know to what allusion is here made, but a very different opinion is expressed by Kant on p. 147, vol. v., of Hartenstein's edition of his works.

Mr. Wallace's familiarity with what may be styled the legitimate development of Kantism stands him in good stead in enabling him to form a clear idea of the significance of those leading terms or thoughts of the system (if system it may be called), form and matter, objectivity, and the relation of things-in-themselves to phenomena. On all these points Mr. Wallace's exposition seems to be very satisfactory. Indeed, whatever may be said with regard to the obscurity of certain details of the exposition, the explanations generally given are so clear and consistent that the reader, even though new to the subject, should rise from the perusal of this little work with a very distinct notion of the philosophic problem as it presented itself to the mind of Kant, and the results actually reached.

One or two simple questions will possibly occur to such an ingenuous reader at the close. What was it that Kant really sought, through all these subtle windings of the Pure and Practical Reasons? Agnosticism? Then why didn't he stop short with his analysis of the operations of the Understanding and the resultless conflict of the antinomies? Or was it Dogmatism? A new practical creed on the basis of a purified Reason? Then how could he have been irate with a moral enthusiast like Fichte, and have declined so decidedly to take his own trust in noumena at its real worth? Much may be said for each view. Anyhow, the opinion at one time prevalent (strongly expressed in a passage quoted from Heine, where a comparison is drawn between Kant and Robespierre, "Had the citizens of Königsberg divined the full meaning of this subversive, world-bruising thought, they would have felt before that man a far more gruesome awe than before an executioner—an executioner who puts only men to death"), the view of Kant as a pitiless Sceptic, is, as observed by Mr. Wallace, very wide of the mark; but it is not by any means self-evident that he really held any positive creed. That he wished to believe in God, Freedom, and Immortality there can be no doubt, but it is not beyond the bounds of credence that the wish was father to the clothing of those hyperphysical Ideas in forms to which they could assert no direct claim.

W. O. COUPLAND.

L'Île de Rhodes. Par Edouard Biliotti et l'abbé Cottret. (Compiègne: Cottret.)

THIS is a book which deserves notice, if only as being thoroughly indigenous to the interesting island of which it treats. The author, M. E. Biliotti, was born at Rhodes; and, after writing down the results of his investigations, local and literary, into all that relates to his native place, he has found time in the intervals of a busy life to instruct himself in com-

positors' work and to print his own book by means of a private printing-press. Although it cannot of course be expected that a work produced under such circumstances should answer all the ordinary conditions of European typography, the result is a fairly presentable volume of 720 pages. The numerous plates and cuts which accompany it were executed at Smyrna. It is but fair to mention here what is well known to everybody at Rhodes, but what the modesty or carelessness of M. Biliotti has allowed to be somewhat obscured in the Preface—namely, that the share of Abbé Cottret, his coadjutor in the work, has, with trifling exceptions, been limited to that of editing the materials furnished by the real author, and passing them through the niceties of a tongue which is not his own.

With the name of Rhodes, the Colossus in ancient times, the Knights in mediæval history are familiarly associated. It is with regard to the latter of these subjects that the work before us contains most original matter. An inedited Turkish MS. by Ahmed Hafyz (an ancestor of Damad Mahmoud Pasha, well known in contemporary history), of which copious extracts are given, furnish some new and interesting details about the memorable siege by Suleiman the Great. By the unlucky omission of a paragraph relating to this interesting MS., as the author has informed us, its value as a new historical source is not made apparent in his work.

Another event connected with the rule of the Knights, of which a more lively recollection is traditionally kept up in the island itself than exists outside it, is also fully treated by M. Biliotti—namely, the episode of the Dragon killed by Dieudonné de Gozon, in 1342. Fabulous as this exploit may *prima facie* appear, there can be no doubt that it had some foundation in fact, inasmuch as the valorous knight was rewarded with the grand mastership in virtue of it; and, moreover, the actual head of the monster, whatever it was, affixed to the gate of Amboise, was in existence down to the year 1837. In order to arrive at a solution of this quaint problem we may, of course, dismiss at once the "small" wings, the mule's ears, the fiery eyes, and the poisonous breath with which the dragon is invested by the chronicler de Boissat. As to the first three of these peculiarities, we are authorised in discarding them even on other contemporary testimony of a more sober kind—that of a fresco-painting, now, unfortunately, no longer extant, but of which a copy is preserved in the work of Col. Rottiers (*Monuments de Rhodes*, Brussels, 1880). In this interesting pictorial record of the exploit the "dragon" is at once recognisable as nothing more nor less than a *crocodile*. Its forefeet, in deference probably to the popular belief, are so disposed as to do duty as nearly as possible for wings. As to the head, which is drawn somewhat more round in form than that of a crocodile, de Boissat's description of it as "long and flat" may safely be preferred as the most correct. On the other hand, with regard to the head, which was still in existence forty-four years ago, the impression left on the mind of M^{me}. Biliotti, the author's mother, who saw it in 1829, is that it had the form of the head of a serpent rather than

that of a crocodile. While this lady describes it as flat-fronted, and with round and large eye-holes, she states that it was broad in its upper part and narrow towards the extremity; the cartilages and lower jaw were wanting, and no traces of integument were left. The size of the skull, according to the same authority, was rather smaller than that of a horse; which may be compared with the chronicler's description of the body of the dragon as being as large as that of a middle-sized horse. Thevenot, who saw the head in 1655, when it was apparently in a more perfect condition than as seen by M^{me}. Biliotti, describes it as follows:—"It is much bigger and broader than that of a horse, the maw reaching to the ears [la gueule fendue jusqu'aux oreilles], the teeth and eyes large, the nostrils round, the skin of a whitish gray." The head escaped the notice of Col. Rottiers, who visited Rhodes in 1825. Upon the whole, the balance of recorded evidence is in favour of the crocodile theory, which, for the rest, seems the only possible solution of the enigma. To suppose, however, that the hypothetical crocodile was a natural zoological product of the island would involve nothing less than the theory of spontaneous generation; the "dragon," whose habitat was a small marshy spot a few miles from the town, being clearly a new-comer without native progenitors. In this connexion the present writer is indebted to Prof. Sayce for a parallel fact which seems to furnish a clue to the problem. In the cathedral of St. Bertrand de Comminges, in the Pyrenees, is still preserved, says Prof. Sayce, who saw it, the skin of a "dragon" killed by the patron saint. To his heretical eyes, however, he adds, it seemed nothing but the armour of a small crocodile. St. Bertrand became Bishop of Comminges about 1084. It may, then, be further heretically presumed that this Pyrenean exploit suggested the Rhodian one of de Gozon. Crocodiles are known to exist as far north as the middle course of the Jordan and the stream of 'Ain Zerk, which flows into the Mediterranean near Cesarea, in Palestine; and it is not inconceivable that one of these saurians may have been imported by the astute knight for the purpose of playing the part of dragon, and of being killed as such.

Readers curious on the subject of monsters will find further exercise for their ingenuity in the traditional account, too specific to be entirely without foundation, of a great serpent killed on the peak of Kerioniati 110 years ago (p. 154). Snakes of the kind and size common throughout the Levant still abound as in ancient times; and, as the author aptly remarks, the Greek name Rhodos is probably but the Hellenised form (by *paronomasia*, as Strabo would say) of the Phœnician word *Rod* or *Iarod*, meaning, according to Bochart, "a serpent;" while "Ophiussa," one of its numerous other appellations, would be a translation of that word. In any case, the received Greek etymology, "a rose," will not hold good, inasmuch as that flower is not indigenous to the island.

There is much that will be found new and interesting to archaeologists in the notices of Kamiros, Kyrvi, Krêténia, Mnassyron, and other ancient sites; and the concluding part

of the work forms a useful gazetteer of all that relates to the modern condition of the island.

EDMUND CALVERT.

CURRENT THEOLOGY.

History of the Church of England from 1660. By William Nassau Molesworth. (Kegan Paul, Trench and Co.) This History, though written by a clergyman, is yet from the pen of one who is better known as a political author than as a theologian; and, accordingly, it has the peculiarity (which will be adjudged as a merit or a defect by readers of unlike temperaments) that it has a distinctly lay flavour about it. It is more concerned with the outward polity and civil position of the Church during the period of which it treats than with the inner religious working which shaped and conditioned its course, though this aspect is not intentionally passed over. For ourselves, we incline to think it an advantage for the reading public to have a History accessible to it sketched on these lines; and the very theological colourlessness which is a feature of the book will help to conciliate prejudice in some quarters—especially as it is a real neutrality, and not an exclusive devotion to the school of Tillotson, pretending to neutrality, but, in truth, as fanatically sectarian in temper as the most high-flying of acknowledged partisans. Canon Molesworth starts with the Restoration, on the ground that the overthrow of the Church of England under the Commonwealth was so complete that its revival under Charles II. may be viewed for practical purposes as a new foundation, sufficient for a full understanding of its existing condition. This does not strike us as a very philosophical view, but this fault of conception is not material so long as we get a clear narrative of what actually did happen; and, on the whole, we do get that. But there are occasional marks of haste and want of thoroughness visible. For example, when sketching the outlines of the persecution of the Church under the Puritan rule, the penal suppression of the Book of Common Prayer is the only leading fact cited; whereas, in estimating the true merits of the extrusion of the Nonconforming ministers in 1662, it is of the first importance that a reader should know that, even if the largest calculation of their numbers—that of Calamy, which Mr. Molesworth accepts—fixing them at 2,000, be received, even so that is only about a fourth of the clergy who were expelled by the Triers appointed by the Long Parliament, and who were, besides, exposed to sufferings and indignities which were not imitated when the whirling of time brought in its revenges. And as Mr. Molesworth writes as a politician, he should not have contented himself with repeating the now popular commonplaces as to the unwisdom of the Act of Uniformity, whose blame he lays chiefly on Archbishop Sheldon. He ought to have told us what intermediate course could have been taken in the restoration of an episcopalian and liturgical communion, without exposing it to a fresh overthrow at the hands of its old opponents if allowed the same opportunities as Archbishop Abbot had afforded them. Among minor inaccuracies, we note that the Earl of Manchester in 1662 is twice spoken of as Duke. The first Duke was his grandson, so created in 1719. The account of the constitutional struggle against James II. is the best part of the book, and next to it may be placed the Sacheverell episode under Queen Anne. But the subsequent treatment is too perfunctory, and three pages are not enough to devote to the rise and progress of the Wesleyan and Evangelical movements; nor, in the otherwise commendably simple and temperate summary of the last forty years of English Church

life, is notice directed to the extraordinary plethora of ecclesiastical legislation by Parliament which has marked them, altogether unparalleled as it is since the time of Henry VIII.

The Revelation of the Risen Lord. By Brooke Foss Westcott. (Macmillan.) The purport of this volume may be best gathered from the words of the author's Preface:

"The following short studies are intended to serve as an Introduction or a Supplement to *The Gospel of the Resurrection*. It has been my aim in writing them to realise as distinctly as I could the characteristic teaching of each manifestation of the Risen Christ, both in relation to the first disciples and in relation to ourselves."

Ten successive studies deal with all the principal incidents of the gospel history of "the forty days," and there is an additional study on the appearance of Jesus to St. Paul, as related in the Acts of the Apostles. The work is not written with critical objects primarily in view; but it need not be said that Canon Westcott writes throughout with eyes fully open to the present state of the critical controversy on the gospels, and now and then interesting side-lights are thrown on questions of exegesis. The dogmatic bearings of the following words from the study on "the Great Commission"—"Whosoever sins ye forgive," &c.—will be apparent:—

"The words were not addressed to all the apostles, nor to the apostles alone. Thomas was absent, and there were others assembled with the apostles, as we learn from St. Luke. The commission and promise were given, therefore, like the Pentecostal blessing which they prefigured, to the Christian society, and not to any special order in it. The power which is described deals with sin, and not with the punishment of sin. In essence it has nothing to do with discipline."

Charges delivered at his Second Visitation. By James Russell, Lord Bishop of Ely. (Macmillan.) The most interesting discussion in these Charges is that on the Royal Commission to enquire into the Laws and Courts Ecclesiastical. The parallel suggested by a passage in Sir H. Maine's *Ancient Law* between the process under which the *Responsa Prudentum* modified the Decemviral Law of ancient Rome and the process under which the Statute Law of England as effecting ecclesiastical causes is modified by judicial decisions is drawn truthfully and effectively. It is beyond all question that successive interpretations of the Statute Law have issued in the practical construction of a code altogether remote from the thoughts of the original legislators.

Notes on the History of the Liturgical Colours: a Paper read before St. Paul's Ecclesiological Society. By J. Wickham Legg. (J. S. Leslie.) In these Notes will be found the result of learned and extended research in a curious and difficult subject. Dr. Legg's investigations will have a sadly disquieting effect upon those youthful curates who are fond of proving to their fair parishioners the natural fitness of the sequence of colour in "parafronts" and "stoles." The variety also of the liturgical colours for the same day in different places is strange and perplexing; for example, on Trinity Sunday we find green at Exeter, red at Wells (the Sarum colour is unknown), yellow at Poitiers, blue at Toledo, violet at Soissons, white at Auxerre, &c. Dr. Legg justly observes, as to mystical reasons for the various colours, that "it is not hard to manufacture such in abundance." We have no doubt that a deep spiritual significance could be found in peacock-blue or "greenery-yallery." If the problems here suggested be approached in the spirit in which Mr. Herbert Spencer discusses the origin of the two buttons that ornament the back of an English gentleman's frock-coat, some interesting side-lights may be thrown on sociological as well as ritual questions; but mystical

reasons may henceforth be relegated to the region of fruitless imaginings.

What is the Truth as to Everlasting Punishment? By F. N. Oxenham. Part II. (Kegan Paul, Trench and Co.) The writer succeeds in proving that the fifteen anathemas of the Patriarch Mennas and the much more sweeping nine or ten anathemas of the Emperor Justinian were drawn up for the Home Synod, not by or for the Fifth General Council. He does not succeed in showing beyond doubt that they were not rehearsed or endorsed there; the working tradition of Eastern canonists always cites the Fifth Council against Origen. And the anathemas, whenever enacted in the first instance, seem to have received whatever authority they can gain from Catholic consent. The author regards his promised analysis of patristic testimonies on the subject of future punishment as superseded by Dr. Farrar's *Mercy and Judgment*.

The Natural Truth of Christianity. Selections from the "Select Discourses" of John Smith, M.A. (Paisley: Gardner.) The editor has been permitted to reprint from Mr. Arnold's review of Principal Tulloch's *Rational Theology* what most readers will think an extravagantly generous estimate of John Smith, who was intruded as a Fellow on Queens' College, Cambridge, in 1644, and died there, at the age of thirty-four, in 1652. The extracts from his discourses would gain by references to a complete edition; they show a very fine and liberal temper, and are an interesting specimen of Calvinism breaking down into rationalism. Most readers will find such interest as they have literary or historical rather than religious.

Canons of the Second Council of Orange. Edited by F. H. Woods. (Oxford: J. Thornton.) This does not aim at being more than a text-book for the Oxford Theological School, but the work is done well, with a good acquaintance with the subject. Perhaps, even with the modest aim avowed, a somewhat more ambitious mode of treatment might have been justified. Original sin is a subject, unlike most others, on which modern physical science tends to render the traditional doctrine of Christendom more and not less easy of belief; and it is almost a pity that the opportunity was not taken of illustrating and estimating the bearing of one upon the other.

Corpus Scriptorum Ecclesiasticorum, editum consilio et impensis Academiae literarum Cæsareæ Vindobonensis. Vol. VI. Magni Felicis Ennodii opera omnia ex recensione Gulielmi Hartelii. (Vienna.) The first edition of the works of Ennodius was printed at Basle in 1669, in the "Monumenta S. Patrum orthodoxographa," from a very faulty MS., and with a large lacuna in the Life of Epiphanius. The next was that of Schottus in 1611, which, however, for the most part, followed the corrupt Basle text, but with marginal corrections. In the same year appeared the edition of Sirmond, giving a greatly improved text, though not after the best MS. authority, and with the works arranged for the first time in some kind of intelligible order. There was thus ample room for the edition now supplied by the labours of Prof. Hartel, of which it is only necessary to say that the greatest pains have obviously been taken to give as accurate a text as is now attainable, while the margin exhibits with a minuteness which may be thought excessive the most trifling variations of the MSS., as well as the conjectures of previous editors. The value of the work is enhanced by the copious indexes which are appended to it.

Theodori Episcopi Mopsuesteni in epistolas B. Pauli Commentarii. The Latin Version, with the Greek Fragments. By H. B. Swete. Vol. II. (Cambridge: University Press.) The

publication of the second volume of Dr. Swete's scholarly edition of the commentary of Theodore of Mopsuestia on Paul's minor epistles has been delayed to give time for the preparation of a valuable Appendix containing the fragments of Theodore's lost dogmatic works. Another Appendix on the text followed by Theodore, with a table of assumed readings, will be found serviceable to the student of textual criticism. The present volume, which completes the work, is furnished with no less than five carefully prepared Indices; and the two, beautifully printed at the Cambridge University Press, form an important contribution to patristic learning.

Life and Letters of St. Paul. By Alfred Dewar. (Longmans.) This translation has been undertaken in the conviction that the Revised Version is often unintelligible, and that the Authorised continually misleads. It is accordingly constructed on principles directly opposed to those followed by the late company of Revisers, and aims at putting Paul's words into intelligible English, without too strict a regard to verbal accuracy. But though it may be admitted that it is sometimes very happy in its renderings, we are by no means inclined to prefer it, on the whole, to either of the versions with which it puts itself in competition. What, for instance, is the advantage of saying "he took his meals with them," instead of "he did eat with them," in Gal. ii. 12? The Life of St. Paul contains some unusually plain speaking as to the consistency of the apostle's conduct on his last visit to Jerusalem, but is otherwise without any marked literary or critical power.

Commentary on the Epistles of Paul. With Illustrations. (Edinburgh: T. and T. Clark.) This is the third volume of the Popular Commentary on the New Testament, by English and American scholars of various Evangelical denominations, edited by Dr. Philip Schaff, of New York. The translation is that of the Authorised Version, but it is accompanied by running marginal emendations following more or less closely the Revised English text. The notes, both exegetical and critical, are full and copious; and the introductions, while dealing fairly with difficulties and objections, supply all the information the ordinary reader can require to enable him to enter intelligently on the study of Paul's writings. In short, if any commentary on Paul's epistles is likely to be popular, there is no reason why this should not be so.

We have also received *The Authentic Gospel: Sermons*, by George Dawson (Kegan Paul, Trench and Co.); *The Friendship of God*, and other Meditations upon Holy Scripture, by the late Rev. Henry Wright, Prebendary of St. Paul's (Sampson Low); *The Doctrine of the Cross: a Contribution to the Theory of the Christian Life*, by the Rev. E. P. Scrymgeour (G. Bell); *Practical Sermons*, by the Rev. P. T. Ouyry (Rivingtons); *The Divine Patriot*, and other Sermons, by Archdeacon Blunt (Kegan Paul, Trench and Co.); &c.

NOTES AND NEWS.

MR. SWINBURNE, in company with Mr. Theodore Watts, is now at Guernsey, where M. Victor Hugo is also staying.

We regret to hear that Dr. Sohliemann is suffering from a malarious fever, contracted during his excavations in the Troad last winter. He is at Marienbad, in Bohemia, drinking the waters.

MR. W. M. RAMSAY has returned from his archaeological tour in the South of Asia Minor, which has been fruitful of discoveries that may throw much light upon the obscure early history of that region. He is at present on a visit to Edinburgh. His companion, Sir C. Wilson, has been summoned to Alexandria.

MR. N. BODINGTON, of Lincoln College, Oxford, and now Professor of Latin and Greek at the Mason Science College, Birmingham, has been appointed to the principalship of the Yorkshire College, and also to the Chair of Greek, which two offices were vacant by the transfer of Mr. Marshall to the Rectorship of the Edinburgh High School.

THE proposal to erect a memorial in England to Longfellow, to which allusion was made in the ACADEMY a fortnight ago, has been taken up more warmly than we ventured to anticipate. Mr. Tennyson, Sir Frederick Leighton, Mr. Matthew Arnold, Sir Theodore Martin, Sir John Lubbock, with many other eminent men, have already given their adhesion; and much interest has been aroused in the scheme on the other side of the Atlantic. We still beg leave to doubt whether a bust in Westminster Abbey is the most appropriate mode of honouring an American poet. But this, perhaps, may be left to future arrangement. That Englishmen should acknowledge their debt to Longfellow in some way is a mere matter of honest dealing. The promoter of the movement, who deserves all the success he has received, is Mr. W. O. Bennett, 63 Royal Hill, Greenwich.

MR. TENNYSON's fine poem, "To Virgil," in the current number of the *Nineteenth Century*, is stated to be "written at the request of the Mantuans for the nineteenth centenary of Virgil's death." Virgil died at Brundisium on September 21, 19 B.C., and lies buried between Naples and Puteoli. He was born at Andes, identified with the modern Pietola, a hamlet two miles from Mantua. The Mantovani do not propose to erect any permanent monument to him. The programme of the anniversary consists of a literary competition, horse-racing, pigeon-shooting, and a cattle show.

THE twenty-fifth anniversary of the death of Auguste Comte was celebrated at Paris on September 5. A large number of his disciples met at his grave in Père-la-Chaise at 10 in the morning, where a discourse was delivered by M. Lagarrigue, of Ohili, who dwelt upon the international character of Positivism. In the afternoon, a meeting was held in Comte's house, rue Monsieur le Prince, at which M. Lafitte, the French director, gave an address, mainly devoted to Comte's institution of a systematic education in the sciences. In the evening there was a large dinner at the Palais Royal, at which many workmen and their wives were present. The English Positivists were represented by Dr. J. H. Bridges and Mr. Frederic Harrison, among others.

PROF. SEELEY's *Life and Times of Stein* is being translated into French, slightly shortened. The German translation is nearly printed, and will soon be out.

MR. FURNIVALL has happily been able to arrange for the printing of Mr. Huth's unique MS. of the French *Merlin*. This MS. was pointed out many years ago by the late Paulin Paris to Mr. Furnivall as unique, inasmuch as it contained the only known original of Malory's story of Balin and Balam and other incidents in the English *Morte Darthur*. Mr. Furnivall induced the late Henry Huth to buy the MS. and have it copied. He procured the copy a short time ago from Mr. Huth's son, for M. Paulin Paris's son, Prof. Gaston Paris, who, on appeal made to him, agreed to edit the MS. for the Old-French Text Society. Mr. Alfred H. Huth has now kindly deposited his unique MS. at the British Museum that the copy may be collated with it for printing; and we shall see, in 1884, we hope, this other of Sir Thomas Malory's originals made accessible to Arthur students.

THE Calcutta *Liberal*, Keshub Chunder Sen's paper, writes: "We are glad to learn that Max

Müller's 'Science of Religion' is one of the text-books in the Philosophy Course for the M.A. degree in the Calcutta University for next year."

WE hear that Mr. F. W. H. Myers has ready a new volume to be entitled *The Renewal of Youth, and other Poems*.

THE new volume in the "English Men of Letters" series is *Swift*, by Mr. Leslie Stephen. This will be shortly followed by *Macaulay*, by Mr. J. Cotter Morison; *Sterne*, by Mr. H. D. Traill; and *Sheridan*, by Mrs. Oliphant.

MESSRS. MACMILLAN AND Co. announce a new edition of the works of Emerson, to be published uniformly with the "Eversley Edition" of Charles Kingsley's novels. It will be in six volumes, with an introductory essay by Mr. John Morley.

MESSRS. TRÜBNER are the publishers in this country of a sketch of the life of Sir Louis Cavagnari, written by a native of India, Kally Prosono Dey.

MESSRS. GRIFFITH AND FARRAN will publish shortly a new edition of Bogataty's *Golden Treasury for the Children of God*, consisting of devotional and practical observations for every day in the year; and *The Churchman's Manual*, compiled from the writings of English divines, with graces and devotions for the seasons, litanies, and an entirely new selection of hymns. The aim of this is to provide a volume of family and private devotions drawn as far as possible from the liturgical storehouses of the English Church. Full use has been made of the English primers published during the Reformation, and of the manuals of Bishops Andrewes, Coan, Ken, Laud, and Wilson. Special features in the work will be the full series of graces (from Eton and Winchester manuals and from the primers), the devotions for the seasons and litanies, and a series of hymns from sources not hitherto examined, or as yet in MS. It will form a companion volume to *The Churchman's Altar Manual*.

AMONG their new books for boys the same publishers are preparing *The Belton Scholarship*: being a Chapter from the History of George Denton's School-life, by Bernard Heldman; and *Won from the Waves*; or, the Story of Maiden May, by the late W. H. G. Kingston, with sixteen full-page illustrations. This story was written many years ago, when Mr. Kingston was at his best. It has never before appeared in book form.

MISS CONCORDIA LÖFFLING, late Inspector of Gymnastics to the London School Board, will publish next week, with Messrs. Sonnenschein, a little work entitled *Physical Education and its Place in a Rational System of Education*, dedicated by permission to the Princess Louise. It advocates the more general introduction of gymnastics into the school course.

THE unprecedented attraction of the Birmingham Musical Festival has induced the publishers of the *Musical Times* to issue a special supplement devoted to a full report of the Festival.

MESSRS. A. HEYWOOD AND SON, of Manchester, have in the press a new edition of the late B. W. Proctor's *Barber's Shop*, which was first published in 1856. It will have the additions made by the author from time to time, and several fresh illustrations from the pencil of his friend Mr. William Morton.

THE Chetham Society has just issued to its members the second part of the *Vitiation of Lancashire (1533)*, edited by the late William Langton, and after his death by Mr. J. P. Earwaker. Prefixed is a memoir of Mr. Langton (who was the first treasurer of the society), with a portrait. This volume represents the third and last of the issues of the Chetham

Society for 1879-80. It is announced that a new series will begin with the current year; but some dissatisfaction has been expressed that nothing is said about the issues for 1880 and 1881.

M. MIGNET, the "father" of the *Académie française*, who is in his eighty-seventh year, has been spending the summer at Aix in historical investigations.

A bust of Pierre Lanfrey has been placed in the public library of Chambéry, his native town.

The centenary of the Swedish poet Esaias Tegner is to be celebrated by a translation into German of his complete works.

THE fourth volume has just appeared (Paris: Germer Baillière) of the *Histoire Illustrée du Second Empire*, with sixty illustrations, including several from the pencil of M. Frédéric Régamey. It comes down to the end of 1866.

THE last addition to the "Petite Bibliothèque Charpentier" is the first volume of the complete works of Alfred de Vigny, with two illustrations by Jeannot, reproduced by heliogravure.

THE National Association for the Promotion of Social Science, which holds its annual meeting at Nottingham from September 20 to 27, commemorates this year its twenty-fifth anniversary. The president-elect is Mr. G. W. Hastings, now Member of Parliament for East Worcestershire, who may be regarded as the founder of the association, for it was on his invitation that the first preliminary meeting was held at the residence of Lord Brougham in 1857. Mr. J. L. Clifford-Smith, the present secretary of the association, has taken the opportunity to write an excellent little *Manual* for the forthcoming congress, giving a narrative of past labours and results. He has been well advised to arrange it, not according to chronological order, but according to subject-matter. In this way the actual progress can best be seen, and also what remains to be done. Photographic portraits are given of Lord Brougham and of Mr. Hastings; and there is a convenient Index.

AMERICAN JOTTINGS.

MR. HERBERT SPENCER landed at New York on August 21, where he stayed with Prof. E. L. Youmans. His visit to America is solely for the sake of health and change. He proposes to go to Boston, St. Louis, Chicago, and parts of Canada.

MESSRS. CHARLES SCRIBNER'S SONS are issuing what they style a "subscription edition" of the *Encyclopædia Britannica*. This is said to be printed from the original plates, though with much narrower margins. The only new feature is a series of United States maps revised to the latest date.

MESSRS. HOUGHTON, MIFFLIN AND CO., of Boston, will shortly publish the letters of Lydia Maria Child, with a biographical Introduction by the poet Whittier, and an Appendix by Mr. Wendell Phillips.

MESSRS. G. P. PUTNAM'S SONS announce a work on *The Development of Constitutional Liberty in the English Colonies*, by Mr. Eben G. Scott; and a *History of English Prose Fiction*, by Mr. Bayard Tuckerman.

AMONG the announcements of the *Century* magazine are a series of papers by Mr. Henry James, Jun., to be entitled "The Point of View," being letters supposed to be written by American men and women in Europe; and a new novel by Mr. W. D. Howells, "A Sea Change," which will treat of the problem of self-help among women in New England.

A STORY by Mr. William Black, called "An Adventure in Thule," is appearing in an American magazine for boys—*The Youth's Companion*.

WE have before referred to a *History of the Negro Race in America*, which is a good deal talked about as in preparation. The author, Mr. G. W. Williams, is himself a mulatto, and commanded a coloured regiment during the war. Afterwards he was elected member of the Ohio State Legislature, and is now a successful lawyer at Cincinnati. In his forthcoming work he begins with the African tribes from whom the majority of American slaves are descended, and traces the history of the Negro in the United States down to the present day. It will be published by Messrs. Putnam's Sons, in two volumes, but probably not until the beginning of next year.

MR. G. STANLEY HALL has been appointed to a Chair of Psychology at Johns Hopkins University, Baltimore.

As the *Critic* appears to be not indifferent to our good opinion, we must take the liberty of commenting upon the "spread-eagleism" that we have noticed more than once recently in its pages. The last number that we have received (for August 26) has two examples of this. In commenting upon the decay of French art—which, we venture to think, is to be found mainly in the candour of French critics—it takes the opportunity to observe that "the chances of supremacy in the fine arts are noticeably tending towards America." This may be so, but it had better have been left to someone else to say. However, it is against us poor English that the *Critic* waxes most bitter. Mr. Matthew Arnold recently presumed to write his mind about American culture, or want of culture. He is told, in what is proud to see itself called "the first literary journal in America,"

"As a man of letters, Mr. Arnold has not a very high place in American esteem. He is a writer, writer. To the mass of Americans he is unknown; to the mass of Englishmen he is only known by his father's name. As a critic of our ways, he is not entitled to a hearing, for he has never been to America."

Mr. Freeman scarcely comes off better. He has only "travelled on American railroads." In short,

"Englishmen may make up their minds that their criticisms on American society will neither correct nor instruct. With all the vulgarities that inhere in a democracy, and which run without restraint in the United States, we cannot accept reproof or advice from a country so snob-ridden as England. Caste has eaten up English good manners. Tory or Radical, bishop or coetermonger, all are smitten by the terrible social gangrene from which the mass of Americans are free. On the life of the Latin races we can afford to model ours, for to them base hero-worship is almost unknown."

OBITUARY.

MOUNTAGUE BERNARD.

WE regret to announce the somewhat sudden death last Saturday of the Right Hon. Mountague Bernard, a man no less distinguished as a teacher of the theory of the law than as an expounder of its practice.

Born at Tibberton Court, Gloucestershire, in 1820, Mr. Bernard was educated at Sherborne School and Trinity College, Oxford, where he took a first class in the classical and a second class in the mathematical schools. Thence he proceeded to London and adopted the law as his profession, studying for a time in the chambers of the present Lord Chancellor, then Mr. Roundell Palmer. As a barrister he became more notable for his comprehensive grasp of the law than for superficial proficiency as an advocate.

About this period the law of nations—of which Mr. Bernard had thus early made himself a master—began to be recognised in England

not only as an interesting study, but as a science of practical utility. Out of the revenues of All Souls' College a Professorship of International Law and Diplomacy was founded at Oxford, and Mr. Bernard had the honour of being elected in 1859 as the first occupant of the chair. For this position he was eminently suited; and the various works which he published from this date—revisions chiefly in a more elaborate form of the notes constructed by him as the bases of his lectures—testify to the wisdom of the appointment.

His reputation, however, was not confined to the limits of the university, and while engaged in his duties as professor he was nominated by the Government a member of the Commission appointed in 1866 to Enquire and Report on the Law of Naturalisation and Allegiance. In 1871 the Government again departed from its usual practice of ignoring academical jurists, by choosing him as one of the High Commissioners to negotiate and sign the Treaty of Washington. As a mark of appreciation of his services, he was in the same year made a member of the Privy Council, and almost immediately afterwards a member of the Judicial Committee. In this capacity he assisted in deciding the well-known ecclesiastical appeal of "Sheppard v. Bennett," his coadjutors being the late Lord Chancellor Hatherley and no less than eight others, ecclesiastics and judges. In 1871 the services of Mr. Bernard were again called in request by the Government, this time also as an authority on international law. He was appointed to assist his old friend Sir Roundell Palmer in supporting the British case in the famous Alabama Arbitration at Geneva.

After holding his professorship at Oxford for some fifteen years he terminated his immediate connexion with the university in 1874; but his temperament was of too active a nature to allow him to be idle. The year previous (in 1873) two important international associations had been founded, both having for their object the practical study of the science which Mr. Bernard had so much at heart—international law. These associations are the Association for the Reform and Codification of the Law of Nations and L'Institut de Droit international. To both Mr. Bernard gave his cordial support, becoming a member of each from their foundation, and officiating as president of the latter once at least and as a vice-president of the former for several years. In 1877 he again served on a Royal Commission appointed for Enquiring into the Duties of Commanders of British Vessels with reference to Fugitive Slaves; and shortly afterwards he accepted an appointment as a member of the University of Oxford Commission. He was, indeed, a diligent worker almost up to the time of his death, being personally occupied until quite recently in drafting and redrafting the Code of Statutes which forms the new Constitution of his university.

In comparison with many less distinguished men, Mr. Bernard was by no means a voluminous author. Beside the works originating out of his Oxford lectures, a pamphlet on the Schleswig-Holstein Question, and an *Historical Account of the Neutrality of Great Britain during the American Civil War*, his reputation as a profound lawyer must rest rather in what will be written of him than on what he wrote himself. Eminent as a scholar, a lawyer, a practical diplomatist, and a theoretical jurist, he used his talents unostentatiously and well. There is little fear that the work he performed during his life will soon be forgotten by either his country or his university.

CHARLES STUBBS.

THE *Biga Gazette* announces the death at Dorpat of the distinguished Estonian poet Dr. F. R. Kreutswald, in his eighty-eighth

year. Dr. Kreutzwald obtained a European celebrity by the collection of popular Esthonian songs which he edited under the title of *Kalewipoeg*, and which have been translated into several European languages.

MAGAZINES AND REVIEWS.

THE current number of the *Fortnightly*—the last, we regret to say, that will bear the familiar name of the editor on the cover—opens with "A Study of Sensibility," by Mr. Saintsbury. This is, we may say at once, a criticism of a certain school of French writers, written with a profuseness of knowledge which none but Mr. Saintsbury himself could profess. Yet in one little matter, rather of history than of literature, he has been guilty of a curious slip. Of M^{me}. de La Fayette, whom he takes as the founder of "sensibility novels," he writes:

"She has left . . . some still more interesting memoirs on Henrietta Maria of England, of whom she saw much in the miserable days when the Queen had to depend on Mazarin's bounty."

We do not venture to say what M^{me}. de La Fayette did not write; but surely this must be an allusion to her *Histoire d'Henriette d'Angleterre*, which has just been reprinted in Paris. And the subject of this is not Henrietta Maria, but Henrietta Anne, the daughter of Charles I., and wife of the duc d'Orléans. Of the other articles, we think Mr. Freeman's second instalment of "Impressions of America" far and away the best. His former paper disappointed us. It might have been written by someone else as a parody upon Mr. Freeman. But this, though not less characteristic, covers a wider area and goes deeper in its criticisms. Mr. Grant Allen asks "Who was Primitive Man?" and gives an answer that we beg leave to think purely imaginative. And, until better instructed, we must renew our protest against his use of the word "Euskarian." Mr. F. Pollock continues his "History of the Science of Politics" in a second paper which is open to the same comment as the first. The subject is far too large to be adequately treated in such limits. "The House of Lords," by Mr. A. F. Leach, begins well, but ends weakly. The desirability of a second chamber is a most fit subject for theoretical investigation, upon which history has by no means said its last word. But an attack upon the recent behaviour of the Upper House has much less interest.

ALL Mr. Tennyson's admirers—and what English-reading person has not been such at one time or another?—will be delighted with his address "To Virgil" in the *Nineteenth Century*. The circumstances under which it was written preclude its being any other than a very recent production. Both the subject and the execution are alike worth notice. That Mr. Tennyson, in his old age, should thus profess his appreciation of that one among the poets to whom he has himself been so often compared is a very interesting circumstance. Not less interesting is it that he should go back to a metre similar to, though not absolutely identical with, that of "Locksley Hall," than which he has used none that stamps itself so readily on the memory. We venture to say that this little poem will do more for Mr. Tennyson's reputation in the future than any we have had from him since his sonnet on the Montenegrins. Of the other articles in the *Nineteenth Century*, by far the most striking is that on "The Egyptian Revolution" by Mr. Blunt. The writer may be an enthusiast, easily impressed and over-sanguine. But we defy anyone to read what he has written and then deny that Arabi has had hard measure. There are two articles which are not so well translated from the French as they ought to have been. M. Jules Claretie, if he understands English, will be surprised to find himself called a

"chronicler;" and "publisher" is certainly not the equivalent of "publiciste." Mr. Brodrick's paper on "Merton College" contains nothing new. We hope that he intends to devote his learned leisure to more important work.

In the *Revista Contemporanea* of August 15 Don Narciso Pagés begins an important study of "Municipal Government in Spain under the Romans," as to which he differs from all previous enquirers. Another archaeological note is a visit to Brabum, or the Ciudad de Montecarlo, to the north-west of Nuez, in the province of Burgos. The remains consist of walls of rough uncoemented stone, within which human bones have been found in sufficient quantities to be employed in manufacture; a few ornaments in iron, and many in bronze. Coins are said to have been found, two in gold, but are not described by the writer. No other inscriptions, sculpture, or wrought stone have yet been discovered. An excellent lecture on "What is Energy?" by Rodriguez Mouralo, is the scientific contribution; and a paper on the old and new Hôtel de Ville of Paris, by Dupuy de Lôme, make up an interesting number.

INTERNATIONAL COPYRIGHT.

AT the recent meeting at Liverpool of the Association for the Reform and Codification of the Law of Nations a report from a committee upon international copyright was read by the secretary, Mr. C. H. E. Carmichael. As regards the burning question between England and the United States, Mr. Carmichael admits that there is no progress to report, and he seems to think that this is due to the fact that the Americans are busily engaged in reforming their municipal law of copyright. We fancy that the true cause is revealed in the following clipping from the *New York Nation* of August 24:—

"According to a cable despatch published the other day, Mr. Lowell has abandoned all hope of the international copyright negotiations coming to anything. Nobody is likely to be very much surprised at the news; it was anticipated by all who have followed the negotiations with any attention. The pirates have now a great opportunity, which they probably will not neglect, to reap a rich harvest; and we trust they will do so, for nothing but unlimited piracy will ever convince the great publishers that their attempts to establish international copyright on the basis of protection to the American book-manufacturers will not work. The 'Harper' treaty has broken down because the publishers have attempted, under pretence of making literary property sacred, to compel the foreign author to publish his book in America. Sooner or later the publishers will find out that they must all come into the market on equal terms, or else that they will be permanently driven out of the market by the pirates. The authors' best friend at present is the pirate, for it is the pirate alone who can bring the publishers to their senses. He has already half-converted most of the publishers, and in time he will make his work of regeneration complete."

Mr. Carmichael proceeds to comment upon the copyright convention concluded last October between France and Belgium, to which reference has already been made in the *ACADEMY* as introducing "the most favoured nation" clause; and to the municipal copyright Act recently passed by the Dutch Legislature. The special feature of this Act is that it adopts the term of fifty years, without any regard to the duration of the author's life.

THE SOCIETY OF FINNISH LITERATURE.

LAST year the Society of Finnish Literature celebrated its jubilee. On that occasion Dr. E. G. Palmén, of Helsingfors, compiled a sketch of the work accomplished by the society during

its fifty years of existence, which has now been translated into French by his brother, M. H. F. Palmén, and published by Klincksieck, of Paris, and Brockhaus, of Leipzig.

We know of no national movement more interesting than that which has been taking place in Finland during the present century. A remote and rude people, weak in numbers and in ethnic alliances, standing almost alone in Europe, conquered by the Swedes and afterwards annexed by Russia, the Finns might well have despaired of their nationality. But their very disadvantages have proved their safeguard. Russia could not feel jealous of a people that had no history, and whom she herself had not deprived of independence. To this day the Grand Duchy of Finland is the only portion of the empire which enjoys some measure of "self-government"—a word, we observe, that requires to be printed in English.

But the creation of a Finnish literature within our own day is a still more striking achievement. The Finns themselves trace their literature back to Michel Agricola, who translated the New Testament into Finnish in 1548. During the seventeenth century Finland shared in the military glories of Sweden, but ran near to losing her national existence in that of her more powerful neighbour. Swedish became the language, both of the administration and of the cultivated classes. Finnish was left to the peasantry and to the worship of the Protestant churches. The language threatened to grow extinct, as Cornish has done, and as Irish is doing under our very eyes. The eighteenth century forms the lowest period of the national life and literature. The power of Sweden was decaying, and Russia was beginning to dismember Finland. Porthan, the father of Finnish history, who died in 1804, wrote only in Swedish and Latin. But the rejuvenescence of Finnish nationality came from a quarter least expected. When the whole of Finland had been overrun by Russian troops in 1808, Alexander I. astonished the world by re-establishing the Grand Duchy with its widest historical frontiers, and by granting to it a liberal Constitution modelled on that of Sweden. Shortly afterwards (in 1827), the ancient capital of Abo was destroyed by fire, and the seat of Government was fixed at Helsingfors on the Baltic. From this time dates the hope of a Finnish nationality, growing up under the shelter of Russian indifference, in opposition to the alien influences of Swedish culture.

This hope took shape in the Society of Finnish Literature (*Suomalaisen Kirjallisuuden Seura*), which was founded in February 1831. The three chief promoters were Lönnrot, Runeberg, and Snellman. Lönnrot was the son of a peasant and himself a doctor by profession. He was the collector and editor of the popular poems entitled the *Kantele*, the *Kalevala*, and the *Kanteletar*, the second of which is widely known as the Finnish national epic. Runeberg was an original poet of no mean rank, who chiefly wrote in the cause of patriotism; Snellman, who had studied at German universities, was first a schoolmaster and afterwards a senator of the Grand Duchy. The main object of the society—in which it may be said to have succeeded beyond its expectations—was to create a literature that should satisfy the aspirations of a nation. Beginning, with Lönnrot, by publishing the ballads and folk-lore of the peasants, it has gone on to compile grammars and dictionaries, to translate the classics of other languages, and to print school-books. We may here note that in 1867 it published an English Grammar (*Englannin Kieloppi*) and in 1879 a translation of "Hamlet," and that it now has an Anglo-Finnish dictionary in the press. Englishmen will be familiar also with the names of the two philologists—Castrén and Ahlqvist—each of whom was for a time secre-

tary to the society. The premature death of the former in 1862 was a loss to European learning.

During its life of fifty years the society has passed through many vicissitudes. Under the rule of Menchikoff, and at the time of the Crimean War, its funds languished, and it fell under a sort of censure of the press. Its present flourishing condition is partly due to the liberal policy of Alexander II., who encouraged the extension of education in Finnish and granted to the society a subsidy of 10,000 marks a-year. Never has a people more deservedly won by peaceful means the recognition of its nationality.

CORRESPONDENCE.

M. LÉNORMANT AND THE "HERMES."

Boulogne, par Orlès, l'Ain: Sept. 4, 1882.

I avail myself of the hospitality of the ACADEMY to publish a few brief remarks with reference to the scandalous attacks made upon me in the last number of the *Hermes*. But I will leave to their authors the unenviable privilege of using violent and offensive language. Such weapons are not needed by one who has right on his side, and who can produce substantial facts.

These attacks—which always come from the same group of scholars, and of which the motive (altogether foreign to learning) was naively revealed in one sentence on the last page of Herr Khoell's article in the *Hermes* of 1872—contain nothing new. I have waited my own time to reply to them, because it does not become me to adopt the attitude of an accused on his defence. I wished to find an opportunity of showing, by striking examples, in what manner my opponents have proceeded, and with what carelessness (to use no stronger word) they neglected the most necessary and easy verifications before aiming their attacks at me.

After the facts about the leaden plates from Styra and the terra-cotta from Aegina, to which I have already directed public attention, they have supplied me again, in the last number of the *Hermes*, with examples not less conclusive, which I am anxious to point out.

The nineteen sepulchral *stelai*, with inscriptions, in the Palais Romas at Zante, which they seek to prove by internal evidence to be invented by me (pp. 451 *et seqq.*), exist to this day on the spot where I copied them in 1860. To assure themselves of this, it would have sufficed for them to do what I have just done—write a letter to M. César Romas, member for Zante in the Greek Parliament, the present owner of these monuments. They would have received from him an immediate reply. But they have not written to him. Germany has now an archaeological institute at Athens, whence it is only a voyage of twenty-four hours to the town of Zante. They might have taken the trouble to go there to see the *stelai* in the Palais Romas, and verify their existence, their genuineness, and the truth of my copies. That would have been a good opportunity of learning on whose side lies the bad faith, and of revealing the truth.

The *stèle* of Xopivn, which is likewise made the subject of a charge against me (p. 452), is at the present time to be found in Paris, at the house of MM. Rollin and Feuillant, where it may be examined by anybody. Here is another fact which the slightest investigation would have brought to their knowledge.

The original of the ox's head with a Sabæan inscription (p. 448) which was brought from Abian by M. Gaudrand has been for fifteen years preserved at the Institut de France, in the collection of the Commission of the *Corpus Inscriptionum Semiticarum*, to which I presented it. It would have been easy to see it and verify its entire genuineness.

In 1878, I deposited in the library of the Institut, where all may consult them, the squeezes which I had kept of the inscriptions numbered 221 and 328 in the *Corpus Inscriptionum Atticarum*. They prove the actual existence of those marbles, which has been deliberately impugned (pp. 461, 464). The deposit of the squeezes was not secret, but public. That my opponents did not know of it is astonishing.

Again, I am represented as having kept carefully from all eyes, without permitting anyone to examine them (p. 460), the inscriptions of La Chapelle Saint-Eloi. Whereas, as a matter of fact, twenty-one years have passed since I placed these monuments, in 1861, in

a public collection, open to the visit and examination of all—in the museum at Bernay, the chief town of the arrondissement in the department of l'Eure, in which they were discovered. By what strange chance is it that nothing was known about this at Berlin?

Here, then, is a complete series of facts of a nature to allow the unprejudiced to appreciate the character of the attacks that have been made upon me.

I have yet more facts to bring forward not less decisive; but they require of me certain verifications which are at this moment beyond my power, for I am in the country and on the point of starting for Italy. I undertake to lay them before the public very shortly. My enemies will gain nothing by the delay.

F. LÉNORMANT.

KAFFIR FOLK-TALES.

Ramilton Rectory, Northumberland: Sept. 1, 1882.

Mr. Theal's *Kaffir Folk-Lore* and Prof. Sayce's review of the book (*ACADEMY*, August 20) raise a question of much interest to the children of Mother Goose:—May we compare European and African folk-lore? Prof. Sayce says we should not do so.

"With all their general resemblance to the nursery tales of other lands, they [the Kaffir stories] have a peculiar and striking physiognomy of their own which shows how far wrong those scholars have gone who have attempted to compare South African and Indo-European folk-lore together. They have simply been misled by collections of Kaffir stories which have received a European colouring."

As a folklorist accustomed to compare African and Indo-European folk-lore, may I say a few words in defence of the practice? In the first place, it is only to be expected that the "physiognomy" of European and Kaffir tales should be different. The "physiognomy" of Scotch, Serbian, Hindoo, French, Scandinavian, Romaic, and Russian tales is also different. The manners vary; the animals introduced as persons in the tale are not the same. But the chief situations and general conduct of the plots are recognisably the same in the tales of various Indo-European peoples. My argument is that the situations and plots of Kaffir folk-tales are often identical, in spite of differences in local colour and in detail, with the familiar legends of Indo-European races. This I purpose to prove from stories in Mr. Theal's collection. According to Prof. Sayce, Mr. Theal's collection has not been "'cooked' for the English market, nor derived from natives who have been influenced by intercourse with Europeans." The opposite opinion has been expressed by another critic (*Athenæum*, August 26). But Prof. Sayce, at least, will not explain the points of contact between European and Kaffir tales by the hypothesis of borrowing from Europeans. I proceed to enumerate some ten *formulae* common to Kaffir and Indo-European *Märchen*.

1. *Formula* of the "Run-away Children." Greek: "Phrixos and Hællê;" Romaic: "Asterinos and Pulja;" Scotch: "Milk White Doo;" Kaffir: "The Bird that made Milk."
2. Portion of "Beauty and the Beast," or "Sir Gawain and the Loathly Lady." The Kaffir Run-away Girl licks the face of a friendly crocodile, who then casts off his skin, and becomes "a man of fine appearance."
3. In a variant of "The Bird who made Milk," we have a Kaffir "Hop o' my Thumb," who, when carried off by a "cannibal" (ogre), sprinkles ashes (white stones in Europe) to mark the trail.
4. Two girls who undertake the same adventures, the good girl with success, the bad girl unsuccessfully. Kaffir: "Five Heads;" English: "Toads and Pearls." The trials of

the two girls resemble in character those which befall Psyche in Hades.

5. Incident of an object left behind him by the hero to indicate his success or failure in a dangerous quest. *Finnish*: Comb of Lemminkäinen; *Egyptian*: Flower which withers when hero fails. Another European formula is the precious stone which clouds over in sympathy with hero's ill-fortune. *Kaffir*: The assegai of Sikulume, which stands when he is safe, and falls when he is dead.

6. The "swallowing" formula, in the Kaffir story of Sikulume. The swallowed people are disgorged alive. The most famous European parallels are the story of Kronos and his children and one conclusion of "Red Riding Hood." The incident occurs in Australian *Märchen*.

7. Pursuit of girl and lover by father of girl. He is discomfited by magical devices of the girl's. *Greek*: Jason and Medea pursued by father of Medea (?); *Russian*: "Tsar Morakoi"; *Scotch*: "Nicht, Nocht, Nothing"; *Gaelic*: "Battle of the Birds"; *Kaffir*: "Sikulume."

8. Opening of Scotch "Rashin Coatie" ("Cinderella") and of Serbian story on the same lines. A child is left an orphan, with an unkind step-mother, and is befriended by a red calf. *Kaffir*: "The Wonderful Horns." Here the child is a boy; the calf becomes an ox.

9. "Black Bull o' Norway" (*Scotch*): a girl rides off on a friendly bull, which fights the De'il; *Kaffir*: Boy rides off on an ox, which fights other oxen. Scotch bull says, "Eat out of my right ear, drink out of my left ear, and put by your leavings;" *Kaffir* ox provides food out of his right horn, and stores "leavings" in his left horn. The Scotch bull, on his death, leaves the lassie apples, which contain beautiful dresses; the *Kaffir* ox, on his death, leaves the boy his horns, which contain "a new mantle and handsome ornaments." With these gifts the Scotch girl wins back her lover; the *Kaffir* boy wins "a beautiful girl." A form of the "Black Bull" occurs in Sir Philip Sidney's *Arcadia*.

10. The formula of the substituted bride, as in "Berthe aux grands Pieds" and in some variants of "Cinderella," occurs in *Kaffir* and Zulu *Märchen*.

11. The "Cannibal Mother" (*Kaffir*) has a form of the "Fee Fo Fum" incident, which appears also in Bleek's *Bushman Folk-Lore*.

These coincidences I have borrowed from notes of my own, in a review of Mr. Theal's book, but the book I have not by me. Though much might be added, I cannot but think that the number and character of these coincidences justify us in venturing to compare African with Indo-European, and, indeed, with universal folk-lore. If Prof. Sayce rejects, as he has done, the theory of borrowing from Europeans, then the agreement of "The Black Bull" and "The Wonderful Horns" must be considered at least remarkable enough to excite curiosity, whether it be possible to satisfy our curiosity or not. Folk-lore, of course, includes much more than *Märchen*, and, in point of fact, the magical folk-lore of African, Australian, and Indo-European peoples has many points of absolute identity. As the magic is introduced into the *Märchen*, the various *Märchen* inevitably resemble each other in such details as that of the spittle which can sustain a conversation in Gaelic and Zulu. It will, therefore, be difficult to persuade folklorists that they must renounce the comparison of savage and Indo-European folk-lore. If I had books by me I could doubtless add a good many formulas common to Indo-European and African *Märchen*, but those already adduced may serve as specimens not unworthy of attention. If Dr. Köhler would annotate Mr. Theal's book, his knowledge of *Märchen* would make the resemblance of

African and European incidents still more noteworthy. These considerations, whatever they may be worth, do not interest enquirers who suppose that the Kaffir stories are simply borrowed from European settlers. A. LANG.

WALTER SAVAGE LANDOR.

15 St. Mark's Crescent, Regent's Park, N.W.:
On Goethe's Birthday, 1882.

In his review of Prof. Colvin's *Selections from the Writings of Walter Savage Landor*, Mr. W. E. Henley says (*ACADEMY*, August 26, p. 144):—"A Landorian anthology has long been wanted, and badly."

And Prof. Colvin himself says in his excellent book on Landor in the "English Men of Letters" series, pp. 219, 220:—

"A selection or golden treasury of Landor's shorter dramatic dialogues . . . would be, as was said long ago by Julius Hare, 'one of the most beautiful books in the language—that is to say, in the world.'"

This was written in 1881. Will it appear too egotistical if I observe that such a book has been already placed before the world, in 1878, by me? My *Manners und Frauen*, etc.: *Auswahl aus den Imaginary Conversations* (Paderborn: Schoeningerh; 1878), was, of course, in the first instance addressed to the public of Germany, but it has not only found a favourable reception there, but also attracted a very appreciable amount of notice in England, having been, among other papers, mentioned in the *ACADEMY* of February 22, 1879.

My book contains sixteen of the, according to me, choicest dialogues, showing the different grave and light touches that we admire, from the highly dramatic "Tiberius and Vipsania" or "Hannibal and Marcellus," to "Bossuet and the Duchess of Fontanges;" from the tender grace of "Dante and Beatrice" to the hatred of tyranny in "Peter and Alexis" and "Katharine II. and Dashkow;" from the patriotic inspiration of "Henry IV. and Arnold Savage" and "Cromwell and Noble" to the philosophical spirit (with a dash of Voltaire) of "Xenophon and Cyrus the Younger" and of "Soliman and the Mufti." The collection is preceded by a Life, a biographical and critical essay, not so good, of course, as Colvin's or Forster's, for I wrote it with much less material at my disposal in 1867, at which time, indeed, my book was finished, though it had, with intervals, to go the round of the publishers for ten years longer. A bibliographical list closes my volume.

Prof. Colvin says, with reference to an anthology, p. 220: "True Landorians may at present be counted on the fingers." I believe this is an exaggeration. It was probably true at a time when the contemporaries of his youth had died and the young generation had not been educated into a knowledge of him—the time marked perhaps by the year 1858, when a popular paper gave the ass's kick to the wounded lion. It will certainly be less true for some time after the publication of Mr. Colvin's *Selections*; it would have been more true previous to his volume in "English Men of Letters;" and I venture to say it would have been more true previous to the publication of my own volume, which not only introduced Landor into the domain of German literature, where he was before unknown, but has indirectly served—I am sure of the fact—to introduce him to a certain number of English men and women who, previously, were unaware of the precious treasure with which the world has been endowed by Landor's mighty genius.

One word in addition. On p. 196 of his Life Prof. Colvin says: "He wrote a small, now almost undiscoverable, volume of *Italics* in verse." On consulting my bibliography he will find this booklet mentioned as "Rare; not in

the library of the British Museum; a copy in mine." On going to the British Museum now, he will find that my copy has been added to the national collection. EVG. OSWALD.

SCIENCE.

CLIFFORD'S MATHEMATICAL PAPERS.

Mathematical Papers. By William Kingdon Clifford. Edited by Robert Tucker. With an Introduction by H. J. Stephen Smith.

Mathematical Fragments. Being Facsimiles of his unfinished Papers relating to the Theory of Groups. By the late W. K. Clifford. (Macmillan.)

IN these days of intellectual activity as regards both the patient labouring after new results on the part of investigators and the desire on the part of an ever-widening circle of enquiring readers to obtain a knowledge of these results when published, there is an increasing appreciation of the works of eminent men, and especially of such as are pioneers in the progressive sciences. For the most part their memoirs are scattered over the *Transactions* of the learned societies of Europe and through a vast wilderness of journals and periodicals; and the very number of these practically excludes them from any private library. This, with the additional disadvantage arising from the fact that good public libraries are, and must be, from the nature of things, rare, makes it difficult for many to get at the original papers; and so the appearance of an author's works in a collected form puts results which might not otherwise be accessible within the convenient reach of students who are anxious, either for the sake of keeping abreast with the actual progress of any subject or of proceeding to ulterior investigations of their own, to know what has been done without devoting time that can ill be spared to a merely mechanical search for memoirs. Text-books often, and indeed usually, cover only the elementary ground of a subject, and little in such a case may therefore be expected from them. There are minds which leave a distinct impress on their respective subjects; the work done by them has a long, sometimes an unceasing, usefulness, though at first it may only interest and engage the attention of experts who see its utility and extend its applications. Yet the original papers remain ever fresh, while the trains of investigation to which they have given rise increase their importance; and they will be consulted, if only they can be obtained, long after their publication. This is peculiarly true in mathematics; were instances needed, those of Newton, Laplace, and Lagrange, of Abel and Jacobi, of Gauss and Riemann, and of Maxwell might be cited. Much is being done in the way of satisfying this necessity for editions of the complete works of famous writers, and, at the same time, of rendering to them what is at least only a tribute due to their genius; and in late years, either from private enterprise or from the munificence of academies and governments, the world has been put in possession of the productions of the greatest mathematicians of modern times. It will therefore be as a welcome addition that this collected edition of Clifford's *Mathematical Papers* will be received.

And this volume will be rendered all the more welcome in that it is preceded by an Introduction by Prof. H. J. Stephen Smith. Its character renders any apology for it unnecessary. It certainly cannot be said to be one "which can offer but little interest to those who do not intend to study the volume itself, and which to those who do must seem at the best superfluous" (p. xxxvi.). The hesitation with which Prof. Smith expresses a hope that it may prove useful to some few friendly readers who have "a general sympathy with scientific results or curiosity about new mathematical ideas" will not be justified, while the hope itself will be more than realised, as the Introduction will prove of the utmost value to all classes of readers. His systematic analysis of the contents will be found of the greatest help for the study of the subjects, as will also be his description of the way in which Clifford was led to some of the developments of his work; and Prof. Smith's general exposition of the theory of biquaternions will form a useful introduction to those who may wish to understand the investigations occurring later in the volume. By his sympathetic grasp of the dominant ideas he succeeds in imparting a personal charm to the volume; and his account of the effect on Clifford's mind of the works of others who influenced his writings forms an interesting chapter in the history of that department of pure mathematics which peculiarly attracted Clifford.

The editor, Mr. Tucker, has evidently spent much labour in obtaining the opinions of the best living authorities, especially in reference to papers now appearing for the first time; quotations are frequently appended to these from letters of Profs. Cayley, Smith, and Henrici, and of Mr. Spottiswoode. It is, perhaps, unfortunate that the first of the "unsolved questions" (pp. 623 *et seqq.*) should have been allowed to remain, as it is obviously incorrect.

Clifford's turn of mind was essentially geometrical; to see this, one has but to turn to the list of the subjects on which he wrote. Yet it was not such as to exclude analysis in the manner of the school of pure geometry; nearly all his papers will be found to make extensive use of the analytical methods which he turned to account in his geometrical investigations. What engaged his attention most systematically was the properties of space. On this he produced his best work, having been influenced towards it by the ideas enunciated by Lobatschewsky and Riemann; and in it he evinced more particularly that originality which is so striking a feature of much of his thinking.

As an introduction to, and for the easier comprehension of, this part of his work it is advisable to read his third lecture on "The Philosophy of the Pure Sciences" (*Lectures and Essays*, i. 295). Before classifying the assumptions of the science of space as we have it and as Euclid laid it down he remarks:—

"The geometer of to-day knows nothing about the nature of actually existing space at an infinite distance; he knows nothing about the properties of this present space in a past or a future eternity. He knows, indeed, that the laws assumed by Euclid are true with an

accuracy that no direct experiment can approach . . . but he knows this as of Here and Now" (p. 300).

And he then proceeds to point out the fundamental postulates involved in the assumption. These are that of continuity—according to which two adjacent portions of space have the same boundary; that of elementary flatness—according to which the "aggregate of directions" or the complete solid angle "round one point is exactly to that round another;" that of superposition—according to which space has all its parts exactly alike; that of similarity—by which any figure may be magnified or diminished without altering its shape. This last postulate includes the theory of parallels proceeding on the basis of Euclid's twelfth axiom; but of this axiom there has never been given a satisfactory proof. To Lobatschewsky occurred the idea of doing without it; and he made a supposition which alters the theorem that the three angles of a triangle are equal to two right angles into a theorem that they are less than two right angles. On this he built up a consistent theory, and his plane geometry becomes identical with the geometry of a surface, the curvature of which is everywhere negative and constant. Of such a surface, we have as an example the inner surface of a spherical hollow.

But while this train of ideas had great influence over Clifford, that which most affected his investigations was the hypothesis—alternate from that of Lobatschewsky—of the constant positive curvature of space. Of a surface of constant positive curvature we have as an example the surface of a sphere. To the working out of the consequences of this hypothesis many of his papers refer, and these are they which are more peculiarly original; they form one of the most striking memorials of his power in the exercise of his genius.

Many other subjects engaged him, of which only two will find mention here. One was the establishment of connexions between geometry and the theorems of advanced analysis in connexion with Abelian integrals and their offshoot the theta functions. Another was the theory of graphs, of which his applications are far from completed, and many of his notes have been left in a fragmentary condition; it is a geometrical mode of representing functions obtained by the use of a particular method of analysis which finds its exposition in Grassman's *Ausdehnungslehre*.

The mathematics of the present day deal more with algebraical analysis than with geometry, and we seem to be receiving and accepting much of the generalised work which was done by Gauss, Abel, and Jacobi. But there has now sprung up a new school of geometry, bringing in new ideas, of which Lobatschewsky and Riemann have been the earliest exponents. And, when the time comes for the acquaintance with, and the generally accepted use of, these methods, it will be not the least of Clifford's claims to honour that he gave to their views, even in the comparatively short time during which he worked, precision and clearness as well as material advancement,
